THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 372—No. 1. TUESDAY, JULY 3, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 3,051, June 18, 1928, directs:

In *class 29, Metal Working* (Division 13), abolish the following subclasses with their definitions, the patents formerly contained in these subclasses having been placed for the most part in class 76, Metal Tools and Implements, Making, subclasses 89.1, Tool sharpeners, Edge serrating, and 89.2, Tool sharpeners, Swaging, established in this order:

Sharpening
82 Edge serrating.
83 Swaging.

In *class 76, Metal Tools and Implements, Making* (Division 14), establish before subclass 82 and indented under the main class title the unnumbered title *Tool sharpeners*, indent thereunder subclasses 82–89, and change the title of subclass 82, "Cutting sharpeners," to *Cutting*.

In *class 76, Metal Tools and Implements, Making* (Division 14), establish the following subclasses and definitions, the patents contained in subclasses 82.1 and 82.2 having been taken for the most part from class 76, subclasses 82, Cutting sharpeners, and 88, Cutting sharpeners, Cutter and guide, and those contained in subclasses 89.1 and 89.2 having been taken for the most part from class 29, Metal Working, subclasses 82, Sharpening, Edge serrating, and 83, Sharpening, Swaging, abolished in this order:

Tool sharpeners
Cutting
82.1 Lawn mower.
82.2 Scissors.
89.1 Edge serrating.
89.2 Swaging.

82.1. TOOL SHARPENERS, CUTTING, LAWN MOWER. Devices coming under the definition of subclass 82 especially adapted to sharpen lawn mowers.

82.2. TOOL SHARPENERS, CUTTING, SCISSORS. Devices under subclass 82 especially adapted to sharpen scissors.

89.1. TOOL SHARPENERS, EDGE SERRATING. Machines, devices, and processes for serrating the metal adjacent to the edges of cutters, the serrations extending in most instances across the beveled portion of the blade and obliquely to the edge.

89.2. TOOL SHARPENERS, SWAGING. Machines and devices for sharpening metal tools by forging or rolling the metal adjacent to the edge.

In *class 76, Metal Tools and Implements, Making* (Division 14), in the definition of subclass 82, Tool sharpeners, Cutting, abolish paragraphs 1 and 2 of the note, and add to the definition of subclass 88, Tool sharpeners, Cutting, Cutter and guide, the following note: *See this class, subclass 82.2.*

In *class 188, Brakes* (Division 47), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 188, subclass 78, Wheel, Transversely movable, Expanding:

Wheel
Transversely movable
79.5 Wear take-up or compensating.

79.5. WHEEL, TRANSVERSELY MOVABLE, WEAR TAKE-UP OR COMPENSATING. Devices for adjusting or taking up slack or for compensating for wear in the brake shoes.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims lised:

Pat. 1,584,230, J. C. Knight, Perforating machine, decided May 26, 1928, claims 1 and 2.

Pat. 1,626,516, B. E. Cramer, Can washer and steamer decided June 8, 1928, claims 1 and 2.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 142,462, Honey, strained and in the comb, California Honey Producers Cooperative Exchange, Los Angeles, Calif. Registered May 17, 1921. Decided June 4, 1928.

T. M. 145,959, Canned sardines, salad oil, olive oil, canned and dried fruits, Hammer & Co., San Francisco, Calif. Registered August 23, 1921. Decided May 4, 1928.

T. M. 220,137, Sardines, canned salmon, salad oil, olive oil, canned fruits, dried fruits, fresh deciduous fruits, fresh citrous fruits, grapes, and melons, Hammer & Co., San Francisco, Calif. Registered November 2, 1926. Decided May 4, 1928.

T. M. 234,780, Grapes, cherries, prunes, etc., V. J. Squillante, New York, N. Y. Registered November 1, 1927. Decided June 9, 1928.

3550

Condition of Applications Under Examination at Close of Business June 22, 1928.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 106,908; Trade-Mark Division, 2,105. Oldest new case, Aug. 24, 1927; oldest amended, Sept. 10, 1927. The dates given are 1927 except where † indicates 1928.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended. DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE ALLSOP AND SIBSON.

No. 1,962. Decided May 7, 1928.

1. ESTOPPEL.

Where a patent to A. and S. was in an interference with an application of B., which contained claims other than those copied from the patent, and no attempt was made by A. and S. to bring about an interference between the B. application and an application filed by them a few days before the issuance of their patent, but after the issuance of the B. patent in view of an award of priority to him A. and S. canceled all the claims of their application and presented claims taken from the patent to B., *Held* that they are estopped to make such claims.

2. SAME.

"Should an interference now be declared and priority awarded appellants, the public would be prejudiced. The Buckley patent is dated July 8, 1924, and since that time the public, of course, has been excluded from the practice of the invention. Should a patent be issued to appellants, it is apparent that the public would be excluded from practicing the invention for a further period of 17 years from its date. This result is directly attributable to the deliberate failure of appellants to act when they should have acted."

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Frank B. Fox and *Mr. E. G. Mason* for Allsop and Sibson.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Commissioner of Patents refusing to allow claims 1 to 12, inclusive, 15, 16, 19 and 56.

The invention relates to steam-heated drying machines. The present application was filed November 14, 1919. There was then pending another application of appellants covering related subject matter. A patent was issued on this prior application November 18, 1919, or four days after the present application was filed.

On March 19, 1920, Joseph L. Buckley filed an application in which he copied 10 claims of appellants' patent. Interference was declared April 6, 1920, between the Buckley application and appellants' patent, and on May 4, 1923, priority was awarded appellants. Buckley acquiesced in this award, and cancelled the interfering claims. The Buckley application from its filing date contained claims that did not read on appellants' patent, and, therefore, on July 8, 1924, a patent issued to Buckley carrying these claims.

Appellants' present application when filed contained no claims that conflicted with the claims of the Buckley application, but on September 12, 1924, or more than four years later, and after the issuance of the Buckley patent, appellants filed an amendment canceling all the claims of their application, and inserting 56 new claims, of which claims 2 to 7 and 56 are claims 1 to 7 of the Buckley patent. The Examiner, the Board of Examiners in Chief, and the Commissioner, all ruled that in the circumstances appellants were estopped to make these claims.

Section 4904 Revised Statutes authorizes the Commissioner of Patents, upon the filing of an application which in his opinion "would interfere with any pending application, or with any unexpired patent," to declare an interference "to determine the question of priority of invention," but there were no claims in appellants' application that conflicted with the claims of the Buckley application, and evidently "in the opinion of the Commissioner" the applications did not conflict. That the then view of the Commissioner was not unreasonable is made to appear not only from the fact that appellants' application contained no conflicting claims, but from the further fact that appellants finally canceled all the claims in their application and amended their specification. In other words, for about four years, during the pendency of the Buckley application, appellants, with full knowledge of it, failed to make any claims conflicting therewith, and because of such failure the Buckley patent was issued without the declaration of an interference.

Since it required more than four years for appellants to discover interfering subject matter in the two applications, it is not strange that the Commissioner did not of his own motion declare an interference. In the circumstances he was quite justified, when he issued the Buckley patent, in assuming appellants would make no claim to the invention therein disclosed. Buckley was without fault, because he was without knowledge of appellants' application.

Should an interference now be declared and priority awarded appellants, the public would be prejudiced. The Buckley patent is dated July 8, 1924, and since that time the public, of course, has been excluded from the practice of the invention. Should a patent be issued to appellants, it is apparent that the public would be excluded from practicing the invention for a further period of 17 years from its date. This result is directly attributable to the deliberate failure of appellants to act when they should have acted. The object of the patent laws is the stimulation of invention for the benefit of the public, and where, as here, the Commissioner of Patents acts in the interests of the public, and without prejudice to the real rights of applicants, he should be upheld.

The Patent Office has found, and we agree in the finding, that the other claims involved are drawn to the same general subject matter as the claims to which we have referred.

In our view, the decision was right, and is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

STEELE, MARTIN, AND MCCARTHY *v.* CHUBB.

No. 2,031. Decided February 6, 1928.

INTERFERENCE—PRIORITY.

Priority *Held* properly awarded to the junior party, C.

Mr. Robert Watson for Steele et al.

Mr. W. G. Carr and *Mr. O. B. Bachman* for Chubb.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority as to the three claims to the junior party, Chubb.

The issue relates to a method of electrically welding metallic parts by moving one of such parts with respect to and into contact with the other through the path of the electric arc formed between them. The arc is maintained "automatically" (count 3), "under electric control" (count 4), and "automatically controlled" (count 8) for a determined period.

The invention is of a complicated character, and the decision of the Patent Office ought not to be disturbed unless error is clearly made to appear. We have examined the record and the briefs of counsel. Being convinced of the correctness of the conclusion reached, we affirm the decision.

Affirmed.

Court of Appeals of the District of Columbia.

CHUBB *v.* SHORT.

No. 2,035. Decided February 6, 1928.

INTERFERENCE—PRIORITY—DILIGENCE.

Where S., who was the first to conceive the invention, first submitted it to the War Department and afterwards employed different patent attorneys, eventually filing his application about 14 months after C., *Held* that while S. may have been overcautious he was acting in good faith, was not lacking in diligence in reducing the invention to practice, and that priority was properly awarded to him.

Mr. Jesse R. Langley for Chubb.

Mr. W. F. Hall and *Mr. E. S. Middleton* for Short.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of the Commissioner of Patents in an interference proceeding awarding priority to the junior party, Short.

The invention is highly technical, comprising as it does means for functionalizing the beams of an automobile headlight, and means, such as shields, for approaching drivers which permit, or are supposed to permit, unobjectionable light to pass therethrough, but which are supposed to cut off the direct rays and thereby eliminate glare.

There are three counts, but count 1 will be sufficient for our purposes, and reads as follows:

1. The headlight apparatus for automobiles or other vehicles comprising a pair of headlights provided with emission polarizing devices to form a beam of light transmitted ahead of the vehicle and substantially polarized in a definite plane, and polarized light viewing devices adapted to be mounted adjacent the eyes of the driver of the vehicle to substantially cut off light polarized in said plane to thereby minimize the objectionable headlight glare of a similarly equipped approaching vehicle.

The Chubb application was filed July 29, 1920. Since he has taken no testimony, he is restricted to his filing date for conception, disclosure, and constructive reduction to practice.

The Examiner of Interferences found that Short conceived and disclosed the invention as early as November 6, 1919, and this ruling was accepted by the other tribunals and is not challenged by Chubb. It is contended by Short that he reduced the invention to practice prior to Chubb's filing date, but in the view we take of the case it is unnecessary to determine this question. He is an engineer, and at the time of making the invention was a captain in the Ordnance Department of the United States Army. He solicited the assistance of the patent branch of that Department, and on November 6, 1919, submitted to it a written description and drawing of his invention. Applications for patent were prepared by the Ordnance Department, but these applications were not satisfactory to Short, and on May 19, 1920, which it will be observed was a short time prior to Chubb's filing date, Short consulted a prominent firm of patent attorneys for the purpose of having an application or applications prepared. Again, he was not satisfied with what was done by this firm; and consulted another firm, by whom the application was prepared, and was filed on September 26, 1921. The Examiner of Interferences and the board ruled that Short was lacking in diligence, and awarded priority to Chubb. The Commissioner, after an analysis of the evidence, reached the conclusion that Short had shown diligence, and therefor awarded him priority. The Commissioner said:

Short may have been too critical as to the work of his attorneys; he may have had a misconception of the true nature of the patentable characteristics of his invention; he may have been overcautious in the preparation of his application; he may have taken the wrong course at times; he may have blundered in some instances; but from the record he cannot be charged with want of diligence.

We agree with the Commissioner. As we have frequently said, diligence is a relative term. *Burnett* v. *Utsman*, 245 O. G. 1027, 46 App. D. C. 407; *Jobski* v. *Johnson*, 247 O. G. 479, 47 App. D. C. 230; *Dickinson* v. *Swinehart*, 273 O. G. 191, 49 App. D. C. 222. The attorney who finally prepared Short's application testified that the whole theory of light is more or less uncertain and a subject of controversy; that—

it was perfectly easy to understand Mr. Short's broad concept, but I encountered serious difficulty in preparing a description of the invention which should disclose it in simple, clear-cut terms and which should at the same time avoid the use of technical terms, whose exact meaning was not authoritatively defined.

Considering the highly technical character of the invention and that Short probably knew more about it than anyone else, he may have been overcautious as to the preparation of his application, but there can be no doubt that he was acting in good faith and at all times diligently attempting to have his application completed and filed. In the circumstances, it would be inequitable to deprive him of the invention.

By writ of certiorari Short has added to the record his brief before the Commissioner. We think this was unnecessary, and the costs incident thereto will be taxed against him.

The decision is affirmed.

Affirmed.

Extension of Patents for World War Veterans.

[PUBLIC—No. 623—70TH CONGRESS.]

An Act Providing for the extension of the time limitations under which patents were issued in the case of persons who served in the military or naval forces of the United States during the World War.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person who served honorably in the military or naval forces of the United States at any time between April 6, 1917, and November 11, 1918, both dates inclusive, and was subsequently honorably discharged, may within six months after the enactment of this Act, upon payment of a fee of $20, make application to the Commissioner of Patents, comprising a verified statement, accompanied by supporting evidence of the following facts:

(A) That he is the inventor or discoverer of an invention or discovery for which a specified patent was granted prior to the 11th day of November, 1918, the original term of which remains unexpired at the time of the filing of the application.

(B) That between April 6, 1917, and November 11, 1918, and also at the time of the passage of this Act, he held, by ownership or contract, a right in said invention or under said patent or to income by way of royalty or otherwise therefrom, whereby an extension of the term of said patent would benefit him.

(C) That between April 6, 1917, and July 2, 1921, he was not receiving from said patent an income, or that his income therefrom was reduced by his said service.

(D) That at the time of his induction into the service he was making diligent effort to exploit the invention covered by his patent.

(E) The names of all persons, firms, or corporations, if any, holding at the time of the passage of this Act, by grant, transfer, license, or contract from him, any right or interest in the invention or discovery or under the patent, and their consent to the extension for which application is made, which shall be supported by an instrument, or instruments, executed by all such persons, firms, and corporations, evidencing their consent to such extension.

(F) The period of extension of the patent from the expiration of the original term thereof, for which he applies, which shall in no case exceed a further term of three times the length of his said service in the military or naval forces of the United States between the dates of April 6, 1917, and July 2, 1921, but exclusive of any reenlistment subsequent to November 11, 1918.

(G) That the licensee of a patent affected by this Act shall automatically be granted an extension of said license for the period of the extension on the same terms and conditions as contained in said existing license, thereby creating an equitable adjustment of the benefits of this Act.

(H) That such extension shall in no way impair the right of anyone who before the passage of this Act was bona fide in possession of any rights in patents or applications for patents conflicting with the rights in any patents extended under this Act, nor shall any extension granted under this Act impair the right of anyone who was lawfully manufacturing before the passage of this Act the invention covered by the extended patent.

SEC. 2. In the case of a veteran, as described in paragraph 1 of this Act, who dies, or has died, or who becomes insane or unable to act, which veteran owned an interest as described in this Act in said patent at the time of his death or at the time he was declared mentally incompetent or became unable to act before said extension is granted, such application may be filed or proceeded with by his legal representatives substantially as provided in section 4896 of the Revised Statutes of the United States (United States Code, title 35, section 46), as amended, with respect to proceedings in such cases for obtaining a patent.

SEC. 3. On the filing of such application the Commissioner of Patents shall cause an examination thereof to be made, and if, on such examination, it shall appear that such application conforms, or by amendment or supplement is made to conform, to the requirements of section 1 of this Act, the Commissioner shall cause notice of such application to be published at least once in the OFFICIAL GAZETTE. Any person who believes that he would be injured by such extension may within forty-five days from such publication oppose the same on the ground that any of the statements of the application for extension required by section 1 of this Act is not true in fact, which said notice of opposition shall be verified before an officer authorized by the laws of any State or Territory or the District of Columbia to administer oaths. In all cases where notice of opposition is filed the Commissioner of Patents shall notify the applicant for extension thereof and set a day of hearing. If after such hearing the Commissioner of Patents is of the opinion that such extension should not be granted, he may deny the application therefor, stating in writing his reasons for such denial. Where an extension is refused the applicant therefor shall have the same remedy by appeal from the decision of the Commissioner as is now provided by law where an application for patent is refused. If no opposition to the grant of the extension is filed, or if, after opposition is filed, it shall be decided that the applicant is entitled to the extension asked for, the Commissioner of Patents shall issue a certificate that the term of said patent is extended for the additional period for which application has been made as aforesaid, and shall cause notice of such extension to be published in the OFFICIAL GAZETTE and marked upon copies of the patent for sale by the Patent Office, in such manner as the Commissioner may determine.

SEC. 4. Thereupon said patent shall have the same force and effect in law as though it had been originally granted for seventeen years plus the term of such extension: *Provided, however,* That in any action, at law or in equity, for infringement after the expiration of seventeen years from the grant of the patent and during the period of such extension, the defendant may plead the general issue, and having given notice in writing to the plaintiff or his attorney thirty days before, may prove on trial that any of the statements of the application for extension required by section 1 of this Act is not true in fact; and if any one or more of such statements shall be found untrue in fact, judgment shall be rendered for the defendant, with costs: *Provided further,* That no person whose patent shall be extended under the provisions of this Act shall be permitted to make any claim for damages against the United States for the period of the extension, and the rights of the United States shall remain in all respects as if these patents had not been extended.

Approved, May 31, 1928.

Adjudicated Patents.

(D. C. Pa.) The Millspaugh patent, No. 1,205,822, for improvement in paper-making machines, claims 2 and 3 *Held* valid and infringed. *Guardian Trust Co.* v. *Downington Mfg. Co.*, 25 F. (2d) 878.

(C. C. A. N. J.) The Riches & Piver patent, No. 1,237,815, for process of manufacturing calcium arsenate as an insecticide, *Held* invalid and not infringed. *Riches, Piver & Co.* v. *Nitrate Agencies Co.*, 25 F. (2d) 860.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 3, 1928.

[VOL. 372. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

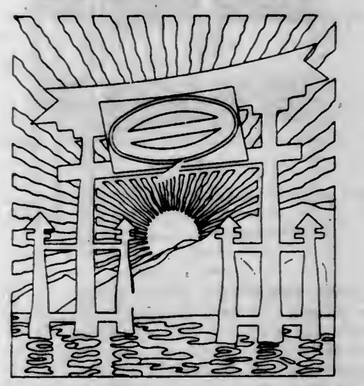
Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 263,348. RICHARD YOUNG COMPANY, New York, N. Y. Filed Mar. 17, 1928.



No claim is made to the exclusive use of the word "Sheep" apart from the mark shown in the drawing.

For Leather.

Claims use since about Nov. 28, 1927.

Ser. No. 263,603. GUNMAKEN RAW SILK CORPORATION OF AMERICA, New York, N. Y. Filed Mar. 22, 1928.

JOSHUSHA

For Raw Silk.

Claims use since Feb. 2, 1928.

CLASS 2.

Receptacles.

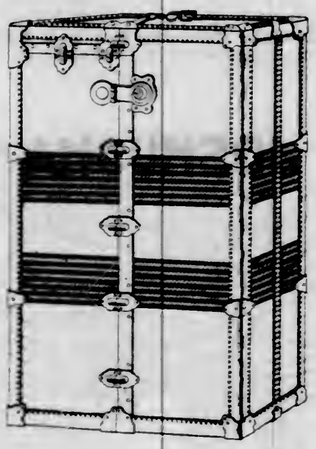
Ser. No. 260,571. FRED I. JADEN, doing business as F. Jaden Manufacturing Co., Hastings, Nebr. Filed Jan. 24, 1928.

GOLDEN ROD

For Oil Cans.

Claims use since about February, 1925.

Ser. No. 262,786. ISAAC APPELBAUM, doing business as The Hangerette Company, New York, N. Y. Filed Mar. 8, 1928.



HANGERETTE

For Foldable Cardboard Containers for Men's, Women's, and Children's Wearing Apparel.
Claims use since Mar. 14, 1927.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 229,979. THE OSHKOSH TRUNK COMPANY, Oshkosh, Wis. Filed Apr. 10, 1926.

The lining in the drawing for the bands or stripes is for the purpose of shading only. Applicant disclaims the representation of the trunk as shown except with respect to the stripes or bands thereon. Applicant is the owner of registrations Nos. 202,709 and 202,710.
For Wardrobe Trunks, Dress Trunks, Cabin or Steamer Trunks; Shoe, Shirtwaist, and Hat Trunks, Hat Trunks, Shoe or Boot Trunks, and Hand Luggage, Such as Visiting Cases, Portable Wardrobe Trunks, and Taxi Trunks.
Claims use since Mar. 27, 1915.

Ser. No. 260,134. ANDRÉ PERUGIA, Paris, France. Filed Jan. 14, 1928.

Perugia

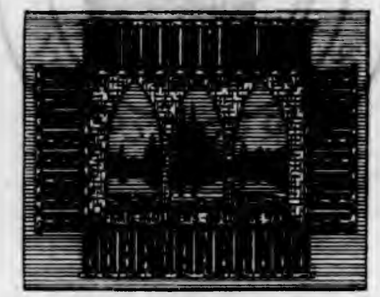
The trade-mark is a facsimile of the essential part of applicant's signature.
For Satchels, Hand Bags, Traveling Bags, Valises, Trunks, Vanity Packages, Hat Boxes, and Brief Cases Made from Leather.
Claims use since 1923.

Ser. No. 261,950. THE DERCO TRUNK CO., Los Angeles, Calif. Filed Feb. 20, 1928.

DERCO TRUNKS

Exclusive use of the word "Trunks" is disclaimed apart from the mark as shown in the drawing.
For Trunks, Such as Wardrobe Trunks, Wardrobe Cases, Automobile Trunks, and Hand Luggage Such as Traveling Bags, Suit Cases, Hat Boxes, and Empty Lunch Kits.
Claims use since about Jan. 15, 1928.

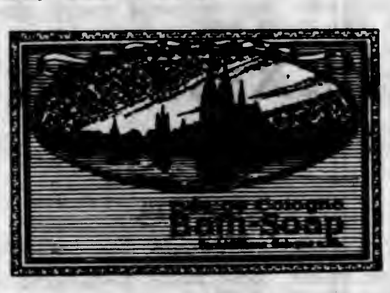
Ser. No. 263,246. WHITE LUGGAGE CO., INC., New York, N. Y. Filed Mar. 15, 1928.



Touro-Lite

For Hat Boxes.
Claims use since Nov. 16, 1927.

CLASS 4.



Abrasive, Detergent, and Polishing Materials.

Ser. No. 242,048. DIE EAU DE COLOGNE- & PARFÜMERIE-FABRIK "GLOCKENGASSE No. 4711" GEGENÜBER DER PFERDEPOST VON FERD. MÜLHENS, Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1926.

The wording appearing in the mark, except the name "Ferd. Mülhens," is disclaimed. The ground color of the trade-mark is greenish blue with gold and black.
For Soaps Including Toilet Soaps and Shaving Sticks.
Claims use since March, 1926.

Ser. No. 242,102. DIE EAU DE COLOGNE- & PARFÜMERIE-FABRIK "GLOCKENGASSE No. 4711" GEGENÜBER DER PFERDEPOST VON FERD. MÜLHENS, Cologne-on-the-Rhine, Germany. Filed Dec. 29, 1926.

The wording appearing in the mark, except the name "Ferd. Mülhens," is disclaimed. The ground color of the mark is greenish blue with gold and black.
For Soaps Including Shaving Sticks.
Claims use since March, 1926.

Ser. No. 257,808. THE MENTHOLATUM COMPANY, Wichita, Kans., and Buffalo, N. Y. Filed Nov. 19, 1927.

MENTHOLATUM

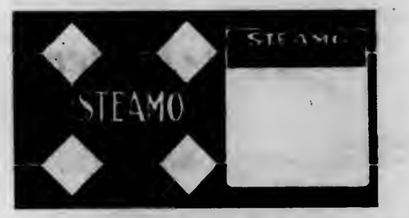
For Shaving Cream for Use Before Shaving, and Soap Shampoo.
Claims use since June 15, 1927.

Ser. No. 259,706. WILLIAM EARL BAUER, doing business as Bauer & Bauer, Norristown, Pa. Filed Jan. 5, 1928.

SCARAB RAY

For Household Cleansing Preparation.
Claims use since May 6, 1927.

Ser. No. 259,707. WILLIAM EARL BAUER, doing business as Bauer & Bauer, Norristown, Pa. Filed Jan. 5, 1928.



For Household Cleansing Preparation.
Claims use since May 6, 1927.

Ser. No. 265,708. WEBB BELTING CO., Kansas City, Mo. Filed Apr. 30, 1928.

SLIP-KNOT

For Belt Dressing in Liquid and Stick Form.
Claims use since about 1918.

Ser. No. 266,440. RECKITT & SONS, LIMITED, Hull, England. Filed May 15, 1928.

For Polishing and Cleaning Preparations for Glass.
Claims use since Nov. 23, 1926.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 235,360. THE BRADIGAN TABLET CONCERN, Jamestown, N. Y. Filed July 30, 1926.

Exclusive use of the words "Constipation, Pleurisy, Kidney, Liver, Neuralgia, Catarrh, The, Great, Tablets, For Rheumatism," is disclaimed except as used in connection with the mark as shown. The vertical shade lines indicate the color red and the shade lines inclined at forty-five degrees indicate green.
For Medicinal Preparations for the treatment of Constipation, Pleurisy, Catarrh, Neuralgia, Rheumatism, and Kidney and Liver Complaints.
Claims use since July 2, 1926.

Ser. No. 253,938. CHAPPEL BROS., INC., Rockford, Ill. Filed Aug. 25, 1927.

HEMO-GLYCOGEN

No claim is made to the term "Glycogen" apart from the mark as a whole.
For Liver Extract and Hemoglobin Compound.
Claims use since Aug. 11, 1927.

Ser. No. 256,772. OSCAR L. GABRIEL, doing business as Happie-Easter Dye Company, Brooklyn, N. Y. Filed Oct. 29, 1927.

"Happie-Easter"

For Dyes.
Claims use since Oct. 15, 1927.

Ser. No. 260,302. E. B. WITTE, doing business as Heal-Ol Laboratories, Trenton, N. J. Filed Jan. 18, 1928.

HEAL-OL

For Antiseptic Solution.
Claims use since on or before Aug. 14, 1918.

Ser. No. 264,101. HEINE & Co., New York, N. Y. Filed Mar. 31, 1928.

SAPOFIXIN

For Natural and Synthetic Oils Suitable for Perfumery Purposes.
Claims use since May 26, 1926.

Ser. No. 264,548. THE ESPE DRUG CO., Subsidiary of Model Drug Stores, Incorporated, Louisville, Ky. Filed Apr. 7, 1928.

Bi-Sor-Bin

For Medicine Used for Relief of Indigestion, Flatulence, Heartburn, Sour Stomach, Dyspepsia, Bad Breath, and Nausea and as an Antacid, Digestant, and Gas Eliminant.
Claims use since Jan. 3, 1928.

Ser. No. 264,760. ROGER G. LAFITE, doing business as Automotive Manufacturing Company, Kansas City, Mo. Filed Apr. 13, 1928.

Electra

For Batteries.
Claims use since Apr. 4, 1928.

Ser. No. 265,608. THE ARCO BATTERY & PLATE CO., Fort Wayne, Ind. Filed Apr. 30, 1928

ARCO-IZED

For Batteries and Battery Plates.
Claims use since May, 1927.

Ser. No. 265,707. THE TRIUMPH ELECTRIC CORPORATION, Cincinnati, Ohio. Filed Apr. 30, 1928.

For Electric Motors.
Claims use since 1926.

Ser. No. 265,940. THE BEARDSLEY & WOLCOTT MFG. CO., Hartford, Conn. Filed May 5, 1928.

PUSHOMATIC

For Electric Toasters.
Claims use since Mar. 15, 1928.

CLASS 22.

Games, Toys, and Sporting Goods.

Ser. No. 246,800. C. W. WYNN, Selma Ala. Filed Apr. 1, 1927.

SPIDALURE

For Fish Lures.
Claims use since Feb. 1, 1927.

Ser. No. 259,994. THOMAS E. CAHILL, doing business as The Checkeroll Company, Ardmore, Pa. Filed Jan 12, 1928.

CHECKEROLL

For Modified Checker Game.
Claims use since Jan. 15, 1927.

Ser. No. 264,144. THE COLSON COMPANY, Elyria, Ohio. Filed Apr. 2, 1928.

BABYBIKE

The word "Bike" is disclaimed apart from the mark shown. Applicant is the owner of registration No. 175,437 covering the term "Baby-Bikes."
For Velocipedes.
Claims use since Apr. 28, 1925.

Ser. No. 264,859. CLIFTON C. ALLES, Los Angeles, Calif. Filed Apr. 16, 1928.

HE-BOY.

For Toy Vehicles—Namely, Toy Wagons.
Claims use since Feb. 10, 1928.

Ser. No. 265,329. THE ENTERPRISE MANUFACTURING COMPANY, Akron, Ohio. Filed Apr. 24, 1928.

STRIPLITE

For Artificial Bait.
Claims use since about Sept. 1, 1927.

CLASS 23.

Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 257,209. WHITE AND HALLOCK, INC., Muskegon, Mich. Filed Nov. 7, 1927.

Whippit

For Beaters for Culinary Purposes Including Egg Beaters and Cream Whips.
Claims use since July 15, 1925.

Ser. No. 258,052. THE VILLAGE BLACKSMITH FOLKS, Watertown, Wis. Filed Nov. 25, 1927.

GRASWIP

The lining on the letters in the drawing represents shading.
For Grass and Weed Cutters.
Claims use since on or about Aug. 1, 1927.

Ser. No. 259,113. LOUIS HIRSCH, INC., Weehawken, N. J., and New York, N. Y. Filed Dec. 19, 1927.

No claim is made to the right to the exclusive use of the representation of the needle shown in said mark and/or to the right to the exclusive use of the word "Needles" occurring in said mark except in the setting and relation in which they appear in said drawing.

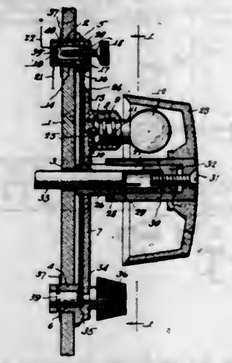
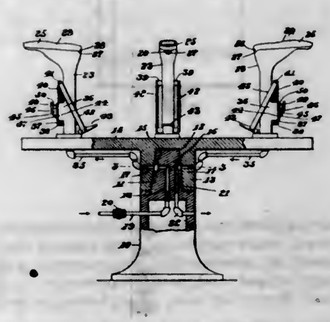
REISSUES

JULY 3, 1928.



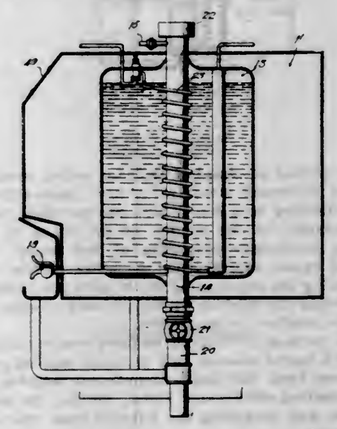
17,015. BRAKE. WILLIAM J. ANDRES, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1928. Serial No. 247,722. Original No. 1,640,589, dated Aug. 30, 1927, Serial No. 46,041, filed July 25, 1925. 34 Claims. (Cl. 188—78.)

1. A brake for a vehicle comprising, in combination, a retarding device, anchoring means engaging the retarding device, and a pair of oppositely-effective servo devices, one of which is arranged to operate the retarding device when the vehicle is moving forward and the other of which is arranged to operate the retarding device when the vehicle is moving backward.



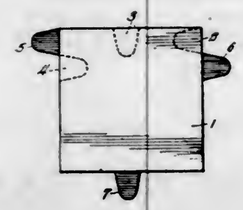
17,016. [WITHDRAWN.]

17,017. ILLUMINATED DIAL. WILLIAM C. BUCHHOLZ and FRANK BUCHHOLZ, Brooklyn, N. Y. Filed Oct. 4, 1926. Serial No. 139,540. Original No. 1,566,069, dated Dec. 15, 1925, Serial No. 31,368, filed May 19, 1925. 6 Claims. (Cl. 240—2.)



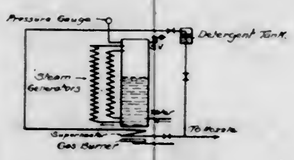
4. The combination with a radio apparatus provided with a dial, of means including a lamp for illuminating said dial, and a knob for actuating said dial, said knob being formed as a hood for covering part of said lamp so that the same will illuminate the dial.

17,018. INNERSOLE-APPLYING DEVICE. GEORGE F. QUINBY, Boston, Mass., assignor, by mesne assignments, to Karl S. Howard, St. Louis, Mo. Filed Apr. 17, 1928. Serial No. 270,709. Original No. 1,352,145, dated Sept. 7, 1920, Serial No. 335,538, filed Nov. 3, 1919. 33 Claims. (Cl. 12—39.)



16. In a device of the class described, a pedestal; a revoluble table mounted thereon; a plurality of shoe supports on said table; an inflatable pad on the top of each shoe support; and means whereby during the rotation of said table air is admitted to each pad, retained therein and then exhausted therefrom.

17,019. REFRIGERATING SYSTEM. CARTER F. HALL and FREDERICK W. LEE, Baltimore, Md.; said Lee assignor to said Hall. Filed May 26, 1928. Serial No. 280,664. Original No. 1,669,465, dated May 15, 1928, Serial No. 225,871, filed Oct. 13, 1927. 4 Claims. (Cl. 62—141.)

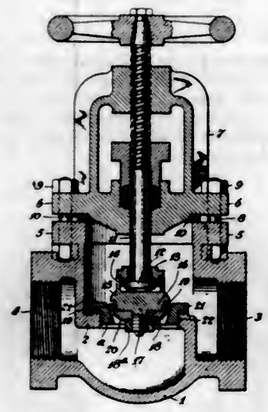


3. A liquid cooling apparatus comprising a container for liquid to be cooled, an evaporator for cooling said container, a brine tank surrounding said evaporator, a second container surrounding said brine tank, evaporator, and container, said second named container being adapted to receive ice, or other refrigerants, and means for supplying and withdrawing a volatile refrigerant from said evaporator.

17,020. PAVING BLOCK. LEON J. D. HEALY, Milwaukee, Wis., assignor to Wright Rubber Products Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 2, 1925. Serial No. 6,469. Original No. 1,473,767, dated Nov. 13, 1923, Serial No. 490,038, filed Aug. 5, 1921. 8 Claims. (Cl. 94—13.)

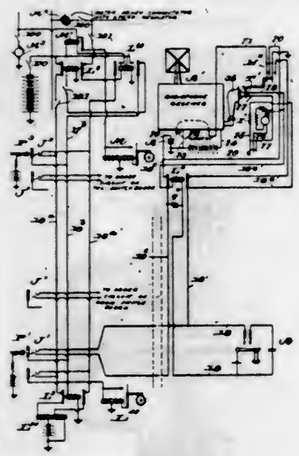
1. A paving block comprising a substantially rectilinear body having a finger projecting from each of the opposite edges thereof in asymmetrical arrangement, and a correspondingly shaped and positioned recess on the edge opposite said finger, all being offset from the medial line.

17,021. STEAM-CLEANING METHOD AND APPARATUS. STUART A. WIER, Dallas, Tex. Filed May 5, 1928. Serial No. 275,533. Original No. 1,607,034, dated Nov. 16, 1926, Serial No. 736,142, filed Sept. 5, 1924. 25 Claims. (Cl. 299—84.)



1. The method of cleaning surfaces, which consists in generating saturated steam at a low temperature and pressure, dividing such steam into two portions, reducing the temperature of one portion of the steam so as to produce a condensate consisting of hot water or hot water and vapor, superheating the other portion of the steam, mixing the superheated steam with the condensate, and projecting the mixture by the pressure of such steam against the surface to be treated.

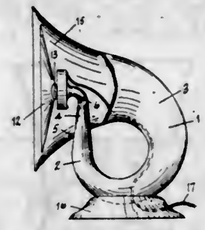
22. The method of cleaning surfaces which consists in producing a heated gaseous fluid of water content under a low pressure head, forming a saponaceous solution therewith, generating superheated steam, uniting the solution and steam, and projecting the mixture upon the surface to be treated.



17,022. RECIPROCATING VALVE. WYLIE GEMMEL WILSON, Elizabeth, N. J. Filed Aug. 23, 1927. Serial No. 214,939. Original No. 1,616,672, dated Feb. 8, 1927, Serial No. 43,906, filed July 16, 1925. 5 Claims. (Cl. 251—27.)

1. A valve including a plurality of valve sealing members, each of which has a tapered wall, one opposable to the other in a valve closing movement, in combination with a deformable and deformably mounted metal sealing

ring having a peripheral margin and an inner circumferential margin both substantially cylindrical.

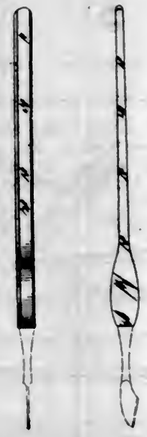


17,023. RADIO METERING SYSTEM. EDWARD E. CLEMENT, Washington, D. C., assignor to Edward F. Colladay, Washington, D. C. Filed Jan. 6, 1927. Serial No. 159,460. Original No. 1,522,359, dated Jan. 6, 1925, Serial No. 581,831, filed Aug. 14, 1922. 20 Claims. (Cl. 179—7.)

1. A system for rendering measured radio service in combination with telephone service, comprising a plurality of subscribers' stations, a telephone central station, wire lines interconnecting them, a radio central station having access to and means for connecting with said wire telephone lines, a plurality of radio subscriber's receiving stations also having access to and associated with said wire telephone lines, radio receiving apparatus at each subscriber's station, means controlled in the use of said apparatus to produce a change in the condition of the wire line leading from said substation, and metering means at the central station responsive to such changed condition of the line to register the use of the substation radio apparatus, but irresponsive to any changes produced in the use of the telephone apparatus as such.

17,024. LOUD SPEAKER. FAY O. FARWELL, Toledo, Ohio. Filed Jan. 13, 1927. Serial No. 161,016. Original No. 1,602,969, dated Oct. 12, 1926, Serial No. 90,727, filed Feb. 26, 1926. 7 Claims. (Cl. 179—116.)

1. In combination, a large diaphragm to produce one tone quality, a small diaphragm actuated in unison with the large diaphragm to produce sound waves, means to amplify the said sound waves to produce another tone quality in unison with the first tone quality which produces a third tone quality unlike either when produced

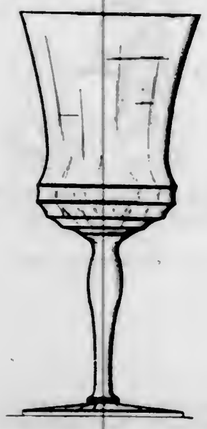


separately the large diaphragm being directly in the path of the amplified waves produced by the smaller diaphragm.

DESIGNS

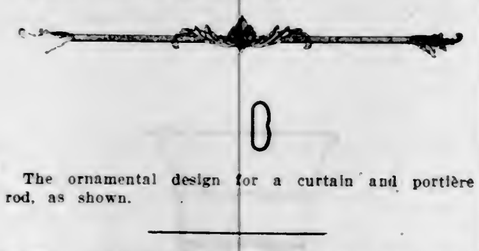
JULY 3, 1928.

75,672. MANICURE IMPLEMENT. HAMILTON C. BATES, Chester, Conn., assignor to C. J. Bates & Son, Chester, Conn., a Firm composed of Carlton J. Bates and Hamilton C. Bates. Filed Dec. 28, 1927. Serial No. 24,679. Term of patent 3½ years.



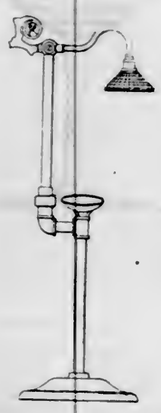
The ornamental design for a manicure implement as shown.

75,673. GOBLET OR SIMILAR ARTICLE. CHARLES C. BEAM, Cumberland, Md., assignor to The Potomac Glass Company, Cumberland, Md., a Corporation of Maryland. Filed Sept. 29, 1927. Serial No. 23,574. Term of patent 14 years.



The ornamental design for a goblet or similar article as shown.

75,674. GOBLET OR SIMILAR ARTICLE. CHARLES C. BEAM, Cumberland, Md., assignor to The Potomac Glass Company, Cumberland, Md., a Corporation of Maryland. Filed Oct. 27, 1927. Serial No. 23,899. Term of patent 14 years.



The ornamental design for a goblet or similar article as shown.

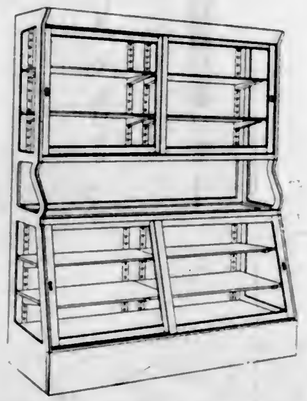
75,675. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill. Filed Apr. 18, 1928. Serial No. 26,375. Term of patent 7 years.

The ornamental design for a curtain and portière rod, as shown.

75,676. COMBINATION FLOOR LAMP AND ASH TRAY. JOSEPH J. CAMYRE, Springfield, Mass. Filed Apr. 9, 1928. Serial No. 26,203. Term of patent 7 years.

The ornamental design for a combination floor lamp and ash tray, as shown.

75,677. BADGE OR SIMILAR ARTICLE. MILDRED CHAMBERLAIN, Chicago, Ill., assignor to American Home Economics Association, a Corporation of New York. Filed Jan. 13, 1928. Serial No. 24,853. Term of patent 14 years.

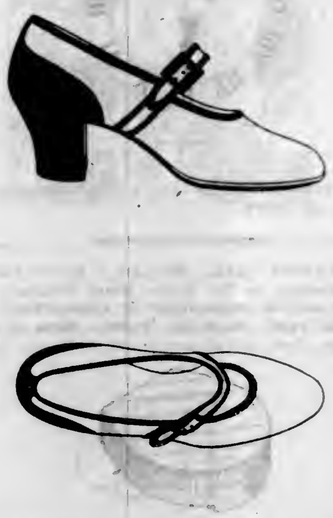


The ornamental design for a badge or similar article.

75,678. RADIATOR-CAP ORNAMENT. EDGAR W. FAUCHER and HENRY W. DILLS, Los Angeles, Calif. Filed July 1, 1926. Serial No. 18,224. Term of patent 3½ years.

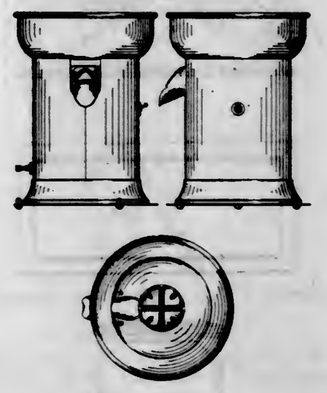
The ornamental design for a radiator cap ornament, as shown.

75,679. DISPLAY CASE OR SIMILAR ARTICLE. WILLIAM A. FIFER, Quincy, Ill., assignor to Quincy Show Case Works, Quincy, Ill., a Corporation of Illinois. Filed May 13, 1927. Serial No. 21,967. Term of patent 14 years.



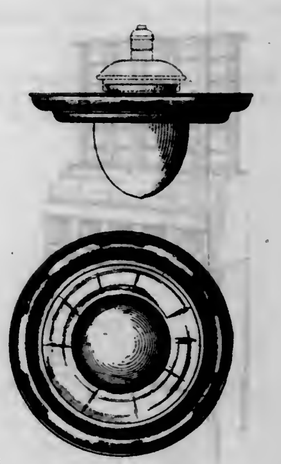
The ornamental design for a display case or similar article, as shown.

75,680. COMBINED RADIATOR-CAP ORNAMENT AND TRAFFIC SIGNAL. ROY FISHER, Los Angeles, Calif. Filed Feb. 10, 1928. Serial No. 25,355. Term of patent 7 years.



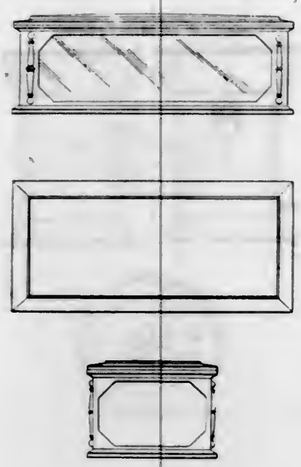
The ornamental design for a combined radiator cap ornament and traffic signal, substantially as shown.

75,681. SHOE. THOMAS J. FITZHARRIS, New Rochelle, N. Y., assignor to Franklin Simon & Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,767. Term of patent 3½ years.



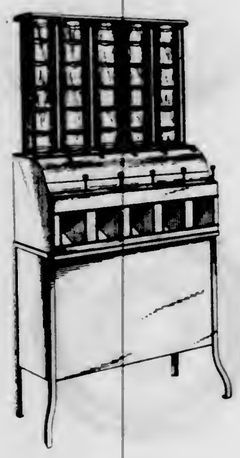
The ornamental design for a shoe, substantially as shown.

75,682. CASING FOR FRUIT-JUICE EXTRACTOR. ALFRED C. GILBERT, Hamden, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Mar. 24, 1928. Serial No. 25,987. Term of patent 14 years.



The ornamental design for a casing for fruit juice extractor substantially as shown.

75,683. LIGHT-DIFFUSING FIXTURE. EDWIN B. GILLINDER, Port Jervis, N. Y., assignor to Gillinder Brothers, Inc., Port Jervis, N. Y., a Corporation of New York. Filed Apr. 21, 1928. Serial No. 26,406. Term of patent 7 years.



The ornamental design for a light diffusing fixture, as shown.

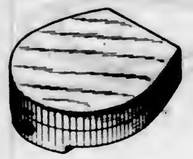
75,684. GRAVE-DECORATION CHEST. GEORGE S. GRAY, Capron, Okla. Filed Apr. 2, 1928. Serial No. 26,101. Term of patent 7 years.

The ornamental design for a grave decoration chest, as shown.

75,685. COMBINED VENDING AND DISPLAY CASE. WILLIAM O. HARRISON and GEORGE W. JOHNSON, Buffalo, N. Y. Filed Sept. 6, 1927. Serial No. 23,298. Term of patent 3½ years.

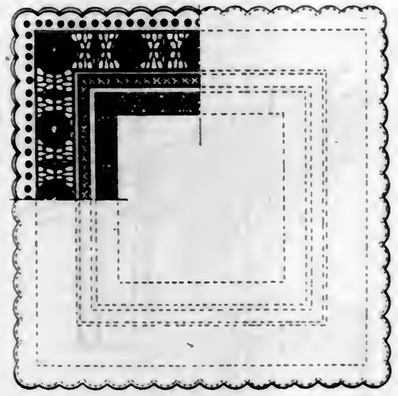
The ornamental design for a combined vending and display case as shown.

75,686. RUG OR SIMILAR ARTICLE. LOUIS S. HENDERSON, Philadelphia, Pa. Filed May 5, 1928. Serial No. 26,579. Term of patent 3½ years.



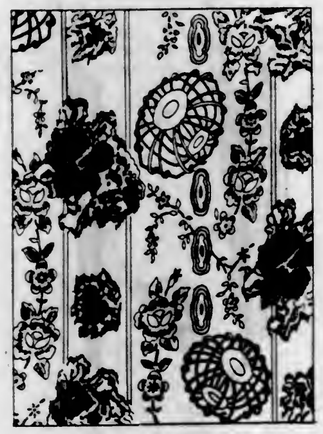
The ornamental design for a rug or similar article, as shown and described.

75,687. TIME INDICATOR. PATRICE H. HICKEY, Happy Camp, Calif. Filed Jan. 23, 1928. Serial No. 24,990. Term of patent 14 years.



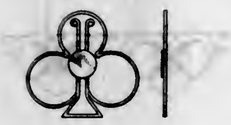
The ornamental design for a time indicator substantially as shown.

75,688. VANITY CASE. WILLIAM J. HINES, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 28, 1926. Serial No. 19,196. Term of patent 14 years.



The ornamental design for a vanity case, as shown.

75,689. DOILY. EDWARD KARFIOL, Brooklyn, N. Y. Filed Feb. 8, 1928. Serial No. 25,258. Term of patent 14 years.



The ornamental design for a doily as shown and described.

75,690. TEXTILE FABRIC. ERNEST KIRCHHOFF, Great Kills, N. Y., assignor to Elias Reiss & Company, New York, N. Y., a Corporation of New York. Filed Oct. 26, 1927. Serial No. 23,892. Term of patent 3½ years.

The ornamental design for textile fabric, as shown.

75,691. PAPER CLIP OR SIMILAR ARTICLE. WALTER LAMPL, New York, N. Y. Filed Feb. 17, 1925. Serial No. 12,401. Term of patent 3½ years.

The ornamental design for a paper clip or similar article as shown.

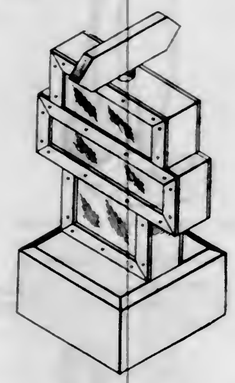
75,692. CAP FOR ATOMIZERS. GUSTAVE M. MINTON, Jr., New York, N. Y. Filed Jan. 20, 1928. Serial No. 24,941. Term of patent 14 years.

The ornamental design for a cap for atomizers, as shown.

75,693. PERFUME ATOMIZER. GUSTAVE M. MINTON, Jr., New York, N. Y. Filed Feb. 8, 1928. Serial No. 25,260. Term of patent 7 years.

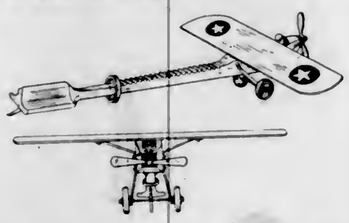
The ornamental design for a perfume atomizer as shown.

75,694. BELT CLASP. WILLARD A. ORMSBEE, Taunton, Mass. Filed Feb. 19, 1927. Serial No. 20,817. Term of patent 3½ years.



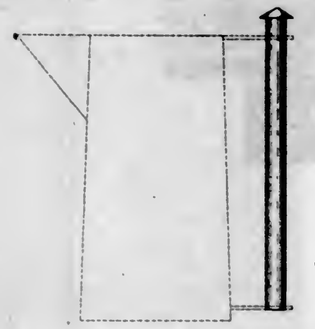
The ornamental design for a belt clasp, substantially as shown.

75,695. GLASS JAR. MARIO PERUZZI, Wilkes-Barre, Pa., assignor to Planters Nut & Chocolate Co., Wilkes-Barre, Pa. Filed Feb. 21, 1928. Serial No. 25,509. Term of patent 14 years.



The ornamental design for a glass jar as shown.

75,696. ROAD SIGN. GUY L. PITT, Rocky Mount, N. C. Filed Jan. 21, 1928. Serial No. 24,965. Term of patent 14 years.



The ornamental design for a road sign, as shown.

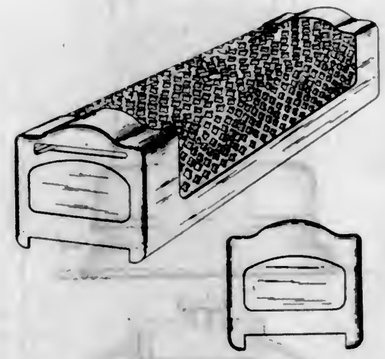
75,697. AEROPLANE TOY. JACK JOSEPH RENIE, Los Angeles, Calif. Filed Oct. 3, 1927. Serial No. 23,612. Term of patent 3½ years.

The ornamental design for an aeroplane toy substantially as shown.

75,698. PITCHER OR LIKE ARTICLE. LOUIS W. RICE, New York, N. Y., assignor to Bernard Rice's Sons, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 23, 1928. Serial No. 25,979. Term of patent 7 years.

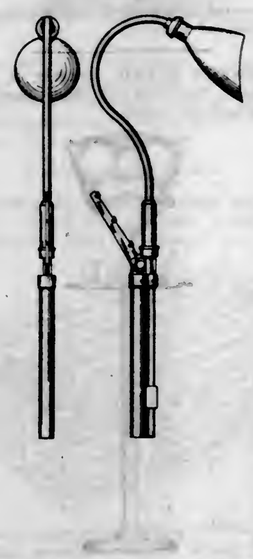
The ornamental design for a pitcher or like article, as shown and described.

75,699. FINIAL. JOHN B. SALTERINI, New York, N. Y. Filed Apr. 26, 1928. Serial No. 26,470. Term of patent 3½ years.



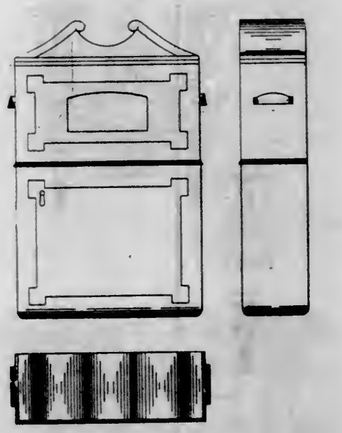
The ornamental design for a finial, as shown.

75,700. EMBROIDERED EDGING. HENRY SCHWARBER, Weehawken, N. J. Filed Apr. 28, 1928. Serial No. 26,494. Term of patent 3½ years.



The ornamental design for embroidered edging, as shown.

75,701. HEATER FOR AUTOMOBILES. ALBERT SPILLMAN, North Tonawanda, N. Y. Filed Sept. 9, 1927. Serial No. 23,335. Term of patent 3½ years.

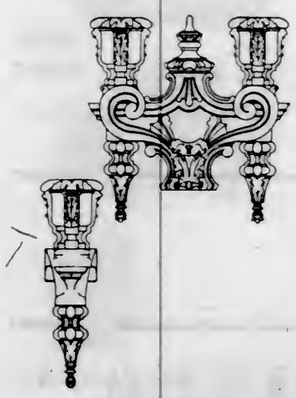


The ornamental design for a heater for automobiles as shown.

75,702. FENCE POST. OLIVER SMITH STYER and GRANT AUSTIN SNEDEKER, Bridgeport, Conn. Filed Jan. 29, 1925. Serial No. 12,193. Term of patent 14 years.

The ornamental design for a fence post, as shown.

75,703. COMBINED FLUSH TANK AND CABINET. BERT O. TILDEN, Trenton, N. J., assignor to B. O. T. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed May 4, 1928. Serial No. 26,563. Term of patent 14 years.

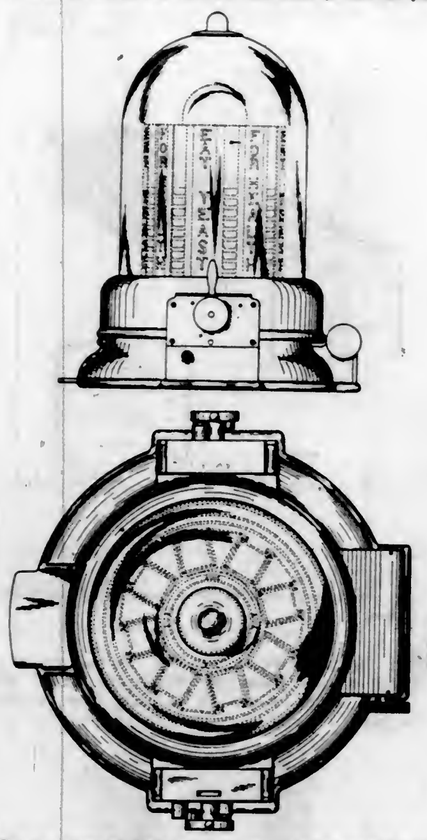


The ornamental design for combined flush-tank and cabinet, as shown.

75,704. CAPITAL FOR LAMP-POSTS. WESTERN UNDERWOOD, Los Angeles, Calif. Filed Mar. 27, 1928. Serial No. 26,019. Term of patent 7 years.

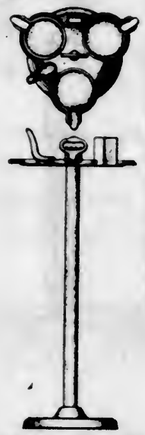
The ornamental design for a capital for lamp posts, as shown.

75,705. HEAD FOR LAMP-POSTS. WESTERN UNDERWOOD, Los Angeles, Calif. Filed Mar. 27, 1928. Serial No. 26,020. Term of patent 7 years.



The ornamental design for a head for lamp posts, as shown.

75,706. STREET-LIGHT LANTERN. WESTERN UNDERWOOD, Los Angeles, Calif. Filed Mar. 27, 1928. Serial No. 26,022. Term of patent 7 years.

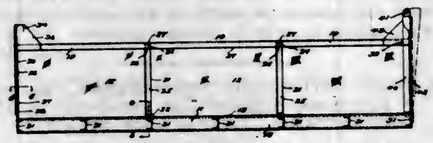


The ornamental design for a street light lantern, as shown.

75,707. COMBINATION VENDING AND DISPENSING CASE. GEORGE R. WEBBER, Augusta, Me. Filed Jan. 3, 1928. Serial No. 24,742. Term of patent 14 years.

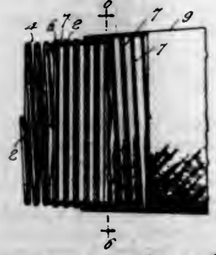
The ornamental design for a combination vending and dispensing case, as shown.

75,708. SMOKER'S STAND. GUSTAV A. WENDT, Cincinnati, Ohio. Filed Sept. 16, 1926. Serial No. 19,085. Term of patent 3½ years.



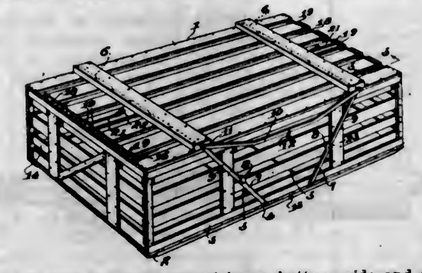
The ornamental design for a smoker's stand as shown.

PATENTS



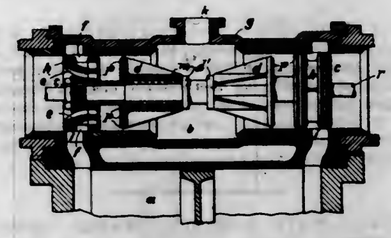
GRANTED JULY 3, 1928.

1,675,317. TRUCK-BODY CONSTRUCTION. ROBERT F. BURKE, Phoenixville, Pa., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 24, 1925. Serial No. 52,013. 3 Claims. (Cl. 296—28.)



1. A truck body including sides having upright portions with lower outwardly bulged portions providing opposed channels; and a plate having opposite edge portions housed within said channels to provide a floor, portions of said plate, from the parts within said channels, being bent upward in front of the forward ends of said bulged portions and extending transversely thereof to provide a front for the body.

1,675,318. ACOUSTIC HORN. MAX ABRAHAMS, New York, N. Y. Filed Sept. 13, 1926. Serial No. 135,214. 4 Claims. (Cl. 181—27.)

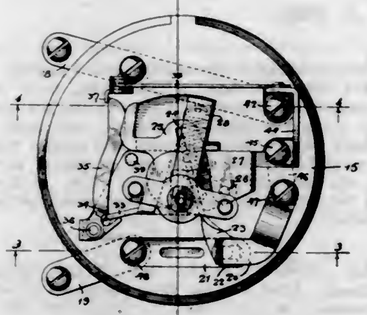


1. An acoustic horn comprising a flexible skeleton frame, a cloth covering said flexible skeleton frame, and an impregnated fabric covering for said first mentioned covering, said skeleton frame being capable of being coiled into the shape of a spiral.

1,675,319. FOLDING CRATE. JOHN MCGARY ALLEN, Mart, Tex. Filed Feb. 18, 1926, Serial No. 89,189. Renewed May 24, 1928. 3 Claims. (Cl. 217—47.)

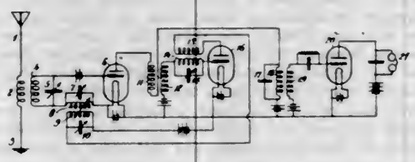
3. A foldable crate comprising a bottom, side and end walls hingedly connected thereto, a top, foldable brace members connecting said bottom and top and adapted to retain the latter in opened or extended position, guard members each comprising a rod having their opposite ends connected to the opposite sides of said top and their medial portions depending thereupon, said guard members being adapted to extend over said bottom when the crate is in folded position to prevent lateral movement of the top and bottom with respect to one another, and means for detachably connecting said guard members to said bottom.

1,675,320. PISTON VALVE. EMIL ALLZEIT, Konigsberg, Germany. Filed Feb. 26, 1926, Serial No. 90,837, and in Germany May 24, 1924. 3 Claims. (Cl. 121—133.)



1. A piston valve for steam engines comprising in combination with a cylinder a valve casing having steam inlet and exhaust chambers therein and communicating with both sides of the cylinder, a double headed piston having two distinct sets of steam passages formed therein and reciprocating in said valve casing; one set of said passages for admitting steam from the steam inlet chamber into the cylinder, the second for equalizing the difference between the pressure in the exhaust chambers and the pressure in the steam inlet chamber when the pressure in the latter sinks below a predetermined minimum, said two sets of steam passages adapted to permanently maintain the communication between the exhaust chambers, the inlet chamber and both sides of the cylinder when the steam is shut off, and independent means, for each piston head, serving for closing the passages in the piston heads when the pressure in the steam inlet chamber surpasses a predetermined maximum.

1,675,321. SECONDARY OR STORAGE BATTERY. CORNELIUS AMBRUSTER, Roslyn, Pa. Filed Nov. 23, 1925. Serial No. 70,766. 3 Claims. (Cl. 136—80.)

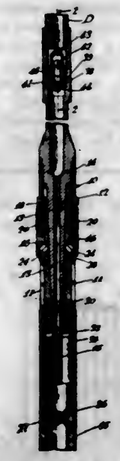


1. In a storage battery the combination of a jar, plates having lugs arranged in spaced relation and resting on the tops of one pair of the opposed walls of the jar, a pair of combs of insulating material having their backs of concave form and arranged to bridge the other pair of the opposed walls of the jar and having their teeth arranged between plate lugs to fill the spaces between the lugs and to separate the lugs, and a pair of glass plates covering the top of the jar and bridging the backs of the combs and held in inwardly sloping relation by the concave form of the backs of the combs.

1,675,322. CIRCUIT BREAKER. CARL ERIC ANDERSON, Stratford, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 17, 1925. Serial No. 44,302. 7 Claims. (Cl. 200—116.)

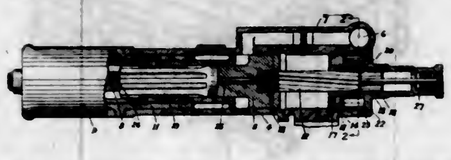
1. A circuit breaker mechanism including a movable member, a spring stressing same constantly to open-circuit position, a swinging support for said movable member, and a warping thermostatic element operatively engaged under tension by said support when the parts are in normal position, but automatically releasing the support on overload to permit its displacement by the movable member under the stress of said spring.

1,675,323. WAVE SIGNALING SYSTEM. EDWIN H. ARMSTRONG, Yonkers, N. Y., assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 10, 1923. Serial No. 638,144. 8 Claims. (Cl. 250—20.)



1. A wave-signaling system comprising an antenna, a heterodyne system, a high frequency amplifier-repeater associated with said heterodyne and interposed between the antenna and the heterodyne, said amplifier-repeater comprising an electron discharge device having a cathode, an anode, and a control electrode and input and output circuits associated therewith, means including said repeater for amplifying the incoming signal wave energy, means including the heterodyne for generating local oscillations, and means for combining the incoming energy with the local oscillations and for converting the combined oscillations to produce oscillations of an intermediate frequency, a circuit connection, associated in parallel relation with the input circuit of said repeater-amplifier for impressing intermediate frequency oscillations on the repeater, means including said repeater for amplifying said intermediate frequency oscillations so impressed, means for causing said amplified intermediate frequency oscillations to react on said heterodyne whereby an increase in the efficiency of conversion is obtained, and means for detecting and indicating said amplified intermediate frequency oscillations.

1,675,324. BRACELET HOOK. CARL AUGENSTEIN, Cranston, R. I., assignor to Automatic Gold Chain Company, a Firm comprising Edwin F. M. Speidel and Albert R. Speidel, Edgewood, R. I. Filed Dec. 10, 1926. Serial No. 153,973. 7 Claims. (Cl. 24—239.)



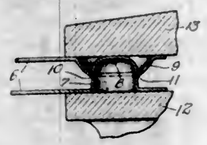
1. An extensible bracelet hook comprising a casing member, a hook member having a shank portion slidable in said casing and having a hook portion extending a substantial distance beyond the casing, a hook-closing tongue carried by the hook member and locked closed when the members are relatively contracted and released when said members are in extended position.

1,675,325. HYDRAULIC UNDERREAMER. BENJAMIN F. BLANCHARD, Fullerton, Calif. Filed Jan. 28, 1926. Serial No. 84,342. 7 Claims. (Cl. 255—75.)

1. An underreamer comprising a slotted body presenting an interior cylindrical surface, a conical wedge having a bore therethrough disposed in said body, blocks carrying cutters slidable in said slots having their inner sides engageable upon the wedge, said blocks having lateral wings extending laterally beyond the sides of the slots between the wedge and the body, a piston disposed within the body below said blocks, and means for causing fluid discharged through said wedge to build up a pressure beneath said piston, causing it to lift said blocks into engagement with said wedge, so that they will be expanded thereby.

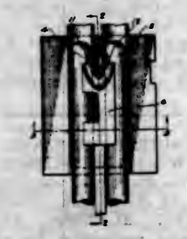
1,675,326. HAMMER DRILL. FORREST H. BLANDING, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 9, 1923. Serial No. 673,665. 2 Claims. (Cl. 121—6.)

1. In a percussive drill, a cylinder forming a piston chamber, a substantially solid piston reciprocable therein for striking upon and for transmitting rotation to a



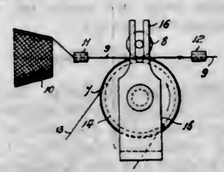
working tool, a rifle bar rigidly but detachably secured to said piston, a back head secured to said cylinder and having an axial cavity into which said rifle bar extends, a rifle nut received and rotatably supported in a counterbore in the outer end of said cavity for cooperation with said bar, an intermediate aligning member between said back head and cylinder forming a bearing for said nut, a pawl carrier detachably secured to said nut, and a ratchet ring on said back head engaged by the pawls of said carrier whereby said nut is held against rotation in one direction to force the combined piston and rifle bar to rotate during movement of the latter in one direction.

1,675,327. SEAL. BRUCE BORLAND, Chicago, Ill. Filed Dec. 21, 1925. Serial No. 76,699. 1 Claim. (Cl. 292—315.)



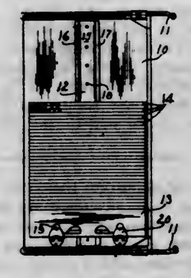
A seal comprising a strip of metal having an integrally formed button adjacent to one end, and a hole adjacent to the other end and having a notch at the base of the stud on the side of the stud toward the hole.

1,675,328. SEAL. BRUCE BORLAND, Chicago, Ill. Filed Mar. 17, 1927. Serial No. 176,030. 3 Claims. (Cl. 292—314.)



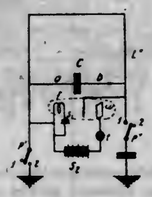
1. A seal of the character set forth, comprising a thin strip of metal having an integrally formed projection adjacent to one end thereof, said projection being approximately cylindrical with a rounded end, said seal also having an integrally formed protuberance adjacent to the opposite end, with a hole therethrough, said protuberance extending toward the projection when in engaging position, the height of the protuberance being approximately equal to the height of the rounded end of the projection.

1,675,329. APPARATUS FOR JOINING PIPES. BENJAMIN N. BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed June 21, 1926. Serial No. 117,471. 4 Claims. (Cl. 78—83.)



1. Apparatus for making pipe structures of the kind described, comprising two parallel cylindrical bars extending into and remaining stationary in the pipes during the process, and a reciprocating male die having grooves slidingly engaging said bars during the process.

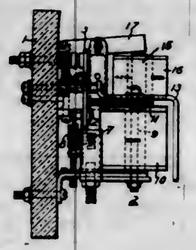
1,675,330. MEANS FOR TENSIONING YARNS OR THE LIKE IN LOOMS, WINDING, DOUBLING, AND OTHER TEXTILE MACHINES. HUGH LINLEY BYRD, Stockport, England, assignor to Drey, Simpson & Company, Limited, South Reddish, near Stockport, England. Filed Mar. 31, 1927, Serial No. 179,917, and in Great Britain Apr. 6, 1926. 3 Claims. (Cl. 242—151.)



1. The improved means for tensioning yarns in looms, winding, doubling and other textile machines, comprising a roller and a pressure member or members between which the yarn passes and is lightly gripped, said roller being positively driven in a direction opposite to the travel of the yarn so that it tends to travel the yarn backwards, and so travels the yarn when slack occurs therein, substantially as set forth.

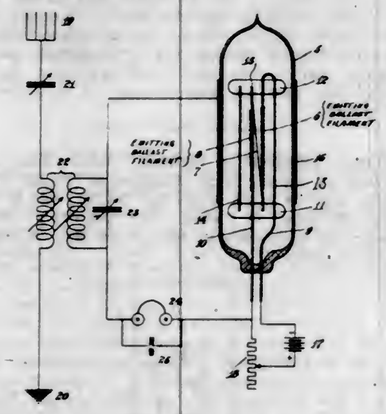
1,675,331. INDEX OR FILE. WILLIAM H. DAY, East Haven, Conn., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1924. Serial No. 750,791. 16 Claims. (Cl. 129—16.)

1. In an index or file, an index card having a pair of tongues projecting inwardly from a marginal portion thereof, each of said tongues having a transversely directed tab portion, substantially in parallelism with said marginal portion, the portion of said card being removed below said tab whereby said tab is spaced from said margin.



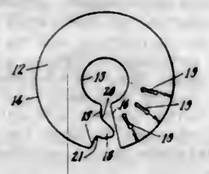
1,675,332. DIRECTION FINDER. HENRI JEAN JOSEPH MARIE DE REGNAULD DE BELLESCIZE, Toulon, France. Filed Aug. 29, 1921, Serial No. 496,537, and in France May 11, 1920. 4 Claims. (Cl. 250—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

3. In the method of ascertaining the direction of a transmitting station from a receiving station with a loop antenna functioning at one time as a directional antenna and at another time as a combined directional and non-



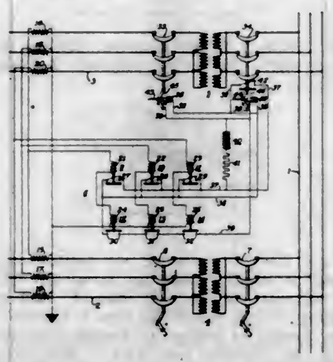
directional antenna, the steps which comprise, electrically balancing the loop antenna and setting the same as a directional antenna to the point of minimum signal reception, then electrically unbalancing said loop antenna and setting the same as a combined directional and non-directional antenna to the point of minimum signal reception, and determining from the direction of digression between these two points the sense of direction of the transmitting station.

1,675,333. CONTROL MECHANISM. RAY E. DE CAMP, Glendale, Calif., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Nov. 11, 1919, Serial No. 337,175. Divided and this application filed Aug. 25, 1923. Serial No. 659,265. 5 Claims. (Cl. 200—98.)



1. The combination with a plurality of movable members and separate means for biasing said members to certain positions, of an electromagnet coacting directly with said members for opposing said biasing means, a second electromagnet having a member coacting with said movable members and actuated by said second electromagnet, and means for biasing said coacting member in such direction as to oppose the first biasing means.

1,675,334. ELECTRON DEVICE. HAROLD POTTER DONLE, Meriden, Conn., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed June 9, 1922. Serial No. 566,969. 8 Claims. (Cl. 250—27.5.)



1. An electron device construction comprising an evacuated tube, a heating filament within the tube comprising two portions connected in series but arranged alongside of each other, one portion being straight and the other being in the form of a coil and operating at a lower temperature than the straight portion and constituting a ballasting member, an anode and a third electrode.

1,675,335. GOLF TEE. CARL B. DREVITSON, Somerville, Mass. Filed Apr. 28, 1926. Serial No. 105,145. 2 Claims. (Cl. 273—33.)

1. As an article of manufacture, a golf tee blank comprising a strip of sheet material adapted to be bent to effect overlapping of its ends to provide a hollow frustum-shaped body and having means for interengaging the overlapping ends at any of a plurality of points whereby the blank will produce any of a plurality of tees of different heights, the vertical distance between the lower and top edges of each said tee being definitely and accurately predetermined.

1,675,336. RELAY SYSTEM. WARREN O. EDMONDS, Kansas City, Mo., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 1, 1924. Serial No. 690,017. 3 Claims. (Cl. 171—97.)

1. The combination with a plurality of polyphase supply circuits, a polyphase distribution circuit, and a plurality of electrical translating devices adapted to be connected therebetween, of an underload and an overload relay for each phase of the circuits, the various relays being so connected with respect to each other and with respect to the supply circuits and the distribution circuit as to effect disconnection of certain of the translating devices from the supply circuits and the distribution circuit when the total load connected to each phase of the distribution circuit is below a predetermined value, and connection of certain of the translating devices to the supply circuit and the distribution circuit when the total load connected to any phase of the distribution circuit is above a predetermined value.

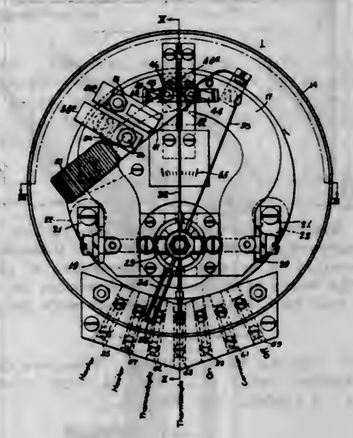
1,675,337. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 31, 1923. Serial No. 671,937. 21 Claims. (Cl. 121—164.)

1. Valve actuating mechanism for windshield cleaner motors comprising a pivotally mounted plate, means having a play connection with said plate controlled by the movement of the piston of the motor to oscillate said plate, an arm pivotally connected to said plate, a pivotally mounted valve supporting member connected to said arm, a valve supported thereby, and a spring arranged on said arm and engaging said member, said

spring being compressed when said plate and said arm are oscillated to move said valve supporting member and shift said valve.

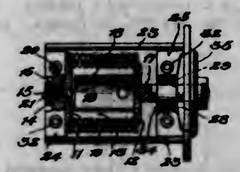
1,675,338. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,269. 20 Claims. (Cl. 121—164.)

1 A snap over valve mechanism for fluid motors comprising a valve, a carrier therefor, a spring connected at one end to said valve carrier and adapted to store up energy to effect a movement of the valve at the end of each stroke, and a system of levers connected to the opposite end of the spring for being actuated by a movable part of the motor to actuate said spring, and having a greater leverage during its initial movement when energy is being stored in said spring and a shorter, quicker-acting leverage during the later movement just before said spring effects a movement of the valve.



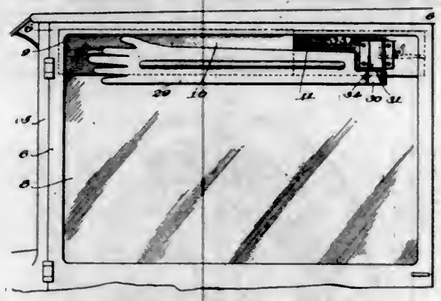
1,675,339. TRAFFIC-CONTROL SYSTEM. CHARLES B. FOLEY, Fort Wayne, Ind. Filed Sept. 1, 1927. Serial No. 216,839. 12 Claims. (Cl. 238—3.)

1. In a yielding barrier system for railway and highway grade crossings and intersections, the combination, with a paved highway of general uniform width, and an intersecting thoroughfare, of a narrow, yielding barrier set in the center of the highway at a suitable distance from the said point of intersection, means for inducing vehicles traveling toward said intersection to adopt a slightly tortuous course when approaching and passing said barrier, and a laterally extending strip of pavement continued along and beyond said barrier sufficient in area to maintain an effective half width of pavement surface opposite and beyond said barrier at least equal to the normal half width of said pavement at points more remote from said intersection.



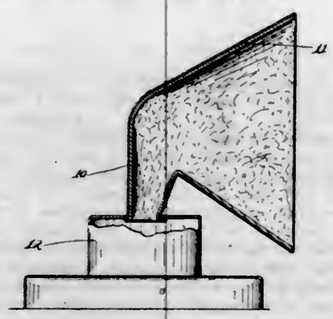
1,675,340. THERMAL REGULATOR. HARLAN S. GANO, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1924. Serial No. 686,690. 7 Claims. (Cl. 200—56.)

1. In an indicating instrument, a scale, a pointer for co-operation therewith, a tensioning device controlled by said pointer, a second pointer attached directly to said tensioning device, electrically controlled means for actuating the second pointer in accordance with an external condition and in opposition to the bias of said tensioning device, and means for manually actuating said first pointer to calibrate the instrument.



7. In an indicating instrument, in combination, a scale, a pointer for cooperation therewith, a tensioning device controlled by said pointer, a plurality of stationary contact members for a plurality of incomplete circuits, a second pointer mounted on said tensioning device and having a contact member mounted thereon, means for actuating the second pointer in accordance with an external condition and in opposition to the bias of said tensioning device, means for causing the contact member on the second pointer to periodically selectively engage said stationary contact members to permit an energizing current to traverse said pointer, contact member and a stationary contact member of one of said circuits, and means for manually operating said first pointer to calibrate the instrument.

1,675,341. THERMOSTATICALLY-CONTROLLED VALVE UNIT. JEAN V. GIESLER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Jan. 6, 1927. Serial No. 159,449. 32 Claims. (Cl. 236—34.)

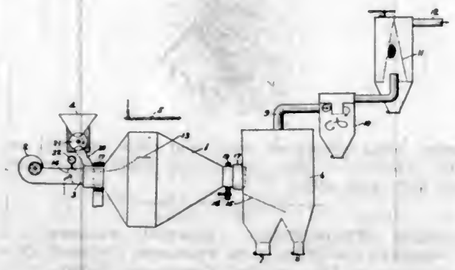


1. In a thermostatically operated valve unit, in combination with a thermostat, a thermostat support having a valve seat formed integrally therewith and being composed of sections partible on a plane extending longitudinally of said thermostat.

1,675,342. DIRECTION-INDICATING SIGNAL. HERMAN GOLDBERG, Washington, D. C. Filed Mar. 27, 1928. Serial No. 265,167. 12 Claims. (Cl. 116—52.)

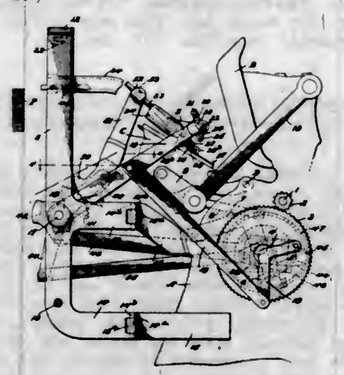
1. A direction indicating signal for vehicles including a supporting member constructed of U-shaped sheet metal adapted to be seated in the groove of the sash frame and means in the ends of said member for spreading the ends into clamping engagement with the groove.

1,675,343. SOUND REPRODUCER. THADDEUS GRAHAM, Los Angeles, Calif. Filed Jan. 19, 1926. Serial No. 82,221. 3 Claims. (Cl. 181—27.)



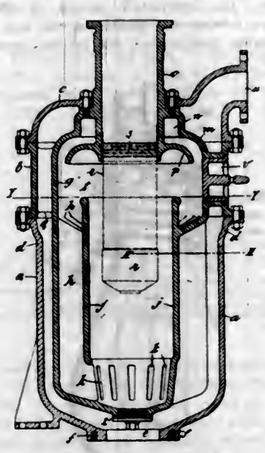
2. A sound reproducer comprising in combination a horn-like body of comparatively stiff material, said body being lined with leather, the flesh side of the leather being exposed on the interior of the horn so as to present a rough, soft, fleecy surface, whereby vibrations issuing from the source of disturbance will be partially absorbed on said surface, causing the sound reproduced to be clear in quality.

1,675,344. CARBURETOR. WILLIAM S. GUTHRIE, Terrell, Tex., assignor to Marvel Carburetor Company, Flint, Mich., a Corporation of Indiana. Filed Apr. 3, 1919. Serial No. 287,277. 3 Claims. (Cl. 261—67.)



2 A carburetor having a body provided with a mixing chamber having means for supplying air thereto, a fuel reservoir, a fuel passage extending from said reservoir to said mixing chamber and an adjustable member arranged at the point of supply controlling the supply of fuel to said fuel passage, said adjustable member being provided with a fuel passage, a valve for controlling the last mentioned fuel passage, said valve having a passage communicating with the main fuel passage.

1,675,345. APPARATUS FOR MAKING LEADEN POWDER. CLARENCE A. HALL, Philadelphia, Pa. Filed Mar. 29, 1924, Serial No. 702,890. Renewed Dec. 2, 1927. 1 Claim. (Cl. 23—284.)



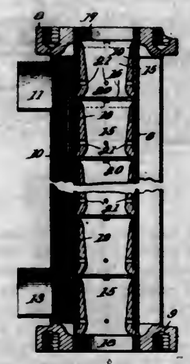
Apparatus for making leaden powder comprising in combination a hollow drum of the general form of reversely disposed conic frustums and having a closed curved wall and being revoluble about a substantially horizontal axis, means for rotating the drum, an enclosed feeder at the inlet end of the drum and in communication with the interior of the drum, an enclosed delivery hopper at the outlet end of the drum and in communication with the interior of the drum, controlled means for spraying cooling fluid onto the exterior of the drum, and controlled air connections for passing a stream of air axially through the drum, said cooling fluid means and said air connections being independently operatable for dissipating the excess of evolved heat over the limited degree of heat appropriate for the success of the chemical reaction between the air and lead.

1,675,346. TRANSFER MECHANISM. WALTER O. HALL, Franklin, Mass., assignor, by direct and mesne assignments, to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 26, 1923. Serial No. 621,438. 23 Claims. (Cl. 101—287.)

1. In combination with a printing press of the oscillating type, sheet feeding mechanism comprising a plurality of pairs of sheet gripping fingers mounted for reciprocation in planes intersecting the platen, means actuated by the operating shaft of the press for reciprocating said fingers from points adjacent a pile of sheets to points adjacent the lower edge of the platen when the latter is in substantially open position, and returning said fingers before the platen closes, and automatic means for opening said gripper fingers when they approach the limit of their movement towards the platen and for closing said fingers when they approach the opposite limit of their movement.

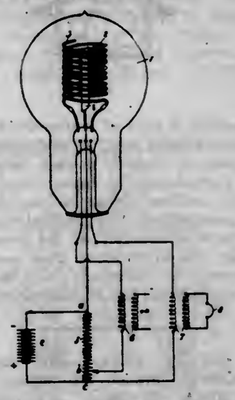
1,675,347. APPARATUS FOR BOILING OR RAISING THE TEMPERATURE OF WATER AND OTHER LIQUIDS. CECIL FEATHERSTONE HAMMOND and WILLIAM SHACKLETON, London, England. Filed Sept. 4, 1926, Serial No. 133,682, and in Great Britain Sept. 5, 1925. 9 Claims. (Cl. 122—32.)

1. Heat apparatus comprising in combination, a heating chamber adapted to contain a mass having a liquid condition at elevated temperatures, a submersible burner projected into said chamber for maintaining combustion while submerged in the liquid mass, and for causing circulation of said mass, means to direct the course of the latter, and a fluid container in heat exchange relation with said heating chamber.



4. Heat apparatus comprising in combination, a heating chamber adapted to contain a mass having a liquid condition at elevated temperatures, a burner projected into said chamber for maintaining combustion while submerged in said mass, a tube surrounding the submerged portion of said burner and communicating freely with upper and lower portions of the liquid mass and disposed so that the gases of combustion from said burner are released into the column of liquid contained in said tube, an escape flue for said gases at the head of said chamber, deflector means in the path of said gases from said liquid to said flue, and a fluid container in heat exchange relation with said heating chamber.

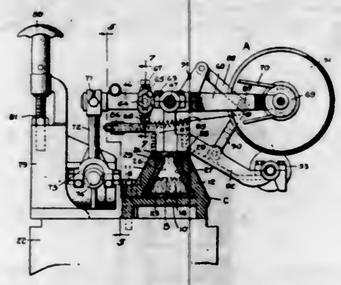
1,675,348. FOOT AND ANKLE PROTECTING MEANS. WILLIAM JOHN HARVEY, New York, N. Y. Filed Jan. 14, 1927. Serial No. 161,046. 3 Claims. (Cl. 36—2.)



1. In combination, an ankle protector made of comparatively thin rubber, comprising a main body open vertically at one side, the meeting margins of said opening having cooperating fastener devices, an additional fastener device at the opposite side of said main body, the forward end of said main body having integral therewith a bottom strap loop to extend beneath the foot of the wearer, and a separable sandal member having rearwardly projecting attachment tongues at each side thereof provided in their extremities with fastener means for separable engagement with fastener devices at opposite sides of said main body.

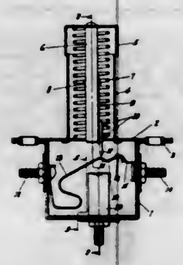
1,675,349. INTAKE MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. WALTER G. HEGINBOTTOM and JACOB RICHARD FRANCIS, Flint, Mich. Filed Nov. 25, 1921. Serial No. 517,555. 10 Claims. (Cl. 48—180.)

2. An intake manifold for internal combustion engines having a straight passageway provided with a series of restrictions for successively increasing and decreasing the flow velocity of the explosive charge in its passage therethrough and means for collecting the heavier particles at the point of decreased flow velocity and vaporizing said particles and returning them to the volume at the point of greatest flow velocity.



1,675,350. ELECTRIC GAS-FILLED GLOW-DISCHARGE DEVICE. GILLES HOLST, EKKO OOSTERHUIS, and JOHANNES BRUIJNES, Eindhoven, Netherlands, assignors to Naamlooze Vennootschap Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Filed Feb. 3, 1922. Serial No. 533,998, and in the Netherlands Feb. 9, 1921. 5 Claims. (Cl. 250—27.5.)

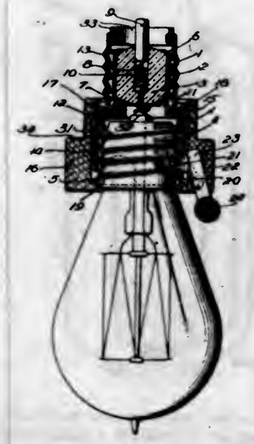
1. An electric gas-filled glow discharge device comprising in combination a cathode, an anode consisting of a wire wound in the form of a coil, a controlling elec-



trode, also wound in the form of a coil, said coils having substantially the same diameter and being coaxially disposed with their respective windings in close proximity to each other, the composition and pressure of said gas filling being of such nature and value that a luminous glow discharge, occurs from the cathode only.

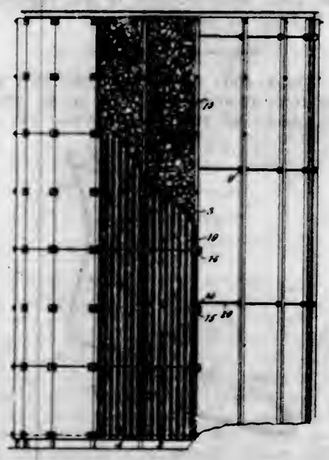
1,675,351. CUT-OFF MECHANISM FOR CIGARETTE MACHINES. JAMES MONROE HORNADAY, Richmond, Va. Filed Feb. 6, 1925. Serial No. 7,212. 16 Claims. (Cl. 131—37.)

1. In a cigarette machine, a slide support comprising a housing having a plurality of closed sides and an open side, end walls closing said housing, a slide having a portion closely fitting within said housing, said portion having walls substantially conforming to the walls of said housing section, and also having a portion forming a closure for said open side of the housing section, said closure being adapted to maintain said section closed in any position of the slide, and cigarette cut-off mechanism mounted on said slide.



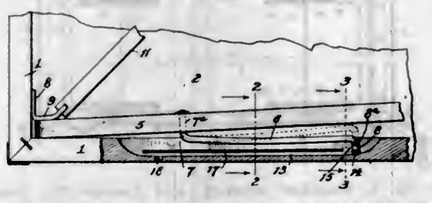
1,675,352. SWITCH. HAROLD LAISTER JOYCE, East Orange, N. J., assignor, by mesne assignments, to Splitdorf Electrical Company, Newark, N. J. Filed Nov. 5, 1925, Serial No. 67,016. Renewed Dec. 27, 1927. 19 Claims. (Cl. 200—159.)

19. In a switch, a pair of stationary contacts, holding means associated with one of said contacts, a switch contact member, a plunger, a push member carried by the plunger and adapted to engage one of said contacts to disable the holding means on one downward movement of the plunger and cause the transfer of the switch member to the other contact on the return of the plunger and means for causing the push member to engage the switch member at a different point on the next movement of the plunger for the purpose described.



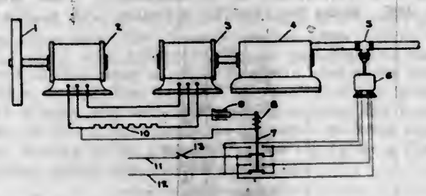
1,675,353. SAFETY PLUG AND LAMP SOCKET. LOUIS KELLNER, Chicago, Ill. Filed May 16, 1925. Serial No. 30,824. 5 Claims. (Cl. 173—356.)

3. In a plug connector of the class set forth, a freely rotatable outer sleeve formed with a keyway extending longitudinally inward from the outer end of the sleeve, said keyway being formed with a restricted mouth and opening laterally into the interior of the sleeve at a point spaced inward from said mouth; and a removable key formed with an insulation handle, a shank, and a spring-projected locking member normally expanded laterally outward from said shank and adapted to be compressed inward, the restricted mouth of the keyway being formed to receive the shank of the key only with the locking member compressed, the lateral opening of the



keyway being formed to permit the locking member to expand into the sleeve to effect a locking connection with parts of the connector plug within the sleeve when the key is fully inserted, and the locking member being formed with outwardly converging cam edges adapted respectively to engage the inner and outer edges of the restricted portion of the keyway and cause the member to be compressed thereby to pass through the restricted portion when the key is moved longitudinally in either direction.

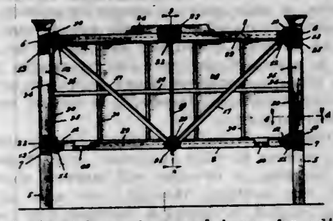
1,675,354. OIL-TANK INSULATION. RAY T. KEMPER, Los Angeles, Calif., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1925. Serial No. 13,497. 2 Claims. (Cl. 220—10.)



1. In a tank protecting structure, a series of supporting members, each parallel to the axis of the tank, arranged in spaced relation about the periphery of the tank, and means for holding said supporting members in position, comprising tension means extending circumferentially of said tank and operatively connected to said supporting members at points nearer the axis of the tank than the outer limits of said members, and sheathing sheets secured to said supporting members outside said tension means.

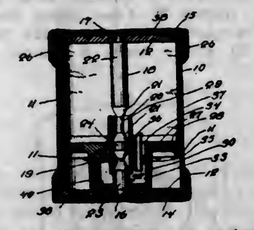
1,675,355. FOLDING TABLE. WILLIAM J. KING, Portland, Me., assignor to The E. T. Burrowes Company, Portland, Me., a Corporation of Maine. Filed Feb. 12, 1925. Serial No. 8,766. 5 Claims. (Cl. 45—11.)

1. In a folding table, a top supporting frame, a leg pivoted to the frame to fold within the same, said frame having a guide provided with a longitudinal groove extending inwardly from one side face thereof, and an inner longitudinal retaining channel extending at an angle to and adjoining said groove, and a transversely resilient brace rod having a pivotal connection at one end with the leg, and having at its other end a lateral extension provided with a retaining offset end part, said lateral extension and offset end part slidably engaging respectively in the said groove and channel, and the guide having an opening leading laterally from the outer side of the guide to said retaining channel providing for disengagement of the lateral extension and offset end part from the groove and channel, said opening being arranged so that said offset end part of the brace may be brought opposite the opening in the pivotal movement of the leg.



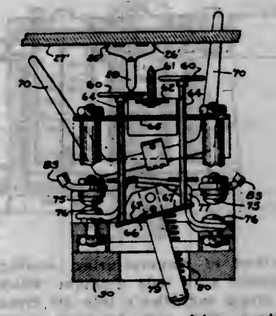
1,675,356. MOTOR-CONTROL SYSTEM. THOMAS P. KIRKPATRICK, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,248. 5 Claims. (Cl. 290—1.)

1. In a system of acceleration for fly-wheels, the combination with a fly-wheel and a driving motor therefor, of a variable speed alternating-current generator for supplying power to the motor, means for controlling the generator to supply a high accelerating current to said motor at low generator speed and automatically operable means for controlling the generator to supply a lower current to said motor at a higher speed.



1,675,357. ADVERTISING SIGN. BARTLEY H. KOLLMAN and ELMER R. PHILLIPS, Indianapolis, Ind. Filed Mar. 28, 1927. Serial No. 178,883. 5 Claims. (Cl. 40—125.)

1. In an advertising sign, a frame comprising vertical members and grooved horizontal members connected to said vertical members, a panel insertible in and removable from the grooved horizontal members, a brace connected to the horizontal members, and a rod connected

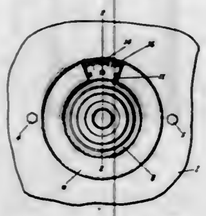


to the horizontal members and brace for adjusting the frame to prevent distortion thereof.

1,675,358. SOUNDING DEVICE FOR DOLLS AND OTHER TOYS. ALEXANDER KONOFF, New York, N. Y., assignor to Voices Incorporated, Wilmington, Del., a Corporation of Delaware. Original application filed June 22, 1922, Serial No. 570,209. Divided and this application filed Oct. 29, 1924. Serial No. 746,672. 4 Claims. (Cl. 46—46.)

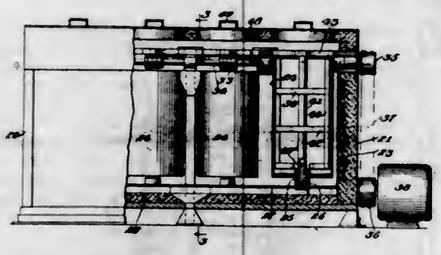
1. In a sound producing device, a casing, sound producing means enclosed within said casing including a flexible bellows wall having one end edge thereof turned outwardly around one end of the casing walls, closures for the opposite ends of said casing each having an annular flange to extend around the casing wall, and the flange of one of said closures having clamping engagement with said outwardly turned end edge of the casing wall, said casing wall having openings therethrough for the emission of sound, a sheet of fabric material externally covering said casing wall and the sound emission apertures and extending at its ends upon the flanges of said closure members, and a sealing material completely enveloping each of the closure members and extending inwardly upon said fabric material beyond said flanges.

1,675,359. REGULATING APPARATUS. GREGORY W. KUNTNEY, Waterbury, and CARLTON W. BRISTOL, Naugatuck, Conn., assignors to The Bristol Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 12, 1926. Serial No. 128,890. 12 Claims. (Cl. 200—56.)



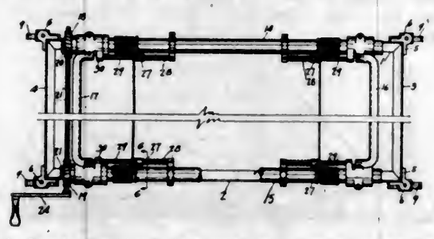
1. Regulating apparatus, comprising contact making mechanism including a two-arm and movable electrical switch and two contacts therefor, one arm of the switch

being adapted to engage a corresponding contact when the other is disengaged from its corresponding contact and vice versa; a scale plate; a measuring pointer movable thereover, associated with said switch and controlled by an external condition; and means to move periodically in a straight line said contact making mechanism as a whole and into proximity with said measuring pointer for engagement therewith to actuate thereby the said electrical switch.



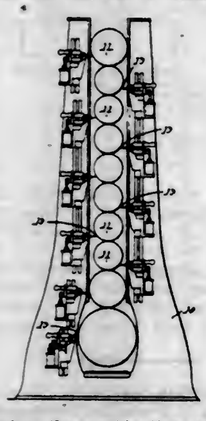
7. Regulating apparatus, comprising a scale plate and a measuring pointer movable thereover; contact making mechanism including a two-arm and movable electrical switch and two contacts therefor, one arm of the switch being adapted to engage a corresponding contact when the other arm is disengaged from its corresponding contact, and vice versa, a rocking member adapted to actuate the electrical switch, and a pair of movable anvil members adapted to be engaged alternately by the measuring pointer and in turn engaging the said rocking member when either anvil is depressed by engagement with the said measuring pointer.

1,675,360. INDICATING MEANS FOR RADIO APPARATUS. GEORGE L. LANG, South Orange, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed May 19, 1925. Serial No. 31,466. 3 Claims. (Cl. 40—70.)



2. Indicating means for radio apparatus comprising; a mounting panel having a portion offset from the plane of said panel, said offset portion having an opening therein, a holder attached to the back of the panel and having an opening registering with the opening in the panel, and an indicating finger, a transparent member carried by said holder and a dial movably mounted on the back of the panel adjacent said transparent member and having indicia adapted to pass by said opening and said indicating finger.

1,675,361. SODA-FOUNTAIN ICE-CREAM MACHINE AND PROCESS OF MANUFACTURING AND DISPENSING ICE CREAM. MILTON R. LAYMAN, Johnstown, Pa. Filed May 1, 1926. Serial No. 106,114. 11 Claims. (Cl. 62—174.)

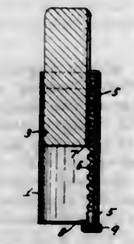


1. The method of manufacturing, storing, and dispensing ice cream at a soda fountain, which comprises freezing ice cream ingredients into ice cream in receptacles positioned at a soda fountain, cooling said ingredients during the freezing by the cooling means of said soda fountain, allowing the resultant ice cream to remain within said receptacles until required for dispensing, and dispensing the ice cream from said receptacles without moving said receptacles.

1,675,362. COMBINED TRANSPORTING AND LOWERING BURIAL APPARATUS. HARRY A. LEDYARD and JAMES J. JELLEY, Ashland, Ohio; said Jelley assignor to said Ledyard. Filed Nov. 11, 1925. Serial No. 68,431. 2 Claims. (Cl. 254—136.)

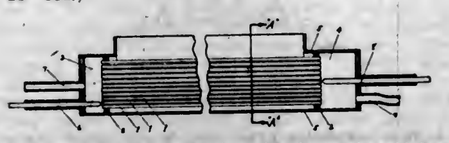
1. In a combined lowering and transporting truck for burial purposes, comprising in combination, a rectangular frame composed of angle iron members, and adapted to provide means for winding the cable around the tubular members and to maintain the same diameter of the cable when lowering or raising a vault or the like from the grave, swivel wheel supporting members journaled on said rectangular frame and adapted to be moved and held parallel with the side members of the frame and also at right angles thereto, standards mounted upon and secured adjacent to the corners of said frame and also being provided with bearings, braces secured to the bearings provided on the standards, tubular members journaled in said bearings, worm gears mounted upon and rigidly secured to said tubular members, brackets having bearings secured to the front standards, a shaft journaled in said bracket bearings, worms mounted on said shaft to mesh with said worm gears, the shaft and bracket mechanism when actuated being adapted to turn the tubular members in different directions as described and for the purpose set forth.

1,675,363. CONTROLLING MEANS FOR CALENDER DOCTORS. FREDERICK W. LODDING, Worcester, Mass., assignor to Rice, Barton & Fales, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed May 9, 1927. Serial No. 189,776. 8 Claims. (Cl. 92—74.)



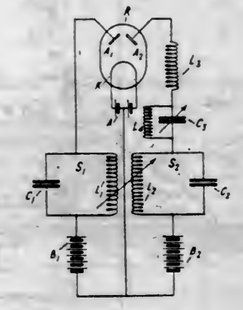
1. In a calender, the combination with the calender rolls, of a doctor movably mounted for engaging each roll and electrically operated means for controlling the position of the doctors with respect to their rolls.

1,675,364. OPTICAL APPARATUS FOR EXAMINING CAVITIES AND TUBES IN THE BODY. GÜNTHER LOECK, Berlin, Germany, assignor to the Firm George Wolf G. m. b. H., Berlin, Germany. Filed Mar. 26, 1927, Serial No. 178,797, and in Germany Mar. 30, 1926. 1 Claim. (Cl. 128—4.)



Optical apparatus for examining cavities and tubes in the body, containing optical elements, adapted to present to the observer an image of the part to be examined, at least one of these elements consisting of two lenses, united by means of dyed cement.

1,675,365. LIP STICK. JOHN L. MCATEE, New York, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed July 30, 1926. Serial No. 125,899. 3 Claims. (Cl. 206—56.)



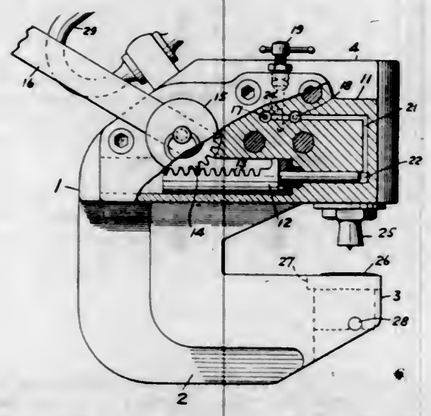
3. In a lipstick, the combination of a single outer casing and a cover therefor both oval in cross section, an oval rouge stick holder frictionally engaging the inner walls of the casing, a groove in a thin edge of the stick holder, a projection adjacent the groove of the holder, and a screw rod held in the casing between the holder and the side of the casing out of contact with the rouge and working in the groove for giving the holder a longitudinal sliding movement in the casing.

1,675,366. MANUFACTURE OF HYDROCYANIC ACID FROM FORMAMIDE. PAUL LA FRONE MAGILL and PAUL JOHNSON CARLISLE, Niagara Falls, N. Y., assignors to The Roessler & Hasslacher Chemical Co., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1927. Serial No. 161,054. 12 Claims. (Cl. 23—151.)

1. Process for the production of hydrocyanic acid from formamide which comprises passing formamide vapor in contact with brass at a temperature about 300° C.

1,675,367. METHOD AND ARRANGEMENT FOR GENERATING OSCILLATIONS BY TWO-ANODE ELECTRON TUBE. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Dec. 15, 1924, Serial No. 755,889, and in Germany Dec. 19, 1923. 2 Claims. (Cl. 250—36.)

1. A system for generating electrical oscillations including a thermionic valve comprising a hot cathode and two cold anodes symmetrically spaced with respect to the cathode, an oscillating circuit connected to each anode and the cathode, coupling means for coupling the two circuits, a source of direct current for each of said circuits and phase adjusting means in one of said circuits of such a value that the alternating potential set up by said oscillatory circuits one of said anodes is 180° out of phase with respect to the alternating potential set up on the other of said anodes.

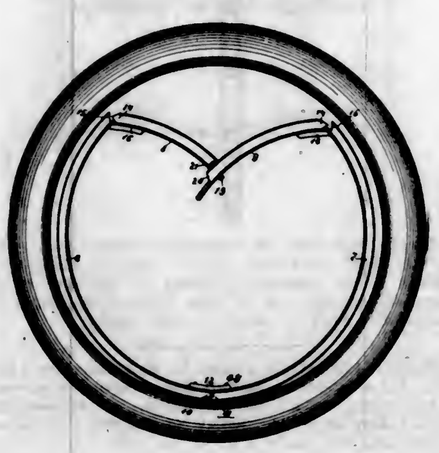


1,675,368. MOP. HIPPOLYTE F. MENGDEN, Houston, Tex. Filed May 31, 1927. Serial No. 195,342. 4 Claims. (Cl. 24—17.)

1. In a mop a securing thrum band formed of a strip of metal having an eye at one end with sides

which converge outwardly, the other end of the band having a tongue adapted to be looped through said eye and gripped by the converging sides thereof.

1,675,369. HYDRAULIC PUNCH. WILLIAM MESSINGER, Philadelphia, Pa. Filed Feb. 19, 1927. Serial No. 169,503. 1 Claim. (Cl. 164—95.)

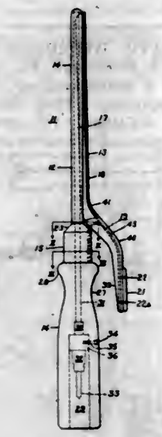


A hydraulic punch comprising a generally C-shaped frame having at the end of its lower arm a claw and having in the end of its upper arm a cylinder space aligned with the claw and having its head integral with the upper arm, said cylinder space providing a length of stroke exceeding the distance between the arms and said upper arm having within it a reservoir and a toothed wheel hand operated mechanism, a ram arranged in the cylinder space and introducible therein through the opening provided by the claw, said ram having rack teeth engaging the hand operated mechanism for quick motion, a pump body applied to the lateral face of the upper arm and provided with hand operated pump elements and relief and other valves, and fluidways provided in the body and in the upper arm.

1,675,370. THERMAL RELAY. FREDERICK H. MILLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Continuation of application Serial No. 387,571, filed June 9, 1920. This application filed Mar. 12, 1925. Serial No. 14,963. 3 Claims. (Cl. 200—113.)

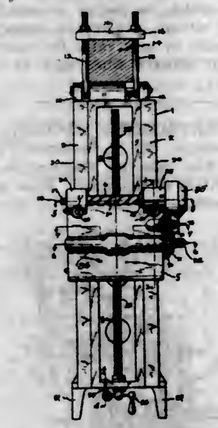
1. A thermal element comprising a bimetallic strip having a plurality of laterally extending slots, said slots being alternately open at opposite edges thereof to increase the length of the current-conducting path therethrough, and means for controlling the relative movement between the different portions so constituted.

1,675,371. DEMOUNTABLE TIRE-CARRYING RIM. PHILIP M. MILLER, Brooklyn, N. Y., assignor, by mesne assignments, to R. E. H., Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 10, 1922. Serial No. 593,915. 3 Claims. (Cl. 301—32.)



3. The combination with a plurality of arcuate channeled sections collectively forming a tire-carrying annulus, of a joint between two sections including rigid means on one of said sections slidably engaging with corresponding means of the other said section, a flexible member rigidly secured to the ends of said sections, the said member holding the said sections in a pivotal engagement one with another, and means pivotally holding the said other sections one with another.

1,675,372. SWIMMING DEVICE. HARTWIG MOHR, Brooklyn, N. Y. Filed Dec. 10, 1927. Serial No. 239,235. 2 Claims. (Cl. 9—21.)



1. In a swimming-device, the flexible, single waterproof web, fastened to both legs and the body by straps and belt, substantially as set forth.

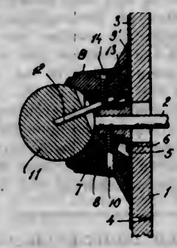
1,675,373. ELECTRIC CURLING IRON. AUGUST J. MOTTLAU, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 69,037. 8 Claims. (Cl. 132—37.)

1. In combination, in a curling iron, a tubular member, a tong member co-operating therewith and a spring member for pivotally supporting and biasing said tong member to operatively engage said tubular member.

1,675,374. PORTABLE MILLING MACHINE. STEPHEN E. MUELLER and GUY M. RODGERS, Moline, Ill. Filed June 14, 1926. Serial No. 115,796. 11 Claims. (Cl. 90—12.)

1. In a portable milling machine, in combination, a bed, a carriage slidable longitudinally of the bed, a rotatable milling cutter having its axis parallel to the surface to be milled, adjustable mountings adjacent the ends of the cutter to receive said cutter whereby, by adjusting said mountings, said cutter may be adjusted independently of said carriage toward and away from the work to be milled, driving means to rotate said milling cutter on its own axis, said driving means comprising a pair of cooperative members to drive said milling cutter when adjusted for any desired depth of cut, said cooperative members being mounted on different axes, and means to permit relative bodily movement of one cooperative member with respect to the other.

1,675,375. COMBINATION FURNITURE. FRANK NETSCHERT, New York, N. Y. Filed Apr. 28, 1925. Serial No. 26,331. 3 Claims. (Cl. 155—22.)

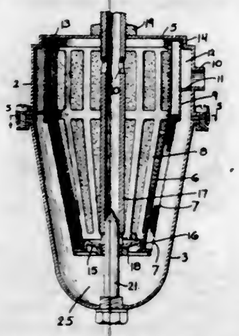


3. An article of the kind described comprising a frame capable of being propelled over a surface and including top rails and intermediate rails each provided with recesses, a baby-walking device, rigid supporting members carrying said device and adapted to set into the recess of the top or intermediate rails for supporting said walking device at different levels upon said frame and slidable latches on said rails for detachably securing said rigid supporting members in the recesses thereof.

1,675,376. SULPHUR-BEARING ARTICLE. HARRY A. NOYES, Sound Beach, Conn., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Jan. 27, 1927. Serial No. 164,133. 1 Claim. (Cl. 18—55.)

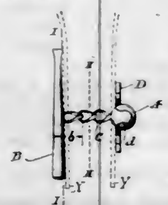
As a new article of manufacture, a rigid molded structure comprising a compact mass of relatively small particles of wood in which the particles are held together solely by the bonding action of congealed sulphur.

1,675,377. VARIABLE-CONTROL DEVICE. LOUIS G. PACENT, Winfield, N. Y. Filed Apr. 6, 1923. Serial No. 630,221. 4 Claims. (Cl. 14—7.)



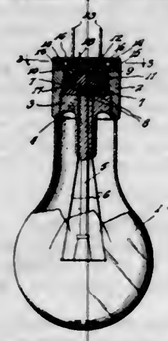
1. The combination with a rotatable shaft of a main knob mounted thereon and rotatable with said shaft, a stationary member having gear teeth disposed concentrically with said shaft, an auxiliary knob partly disposed within a recess in said main knob, a spindle rotatable by said auxiliary knob and having its axis of rotation disposed at an angle to said shaft, and a pinion rotatable by said spindle, said pinion being in mesh with said gear teeth, said knobs, said member, said spindle and said pinion being combined in a self-contained unit.

1,675,378. GASOLINE PURIFIER. CARL E. PEARSON, Camden, N. J., assignor to Motor Requirements Corporation, Camden, N. J., a Corporation of New Jersey. Filed May 16, 1927. Serial No. 191,603. 6 Claims. (Cl. 210—165.)



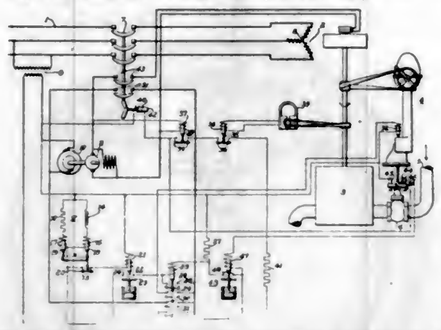
1. In a gasoline purifier, a casing, a filtering element therein including a chamois sleeve of annular horizontal section, a vertical annular baffle surrounding and spaced from the upper portion of the sleeve, the casing having an inlet adjacent said baffle, an outlet leading from the in-

terior of the sleeve, and a perforated distributing ring arranged below the inlet and extending across the space



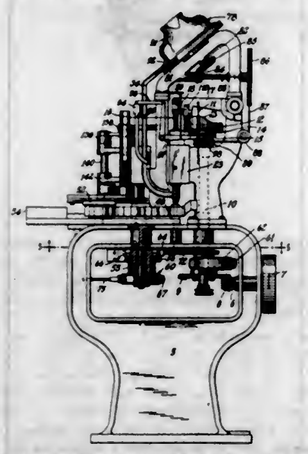
between the baffle and the casing, the perforations of said ring increasing in area away from said inlet.

1,675,379. CUFF LINK. JOSEF PEJCHAR, Brooklyn, N. Y. Filed Dec. 4, 1926. Serial No. 152,550. 1 Claim. (Cl. 24—90.5.)



A cuff link comprising two end members of predetermined ornamental shape, a connecting member extending between and secured to said end members, and an auxiliary metallic member of predetermined form loosely mounted on said connecting member and freely movable thereon between said end members into engagement with either of them to form therewith an ornamental end member visible upon the outside of the cuff and to constitute a button hole guard for preventing the end member from exerting tearing strains upon the button hole of the cuff, said auxiliary member being further movable to an intermediate position between said end members so as to occupy a hidden position on the cuff.

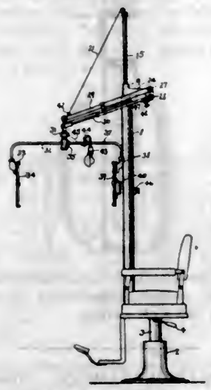
1,675,380. ELECTRIC-LIGHT-BULB CAP. FRED W. PUND, Cincinnati, Ohio. Filed July 6, 1927. Serial No. 203,819. 4 Claims. (Cl. 176—32.)



1. An electric lamp comprising a bulb, a filament in said bulb having end portions projecting from the butt end of the bulb, a hollow cap carried by and projecting from the butt end of the bulb and provided with an internal annular shoulder between its outer end and the butt end of the bulb, terminal blades connected with the end portions of said filament and seated in the outer end portion of said cap and projecting from the cap, and a set plastic filler for said cap overlying the inner end portions of said blades.

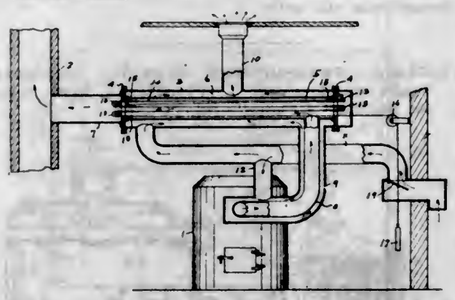
1,675,381. AUTOMATIC HYDROELECTRIC STATION. MAURICE E. REAGAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,516. 3 Claims. (Cl. 290—4.)

1. The combination with a generator, a prime mover for driving said generator, a source of energy supply for said generator, means for controlling the energy supply to said generator comprising a governor and a valve controlled thereby, a circuit breaker for connecting the generator to the line, of means comprising a limit switch operable by said valve for actuating said governor when the latter has been in a position to supply energy to said prime mover at less than a predetermined rate for a predetermined time, whereby said governor moves the valve to a position at which no energy is supplied from the generator to said circuit, and means comprising another limit switch operable by said valve for causing the opening of said circuit breaker when said valve has moved to said position.



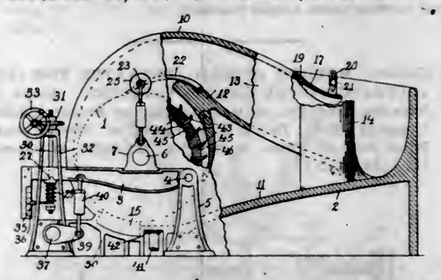
1,675,382. BATTERY-MAKING MACHINE. OTTO KARL REINHARDT, Jamnica, N. Y., assignor, by mesne assignments, to Yale Electric Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 13, 1926. Serial No. 129,099. 12 Claims. (Cl. 29—84.)

1. A battery making machine having, in combination, means for vertically supporting a battery in disc receiving



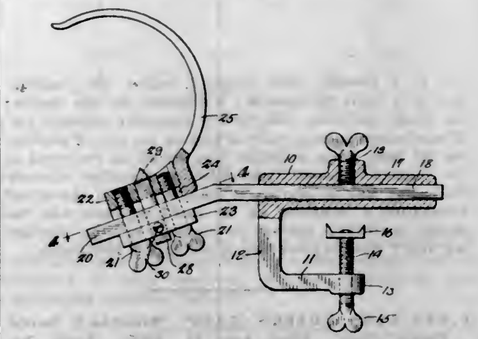
position with its central electrode exposed, means for feeding a disc into disc-applying position above said electrode, friction means for temporarily retaining said disc in disc-applying position above said electrode, and means for engaging said disc and moving the same into the battery to a position about said electrode.

1,675,383. MIRROR FOR BARBER OR BEAUTY-PARLOR CHAIRS. BALDASSARE N. ROCCAFORTE, Houston, Tex. Filed Aug. 23, 1926. Serial No. 130,797. 2 Claims. (Cl. 45—97.)



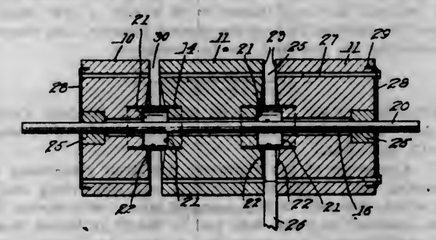
1. A chair attachment comprising a tubular post, a block rotatable thereon, a staff adjustable vertically in said block, a pulley at the upper end of said staff, a bracket on said block, parallel arms pivoted at one end to said bracket to swing in a vertical plane, mirror supporting means at the other ends of said arms, a weight in said post, and a flexible line secured to said weight passing over said pulley and secured to one of said arms adjacent said mirror supports, and means to limit the downward movement of said arms.

1,675,384. AUXILIARY HEATING ATTACHMENT FOR FURNACES. WILLIAM SCHAU, Kalamazoo, Mich. Filed Jan. 31, 1927. Serial No. 164,828. 1 Claim. (Cl. 257—166.)



In a device of the character described adapted for use with a furnace, an outer drum having annular end plates, an inner drum whose ends are anchored to the respective end plates and whose walls are spaced from the outer drum forming an air circulating chamber between said drums, a smoke outlet leading from the inner drum, a smoke pipe adapted to lead from the combustion chamber of the furnace and connected into the inner drum, a jacket surrounding and spaced from said smoke pipe and entering one end of said chamber, an air inlet pipe connected into the other end of said chamber, a branch pipe leading from said air inlet pipe and connected into said jacket.

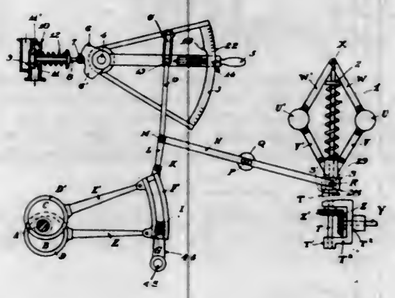
1,675,385. BEATING ENGINE. LEO SHLICK, Boston, Mass. Filed Jan. 25, 1923, Serial No. 615,451. Renewed Jan. 19, 1927. 16 Claims. (Cl. 92—25.)



1. A beating engine comprising a tub, a beater roll, a back fall higher than the topmost point of the beater roll, an upwardly curved deflector pivoted at one end to the back-fall and presenting its free edge close to and above the beater roll and on a line beyond said topmost point.

1,675,386. PIPE CUTTER. JOHN SCHULTHEISS, Baltimore, Md. Filed Oct. 24, 1927. Serial No. 228,241. 4 Claims. (Cl. 81—189.)

1. In a pipe cutter, a bracket, clamping screws extending through said bracket, a clamping head carried by said screws in spaced relation to said bracket, a knife projecting through said head between said screws, and an arcuate guide frame having a foot positioned between said head and bracket and clamped removably on the bracket by said head.



1,675,387. METHOD OF JOINING WOOD PIECES FOR MAKING ROLLS. WARREN J. SIMONDS and JOHN G. SPEAR, Orange, Mass., assignors to Rodney-Hunt Machine Company, Orange, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1926. Serial No. 154,822. 7 Claims. (Cl. 144—31.)

1. The method of making up wood rolls out of a plurality of wood discs, which consists in assembling a series of these discs on a shaft with the grain all run-

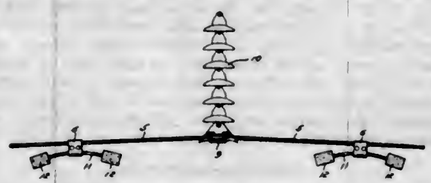
ning parallel to the shaft, leaving the discs all spaced apart, squaring up each two adjacent end surfaces simultaneously, forcing the discs together on the shaft, and uniting them under pressure.

1,675,388. METHOD OF AND APPARATUS FOR CONTROLLING POWER-DRIVEN VEHICLES. ALLAN D. SKINNER, Erie, Pa., assignor to Skinner Patent Holding Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1919. Serial No. 331,686. 43 Claims. (Cl. 121—142.)

1. In a pressure fluid actuated engine, the combination of a valve mechanism; a throttle for the engine; and speed controlled and directly manually operable cut-off mechanism automatically actuating the cut-off shortening the same from an initial long cut-off as the speed of the engine increases with initial acceleration whereby the engine may be started at long cut-off and the cut-off automatically shortened as the speed increases and the engine controlled during its normal running through the direct manual operation of the cut-off mechanism.

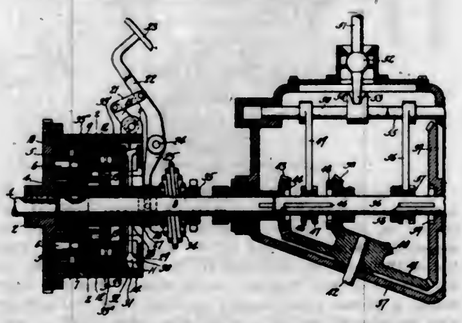
1,675,389. JOINER'S CLAMP. WHEELER E. SMITH, Pueblo, Colo. Filed Apr. 21, 1927. Serial No. 185,562. 6 Claims. (Cl. 144—303.)

1. A clamp comprising a body, members having the body disposed therebetween, one of the members having an inclined face and formed with a slot, a jaw seated upon the inclined face of the slotted member, and means connecting the jaw and the two members.



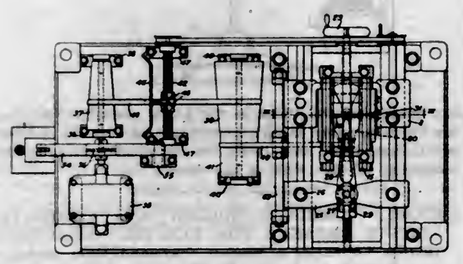
1,675,390. PUMP. CHARLES STARYSKY, Wichita Falls, Tex. Filed July 6, 1925. Serial No. 41,735. 5 Claims. (Cl. 103—181.)

1. Apparatus of the character described comprising a pumping unit, a flexible operating and supporting cable by which said unit is first lowered into a well casing, is then operated to pump fluid and is finally abstrated from the well casing, an expansible packer, and means operatively connecting the pumping unit and cable having an abutment member thereon cooperating with said unit in one direction of movement to expand the packer in the first instance thereby to sustain the unit in operative position within the well casing and cooperating with



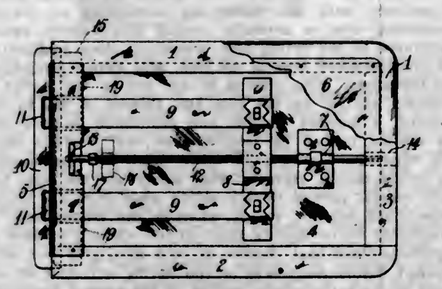
said unit in the reverse direction of movement subsequently to release the packer preparatory to the abstraction of the unit from the well casing.

1,675,391. VIBRATION DAMPER. GEORGE H. STOCKBRIDGE, Los Angeles, Calif. Filed Nov. 12, 1925. Serial No. 68,634. 7 Claims. (Cl. 173—13.)



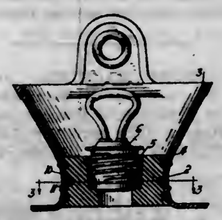
1. In combination with a cable in a span, a vibration damper comprising; a substantial mass and a member interposed the mass and cable resiliently suspending the former from the latter.

1,675,392. TRANSMISSION GEARING. STONEWALL TOMPKINS, Passaic, N. J. Filed July 6, 1927. Serial No. 203,775. 4 Claims. (Cl. 74—34.)



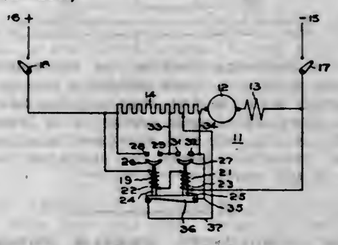
1. In transmission gearing, a driving shaft and a second shaft, planetary gearing connecting the driving and second shafts, a floating gear meshing with the planetary gears, a brake adapted to hold the floating gear stationary to cause the planetary gears to drive the second shaft at slower speed than the driving shaft, clutch members adapted to clamp the driving shaft to the second shaft for high speed, a spring adapted to hold the clutch members so clamped, a foot lever adapted to hold the spring retracted and the clutch members unclamped, and means operatable by the said lever for setting the brake on the floating gear during a first part of the movement of the lever and releasing the said brake during a second part of its movement.

1,675,393. BALANCING MACHINE. WILLIAM E. TRUMPLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1924. Serial No. 736,458. 22 Claims. (Cl. 73—51.)



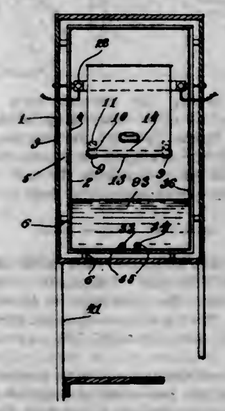
1. A balancing machine comprising a base, a fulcrum support slidingly mounted thereon, a spring support secured to said base, flexible fulcrum members secured to said fulcrum and spring supports, an oscillatable bed supported on said fulcrum support, and means for journalling a body to be tested on said bed.

1,675,394. LOOSE-LEAF BINDER. WILLIAM VENNARD, London, England. Filed Jan. 13, 1927, Serial No. 160,831, and in Great Britain Feb. 15, 1926. 6 Claims. (Cl. 129—41.)



1. In a loose-leaf binder of the character described having thongs attached to a bar adjusted by screw mechanism in one of the covers, a cover comprising a wall and a back edge formed as a one-piece component, and a front edge formed by a stretcher, the thongs passing through said back edge, and a thrust bearing for the winding mechanism being mounted on said intergral component, so that the stresses due to tightening the thongs are confined to the wall and the back edge integral therewith.

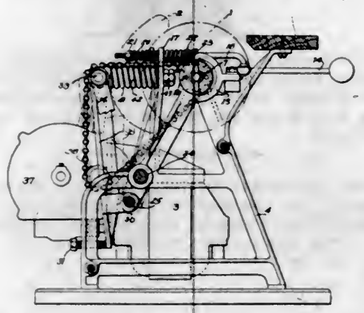
1,675,395. WATER BOTTLE. CHAUNCY P. WHISLER, Kenmore, Ohio, assignor to The Rubber Products Company, Barberton, Ohio, a Corporation of Ohio. Filed July 17, 1926. Serial No. 123,033. 4 Claims. (Cl. 150—8.)



1. A hot water bottle comprising a body and a neck portion, a rubber plug within the neck portion and having a threaded socket member embedded therein, and mating grooves and ribs between the plug and the neck of the bottle.

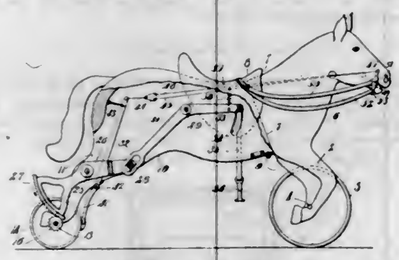
1,675,396. THERMAL RELAY. HAROLD E. WHITE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Mnufacturing Company, a Corporation of Pennsylvania. Filed May 4, 1925. Serial No. 27,720. 10 Claims. (Cl. 172—288.)

1. A thermally-controlled motor starter comprising a current-traversed magnetically-reversible member, and a plurality of electro-magnetic switches operated in predetermined sequence thereby.



1,675,397. CAN-LABELING-MACHINE PICK-UP CEMENT HEATER. CHARLES H. WILD, Baltimore, Md., assignor to Burt Machine Company, Incorporated, a Corporation of Maryland. Filed July 18, 1924. Serial No. 726,889. 2 Claims. (Cl. 126—284.)

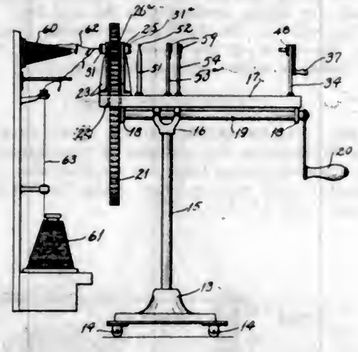
1. In an apparatus for heating pick-up cement for can-labeling machines, a heating chamber having means for holding the cement cans in inverted position, heating



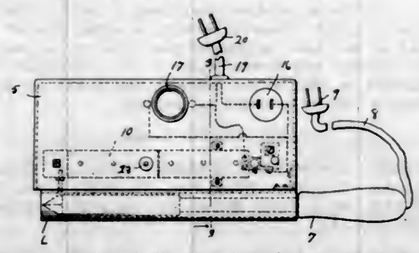
means adjacent the cans as thus held, and heating means near the bottom of the chamber, the receptacle having an opening to admit the cans, and a closed portion below said opening to hold liquid cement from the cans, and means for separately controlling the heating effect in said respective heating means.

1,675,398. LAUNDRY MACHINE. ALLEN S. WISE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1924, Serial No. 715,105. Renewed Nov. 23, 1927. 21 Claims. (Cl. 68—9.)

1. In a laundering machine, the combination of a laundering member, a second laundering member adapted to cooperate with the first mentioned laundering member for direct action upon articles to be laundered, a motor for moving said first mentioned laundering member and mechanical means for preventing the overloading of said motor.



1,675,399. HOBBYHORSE. EUGENE R. WITHERELL and JOHN J. CLARK, Framingham, Mass. Filed Apr. 21, 1926. Serial No. 103,603. 10 Claims. (Cl. 208—42.)

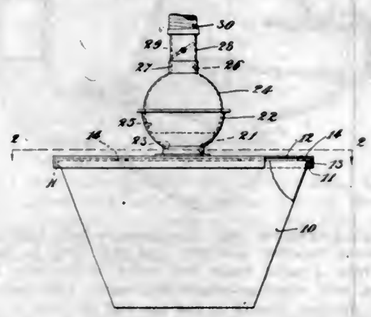


1. A vehicle having the general form of a horse adapted to carry a rider comprising a driving wheel having an axle, means operable by the pressure of the foot of the rider for engaging said axle to propel the vehicle, and means for disengaging the last named means to permit free movement when the foot of the rider is released.

1,675,400. APPARATUS FOR AND METHOD OF SPLICING MULTIPLY THREAD. RAYMOND L. YOUNG, St. Louis, Mo., assignor to Bemis Bro. Bag Co., St. Louis, Mo., a Corporation of Missouri. Filed Feb. 12, 1926. Serial No. 87,750. 17 Claims. (Cl. 117—6.)

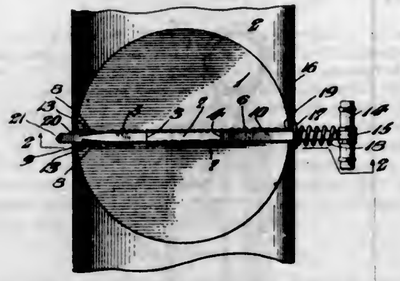
1. The method of splicing multiply threads which consists in clamping the free ends of parallel spaced apart horizontally extending threads to prevent the same from untwisting, imparting to each thread at points equally removed from the application of said clamping a rotary movement for removing the twist of said threads and to permit the plies thereof to be separated, arranging the plies of one thread in pairs with the plies of another thread, uniting by individually tying together the pairs of plies at longitudinally spaced apart points without destroying the twist in the plies, partially restoring the twist in said threads, removing said threads at their point of rotation, and, lastly, automatically restoring the remainder of the twist to the thread.

1,675,401. COMBINED HOLDER AND AUTOMATIC CIRCUIT BREAKER FOR ELECTRIC SOLDERING IRONS. WILLIAM ALFERINK, Cleveland, Ohio, assignor of one-third to Joseph H. Weaver and one-third to Carrie L. Weaver, Cleveland, Ohio. Filed Dec. 22, 1926. Serial No. 156,388. 4 Claims. (Cl. 219—23.)



3. In a device of the class described, a casing, means associated with the casing for supporting an electric soldering iron, a normally closing thermostatic switch arranged in the casing and operable to open position by a predetermined heat of the iron, said switch comprising a thermostat strip pivoted at one end in the casing, a contact carried by the free end thereof, a pin in the casing, a member slidable and adjustable on said pin, a contact carried by said member, said contacts being in engagement with each other until the iron reaches a predetermined degree of heat whereupon the strip and the contact carried thereby moves away from the second mentioned contact, means whereby the switch may be regulated as to operate in a circuit opening manner at predetermined heat degrees of said iron, said last mentioned means comprising a coil spring attached at one end to the intermediate portion of the pivoted strip, and an adjustable device arranged on the outer side of the casing and connected to the other end of the spring for adjusting the tension thereof.

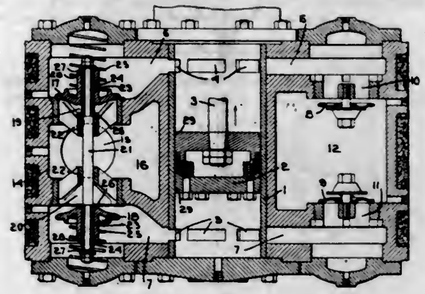
1,675,402. METHOD OF PREPARING NITROPYRIDINE ARSENIC ACIDS. ARTHUR BINZ and CURT RÄTH, Berlin, Germany. Filed July 28, 1927, Serial No. 209,170, and in Germany Aug. 5, 1926. 6 Claims. (Cl. 260—14.)



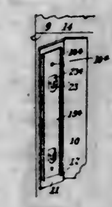
1. Method of preparing nitropyridine arsenic acids, comprising the step of treating substituted pyridine arsenic acids with energetically reacting nitrating agents.

1,675,403. APPARATUS FOR FUME CONTROL. VERN K. BOYNTON, Beaumont, Tex., assignor to Perry & Webster, Inc., New York, N. Y., a Corporation of New York. Original application filed May 27, 1921, Serial No. 473,073. Divided and this application filed Jan. 23, 1922. Serial No. 531,300. 5 Claims. (Cl. 134—26.)

1. In a device for controlling condensible fumes, in combination, a liquid-holding kettle, a cover spaced from the top of the kettle allowing the admission of air around the periphery thereof, a draft conduit connected with the upper portion of the kettle and means for controlling the draft whereby the amount of air admitted through said space is controlled.



1,675,404. DAMPER. AARON COHN, Philadelphia, Pa. Filed May 4, 1927. Serial No. 188,684. 1 Claim. (Cl. 126—292.)



In a device of the character stated, a damper plate having opposed and alternately staggered and longitudinally aligned channels of substantially rectangular cross section extending across the same, a damper rod of generally rectangular cross-section adapted to be inserted into said channels and interlock with the same so as normally to prevent relative rotation thereof with respect to the plate, a handle carried by one end of said damper rod, said damper rod having near its other end a pair of notches and resultant rearward locking shoulders, corresponding constrictions and resultant shoulders in one of said channels adapted to interlock and engage with the corresponding shoulders on said damper rod, and a spring intermediate said handle and said damper plate for maintaining a constant axial tension on the damper rod, and thereby normally to maintain said rod in locking engagement with said damper plate.

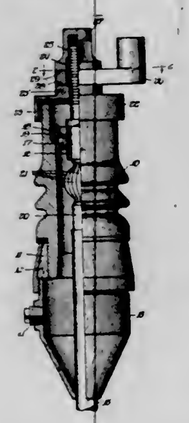
1,675,405. LIQUID PUMP. MYRON W. DOLE, Belmont, Mass. Filed Mar. 14, 1927. Serial No. 175,045. 7 Claims. (Cl. 103—175.)

1. In a double-acting pump, in combination, a pump cylinder having a piston therein, discharge ports, an induction port, an inlet valve device which in one extreme position opens communication between said induction port and one end of the cylinder while maintaining said induction port closed to the other end of the cylinder, and in the other extreme position closes the first-named communication and opens the second-named communication, and in a central position closes communication between the induction port and both ends of the cylinder, and means tending normally to move said valve device into central position, said valve device when in said central position having a portion at least of each end exposed to the pressure in the corresponding end of the cylinder, whereby the valve device will be automatically centered at the end of each piston stroke and will be positively moved into either extreme position by the pressure developed in the cylinder.

1,675,406. PORTFOLIO. JAMES D. DOUGLAS, Detroit, Mich. Filed Oct. 20, 1926. Serial No. 142,824. 4 Claims. (Cl. 281—19.)

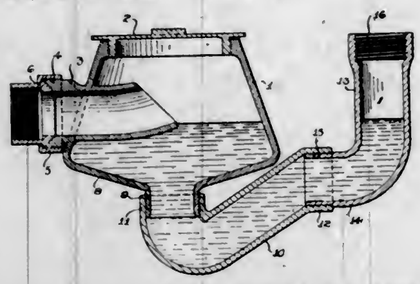
1. In a portfolio, the combination of two cover members flexibly connected at their inner ends, a binder support flexibly mounted on one of said cover members substantially at right angles to the inner end of said cover member, and a binder removably engaged with said binder support.

1,675,407. OPTOMETRICAL INSTRUMENT. ISRAEL DVORINE, Baltimore, Md. Filed Aug. 16, 1927. Serial No. 213,253. 4 Claims. (Cl. 33—200.)



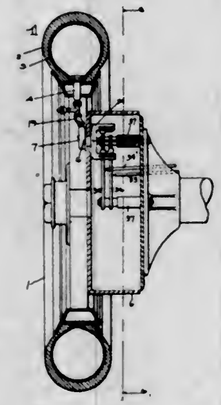
1. The combination in an instrument for determining by measurement taken from the patient the position of the line of intersection of the segments of a bifocal lens or spectacles which consists of a transparent oval measuring plate, a casing for the same slotted to admit the measuring plate and having a measuring abutment adapted to contact the edge of a spectacle rim, the casing having a hollow handle having a longitudinal slot therein and a shaft within the handle supporting the plate with

means on the shaft protruding through the slot whereby the plate may be moved up and down relatively to the



rim and in front of the eye to determine the proper relation of the line of intersection of the segments of the bifocal lens to the rim.

1,675,408. ELECTRICAL-CONDUCTOR-PROTECTING MEANS. GEORGE P. EDMONDS, Chicago, Ill., assignor to G. & W. Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,165. 2 Claims. (Cl. 173—353.)

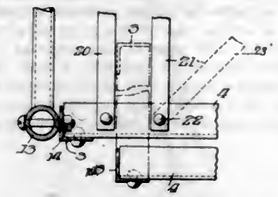


1. In combination, a casing for protecting an electrical conductor, an electrical conductor therein, an electrical connector electrically connected to said conductor, a metal skirted nut closing and covering one end of said casing and screwed onto said connector, said skirted nut having a sleeve extending along a threaded portion of said connector, a cable lug mounted over and embracing said sleeve of said nut, and a cap nut screwed onto said connector and extending over said sleeve, said sleeve extending up beyond the interengaging portions of said cable lug, skirted nut and cap nut whereby moisture is prevented from reaching the threaded portions of said members and is thereby prevented from reaching the enclosed conductor.

1,675,409. ANTISIPHON TRAP. HAROLD A. GARDNER, Sr., Rochester, N. Y. Filed Feb. 10, 1927. Serial No. 167,084. 2 Claims. (Cl. 182—21.)

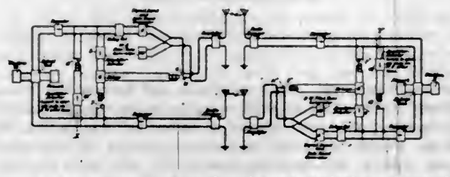
1. An anti-siphon trap comprising a body having outside walls tapering upwardly and extending to the top wall from a point below the outlet of the trap and a bottom wall tapering toward its center, said body having a cleanout closure at the top and an inlet at center of its bottom, an outlet connecting the body above the bottom, a sealing portion connecting with the inlet at the center of the body, and a terminal inlet portion projecting above the water level of the body and connected with said sealing portion.

1,675,410. PRESSURE-INDICATING DEVICE. JOHN H. GARTNER, San Francisco, Calif., assignor of one-fifth to Patrick S. Higgins, one-fifth to James D. Skelly, and one-fifth to William Shackleton. Filed Feb. 15, 1927. Serial No. 168,373. 5 Claims. (Cl. 200—58.)



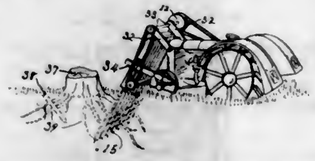
1. In means for indicating the pressure in the tire of a moving vehicle, an arc-shaped contact fixed relative to the vehicle adjacent a wheel thereof, a wiping contact supported relative to the wheel and operating means for the wiping contact subject to the pressure in the tire and arranged to keep the latter contact spaced from the former at normal tire pressure, and to effect engagement of the contacts when the tire pressure changes beyond a predetermined point.

1,675,411. COLLAPSIBLE BED. DARWIN HANAUER, La Grange, Ill., assignor to Kinney-Rome Company, Chicago, Ill., a Corporation. Filed Jan. 25, 1922. Serial No. 531,585. 7 Claims. (Cl. 5—18.)



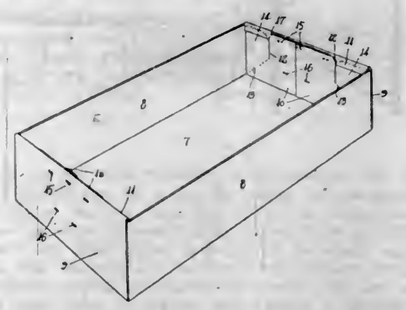
1. A metallic couch bed comprising inner and outer, self-supporting, telescoping sections, separable into independent beds and each comprising angle bar end frames

forming end bars and corner legs, a metallic fabric connecting the end bars, and side bars spaced below the fabric and connecting the corner legs, the outer section having pairs of guide bars connecting the end portions



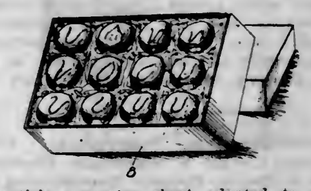
of the side bars thereof, said sections being adapted to be nested with each leg at one side of the inner section extending over one of the side bars of the outer section and between one pair of guide bars thereof, substantially as described.

1,675,412. ECHO AND SINGING SUPPRESSOR SYSTEM. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 1, 1926. Serial No. 113,021. 5 Claims. (Cl. 178—44.)



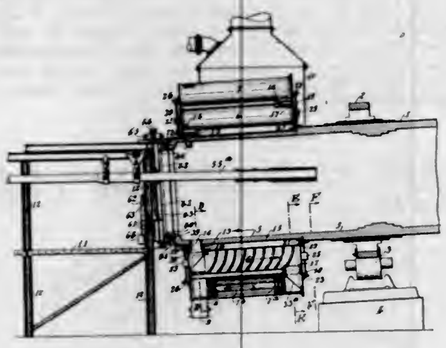
1. In a two-way system for the transmission of speech, including combined wire and radio paths adapted to transmit in opposite directions, means associated with the outgoing wire section of one of said paths for generating a pilot tone, means operable by voice currents in said section for disabling the incoming wire section of the opposite path and for supplying said pilot tone to the first path for transmission simultaneously with the voice, and means operable substantially only in response to said pilot tone for disabling the distant outgoing wire section of said opposite path.

1,675,413. GRUBBING MACHINE. DAVID A. JOHNSON, Belvue, Kans. Filed Mar. 29, 1927. Serial No. 179,383. 2 Claims. (Cl. 144—110.)



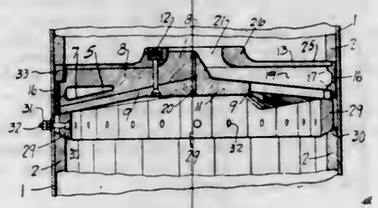
1. In a grubbing machine, in combination with a power actuating means, a frame having a shaft rotatably mounted on the upper end thereof, arms extending from the power actuating means in which the shaft is rotatably mounted and on which the frame will swing, pivotally connected bars on the power actuating means, a clamping means on the lower end of the frame to engage along said bars whereby the desired angle of the frame is fixed, a beam positioned between the sides of the frame, a toothed rack on the rear and front of both side members of the frame, a pair of gears trunnioned on both ends of the beam to engage with the said toothed racks, a train of gears connecting the first said gears as equalizing means for the rotation of the first said gears to cause a reciprocating travel of the beam, manual means to rotate the gears, a plurality of drill bits positioned in close working relation and equally spaced across the frame, the upper ends thereof rotatably engaging in the beam and thrust longitudinally thereby, the shafts of the bits being square, worm gears trunnioned on the lower end of the frame, a square aperture axially extending through the gear to slidably engage the shaft as rotating means for the bits while sliding longitudinally therethrough, worms trunnioned to engage on both sides of the gears for simultaneous rotation thereof, means to rotate the worm, all substantially as shown.

1,675,414. BOX. SAMUEL KOFF, New York, N. Y. Filed Feb. 5, 1926. Serial No. 86,321. 1 Claim. (Cl. 229—34.)



A box of cardboard or similar material comprising a bottom, side walls and end walls, the end walls having turned in lips at their upper edges and bearing against the inner surfaces of said end walls, the side walls having end flaps overlapping the inner surfaces of the end walls, said flaps having slits extending downwardly from their upper edges at distances from the corresponding side walls less than the height of said walls, said flaps having inclined fold lines between the slits and corners of the bottom, the portions of the flaps beyond said slits extending upwardly and overlapping the intermediate portions of said lips with the lips located between said portions of the flaps and the end walls, and securing means engaging through said end walls, lips and portions of the flaps to clamp the lips between said portions of the flaps and end walls and to confine the flexing of the lips away from the end walls to those portions of the lips between said slits and side walls, the portions of the flaps at the upper ends of the slits above said fold lines being cut away to enable such portion to be engaged under the end portions of the lips when the box is erected.

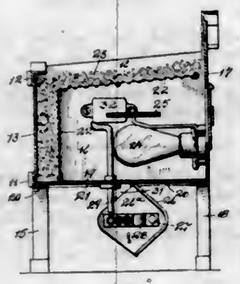
1,675,415. CANDY PACKAGE. JOHN E. LIEBRICH, Indianapolis, Ind. Filed Apr. 1, 1925. Serial No. 19,773. 3 Claims. (Cl. 229—42.)



2. An article separator sheet adapted to contain a plurality of articles and comprising a flexible separator sheet upon which a plurality of articles are adapted to rest, said sheet having integral vertical irregular puckers folded in the sheet on all sides of each of the articles thereon between the adjacent articles.

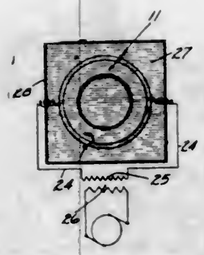
1,675,416. ROTARY KILN AND COOLER. POUL T. LINDHARD, Brooklyn, N. Y., assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Feb. 12, 1926. Serial No. 87,746. 16 Claims. (Cl. 222—7.)

1. The combination of a rotary kiln for use in the manufacture of cement, having in its end portion a circumferential series of openings through which the clinker is discharged, a circumferential series of cooling drums supported by the kiln about itself and communicating respectively with the kiln through said openings and into which the clinker is directly discharged by gravity, a tubular neck secured to each drum, a removable bushing in each of said openings and extended inwardly beyond the shell of the kiln and externally into said tubular neck to protect the lining of the kiln and the associated parts from wear and means to secure the bushing removably in such position.



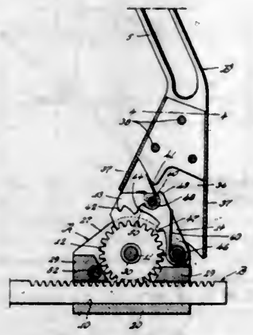
1,675,417. GRINDING-MILL SCREEN. WILLIAM FREDERICK McMAHON, Riverside, Calif. Filed Apr. 25, 1927. Serial No. 186,505. 9 Claims. (Cl. 83—9.)

1. In a grinding mill, the combination with a rotary shell, of a division head comprising a series of separating screens having a lateral inclined plane arrangement, each series formed a part of a circle comprehended between two radii and the included arc and comprising a series of radially disposed perforations inclined rearwardly and being substantially in alignment with the direction of rotation of the rotary shell.



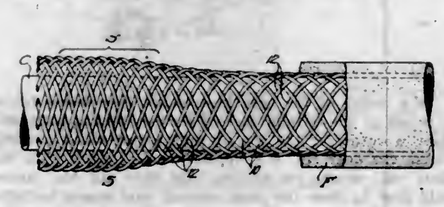
1,675,418. ELECTRIC FIREPLACE. DANIEL N. MEANY and EDWARD N. ELLSWORTH, Chicago, Ill., assignors to Electric Fireplace Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Nov. 24, 1924, Serial No. 751,773. Divided and this application filed June 19, 1925. Serial No. 38,151. 1 Claim. (Cl. 219—45.)

In an electric fireplace, the combination of a box-like four sided grate structure having a grated front, a back in spaced relation thereto and end walls converging from the front to the back, a leg at each corner of the structure for supporting the same in elevated relation with respect to the hearth, a reticulated support for artificial fuel located within the grate and having its supporting surfaces in spaced relation behind the grated front and below the top of the grate structure, artificial fuel carried by said support and exposed over the top and in front thereof to simulate a bed of coals, illuminating devices within the grate structure and below and behind the artificial fuel for illuminating the same, an elongated open fronted reflector extending lengthwise



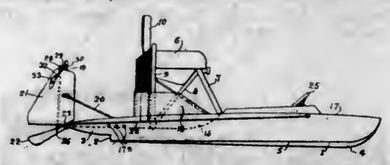
of and below the grate structure and behind the transverse center thereof, said reflector being trough shaped, hangers at the ends of the deflector for supporting the same below the fuel supporting portion of the grate and within the space subtended by the legs, an elongated heating element extending lengthwise of the trough shaped reflector and located near the inner angle thereof, current wires leading to the illuminating devices and to the heating element, and switch mechanism for controlling the flow of current to either or both of said heating and illuminating devices, substantially as described.

1,675,419. PROCESS OF INSULATING MOTOR WINDINGS. THOMAS G. MYERS, Los Angeles, Calif., assignor to United States Electrical Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 9, 1927. Serial No. 166,899. 8 Claims. (Cl. 171—206.)



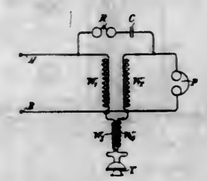
2. The method for the purpose stated comprising: forming conductors into a winding; immersing said winding in a body of liquid insulation; and passing an alternating current through said winding in order to vibrate the conductors thereof in a manner to cause said liquid insulation to enter the spaces between said conductors.

1,675,420. BOX-STRAP TIGHTENING DEVICE. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Mar. 26, 1927. Serial No. 178,800. 5 Claims. (Cl. 254—66.)



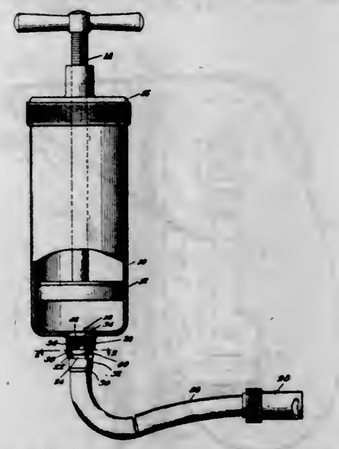
1. In a box strap tightener, a frame, a rack bar slidably mounted therein, a pivoted clamping member on said frame for holding one end of the strap, a pivoted clamping member carried by said rack bar for holding the other end of the strap, a pinion rotatably mounted in said frame and meshing with said rack bar, a handle pivoted in said frame for oscillatory movement, a spring-pressed pawl pivoted on said handle and adapted to cooperate with said pinion, the pivoted end of said pawl being rounded to provide a seating surface for the pawl, and a pawl pivoted on said frame and cooperating with said pinion to hold the same against rotation during the inoperative stroke of said handle, said last mentioned pawl having on its free end a pair of fingers with a notch therebetween rounded correspondingly to and adapted to receive said seating surface of the pivoted end of said first mentioned pawl and provide a stop and a support for the same and said handle, the rounded end of said first mentioned pawl being adapted to engage one of said fingers to move the second mentioned pawl out of engagement with said pinion and said first mentioned pawl having a cam surface with which the other of said fingers engages to move and hold said first mentioned pawl out of operative relation to said pinion when said handle is moved to the full extent of its inoperative stroke.

1,675,421. COVERING FOR CABLES AND THE LIKE. ALLEN D. PETTEE, Mount Vernon, and CARROLL H. SHAW, Jackson Heights, N. Y. Filed July 2, 1927. Serial No. 203,001. 1 Claim. (Cl. 173—266.)



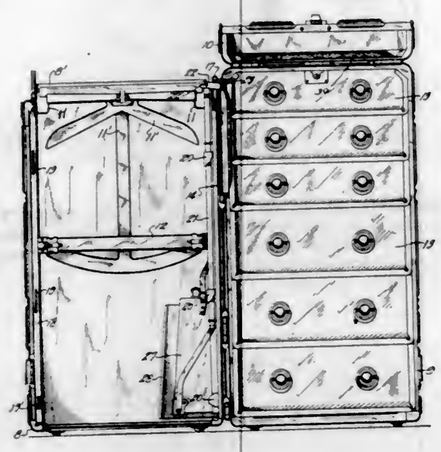
In combination, a lead covered cable having an outer covering comprising a stocking-like sheath of oppositely inclined interwoven strands and a layer of fireproof cement embedded between said strands and surrounding said sheath.

1,675,422. BOAT. GEORGE B. POST, New York, N. Y. Filed Oct. 25, 1926. Serial No. 143,949. 13 Claims. (Cl. 114—66.5.)



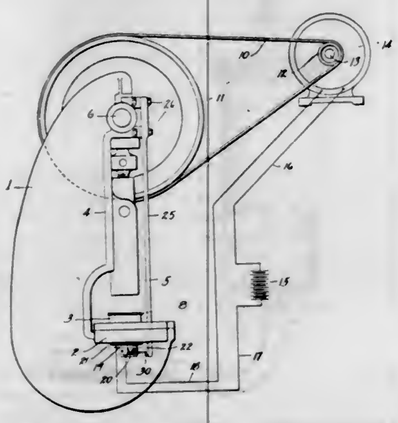
1. In combination in a boat, for steering a boat, an air rudder, a water rudder, and means automatically operated to render the water rudder inoperative.

1,675,423. TELEPHONE SUBSTATION CIRCUITS. RUSSELL S. OHL, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 24, 1926. Serial No. 118,349. 9 Claims. (Cl. 179—81.)



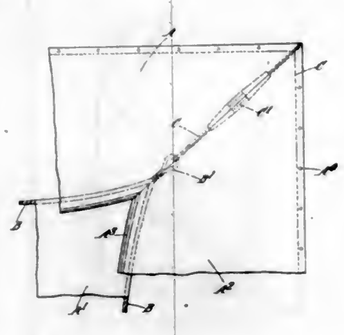
1. A system for eliminating the effect of high frequency currents induced in a telephone substation circuit, comprising means within said telephone substation circuit and in series with its transmitter for substantially suppressing these high frequency currents by reactances of predetermined magnitude.

1,675,424. LUBRICANT COMPRESSOR. EARL F. PIERCE, Winnetka, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 17, 1925. Serial No. 63,081. 3 Claims. (Cl. 221—47.3.)



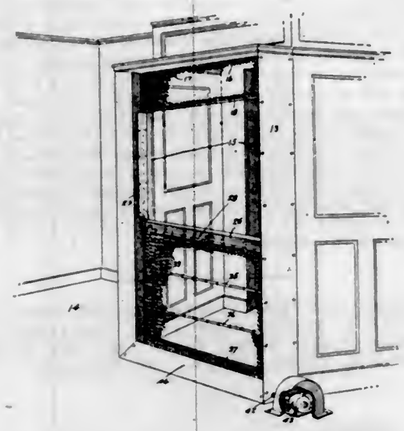
1. Lubricating means comprising a barrel, a discharge conduit, a coupling in the barrel end of said conduit, said barrel having a discharge opening, laterally open hook means for receiving said coupling and holding it in sealing relation with said opening, and automatically operable means for positively retaining said coupling against removal while the lubricant is under pressure.

1,675,425. COMBINED TOP AND FRONT-DOOR LOCK. JULIUS RITTER, Jr., Racine, Wis., assignor to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Sept. 12, 1927. Serial No. 218,986. 6 Claims. (Cl. 292—157.)



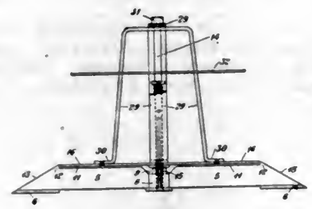
1. The combination with a wardrobe trunk formed of two hinged together sections swingable horizontally to open position, one of said sections having an open top and front and an inner top cover and an inner front cover, of a lockig means therefor, comprising a manually controlled lock for the inner top cover, and a locking means for the inner front door actuated by the movement of the inner top cover towards open or closed position.

1,675,426. AUTOMATIC STOP MECHANISM. VICTOR G. ROSS, Seattle, Wash., assignor to Seattle Can Company, Seattle, Wash., a Corporation. Filed Jan. 2, 1925. Serial No. 105. 6 Claims. (Cl 192—127.)



1. The combination with a machine and a control member for a source of power, said machine comprising a frame structure that is yieldable when placed under excess working strain, of means operable by said yieldable movement to actuate the control member.

1,675,427. RIGID AIRSHIP. ALFRED RYAN, Anniesland, Glasgow, Scotland, assignor to The Ioco Rubber & Waterproofing Company, Limited, Glasgow, Scotland, a British Company. Filed Sept. 15, 1927. Serial No. 219,716, and in Great Britain Sept. 17, 1926. 4 Claims. (Cl. 244—3.)

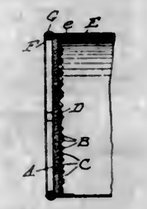


4. A detachable section for the outer cover of an airship provided with catenaries towards each edge thereof and with turnbuckles or other tautening devices for attaching the catenaries to the framework of the airship.

1,675,428. PROTECTIVE APPARATUS. EWALD J. SCHIFFKO, Oakland, Calif., assignor of one-third to Frank Franzen and one-third to Lucille Hill, Oakland, Calif. Filed Sept. 1, 1925. Serial No. 53,960. 1 Claim. (Cl. 20—1.01.)

In a device of the type described, a door frame having a recess at the bottom thereof for receiving a collapsible door, a cover for the top of said recess which normally forms the door sill, a collapsible door connected to said door sill, means for raising said door sill for causing said door to close the door opening, said means including a shaft mounted in said recess, a ratchet carried by said shaft and a pawl for engaging with said ratchet, said collapsible door being formed of chains that are shaped in a Y at the lower end thereof and secured to the sides of the walls forming the recess whereby the actuating mechanism disposed within said recess is protected.

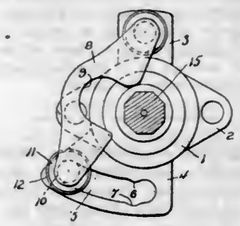
1,675,429. REELING DEVICE. HENRY E. SCHNEE, Chicago, Ill., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 8, 1926. Serial No. 114,528. 3 Claims. (Cl. 242—78.)



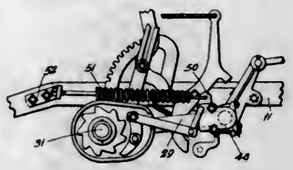
1. In a device for reeling wire, a drum adapted to support a coil of wire, said drum comprising a rotatable disk having standards positioned thereon in spaced relation from each other, a spindle for supporting said disk and standards, a base for said spindle, said base having shoulders closely adjacent to the edge of said disk to prevent the catching of the wire as it is unwound from the drum, and braking mechanism associated with said spindle for permitting the rotation of the drum in one direction under tension applied thereto in the withdrawal of the wire and preventing rotation of the drum upon the release of the pulling tension.

1,675,430. SULPHUR DYESTUFF. LINCOLN M. SHAFER, Jersey City, N. J., assignor to Tower Manufacturing Co., Inc., a Corporation of New York. Filed Jan. 18, 1926. Serial No. 82,135. 3 Claims. (Cl. 260—24.)

1. A sulphur dyestuff resulting from the reaction of sulphur on a meta-diamine, a para-diamine, and dehydro-thiotoluidine, having the characteristics of being insoluble in water but soluble in aqueous sodium sulphide with a yellowish-tan color, and having the property of dyeing unmordanted cotton in a bath containing sodium sulphide in shades ranging from tan to greenish-bronze.



1,675,431. LIGHT TRANSMITTING AND REFLECTING DEVICE. DONALD E. SHARP, Hamburg, N. Y., assignor to Spencer Lens Company, Buffalo, N. Y. Filed Apr. 18, 1925. Serial No. 24,111. 2 Claims. (Cl. 240—8.3.)



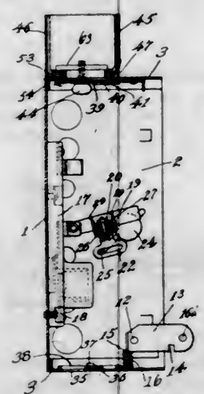
2. A light transmitting signal article of colored glass having a plurality of integral light reflecting right cones projecting from a face thereof and having substantially flat spaces arranged between the cones on the same face.

1,675,432. TOOL RETAINER. GEORGE W. SMITH, Ottumwa, Iowa, assignor to Hardsocg Wonder Drill Co., Incorporated, Ottumwa, Iowa. Filed Mar. 12, 1928. Serial No. 261,042. 3 Claims. (Cl. 121—32.)

1. In drill retainers, a drill head having a drill receiving portion, a pivot ear and a slotted ear on said drill head; a yoke having arms passing through said ears with stops to limit movement of the arms and yoke in one longitudinal direction; springs and nuts on said arms to hold said stops against said ears.

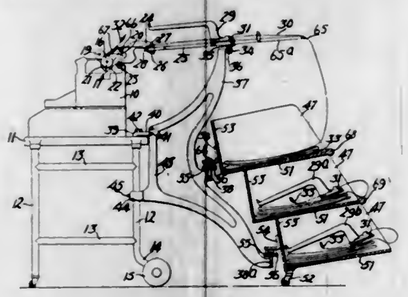
1,675,433. POWER LIFT PLOW. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 1, 1923. Serial No. 665,897. Renewed Apr. 17, 1926. 12 Claims. (Cl. 97—73.)

1. In a wheeled plow, the combination of a beam structure, a wheeled support movable to lift or lower the plow, mechanism actuated by power of the traction to move said support to lift the plow, and means connected with the beam structure and with said support, and cooperating with said mechanism to increase the power thereof as the plow rises and operating to resist said power as the plow approaches its pre-determined height.



1,675,434. FLUID PUMP. CHARLES VAN AMBURGH, Long Beach, Calif. Filed May 15, 1924. Serial No. 713,493. 7 Claims. (Cl. 105—165.)

1. A fluid pump comprising a pair of pistons, a barrel in which said pistons are adapted to work, said barrel being adapted to be lowered into an oil string casing so

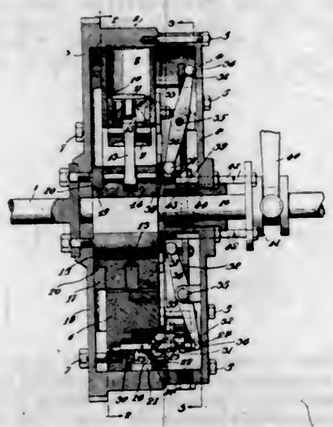


as to be submerged in the static oil of a well, both ends of said barrel being open to allow the upper strata of oil to enter the ends of the barrel and provide fluid mediums free from solid particles in which said pistons are adapted to work, and means adapted to co-operate with said oil string casing for elevating oil on each stroke of the pistons and in such manner as to prevent complete expulsion of the fluid mediums from the barrel.

1,675,435. ELECTRICAL SWITCH. GEORGE B. WADSWORTH, Covington, Ky., assignor to The Wadsworth Electric Manufacturing Company, Covington, Ky., a Corporation of Kentucky. Filed Mar. 24, 1921. Serial No. 455,027. 2 Claims. (Cl. 247—2.)

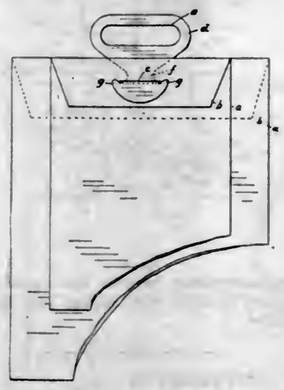
1. A sealable electrical appliance housing having an aperture at one end through which conductors may be passed and having adjustable means arranged about the aperture whereby any one of a plurality of sizes of meter terminal chambers may be substantially inclosed on at least three sides, and means operable only from within the housing for securing the adjustable means in selected positions.

1,675,436. TYPEWRITING MACHINE. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 9, 1922. Serial No. 566,939. 2 Claims. (Cl. 312—39.)



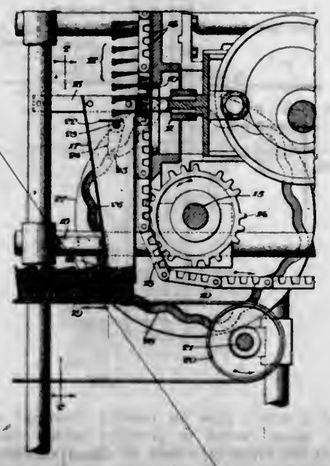
1. The combination of a stand for a typewriting machine, brackets having vertical reaches secured on the rear of the stand and provided with arms inclined in a rearward and downward direction from the rear of the stand, horizontal rails one spaced above the other and both laid across the arms and connecting them together, a work-web-holder-cabinet, including tiers of work-web-holders, and brackets on the cabinet adjustably engaging said rails for lateral adjustment of the cabinet on the rails and supporting the cabinet in a forwardly and upwardly inclined position, whereby the tiers may be brought selectively in vertical register with the carriage of a typewriting machine supported in operative position on the stand.

1,675,437. METHOD OF AND APPARATUS FOR SHAPING GOLF-CLUB FACES AND CLUB PRODUCED THEREBY. FREDERICK A. WALDRON, Westfield, N. J. Filed Aug. 4, 1927. Serial No. 210,470. 20 Claims. (Cl. 144—309.)



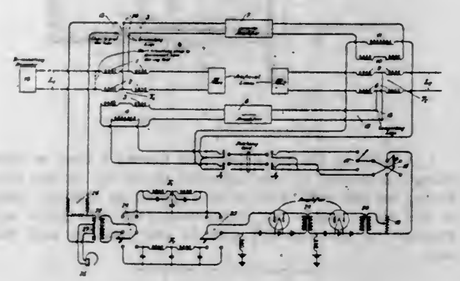
1. A golf club having a grip, shaft, and club head provided with a striking face, and wherein the angle of the striking face is fixedly related to both the lateral and torsional flexibility of the shaft and a predetermined moment produced by pressure on the striking face.

1,675,438. VARIABLE-SPEED-TRANSMITTING MECHANISM. TIMOTHY WALSH and HARRY S. COOVER, Philadelphia, Pa. Filed Jan. 21, 1925. Serial No. 3,728. 9 Claims. (Cl. 192—60.)



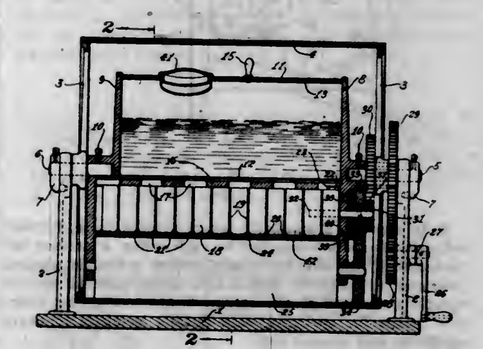
1. Variable speed transmitting mechanism including a rotatably mounted oil-tight casing; an annular block secured within the casing; cylinders extending radially inward from the periphery of the block and closed at their outer ends by the casing; pistons slidable in the cylinders; inlet ports in the pistons; valves for closing the ports; springs normally closing the valves; a shaft rotatably mounted in the casing; an eccentric fixed thereto; a collar rotatably mounted on the eccentric; links connecting the pistons with the collar; outlet ports in the cylinder block, communicating with the cylinders; outlet valves mounted in the outlet ports; stems for controlling said valves, and means for manually actuating the stems.

1,675,439. ENVELOPE AND SEPARABLE HANDLE THEREFOR. HOWARD A. WOLF, Elkins Park, Pa., assignor to Edwin Wolf, Benjamin Wolf, Clarence Wolf, Louis Wolf, and Albert Wolf, Philadelphia, Pa., Copartners trading as Wolf Brothers. Filed Oct. 15, 1923. Serial No. 668,536. 3 Claims. (Cl. 229—68.)



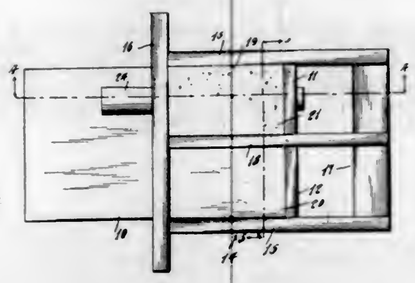
2. An envelope having two opposed walls, registering slots in said walls adjacent an edge of the envelope, said slots extending substantially parallel to said edge, and a rigid separable handle therefor comprising a head portion substantially wider than the length of the slots, a suspensory portion of greater width than the length of the slots, and an intermediate neck portion adapted to extend through the slots.

1,675,440. MECHANISM FOR ASSEMBLING MATCH STRIPS. CHARLES F. WRIGHT, Akron, Ohio, assignor to The Diamond Match Company, New York, N. Y., a Corporation of Illinois. Filed July 1, 1927. Serial No. 202,783. 7 Claims. (Cl. 144—51.)



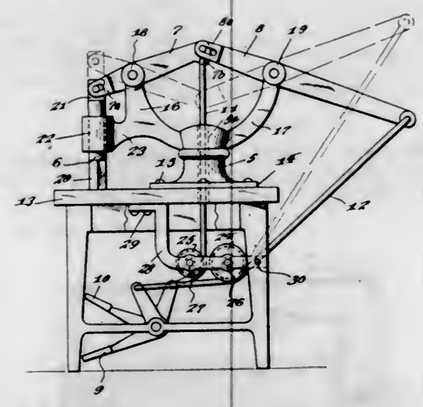
1. The combination with means for supplying match strips, and means for ejecting successive pairs of match strips therefrom, of a pendant guide element to which the match strips are delivered in a substantially horizontal position, means arranged to intercept the successive pairs of match strips, oppositely tilt the alternate pairs and direct them to a substantially vertical position for gravitation with their heads in opposite directions, and a collecting element which receives the oppositely-disposed pairs of strips.

1,675,441. MEANS FOR MEASURING BALANCE OF ELECTRICAL NETWORKS. SUMNER B. WRIGHT, South Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 26, 1927, Serial No. 171,836. Renewed Sept. 27, 1927. 12 Claims. (Cl. 179—175.)



9. In a system for measuring balance between two electrical networks, the combination with a hybrid coil of a plurality of impedances connected with certain windings of the said coil, a measuring circuit having one end connected with the midpoints of the said certain windings and the other end connected with another winding of the said coil, the said circuit having an amplifier, means to adjust the gain of the said amplifier, and means to detect the occurrence of singing.

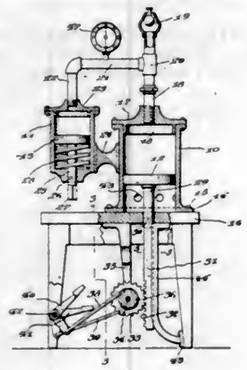
1,675,442. INKING MECHANISM. ANTHONY F. ZEITINGER, St. Louis, Mo. Filed May 7, 1927. Serial No. 189,594. 11 Claims. (Cl. 101—120.)



1. An inking device for duplicators, comprising, an ink reservoir, an ink distributing roller, means providing a series of ducts spaced along said roller adapted to supply ink thereto, and means joining said ducts adapted to spread the ink over said roller.

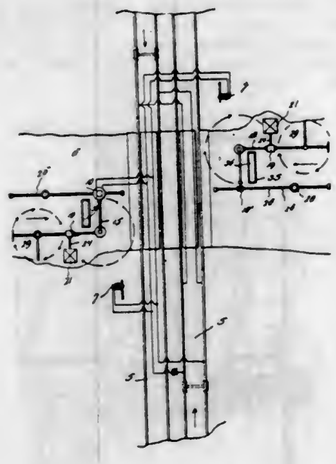
1,675,443. CONCRETE-SPREADER MOLD. EARL R. BELL, Covington, Ky., assignor of one-fourth to Arthur L. Evans and one-fourth to Russell A. Lenox, Covington, Ky. Filed June 23, 1927. Serial No. 200,896. 6 Claims. (Cl. 25—121.)

3. A mold of the class described having a base, a plate rising therefrom, a body movable relatively to the base having an end wall, side walls disposed on opposite sides of the plate, and a bar connecting said side walls and disposed on the opposite side of the plate to said end wall.



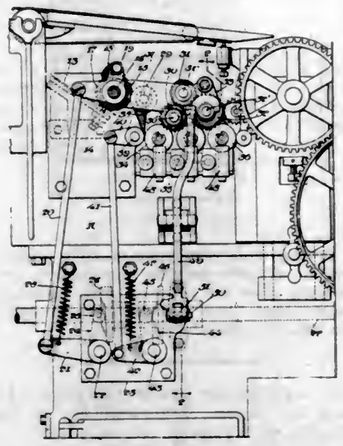
1,675,444. PRESS. FRANK BLANDO, New York, N. Y. Filed May 10, 1927. Serial No. 190,314. 3 Claims. (Cl. 41—2.)

1. In a press, a standard, levers pivoted to said standard and pivotally connected to each other, a presser bar connected to the shorter of said levers, a flexible member connected to the other end of said lever, a second flexible member connected to the other of said levers, and alternate means for operating said flexible members to lower and raise said presser bar.



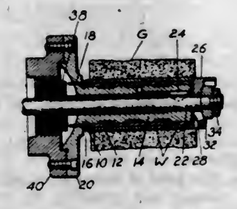
1,675,445. PRESS. FRANK BLANDO, New York, N. Y. Filed May 10, 1927. Serial No. 190,315. 3 Claims. (Cl. 41—2.)

3. In a press, a major reciprocatory member, a minor reciprocatory member responsive to the movements of said major member, cylinders confining said members, a conduit connecting said cylinders and establishing communication with the atmosphere, yieldable means associated with said minor member for restoring the same to its normal position and means for operating said major member.



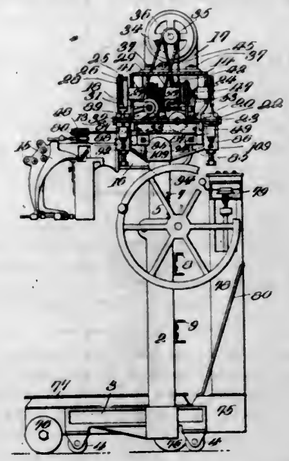
1,675,446. [WITHDRAWN.]

1,675,447. SAFETY GATE FOR RAILWAY CROSSINGS. MARION BROWN and JULIUS GREEN, National Home, Wis. Filed Mar. 30, 1927. Serial No. 179,542. 7 Claims. (Cl. 246—128.)



6. In a safety gate for railway crossings wherein an electric block circuit is provided within the trackway adjacent the crossing, a pair of signal semaphores at opposite sides of the crossing operable by a train passing into the block, a normally closed electrically operated gate arranged upon the roadway at opposite sides of the crossing, said electrically operating means consisting of an electric motor and a source of supply, a vehicle actuated switch complementary to each gate for closing the circuit to the motor when depressed, and means within the circuit operable by the actuation of the semaphore to prevent the completion of the circuit between the motor and source of supply even though the vehicle actuated switch is depressed.

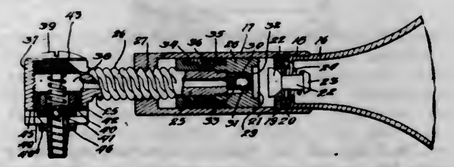
1,675,448. INKING MECHANISM FOR PRINTING PRESSES. IRA CARSON, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1927. Serial No. 196,757. 3 Claims. (Cl. 101—187.)



1. Inking mechanism for printing presses having a fountain with separate ink chambers and having also associated distributing and inking rolls, said distributing rolls comprising a plurality of rolls presenting uninterrupted ink-receiving surfaces, and also an intermediate roll having spaced-apart ink-receiving surfaces in peripheral contact with the surfaces of the laterally adjacent rolls, means for delivering the ink in spaced relation from the respective chambers of the fountain to the surface of one of the said adjacent rolls, and means for longitudinally reciprocating the latter roll in a path substantially equal in length to the width of the gap between the spaced ink-receiving surfaces.

1,675,449. WORK HOLDER. WILLIAM H. CHAPMAN, Montclair, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 6, 1924. Serial No. 718,313. 12 Claims. (Cl. 279—1.)

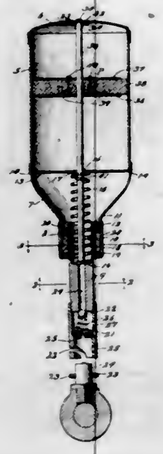
1. In apparatus of the character described, a rotary cylindrical spindle for supporting a hollow work piece, a hollow cylindrical bushing sleeved on the spindle, said bushing being slidable off and on the spindle for loading, a limit device associated with the spindle, a quick detachable member engaging the limit device and contacting with the work piece to hold the latter on the spindle, means extending through the spindle for moving the limit device away from the work, and means for sliding the bushing on the spindle; substantially as described.



1,675,450. FILLED-BAG-SEWING MACHINE. NORMAN V. CHRISTENSEN, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1923. Serial No. 681,263. 37 Claims. (Cl. 112—11.)

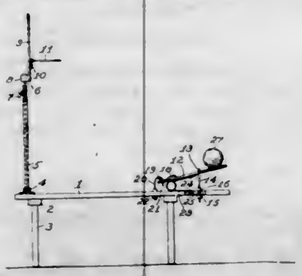
1. In a filled bag sewing machine, the combination of a track, a carrier movable along the track, a sewing head mounted on the carrier, means for actuating the sewing head, and means whereby said track may be placed in a substantially horizontal position during the stitching of the bag and raised so as to incline downwardly for returning the sewing head to starting position.

35. In a filled bag sewing machine, the combination of a track, a carrier adapted to move along the track, a sewing head mounted on the carrier, a motor mounted on the carrier and movable therewith, devices including a clutch for actuating the sewing head from the motor, devices including a clutch for actuating the carrier from the motor, a control rod parallel with the tracks, means operated by said control rod for actuating said clutches, and an adjustable stop for determining the initial starting position of the sewing head.



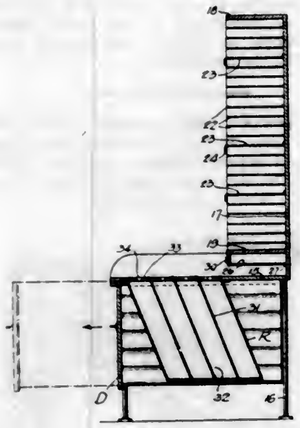
1,675,451. LUBRICANT COMPRESSOR. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 30, 1924. Serial No. 710,043. 8 Claims. (Cl. 221—47.4.)

1. A lubricant compressor, comprising a barrel, a sleeve communicating with said barrel and forming a cylinder, the outer end of said sleeve being internally threaded, an outwardly opening valve controlling communication between said barrel and said sleeve, a hollow plunger rod extending through the outer end of said sleeve and ex-



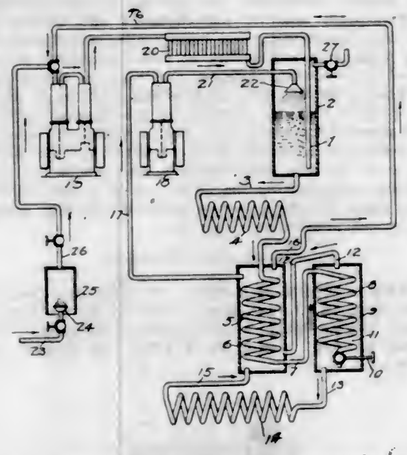
ternally threaded for co-acting with said threaded sleeve, a plunger at the inner end of said plunger rod, comprising an outwardly opening valve, and a coupling member carried by the outer end of said plunger rod for making sealed connection with a fitting by a movement substantially parallel with said plunger rod.

1,675,452. LUBRICANT COMPRESSOR. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 10, 1924. Serial No. 685,357. 5 Claims. (Cl. 221—47.4.)



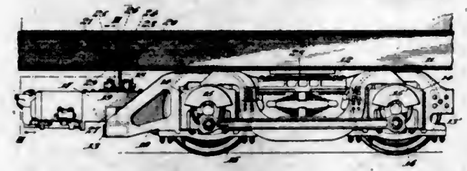
1. A lubricant compressor comprising a barrel having a cap at one end and an opening at the other end, a cylinder reciprocably mounted in said opening, a coupling member secured to the outer end of said cylinder, a spring for urging said cylinder outwardly, a valve for closing the outer end of said cylinder, a plunger supported by said cap and extending inwardly to a point adjacent the inlet end of said cylinder when said cylinder is in its outermost position, and a follower slidably mounted on said plunger rod.

1,675,453. ADJUSTABLE GAME DEVICE. ARCHIE D. FORRY, Clarksville, Iowa. Filed July 25, 1927. Serial No. 208,334. 3 Claims. (Cl. 273—107.)



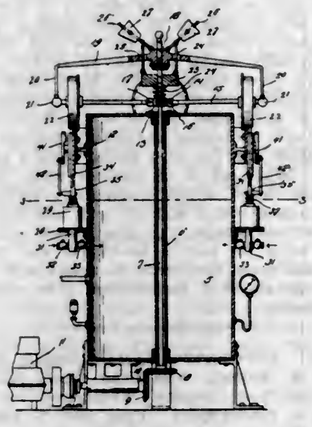
1. A device of the character described, comprising a game ball, a horizontal ring mounted at a desired altitude, a resiliently controlled propelling device for said ball mounted loosely to be freely tiltable in any direction, means for limiting the scope of movement of said device, and means for varying the said limiting device in position to variably tilt the propelling device when striking the limiting device.

1,675,454. SORTING DESK. SAMUEL A. HARRISON, Los Angeles, Calif. Filed Sept. 20, 1924. Serial No. 738,936. 4 Claims. (Cl. 312—103.)



1. A sorting desk comprising a table having a top supported in elevated position, a receptacle secured to and depending from the table top and divided interiorly into compartments, and a drawer slidable beneath the table top and receiving the receptacle.

1,675,455. SYSTEM OF REFRIGERATION. PIERRE E. HAYNES, East Aurora, N. Y. Filed Jan. 16, 1924. Serial No. 686,497. 1 Claim. (Cl. 62—178.)



In a system of refrigeration, incorporating with a compressed gaseous refrigerative medium a normally liquid miscible non-refrigerative material capable of entering into solution with the medium and of raising the critical temperature and lowering the critical pressure of the medium, the heat of solution exceeding the heat of vaporization, cooling and reducing the pressure of the mixture whereby the gaseous medium is driven out of the solution and a super-cooled residue of the solution with a weak concentration of the refrigerative medium remains, utilizing said residue for the work of refrigeration, compressing and cooling the medium, and circulating the medium and material in a continuing cycle.

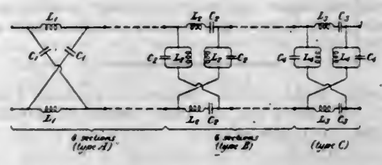
1,675,456. AUXILIARY LOCOMOTIVE SUPPORT. RICHARD J. MCCARTY, Jr., Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Aug. 16, 1926. Serial No. 129,352. 3 Claims. (Cl. 105—136.)

1. In a railroad vehicle, a center sill, a truck having an axle, and a motor frame mounted on said axle and suspended from said center sill.

1,675,457. AIR COMPRESSOR. THEODORE A. MATHEWS, Washington, Pa., assignor of forty per cent to Fred D. Johnson and W. N. Butler, trustees, Washington, Pa. Filed Feb. 8, 1927. Serial No. 166,724. 6 Claims. (Cl. 230—186.)

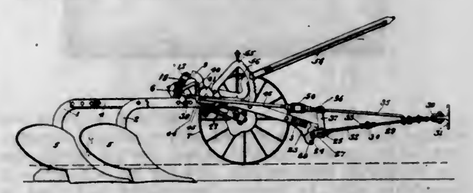
1. In an air compressor of the character described, a closed storage tank, a plurality of air compressor pumps arranged around the exterior of the tank and including vertical piston rods, said pumps having communication with the interior of the tank, a track supported by the tank, wheels movable upon the track, means associated with the pump pistons for engagement above the track so as to be encountered by the wheels to depress the pump piston, means for returning the piston, a drive shaft operatively connected with said wheels extending concentrically through the tank and drive means for said shaft remote from the tank.

1,675,458. AUTOMOBILE BUMPER. OLIVER R. MCDONALD, Bridgeport, Conn., assignor to American Chain Company, Inc., a Corporation of New York. Filed Oct. 16, 1926. Serial No. 141,897. 4 Claims. (Cl. 293—55.)



1. An automobile bumper comprising as a main element a complete loop end bumper bar, a pair of auxiliary bars having short loop ends terminating in eyes, spacing members for engagement with said main bar, and means for aligning said eyes with said spacing members.

1,675,459. PHOSPHATE REDUCER FOR BOTTOM CHROME DYEING. NEIL NEVILLE, Birmingham, Ala., assignor to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Filed Oct. 29, 1924. Serial No. 746,678. 11 Claims. (Cl. 8—13.)

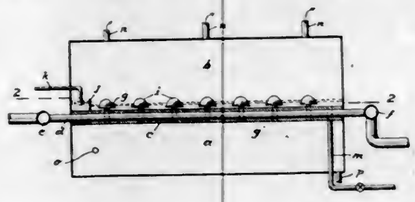


9. The method of assisting the action of the bichromate of a mordanting bath for bottom chroming which includes adding a pyro-phosphate to the chromate solution.

1,675,460. DISTORTION COMPENSATOR. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 20, 1924. Serial No. 751,146. 14 Claims. (Cl. 178—44.)

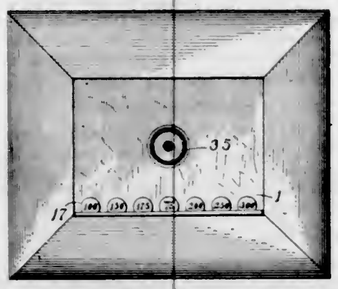
1. In combination, a transducer giving different delays for different frequencies over a certain frequency range, and a compensator to equalize the delays consisting of sections, at least one of these sections giving a maximum of delay within said frequency range.

1,675,461. HITCH DEVICE. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 13, 1921. Serial No. 484,412. Renewed Mar. 16, 1925. 14 Claims. (Cl. 97—98.)



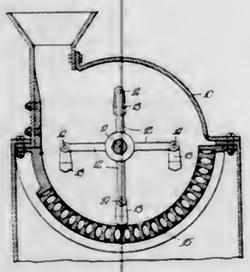
1. In a tractor plow, the combination with a crank axle and supporting wheels, of means to rock the axle to raise and lower the plow, a hitch device adapted to connect the plow with a tractor and including a draft bar pivoted to the plow for vertical swinging a standard on the rear of the hitch device, a brace extending from said standard forwardly to connection with the draft bar, a rotatable member supported on the plow, means for rotating said member by the raising or lowering of the plow, and a rod pivotally connected to said standard and having a connection wtih said member adapted to permit said rod to move longitudinally while said member remains in one position, and to hold said rod against longitudinal movement when said member is rotated to another position.

1,675,462. PROCESS OF PRODUCING HIGH-VISCOUS LUBRICATING OIL AND HIGH-GRADE ASPHALT FROM PETROLEUM. ARTHUR E. PEW, Jr., Bryn Mawr, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 22, 1926. Serial No. 156,288. 4 Claims. (Cl. 196—119.)



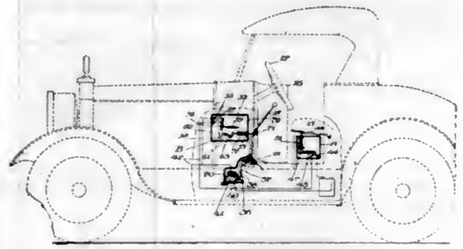
1. The process of separating the heaviest and less heavy constituents of heavy residual mineral oil which comprises subjecting a flowing shallow stream of such oil to a low absolute pressure and to a temperature above the vaporizing points of the less heavy constituents at such low pressure, and simultaneously therewith passing through the flowing stream a relatively light hydrocarbon

substantially lighter than said less heavy constituents of the heavy residual oil, thereby agitating the flowing liquid and, by relieving surface tension and by entrainment,



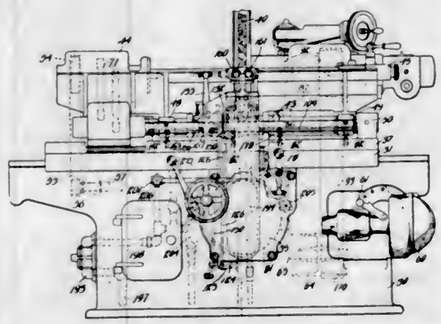
effecting maximum vaporization of said less heavy constituents, and separating the latter and said light hydrocarbon.

1,675,463. BALL GAME. WALTER S. POLLARD, Philadelphia, Pa. Filed Jan. 25, 1928. Serial No. 249,239. 6 Claims. (Cl. 273—35.)



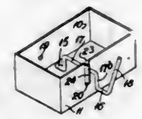
1. In a ball game, a target movably mounted and adapted to be hit by a moving ball, a pressure transmitting device actuated by said target, electric circuit closing mechanism progressively actuated by said device in accordance with the pressure transmitted, and score indicators progressively actuated by said circuit closing devices.

1,675,464. SHREDDER-TYPE PULVERIZING HAMMER. WILLIAM M. PRYOR, St. Louis, Mo., assignor to Southern Manganese Steel Company, St. Louis, Mo., a Corporation of Delaware. Filed June 10, 1927. Serial No. 197,800. 18 Claims. (Cl. 83—11.)



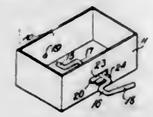
1. An article of manufacture including a series of stepped faces, slots provided in said articles between said faces, and attaching means for said article.

1,675,465. LOCKING MECHANISM FOR AUTOMOBILES. FRANK N. ROEHRICH, Jersey City, N. J., assignor to William H. Loud, Jersey City, N. J. Filed Jan. 26, 1927. Serial No. 163,643. 9 Claims. (Cl. 70—127.)



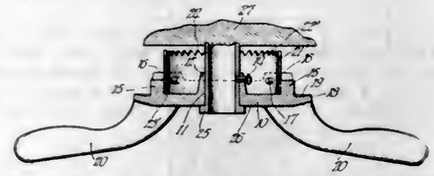
1. In motor vehicle locking mechanism, the combination of a locking member movable into locking and unlocking positons, means for urging said member normally to one position, a lock effective by key actuation to move said member to the other position, a restraining element operable to engage the said member and hold it in such second position, an electric circuit, including an electro-magnet which, when energized, moves said restraining element to releasing position, switches included in said circuit, one of said switches being open when the seat is occupied and being closed when the seat is unoccupied, and the other switch being a quick make-and-break switch which is operated when the door is opened and closed, motion transmitting devices between the first-named switch and the seat, and motion transmitting devices between the other switch and the door, whereby when the seat is unoccupied and the door is opened and closed the circuit is momentarily completed by the joint action of the switches, thus energizing the electro-magnet.

1,675,466. AUTOMATIC CAM-GRINDING MACHINE. RALPH K. ROWELL, West Palm Beach, Fla., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Mar. 6, 1926. Serial No. 92,885. 14 Claims. (Cl. 51—101.)



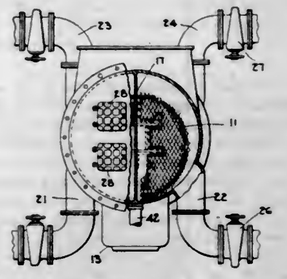
1. In a cam grinding machine, a rotary wheel, a tilting support therefor, a bracket tiltable on an axis parallel to that of the wheel, means on said bracket for supporting a camshaft, and means including a master camshaft for tilting said bracket, and means for tilting said bracket away from the grinding wheel, substantially as set forth.

1,675,467. INCLOSED ELECTRIC SWITCH AND METHOD OF ASSEMBLING THE SAME. JOSEPH SACHS, Hartford, Conn. Original application filed Jan. 28, 1922, Serial No. 532,450. Divided and this application filed Aug. 23, 1926. Serial No. 131,041. 7 Claims. (Cl. 200—162.)



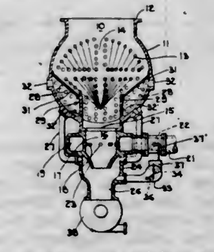
7. The herein described method of assembling an electric switch inclosing casing and a single piece switch operating spindle comprising two aligned pivot sections with a crank section between them and also comprising a handle at the end of one of the said pivot sections, the said method comprising initially forming the casing with aligned bearing apertures in its opposite side walls for receiving and approximately fitting the respective pivot sections of the spindle and with a slot in one of the side walls communicating with the corresponding bearing aperture and formed by slitting the side wall and bending a portion of the metal thereof to form a projecting lip, then moving the spindle through the slot into its operative position with the pivot sections thereof fitting the respective bearing apertures and with the handle on the exterior of the casing adjacent the slotted side wall, and finally when the spindle is in position bending the said lip to return it to the plane of the corresponding side wall so as to close the slot and hold the corresponding pivot section in place in its bearing aperture, the said lip cooperating with the other parts of the side walls to engage the crank section and thereby prevent endwise movement of the spindle.

1,675,468. INCLOSED ELECTRIC SWITCH AND METHOD OF ASSEMBLING THE SAME. JOSEPH SACHS, Hartford, Conn. Original application filed Jan. 28, 1922, Serial No. 532,450. Divided and this application filed Aug. 23, 1926. Serial No. 131,042. 4 Claims. (Cl. 200—162.)



1. The combination with a switch comprising stationary contacts and an associated movable member, of a single piece switch operating spindle comprising two aligned pivot sections with an off-set crank section between them operatively connected with the movable switch member and also comprising a handle at the end of one of the said pivot sections, an inclosing casing for the said switch having its opposite side walls closely adjacent the ends of the said crank section of the spindle and having in the respective side walls aligned bearing apertures for receiving and approximately fitting the respective pivot sections of the spindle, the said casing also initially having in one of its side walls a narrow slot communicating with the corresponding bearing aperture and closed at both ends, the said slot having a width and a length sufficient to permit the said spindle to be moved endwise and in substantial parallelism through the slot into its operative position with the pivot sections thereof fitting the respective bearing apertures and with the handle on the exterior of the casing adjacent the slotted side wall, and a closure associated with the casing for closing the said slot and for holding the corresponding pivot section in place in its bearing aperture, the said closure cooperating with the crank section and thereby prevent endwise movement of the spindle.

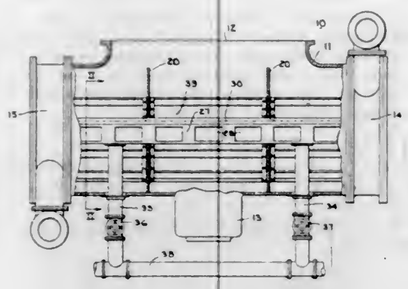
1,675,469. DRILL OR CUTTER. JOHN A. SCHREINER, Chicago, Ill., assignor, by mesne assignments, to Paul W. Koch & Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,861. 1 Claim. (Cl. 77—69.)



In a device of the character described, a body portion having guiding means centrally thereof, an annular cutter concentric with said guiding means extending from one face thereof and handles extending from the other face thereof, said body portion having an annular concave ledge outwardly of said cutter.

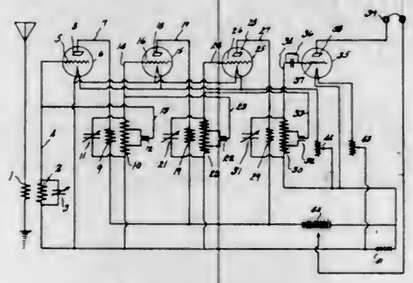
1,675,470. CONDENSER. JOHN H. SMITH, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1926. Serial No. 145,198. 13 Claims. (Cl. 257—33.)

1. In a surface condenser, a tube nest, a water box having a partition therein dividing it into sections each controlling the flow of cooling water through a portion of the tube nest, an air offtake having partition means therein forming compartments communicating with the portions of the tube nest, means for shutting off the flow of water through any one of the sections in the water box, means for shutting off the flow of air and non-condensable vapors through any one of the compartments, and baffle means for directing condensable vaports through a cooled portion of the tube nest when the flow of water and air through another portion is shut off.



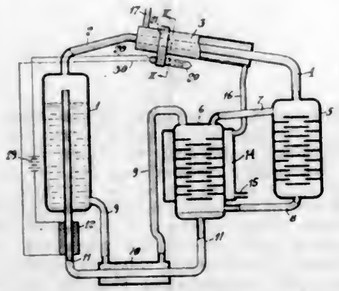
1,675,471. HEAT-BALANCE CONDENSER PLANT. JOHN H. SMITH, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 30, 1926. Serial No. 145,199. 17 Claims. (Cl. 257—24.)

1. In a power system requiring a relatively large quantity of boiler feed water, the combination of a plu-



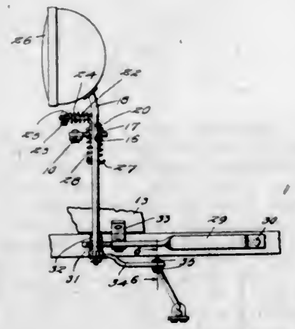
rality of steam condensers connected in series, one of said condensers being of the contact type, and means for utilizing make-up feed water as a cooling medium in the contact condenser, whereby a relatively large quantity of heated water is made available for boiler feed purposes.

1,675,472. SURFACE CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 24, 1927. Serial No. 170,607. 10 Claims. (Cl. 257—33.)



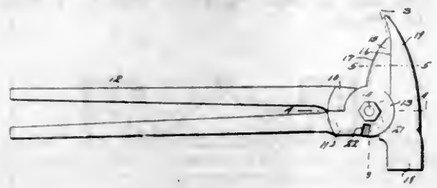
1. In a condenser comprising a shell, a nest of tubes within the shell, and separate controllable means for directing cooling media through respective portions of the nest, the combination of separate controllable means for removing air and non-condensable gases from the respective portions of the nest, and directing means extending longitudinally of the nest and between said respective portions of the nest for preventing condensable gases from by-passing from one of said respective portions of the nest directly to said means for removing air and non-condensable gases from another of said respective portions of the nest.

1,675,473. RADIO RECEIVING CIRCUITS. CHRIS L. VOLZ, Detroit, Mich. Filed Sept. 22, 1926. Serial No. 137,024. 3 Claims. (Cl. 179—171.)



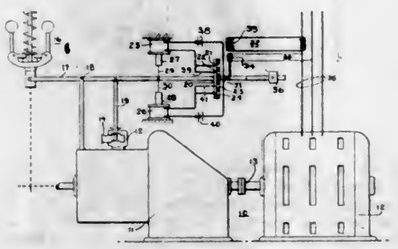
1. A radio receiving circuit comprising a series of stages of radio frequency amplification, each stage including a vacuum tube and a radio frequency transformer connecting the stages, a three-plate fixed condenser connected across several of the turns of the secondary of each radio frequency transformer, the central plate of each fixed condenser being connected to the input circuit of the preceding stage.

1,675,474. REFRIGERATOR OF THE ABSORPTION TYPE. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors, by mesne assignments, to Electrolux Servel Corporation, a Corporation of Delaware. Filed Oct. 2, 1925, Serial No. 60,088, and in Sweden Sept. 15, 1925. 3 Claims. (Cl. 62—119.)



1. A refrigerating system comprising a generator, an evaporator, heat rejecting means including an element continuously supplied with both a hot fluid and a cold fluid in normal operation, a source of heat for said generator arranged to continuously supply heat thereto, a thermostat responsive to a temperature resultant of the supply of hot and cold fluids to said element and means responsive to said thermostat to control the supply of heat to said generator, said thermostat being operative to interrupt the supply of heat to the generator upon an increase of temperature to a high value due to cessation of supply of cold fluid to said element and being inactive during normal operation.

1,675,475. DIRIGIBLE HEADLIGHT. JOHN D. WELNORN, Clayton, Ga. Filed Oct. 23, 1926. Serial No. 143,743. 1 Claim. (Cl. 240—62.)

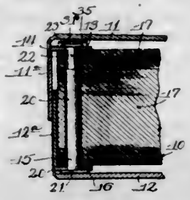


In combination with a vehicle having the usual steering mechanism including a connecting rod moving transversely of the vehicle during steering operations, a pair of vertically rotatable standards mounted for rotation adjacent opposite sides of the vehicle, headlights carried thereby, arms projecting forwardly from the standards, a link connecting the arms, an arm secured to the lower end of one of the standards, a bar connected at one end with the connecting rod of the steering mechanism of the vehicle and engaged with the arm at a point spaced from the end thereof and a spring seat carried by the bar and with which is engaged one end of a spring, the opposite end of said spring engaging the last named arm at opposite sides of the pivotal connection of the bar thereto whereby said spring tends to maintain said arm in one position with relation to the bar.

1,675,476. COMBINATION TOOL. WILLIAM JAMES WEST, Alder, Wash. Filed Mar. 26, 1927. Serial No. 178,761. 4 Claims. (Cl. 7—3.)

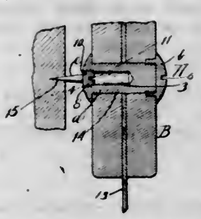
1. A tool of the character described including crossed shanks having handles and pivoted to each other, one of the shanks being provided with an outwardly projecting jaw flat on its inner face, and the other shank being formed with an outwardly projecting jaw having a flat inner face bearing against the first-named jaw but projecting longitudinally beyond the same and having a pointed rounded extremity, the opposite end of the jaw being formed with a head whereby the rounded extremity may be driven beneath a staple for the purpose of extraction.

1,675,477. GOVERNOR. JOSEPH BANCROFT WILSON, Chicago, Ill., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1925. Serial No. 70,171. 11 Claims. (Cl. 290—40.)



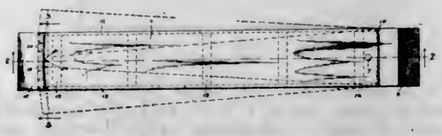
1. The combination with a turbo-generator set having a fluid-admitting valve and a speed controlled governing device for the actuation of said valve, said governing device maintaining the fluid admission substantially as a function of the speed of the turbine, of mechanism responsive to changes in a predetermined variable in the load conditions on the generator and effective to temporarily supersede said governing device in the control of said valve upon relatively rapid changes in said variable.

1,675,478. DYESTUFF INTERMEDIATES. FRITZ BALLAUF, FRIEDRICH MUTH, and ALBERT SCHMELZER, Elberfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y. Filed Jan. 16, 1925, Serial No. 2,926, and in Germany Jan. 24, 1924. 6 Claims. (Cl. 260—46.)



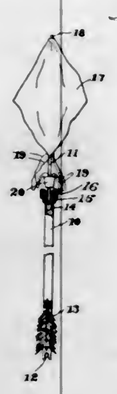
3. As new products the carbazoloic-acid-arylid-indophenols which are substantially identical with products obtainable by reacting aromatic amino bodies with carbazol-carboxylic acids and condensing the carbazoloic-acid-arylids so obtained with nitrosophenols which carbazoloic-acid-arylid-indophenols are reddish-blue to blue powders, soluble in concentrated sulfuric acid with from reddish-blue to blue color and being reduced in alkaline solution with sodium sulfide or hydrosulfide to the corresponding leuco compounds.

1,675,479. BINDER POST. ARTHUR M. BARRETT, Chicago, Ill. Filed June 1, 1926. Serial No. 112,782. 7 Claims. (Cl. 129—13.)



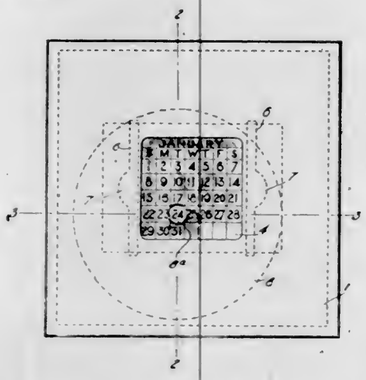
1. A binding post consisting of two parts detachable by expanding and contracting one of said parts within the other, the expanding part having a flanged portion at one end thereof, an expanding pin operatively disposed within said part and provided with a head projecting above said flanged portion, and an enlarged part spaced vertically below said head, and a securing piece interposed between said flanged portion and said head, said piece having a restricted opening permitting limited vertical movement of said pin.

1,675,480. SAW. WILLIAM H. BATH, Torrance, Calif. Filed Mar. 31, 1926. Serial No. 98,714. 2 Claims. (Cl. 145—35.)



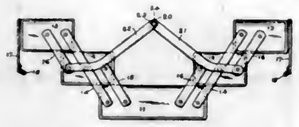
1. The combination with a saw and the handle member thereof, of an impaling device adapted to be screw-threaded within said handle and whereby the impalling device may be totally enclosed within said saw handle or may be projected from said saw handle for engagement with an object.

1,675,481. MOTOR-VEHICLE-WHEEL GAUGE. CLAUDE C. BENNETT, Seattle, Wash., assignor to A. E. Feragen, Inc., Seattle, Wash. Filed Sept. 23, 1926. Serial No. 137,227. 1 Claim. (Cl. 33—203.)



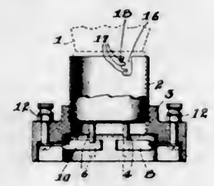
A vehicle wheel gauge comprising an elongated base, a runner board pivotally mounted at one end of said base, resilient means for normally retaining said runner board in a predetermined position with respect to said base, and anti-friction means disposed between said base and runner board, said anti-friction means comprising a casing, a plurality of balls in said casing, spacers disposed between said balls, and springs disposed between the ends of said casing and the adjacent ball.

1,675,482. TOY. JOHN F. BOYET, Covington, Ky., assignor of one-half to Walter W. Burns, Washington, D. C. Filed Nov. 29, 1921, Serial No. 518,578. Renewed May 25, 1927. 4 Claims. (Cl. 46—52.)



4. An arrow comprising a two part shaft having upper and lower parts, a parachute having its body portion surrounding the upper part of the shaft and having its periphery secured therebelow to the upper part of the shaft, the upper part of the shaft being so constructed as to be heavier at its lower end than at its upper end, a detachable connection between the two shaft parts and a guiding device at the lower end of the lower part, the connection being such as to readily permit the two parts of the shaft to separate upon the sprending of the parachute at the beginning of the descent.

1,675,483. CALENDAR. WILLIAM JOHN BROOKS, Letchworth, England. Filed July 5, 1927, Serial No. 203,591, and in Great Britain Jan. 8, 1927. 6 Claims. (Cl. 40—110.)

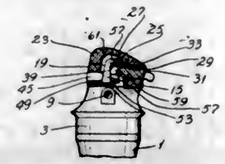


6. A calendar and like display device comprising a shallow casing having a front wall with a centrally located opening for the exposure of a card bearing matter to be displayed and a rear wall between which and the front wall the card is adapted to be accommodated, a transparent disc of a greater area than the said opening for covering substantially the whole of the exposed area of the displayed card, said transparent disc being frictionally held between the front of the said displayed card and the front wall of the casing solely by the pressure exerted upon it due to the compression between front and rear walls, and being capable of such movement within the casing, in any direction in its own plane, that a fixed central distinguishing mark upon it can be aligned with any portion of the displayed matter on the card, and accommodation within the casing for the disc around the entire periphery of the front wall opening.

1,675,484. TOOL BOX. JOHN E. COE, Jamestown, N. Y. Filed Aug. 28, 1926. Serial No. 132,175. 6 Claims. (Cl. 206—16.)

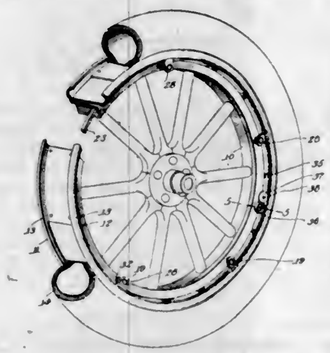
1. A tool box, having a handle, a plurality of trays arranged one above another so that when the tool box is closed each tray rests on the one below, means for so connecting said handle to certain of said trays that downward pressure on said handle will cause certain of said trays to shift laterally and thus open said box.

1,675,485. VACUUM-TUBE CONTACT DEVICE. JOHN C. FARLEY, Opelika, Ala. Filed Oct. 13, 1926. Serial No. 141,327. 3 Claims. (Cl. 173—328.)



1. In a vacuum tube contact device, a socket for the tube, a base member for the socket, contact pins extending in fixed relationship from the tube, contact strips suitably attached to the base member, a notched portion in the base member, means for adjusting the contact between the pins and contact strips consisting of a suitably formed slot in the socket adapted to cooperate with a lug portion extending from the tube, the contact strips being formed to contact with the pin elements at the sides thereof, contact strips being formed of suitable material and bent into an approximate V shape, one end of which is suitably connected to the base member, while the other end is adapted to be received in free relationship in the notched portion of the base member, thereby functioning to provide a resilient contact strip member of high efficiency.

1,675,486. FORM OF TUNGSTEN AND METHOD OF PRODUCING THE SAME. COLIN G. FINK, Yonkers, N. Y. Filed Jan. 16, 1924. Serial No. 686,628. 3 Claims. (Cl. 75—17.)

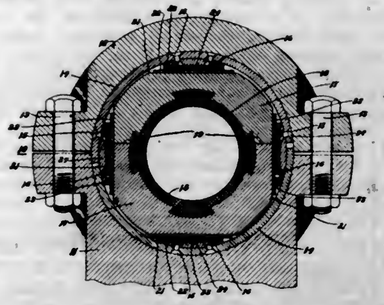


1. The process of preparing tungsten bodies containing tungsten crystals in part, which comprises incorporating in a slug of tungsten material a relatively small amount of a substance having a high affinity for hydrogen at relatively elevated temperatures and capable of reacting with intercrystalline impurities, and then heat-treating said slug in hydrogen to produce the reaction whereby the intercrystalline impurities are removed.

1,675,487. RAZOR. HERMAN I. GAHAGAN and WILLIAM P. ARON, Dallas, Tex., assignors, by mesne assignments, to The Whisk Razor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 173,465. 3 Claims. (Cl. 30—12.)

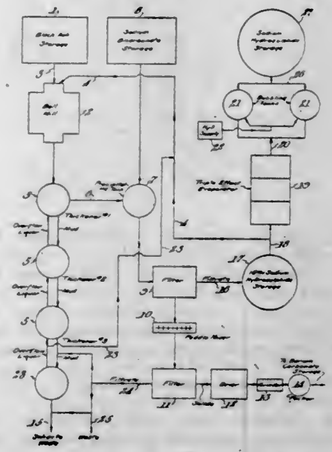
1. The razor comprising a blade member, a handle and a head thereon for holding said blade, an armature adapted to be vibrated by means within the handle, said armature having a finger thereon which in normal position engages an opening unsymmetrically located in the blade member, a recess in said finger, the armature being manually movable to a sprung position wherein the recess and the blade member align, thereby permitting release of the blade and replacement thereof in its other position beneath said finger of the sprung armature, whereby upon manually releasing said armature said blade is non-reciprocally held in said head by the reaction of said finger of the spring armature.

1,675,488. VEHICLE WHEEL RIM. HYMAN S. GOODKOWITZ, Suffolk, Va. Filed Apr. 7, 1926. Serial No. 100,436. 7 Claims. (Cl. 152—21.)



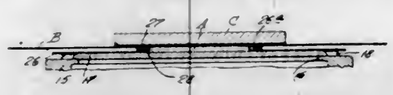
1. In combination with a vehicle wheel, a rim divided circumferentially to provide an inner relatively stationary section and an outer section, circumferentially spaced axially movable locking bolts associated with the sections to lock the sections in tire engaging position or to release the tire, pinions mounted upon the bolts to actuate said bolts and means common to all of the pinions to simultaneously actuate the latter.

1,675,489. MANDREL. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1924. Serial No. 694,561. 17 Claims. (Cl. 242—72.)



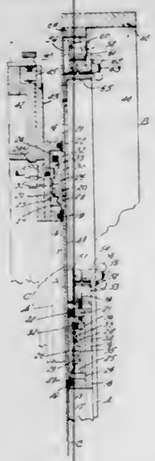
1. In a mandrel of the character described comprising a core and arcuate shaped sectional shell members extending longitudinally thereof, longitudinal slots in said core and means secured to said sectional shell members and in said slots, said means comprising members having inclined faces adapted to engage each other for slidably supporting said sectional shell members on said core to form a unitary cylindrical structure, a spring for maintaining said shell members in their normal positions, and means for placing said spring under compression and thereby sliding said shell members.

1,675,490. ADJUSTABLE BEARING. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1921. Serial No. 513,467. 7 Claims. (Cl. 308—58.)



1. In a shaft bearing in which a bearing block is mounted in a housing, in combination, means comprising opposed shim nests for adjusting the block axis relatively to the frame axis including opposed parallel guide faces on the outer surface of the block, and plates adapted to slide on the guide faces and to transmit radial pressure from the shim nests to said guide faces whereby the angular relation between the said axes is maintained during the adjustment.

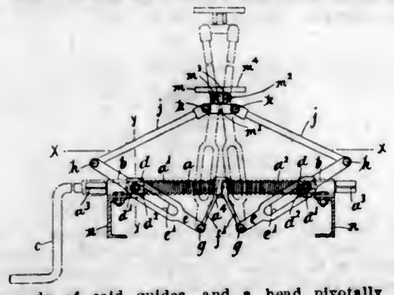
1,675,491. PROCESS OF MAKING SODIUM HYDROSULPHIDE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 20, 1925. Serial No. 44,913. 5 Claims. (Cl. 23—134.)



1. Process of making an alkali metal hydrosulphide which comprises dissolving an alkaline earth metal sulfid in a solution containing an alkali metal hydrosulphide and treating the resulting solution with an alkali metal bicarbonate.

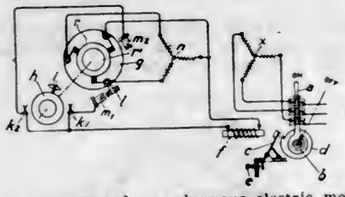
1,675,492. VACUUM PRESSURE DEVICE AND MASK. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed Feb. 5, 1923. Serial No. 616,938. 16 Claims. (Cl. 95—76.)

16. In a vacuum device for pressing a printing element and an opposing element into uniform close contact, the combination of a transparent support on the face of which said printing element is supported facing said opposing element, said support being imperforate in the area thereof covered by said printing element, a device which is adapted to contact with said support and said opposing element and form an air tight closure around the periphery of said printing element for the space between said support and said opposing element within which said printing element is located, and means for withdrawing air from the space closed by said device.



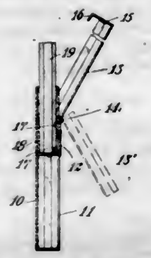
1,675,493. HOLDING AND SUPPORTING DEVICE FOR PRINTING OR PRINT-RECEIVING ELEMENTS OR THE LIKE. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bleistein Patents Company, Buffalo, N. Y. Filed Nov. 8, 1924. Serial No. 748,594. 22 Claims. (Cl. 95—76.)

1. In a printing apparatus, the combination of a support including a metal plate having an aperture therein, sheet holding means mounted on said support at one face of said plate and including holding parts extending into said aperture in position to hold a flexible sheet so as to extend across said aperture with its face substantially coplanar with the opposite face of said metal plate.



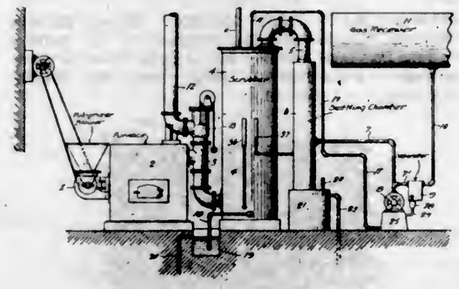
1,675,494. SCREW AND NUT GEARING. WILLIAM JENNINGS and GEORGE JENNINGS, Morpeth, England. Filed Jan. 5, 1927, Serial No. 159,156, and in Great Britain Dec. 10, 1926. 2 Claims. (Cl. 74—5.)

1. Screw-and-nut gearing comprising a right- and left-hand threaded spindle, bearings for said spindle, means for supporting said bearings, nuts on the threaded portions of said spindle, guides co-acting with said nuts, a sleeve on said spindle centrally of its threaded portions, arms on said sleeve, the ends of said guides being pivoted to said arms, links pivoted at one end to the



other ends of said guides, and a head pivotally connected to the other ends of said links, said guides and links together forming a closed four-sided link-work.

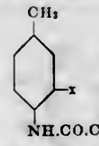
1,675,495. PROTECTIVE DEVICE FOR COMPENSATED ASYNCHRONOUS MOTORS. FRIEDRICH KADE, Kiel, Germany, assignor to Deutsche Werke Kiel Aktiengesellschaft, Kiel, Germany, a Corporation of Germany. Filed Mar. 11, 1925, Serial No. 14,753, and in Germany Mar. 12, 1924. 5 Claims. (Cl. 172—280.)



1. In a compensated asynchronous electric motor, the combination with brushes, adapted to be displaced by hand in accordance with the direction of rotation of the motor, of a switching member controlling the connections of the motor with the mains, and means adapted to automatically operate said switching member to break the connections of said motor with its external circuit when the brushes are not in the correct position corresponding to the direction of rotation of the motor at the time the motor circuit is closed by said switching member.

1,675,496. COSMETIC-STICK HOLDER. NATHAN KASDAN, Bronx, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Metal Specialties, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 16, 1927. Serial No. 240,440. 3 Claims. (Cl. 206—56.)

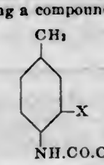
1. In a cosmetic stick container, in combination, a casing having a longitudinal opening therein, a slidable member exterior of the casing, a cover member hingedly attached to the slidable member, a slidable cosmetic stick carrier within the casing, and means within the casing opening connecting said slidable member with said carrier.



1,675,497. PROCESS FOR PRODUCING CARBON-DIOXIDE GAS. FREDERICK H. KELLIHER, Cleveland, Ohio. Filed June 19, 1926. Serial No. 117,032. 10 Claims. (Cl. 23—150.)

1. The process of producing a gas containing carbon dioxide which consists in burning a finely divided carbonaceous material in a closed furnace in the presence of sufficient air to insure substantially complete combustion without producing carbon monoxide, operating a water piston suction pump to withdraw the products of combustion from the furnace through a scrubber and a settling chamber and to deliver the gas so obtained through a separator to a gas receiving tank, and returning to the upper part of the scrubber the water which is removed from the gas in the separator.

1,675,498. SULPHUR DYESTUFF. ERWIN KRAMER, Cologne-Deutz, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 3, 1927, Serial No. 210,460, and in Germany Aug. 17, 1926. 4 Claims. (Cl. 260—24.)

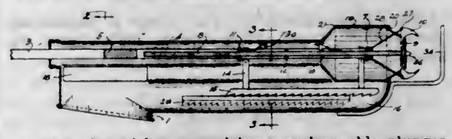


1. As new products the sulphur dyestuffs which are obtainable by heating a compound of the general formula:

wherein x stands for a nitro- or an amino-group at an elevated temperature with sulphur in the presence of about 2–8 mols benzidine and which dye cotton from baths containing sodium sulphide orange-brown shades passing on steaming or acidifying into bright clear orange shades.

1,675,499. SULPHUR DYESTUFF DYEING COTTON YELLOW. ERWIN KRAMER, Cologne-Deutz, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 3, 1927, Serial No. 210,461, and in Germany Aug. 17, 1926. 4 Claims. (Cl. 260—24.)

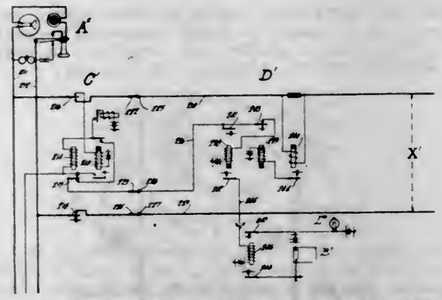
1. As new products the sulphur dyestuffs which are obtainable by heating a compound of the general formula:



wherein X stands for a nitro- or an amino-group at an elevated temperature with sulphur in the presence of 2–8 mols benzidine and which dye cotton from baths containing sodium sulphide yellowish brown shades passing on steaming, drying or acidifying into clear greenish yellow.

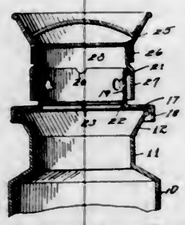
1,675,500. PHARMACEUTICAL COMPOUND. WALTER KROPP, Elberfeld, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed Sept. 17, 1925, Serial No. 57,026, and in Germany Dec. 12, 1924. 2 Claims. (Cl. 260—124.)

1. The herein-described new hydroxyalkylamides of orthohydroxyarylcarboxylic acids having most probably the formula:



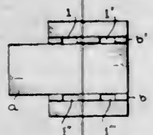
wherein R stands for an aryl and R_1 for an alkylene with more than one carbon atom, which are generally whitish crystalline compounds being soluble with difficulty in water and being valuable antirheumatics and antineuralgics, substantially as described.

1,675,501. COTTON-PICKING DEVICE. NICHOLAS LEHMAN, Birmingham, Ala. Filed May 22, 1925. Serial No. 32,223. 8 Claims. (Cl. 56—37.)



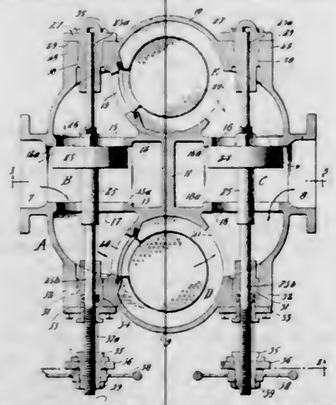
1. A cotton picker comprising a reciprocable plunger, a housing for guiding said plunger, grab means reciprocable with the plunger, automatic means to disengage the grab means from the plunger at an intermediate point in its travel in each direction, and co-acting means responsive to resultant relative movement between the plunger and grab means to cause the latter to engage and release cotton.

1,675,502. TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 27, 1922. Serial No. 532,063. 9 Claims. (Cl. 179—27.)



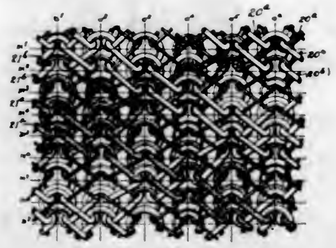
1. In a telephone system, an automatic trunk selecting switch having movable contacts, trunk lines accessible to said switch and terminating in fixed contacts, means for operating said switch to select and connect with an idle trunk, a locking circuit for holding said switch in operated position including a movable switch contact and affixed contact associated with the selected trunk, means operable over a non-talking conductor of said trunk for closing said locking circuit, a holding circuit for said switch closed after said locking circuit, and means for opening said locking circuit when the holding circuit is closed.

1,675,503. VENTILATING ATTACHMENT FOR MILK-CAN COVERS. WALLACE MCCALLUM, Minburn, Iowa. Filed Aug. 4, 1926. Serial No. 127,038. 5 Claims. (Cl. 220—44.)



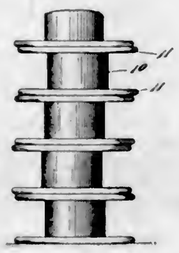
1. A ventilating attachment for milk cans comprising a flat annular body member having its outer edge provided with a downwardly extending flange and its inner edge provided with an upwardly extending flange, the upper edge of which is provided with an outwardly extending portion, the last said flange having its upper edge provided with a series of notches and its body portion provided with openings located substantially midway between its lower and upper edges, and a screen mounted within said upwardly extending flange perpendicular to its vertical axis.

1,675,504. RAIL-CHAIR PLATE. JOHN E. MCMULLEN, Council Bluffs, Iowa. Filed Sept. 9, 1927. Serial No. 218,496. 1 Claim. (Cl. 238—210.)



In a railroad rail chair, a flat rail plate having longitudinal ribs running its entire length, an extension portion, a rail joint adapted to be used with said railroad chair plate, the said chair plate having holes in the said ribs adapted to receive side flanges upon the rail joint and spikes through the said holes adapted to spike and hold the side flanges on the said rail joints in place where the said holes pass through the said ribs, the distance between the said ribs being sufficient to receive the said rail plate.

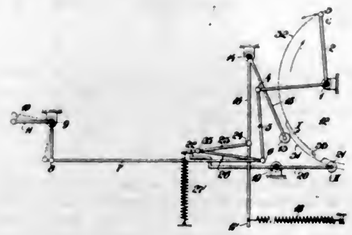
1,675,505. STRAINER. DANIEL RAYMOND MCNEAL, Palmyra, N. J., assignor to Andale Engineering Company, a Corporation of Pennsylvania. Filed Feb. 13, 1924. Serial No. 692,488. 3 Claims. (Cl. 210—168.)



1. In a strainer, a strainer body having a valve chamber, a valve, a valve stem carrying the valve intermediate the ends of the stem, a pair of bearing members for the ends of the stem interchangeably carried on the body whereby the stem may be reversed end for end, and means for manually shifting said valve into one position or another.

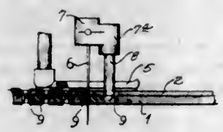
1,675,506. WARP KNIT FABRIC. ERNST RICHARD MEINIG, Wyomissing, Pa., assignor to E. Richard Meinig Co., Inc., Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1924. Serial No. 754,901. 6 Claims. (Cl. 66—86.)

6. The method of producing a crepe fabric on a traverse warp knitting machine having single row of needles and two reversely traversed rows of warps engaged thereby, which consists in arranging the warps in alternating pairs of thick and thin threads, traversing the same so as to lap over each separate needle, engaging like pairs of warps of the respective rows on the same pairs of needles to form alternate pairs of thick and thin stitches, and alternating said loop pairs in successive courses to form uniformly spaced thick and thin fabric.



1,675,507. REEL. FRANK MOSSBERG, Attleboro, Mass., assignor to Mossberg Pressed Steel Corporation, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1927. Serial No. 174,851. 10 Claims. (Cl. 242—123.)

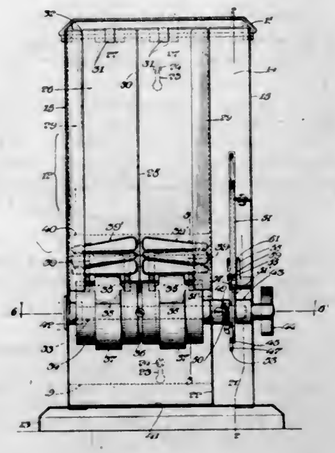
1. A sheet metal reel comprising a body having a head at each end, each of said heads having its periphery outwardly deflected to stiffen the same, and separate members attached to said heads adjacent and inwardly of the periphery thereof and of a dimension to present a portion in substantially the same plane as the edge of said deflected periphery whereby the reels may be stacked vertically end-to-end with their axes in staggered relation without tumbling.



1,675,508. BUTTONHOLE-SEWING MACHINE. GEORG MÜLLER, Berlin-Adlershof, Germany. Filed July 20, 1927, Serial No. 207,218, and in Germany Feb. 25, 1924. 1 Claim. (Cl. 112—158.)

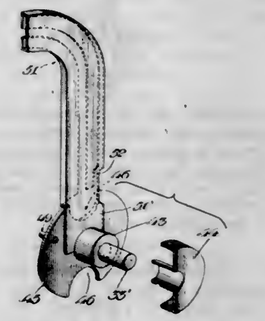
A button-hole sewing machine of that type in which the fabric is moved to and fro in the longitudinal direction of the slit to be turned into a button-hole by being bordered at its two edges or rims, and in which first one edge or rim is bordered, then the barring stitches at one end of the button-hole are made, then the other edge or rim is bordered, and finally the barring stitches at the other end of the button-hole are made, comprising, in combination, a bell-crank lever (11) adapted to actuate the needle guide, a rod (7) rocking this lever, another bell-crank lever (2) moving said rod, means for rocking this bell-crank lever, a cam-disk having a long cam (31) and two short ones (33, 34) two rigidly connected arms

(15, 16) rocked by said long cam, a third arm (23) hinged to one (16) of said two arms and extending in the direction to the first-mentioned bell-crank lever, a link (26) connecting said third arm (23) with the joint between the second bell-crank lever (2) and the rod connecting this lever with the first bell-crank lever, a double-armed lever (20) rocked alternately by said short cams and extending with its free end below the end of the said third arm (23), and means for keeping the members actuated by the said cams in contact with them and with the disk bearing them, for the purpose set forth.



1,675,509. RING BOOK AND METHOD OF ASSEMBLY. GEORGE WASHINGTON NEWMAN, Chicago, Ill., assignor to Wilson-Jones Loose Leaf Company, a Corporation of Massachusetts. Filed May 31, 1924. Serial No. 716,889. Renewed June 10, 1925. 3 Claims. (Cl. 129—24.)

1. In a ring book structure, a cover having a scarfed portion extending interiorly of the center line, a metal plate having a series of apertures struck therein with the struck out metal embedded in said cover and stitches extending through said apertures for securing said plate to said cover.

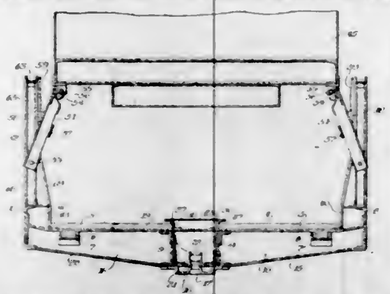


1,675,510. VENDING MACHINE. JOHN R. NOLAN, New York, N. Y. Filed Apr. 8, 1924. Serial No. 704,922. 6 Claims. (Cl. 312—63.)

1. In a vending machine, the combination with a magazine adapted to contain a column of articles to be vended, of a delivery element mounted to rotate below the magazine, and support the lowermost article and the entire column, said element comprising a generally cylindrical body having a peripheral projection affording an impelling shoulder and extending through an arc eccentric to the axis of the delivery element, which arc merges with the periphery of the body, a portion of such periphery

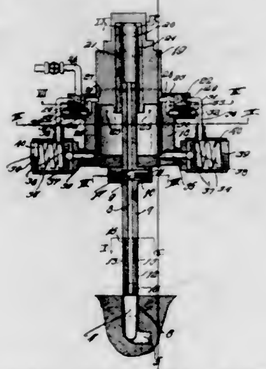
in advance of the projection affording a supporting surface for the entire column preparatory to the delivery operation.

1,675,511. COIN-CONTROLLED MECHANISM FOR VENDING MACHINES. JOHN R. NOLAN, New York, N. Y. Original application filed Apr. 8, 1924, Serial No. 704,922. Divided and this application filed Apr. 23, 1925, Serial No. 25,215. Renewed Nov. 2, 1927. 3 Claims. (Cl. 194—63.)



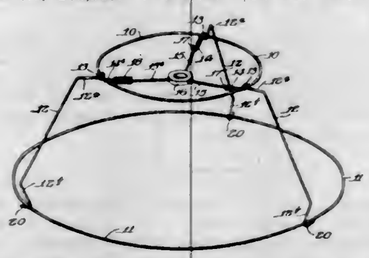
3. In a coin-controlled mechanism for vending machines, a rotary operating element including a socketed coin receiver, a coin chute leading to the coin receiver, and inter-engaging means between the coin rceiver and the coin chute for preventing lateral displacement of the one relative to the other.

1,675,512. MEANS FOR TRANSPORTING GOODS. HAROLD A. OTIS, Chicago, Ill., assignor to Chicago North Shore & Milwaukee Railroad Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1926. Serial No. 98,746. 16 Claims. (Cl. 105—159.)



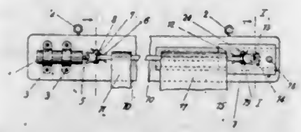
2. In combination, a first vehicle having supporting wheels, a second vehicle having a compartment for goods

to be shipped in less than carload lots, said second vehicle being loaded upon the first vehicle, pivoted struts mounted on the first vehicle for engagement with the



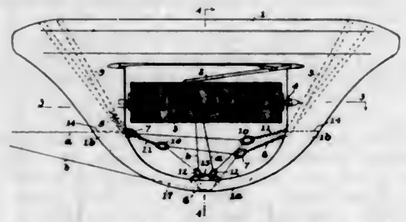
compartment, and winches on said first vehicle, said winches having cables adapted for connection with the second vehicle.

1,675,513. HYDRAULIC PRESS. LARS PARKER, Chicago Ill., assignor to Quality Hardware & Machine Co., a Copartnership consisting of Hilding A. Laystrom, Jerry Anderson, Carl Schwartz, and Elsie Laystrom, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,282. 4 Claims. (Cl. 138—10.)



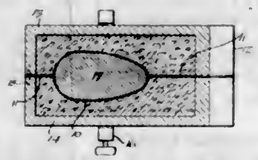
1. In a machine of the character described, the combination with a die having a forming cavity for receiving a tube, of a plunger adapted for fitting in said tube and a sleeve on the lower end of said plunger adapted for resting on said tube, said sleeve and plunger having relative movement whereby said plunger may enter said tube for the purpose set forth.

1,675,514. LAMP-SHADE CONSTRUCTION. ERNEST G. PATTERSON, Chicago, Ill. Filed July 5, 1927. Serial No. 203,540. 7 Claims. (Cl. 240—108.)



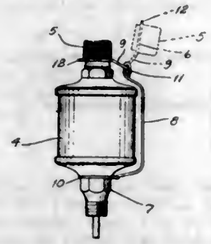
1. A collapsible lamp shade frame comprising upper and lower ring-like frame members spaced apart on substantially the same axis, and connecting standard members, with means including an integral radially-directed lever-extension of the standard members respectively for holding the ring-like members against twisting movements relative to each other, the standard members being readily releasably connected to one ring-like member and being mounted on the other ring-like member for movement into planes close to and substantially parallel with the plane of said other ring-like member to form a shallow compact unit.

1,675,515. SUSPENSION DEVICE FOR MAPS AND THE LIKE. CHRISTIAN PEDERSEN, Ugledige, near Allerslev, Denmark. Filed Mar. 26, 1927, Serial No. 178,787, and in Denmark Mar. 29, 1926. 3 Claims. (Cl. 40—85.)



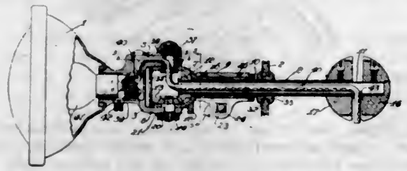
1. A suspension device for maps and the like, comprising, in combination, two oppositely located clamping bows adapted to receive and hold fast the rod attached to the upper rim of the map, one of said bows being adjustable with respect to the other bow according to the length of said rod, and an automatic winding and checking device connected with the other clamping bow, substantially as described.

1,675,516. SHUTTLE. FRANZ C. REINHARDT, Paterson, N. J. Filed Oct. 22, 1927. Serial No. 227,877. 9 Claims. (Cl. 139—201.)



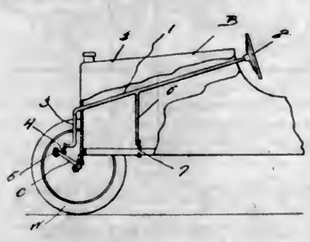
1. A double-thread-delivering shuttle having a bow provided with a forward thread-separating abutment and thread outlets for the respective threads extending back from said abutment, said shuttle also having means independent of the abutment for imposing on that thread which is held by the abutment relatively forward of the other thread on the flight of the shuttle in either direction tension exceeding the tension on said other thread.

1,675,517. MATRIX FOR MAKING CASTS. WILLIAM M. SCHOLL, Chicago, Ill. Filed Oct. 31, 1925. Serial No. 65,904. 4 Claims. (Cl. 18—5.)



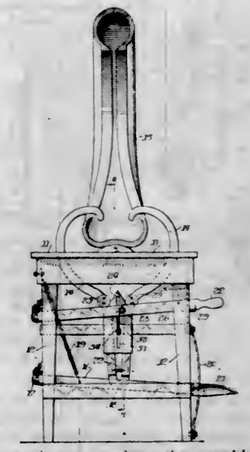
2. In a mold, two separable hollow members to hold a plastic material and means to hold said members in register, in combination with a thin, elastic, removable, imperforate sock to enclose a foot to be inserted in said members, said sock having a projecting fin for inclusion between the meeting edges of said members to provide a parting zone.

1,675,518. OIL-CUP-CAP HOLDER. FRANK STROINSKI, St. Louis, Mo. Filed Feb. 24, 1927. Serial No. 170,656. 1 Claim. (Cl. 220—24.)



A device of the character described, comprising two pieces of resilient wire, the end of one piece forming a hook, the other end of the same piece forming an eye, the two ends being joined by a portion of the piece extending laterally beyond and at right angles to the plane of the hook, the second piece extending through the eye of the first piece and having two prongs, each prong being bent outwardly in an arcuated manner opposite the other.

1,675,519. SPOTLIGHT AND MOUNTING THEREFOR. HENRY P. THOMPSON, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,017. 3 Claims. (Cl. 240—61.)



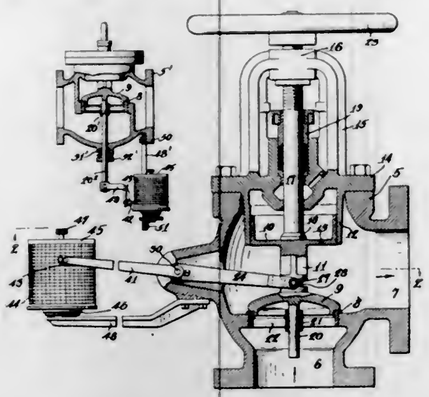
1. In combination, a lamp body, a rearwardly opening yoke extending therefrom, a housing upon which the arms of said yoke are lapped and pivoted, a hollow adjusting member rotatable in said housing and extending rearwardly therefrom with gearing in the housing operatively connecting said member with the yoke, one arm of the yoke being hollow and the pivotal connection of said arm having a passage by which the hollow arm communicates with the housing and a continuous lead wire extending through said hollow yoke arm and its pivotal connection and through the hollow adjusting member for supplying electrical energy to the lamp.

1,675,520. AUTOMOBILE STEERING GEAR. IRAH JUNIOR WATKINS, Cincinnati, Ohio, assignor to Dudley Andrews, Indianapolis, Ind., and James L. Arnout, Buffalo, N. Y. Filed Sept. 5, 1924. Serial No. 736,102. Renewed Mar. 22, 1927. 2 Claims. (Cl. 280—93.)

1. In a device of the class described, an automobile frame, a front axle pivotally connected on a horizontal pivot at a point between its ends to the intermediate portion of the frame for permitting rocking of said axle upon said pivot, steering wheels disposed at the outer ends of said axle, steering knuckles interposed between the wheels and the ends of the axle, a connecting rod between the arms of said steering knuckles, a link having connection with one of the steering knuckles, a rod turnable about its axis and connected at one end to the inner end of said link, a depending leg carried by the intermediate portion of said rod, and a pair of separate chains connected to the lower end of said leg and at their outer ends to the frame of the automobile.

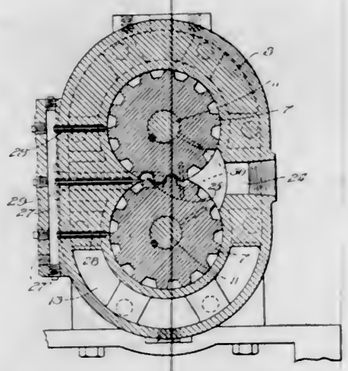
1,675,521. TIRE SPREADER. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Sept. 26, 1927. Serial No. 221,949 7 Claims. (Cl. 154—9.)

1. In a tire-casing spreader, the combination of a support for the tire-casing to be inspected, opposed hook-members arranged to engage the opposite marginal portions of a casing mounted on said support, means to depress said hook-members, and cam means to cause the separation of said hook-members during their depression, whereby to effect the spreading open of that portion of the tire-casing engaged by the hook-members.



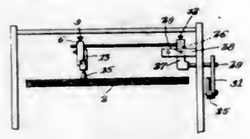
1,675,522. DIVER TOY. CHRISTIAN WEIDINGER, LUDWIG GRADL, and MARTIN SCHÖNNER, Nuremberg, Germany, assignors to Bayerische Celluloidwarenfabrik, vorm. Albert Wakker A.-G., Nuremberg, Germany. Filed Jan. 6, 1926, Serial No. 79,594, and in Germany June 22, 1925. 3 Claims. (Cl. 272—8.)

3. A toy of the character set forth, comprising a container sealed at its ends and substantially filled with



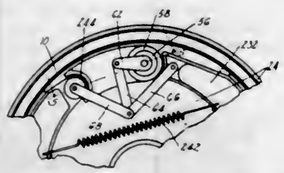
liquid, and a pressure-responsive diving member floatable therein, the body of said container being of elastic material and diametrically compressible between its ends to a degree to cause the same to exert pressure on the contained liquid for operating the diving member.

1,675,523. INDICATING AND RECORDING NONRETURN VALVE. DAVID ROBERT YARNALL, Philadelphia, Pa., assignor to Yarnall-Waring Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1924. Serial No. 705,473. 1 Claim. (Cl. 234—1.)



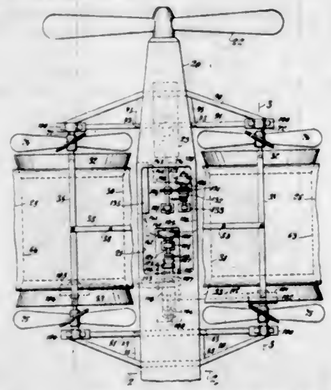
A non-return stop and check valve of the globe type having a damper upon the valve, in combination with a valve stem therefrom passing through the body of the valve, packing therefor and recording connections mounted upon the said stem.

1,675,524. ROTARY COMPRESSOR OR MOTOR. LEOPOLD ZAJAC, Milwaukee, Wis. Filed Sept. 30, 1927. Serial No. 222,992. 3 Claims. (Cl. 230—205.)



1. In a device of the character described, the combination with a casing and a pair of intermeshing herringbone gears working therein, said casing having a centrally disposed inlet on one side and exhaust outlets at the ends of said gears where the end portions of the teeth of said gears intermesh, of means for introducing a sealing liquid into said casing including a centrally disposed duct for discharging a sealing liquid into the space immediately adjacent the position in which the apices of said gears start to intermesh.

1,675,525. HOLDDOWN AND REGISTER FOR AUTOMATIC FEEDERS. LESTER KYLE ALDRICH, Sidney, Ohio. Filed June 2, 1927. Serial No. 196,028. 10 Claims. (Cl. 271—27.)

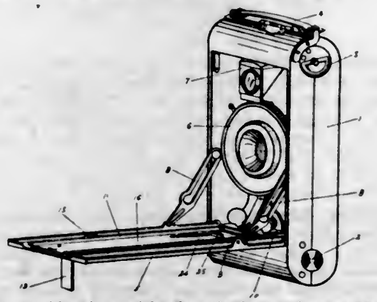


1. A hold down and register for automatic feeders comprising a body movable upwardly and downwardly to clear the top sheet of a stack, means extending rearwardly from the body and carried by the same for engaging the second sheet of the stack when the top sheet is clear of the device, and means operated by the downward movement of the device for moving the said second sheet rearwardly to its initial position in perfect register.

1,675,526. BRAKE MECHANISM. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1926. Serial No. 100,257. 9 Claims. (Cl. 188—194.)

5. Brake mechanism comprising, in combination, a drum, a fixed support including a journal bearing, a friction device anchoring at one end on the support when the drum is turning in one direction and anchoring at the other end on the joural bearing when the drum is turning in the other direction, a shaft in the bearing having an arm at its end, and toggle links connecting said arm to the ends of the friction device.

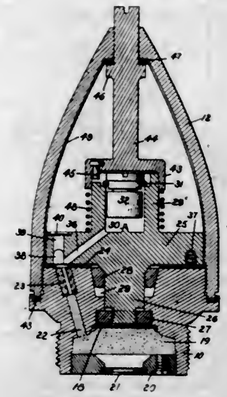
1,675,527. COMBINED PROPELLER AND ROTOR. JAMES C. BENNETT, New York, N. Y., assignor of forty per cent to William H. Fraser, New York, N. Y.; five per cent to Gonzalo O'Neill, East Orange, N. J.; and five per cent to Arthur A. de Bonneville, Bayonne, N. J. Filed Sept. 7, 1926. Serial No. 133,972. 8 Claims. (Cl. 244—25.)



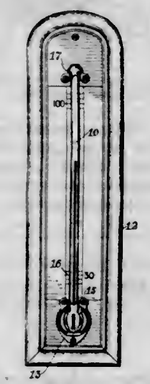
1. The combination of a sleeve casing, an inlet duct extending from one end of the casing, an outlet duct extending from the other end of the casing, a rotor in the casing and coaxial therewith, means to direct streams of compressed air to the said inlet duct, the air rotating the rotor and expanding, and means to again expand the air when discharged from the outlet duct.

1,675,528. INSTRUCTIONAL MUSICAL-HARMONY CARD GAME. MABEL M. BISHOP, Milwaukee, Wis. Filed Jan. 28, 1927. Serial No. 164,195. 8 Claims. (Cl. 273—152.)

1. An instructional musical harmony game comprising a series of book sets of cards, the cards of each set comprising a key signature card and a set of chord bearing cards written in the key indicated by the signature card, whereby a player holding one of the cards in a book may obtain the others by calling for them from other players or by drawing them from the deck.



1,675,529. CATCH FOR CAMERA FRONTS. CARL A. BORNMANN, Binghamton, N. Y., assignor, by mesne assignments, to AGFA Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Aug. 1, 1927. Serial No. 209,916. 3 Claims. (Cl. 95—46.)

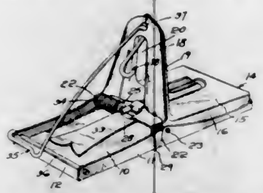


1. In combination with the platform of a camera, a slidable rail thereon, a fixed cover plate over said rail between the edges thereof, a sliding front on said rail, a spring catch on said cover plate normally out of the path of said front, and means on said slidable rail for forcing said catch upwardly in such path when the rail is extended.

1,675,530. POWDER TIME FUSE. HAROLD M. BRAYTON, Dover, N. J. Filed Aug. 5, 1924. Serial No. 730,294. 11 Claims. (Cl. 102—36.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

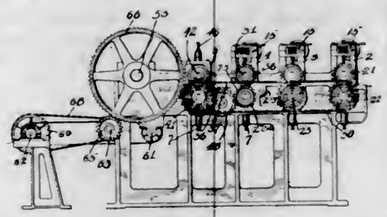
1. A powder time fuse including a body, a hollow cover secured to the body, a time ring formed with a stem for rotatably securing the ring to the body, a tapered ring embracing the stem and adapted on set back to lock the time ring, a tubular extension formed on the forward face of the time ring, a concussion plunger supported at the mouth of the extension, and a cap for preventing displacement of the plunger.

1,675,531. THERMOMETER. HENRY B. BROWN, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 3, 1927. Serial No. 172,480. 6 Claims. (Cl. 73—52.)



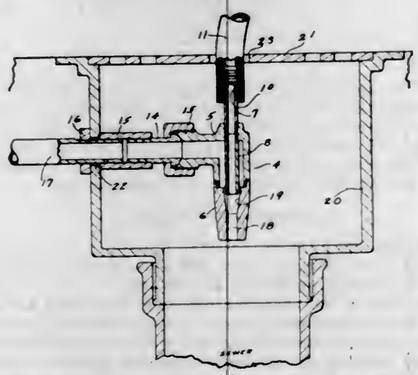
6. In instruments of the character described, including a stem terminating in a bulb and a base therefor, a hood-shaped guard consisting of a single piece of sheet material and constructed to provide on one side an opening for the stem and a portion contiguous to the opening for bearing upon the stem to hold it to the base.

1,675,532. RAT TRAP. CHARLES L. CESSNA, Fort Dodge, Iowa. Filed May 4, 1925. Serial No. 27,904. Renewed Feb. 4, 1928. 1 Claim. (Cl. 43—83.)



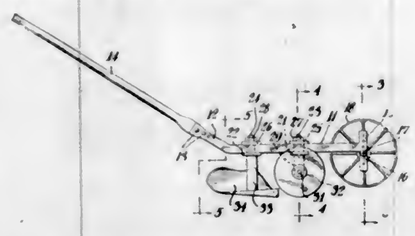
A trap of the character described comprising a base embodying a stationary jaw, a co-acting movable jaw pivoted upon the base and provided with a setting extension which assumes an upstanding position when the movable jaw is in the closed position, said setting extension having an aperture near its free end and a longitudinal opening inwardly of the aperture, a spring to throw the movable jaw to the closed position, a pivoted

dog mounted upon the base and extending through the aperture of the setting extension, said dog being bent into a U-shaped portion at its forward end with the base of the U-shaped portion being arranged in advance of the setting extension, the free arm of the U-shaped portion extending rearwardly of the setting extension when



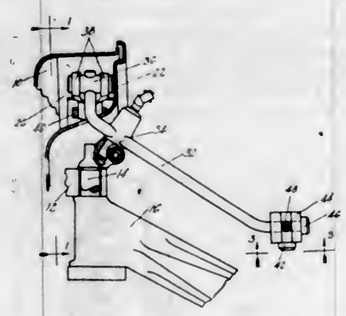
the movable jaw is in the closed position and carrying a forwardly bent tongue also positioned in the rear of the setting extension, said free arm and tongue being arranged to operate within the longitudinal opening of the setting extension, and a pivoted trigger arranged upon the base and carrying an overhanging tongue adapted for co-action with the first named tongue.

1,675,533. SHINGLE-MAKING MACHINE. HARRY A. CUMFER, Chicago, Ill., assignor to "Guyton & Cumfer Mfg. Co.," Chicago, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 538. 7 Claims. (Cl. 164—68.)



7. In a shingle machine, mechanism for shearing a sheet of roofing into strips, rolls for advancing said strips, mechanism for laterally separating said strips and means for temporarily and vertically separating adjacent strips after lateral separation thereof.

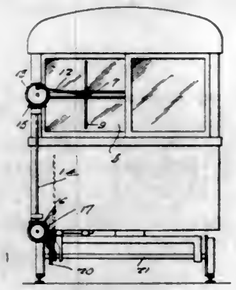
1,675,534. PRESSURE SIPHON. CHARLES A. DAVIS, Seattle, Wash. Filed Oct. 12, 1927. Serial No. 225,652. 1 Claim. (Cl. 230—92.)



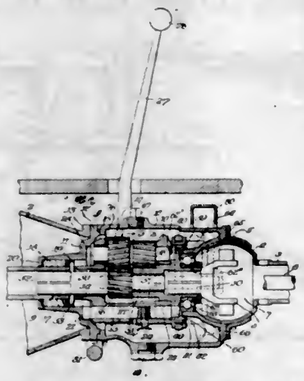
In a pressure siphon, a body member, a water inlet opening disposed in the side of said body member, a suction opening disposed in the top of said body member, a discharge opening disposed in the bottom of said body member, a vertically disposed suction tube disposed in said suction opening, a removable jet tube vertically disposed in the medial portion of said body member, and a removable discharge tip having a bore the upper end of which is tapered, said tapered portion partially surrounding the lower end of said jet tube.

1,675,535. TRIMMING TOOL. PETER DETLEFSEN, North Bend, Nebr. Filed July 22, 1927. Serial No. 207,648. 2 Claims. (Cl. 97—227.)

1. A trimming device comprising a pair of side frame members, a handle fixed to one end of said members, a guide wheel rotatably mounted in the other end of said members, means adjustable along said frame members to cut the grass, and means similarly adjustable along the frame members to throw the cut grass to one side.



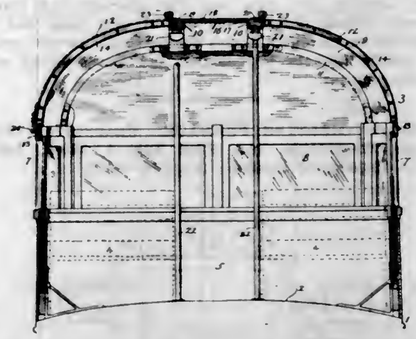
1,675,536. BRAKE MECHANISM. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,266. 10 Claims. (Cl. 188—194.)



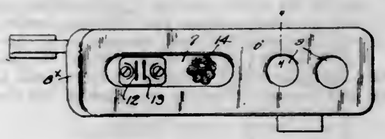
1. Brake mechanism comprising, in combination, a friction device having a thrust member forked to provide arms formed with coaxial openings, a cylindrical connector sleeved in said openings and formed with a central cross bore, and an operating member having a part received in said cross bore.

1,675,537. WINDOW WIPER. FRANK A. EITELGOERGE, Denver, Colo. Filed Aug. 8, 1927. Serial No. 211,498. 3 Claims. (Cl. 15—253.)

1. A window wiper of the class described, in combination, a sectional window, the sections of the window having adjacent edges disposed in spaced relation, upper and lower guide tracks mounted upon the opposed edges of said sections and disposed in spaced relation, a slide block arranged between said tracks and having marginal flanges slidably contacting said tracks, a wiper including a backing member, and a squeegee strip in contact with the outer surfaces of said window sections, a bolt passing removably through an opening in said block and through an opening in said backing member, operating means connected with said bolt, and a retaining nut carried by the threaded end of the bolt and maintaining said operating means, backing member, and block in assembled relation.



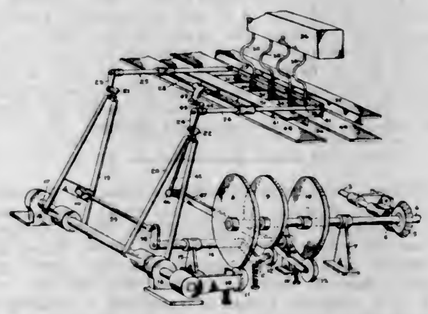
1,675,538. TRANSMISSION. THOMAS L. FAWICK, Racine, Wis. Filed Dec. 11, 1925. Serial No. 74,813. 8 Claims. (Cl. 79—34.)



1. In combination, a housing having an integral end wall, a bearing in said end wall, a removable end wall for the open end of the housing, a bearing in said second end wall, a pair of shaft sections mounted in said bearings and piloted axially in alignment with each other, a cage surrounding the ends of said shaft sections and having bearings thereupon, pinions of different diameters on the adjacent ends of the shaft sections, a series of lay-shafts having connected gears meshing with said pinions, a series of clutch bars disposed in the cage substantially parallel with said lay-shaft, a collar for shifting said clutch bars, means for clutching said bars at one end to the housing and means for clutching said bars at the opposite end to one of said shaft sections.

1,675,539. VEHICLE TOP. MICHAEL J. FORRESTER, Astoria, N. Y., assignor to Fifth Avenue Coach Company, a Corporation of New York. Filed Aug. 5, 1926. Serial No. 127,240. 2 Claims. (Cl. 296—102.)

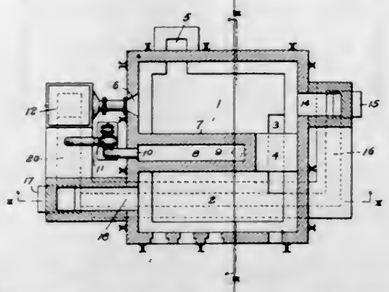
1. In a vehicle top, the combination of two longitudinally extending transversely spaced roof rails, transverse roof supporting ribs having their inner ends abutting against and fastened to the outer sides of the rails and extending thence outwardly and downwardly in continuous curves and supported at their lower ends in the sides of the vehicle top, and a roof plate fastened to the upper sides of the rails and bridging the space between them and forming an uninterrupted continuation of the contour of the vehicle top, said plate being free and unobstructed on its under side, and said transverse ribs being adapted to give support to a roof covering extending outwardly in opposite directions from the longitudinal roof rails flush with said roof plate.



1,675,540. ATTACHMENT FOR FELT CONDITIONERS. WILLIAM RILEY FOWLER, Hamilton, Ohio. Filed Nov. 24, 1926. Serial No. 150,561. 4 Claims. (Cl. 92—50.)

1. In means for the purpose described, the combination with a box opened at its upper side and machined so as to have a taper and to be wider at one end than at the other, and being dove tailed, of an apertured plate machined with a taper so as to be wider at one end than the other and dove-tailed and adapted to be slipped endwise on the box and be tightly held to the box in air tight manner of itself.

1,675,541. TREATMENT OF CONTAINERS. FREDERICK FRANZ, Woodhaven, N. Y. Filed Aug. 1, 1925. Serial No. 47,458. 7 Claims. (Cl. 91—39.)



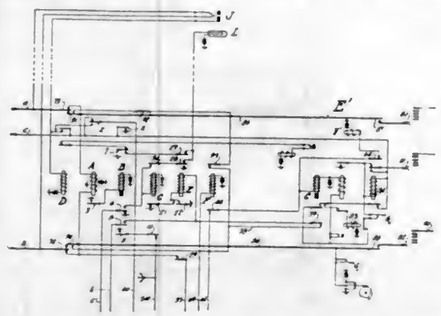
1. In a device of the class described, means for feeding containers in position to be greased, means for inserting non-rotatable greasing elements therein and for

moving the same across the entire interior surface of said containers, and means for withdrawing said greasers and removing said containers.

7. In a device of the class described, a conveyor and pans thereon, a greasing device, and means for raising and lowering the same and for laterally and transversely moving the same in one of said pans, and in combination therewith means for moving successive pans in position for the introduction and movement of said greasing device.

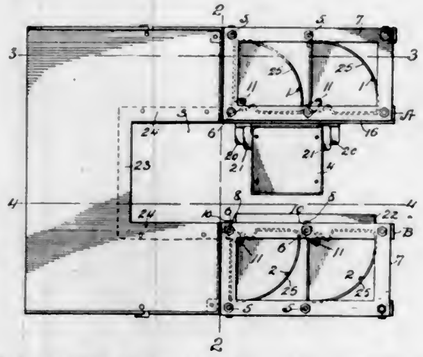
1,675,542. MELTING FURNACE. CHAUNCEY E. FRAZIER, Washington, Pa. Filed Aug. 4, 1926. Serial No. 127,004. 5 Claims. (Cl. 266—33.)

1. A melting furnace of twin construction adapted to carry in its lower portion the material under treatment and in its upper portion a heat-giving gaseous stream and including melting and working chambers arranged side by side, the said furnace being provided with a port at the downstream end of the melting chamber, and means for diverting through said port a portion of a gaseous stream flowing through the furnace.



1,675,543. FOUNTAIN-PEN DESK STAND. JULES A. FREMON and AVERY S. DE HAVEN, Leeper, Mo., assignors to W. A. Sheaffer Pen Co., Fort Madison, Iowa, a Corporation of Delaware. Filed Sept. 17, 1926. Serial No. 136,074. 5 Claims. (Cl. 120—108.)

1. In a fountain pen desk stand, a base adapted to be placed on the top of a desk, a receptacle pivotally mounted at the closed end thereof on said base for receiving the writing point of a fountain pen and having a seat therein to support one end of the body of said fountain pen whereby said writing point is sealed apart from the atmosphere, and automatic means for urging said fountain pen into said sealed position.

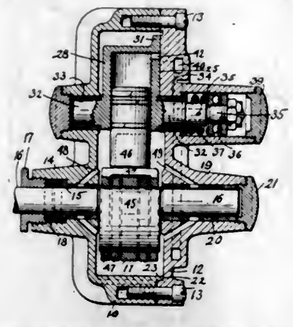


1,675,544. DIRECTOR CIRCUITS. CHARLES GILLINGS, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 11, 1924, Serial No. 692,131, and in Great Britain Jan. 30, 1923. Renewed Nov. 23, 1927. 3 Claims. (Cl. 179—27.)

1. In a telephone system, a trunk line, a plurality of call directors, means for temporarily connecting one of said call directors with said trunk line to aid in setting up a connection thereover, an operator's switchboard, a signal thereat, means for operating said signal automatically responsive to an abnormal condition arising during the process of setting up a connection over said trunk line, and multiple connections between said

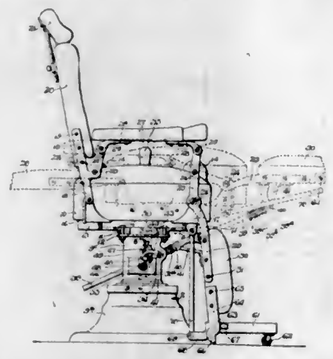
switchboard and said trunk line to enable an operator to converse with the calling subscriber or to give aid in further extending the connection.

1,675,545. STORE-SERVICE APPARATUS. PLUMA R. GOSS, Kansas City, Mo. Filed Apr. 9, 1927. Serial No. 182,257. 5 Claims. (Cl. 211—134.)



5. In a store service apparatus, two oppositely disposed tiers of shelves having between them a passage, supporting means to which said shelves are pivoted so as to swing into and ont of said passage, a U-shaped counter having its transverse portion closing said passage and spaced from said tiers and having its arms respectively alining with and extending substantially to said tiers, and a car adapted for travel in said passage on said supporting means between said arms and said tiers.

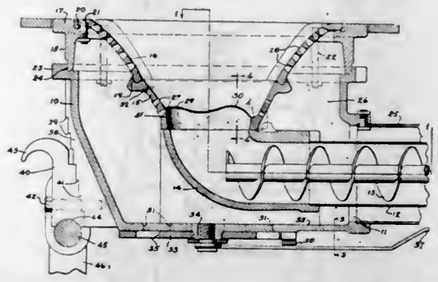
1,675,546. COMPRESSOR. LEE B. GREEN, Lakewood, Ohio, assignor of one-third to Earl L. Jones, Cleveland, Ohio; one-third to Cassius L. Finney, Canton, Ohio; and one-third to Conrad B. Krause, Cleveland, Ohio. Filed June 27, 1925. Serial No. 39,938. 1 Claim. (Cl. 230—175.)



In compressors, the combination of a housing comprising two sections bolted together and having a chamber and bearings in the walls on opposite sides of the chamber, said bearings being arranged in aligned pairs, an oscillatable cylinder having trunnions mounted in one of said pairs of bearings, a shoulder formed on one of the trunnion bearings, a shaft mounted in another of said pairs of bearings and extending to the exterior of said housing, said walls having ports which communicate with said chamber and through which lubricant is circulated through said shaft bearings, one of said

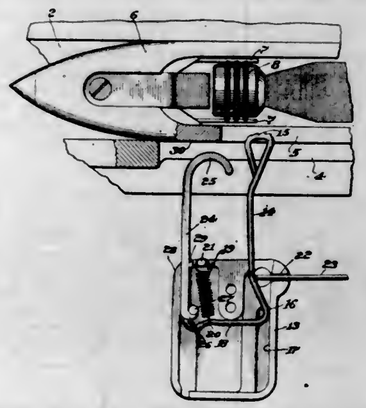
walls having inlet and discharge ports therein and said cylinder having a port which cooperates with said inlet and discharge ports, said wall being provided with a bearing surface against which said cylinder is pressed to form a seal for said ports, one of said trunnions having an extension threaded and pinned therein, a

thrust bearing carried by said extension, a spring engaging the shoulder on the trunnion bearing cooperating with said thrust bearing to hold said cylinder against said surface and to secure said trunnion bearing in place, an eccentric on said shaft, and a piston in said cylinder operatively connected with said eccentric.



1,675,547. RECLINING CHAIR AND FOOT REST. WILLIAM GRIMMICH, Chicago, Ill., assignor to Emil J. Paidar Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1925. Serial No. 42,340. 1 Claim. (Cl. 155—25.)

In a reclining chair, the combination with a swingable back, a leg rest swingable with said back, a foot rest pivoted intermediate its ends to said leg rest, a rod pivoted at one end to said chair and at its other end to said foot rest, said foot rest having a pair of lateral lugs and said leg rest having extending side members adapted for engaging said lugs when said leg rest is moved to horizontal position.

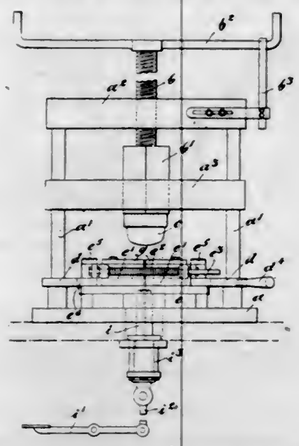


1,675,548. BURNER FOR SOLID FUEL. CORTICE H. HALL, Paterson, N. J., and WILLIAM LLOYD, Hazleton, Pa., assignors to Domestic Stoker Company, New York, N. Y., a Corporation of Delaware. Filed July 9, 1925. Serial No. 42,347. 2 Claims. (Cl. 110—45.)

1. In a solid fuel burner of the underfeed type, an upwardly flaring annular grate, a feed conduit having a horizontal portion and an upwardly directed portion communicating with the lower end of the grate, a screw in said conduit for forcing fuel through said conduit and over the interior of the grate, the lower portion of said grate being provided on the interior thereof, at

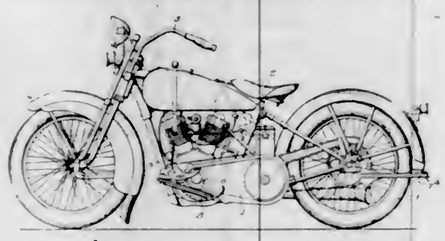
the side at which the conveyer tends to convey fuel most rapidly, with an upstanding lip adapted to retard the passage of fuel over the grate on that side and thus produce a level combustion surface at the top of said grate.

1,675,549. FEELER MECHANISM FOR LOOMS. OREN C. HAMMETT and GEORGE R. SCOTT, Knoxville, Tenn., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 31, 1927. Serial No. 243,918. 7 Claims. (Cl. 139—230.)



1. In a feeder mechanism for looms, the combination of a feeler stand, a floating side slipping feeler mounted on the feeler stand and having a laterally extended arm, a spring connected to said arm and normally acting to move the feeler rearwardly, a stop bearing secured to the feeler stand rearward of the laterally extended arm, a change preventer constituted as a slide on the feeler stand having a lateral projection between the stop bearing and laterally extended arm and having its rear end adapted for engagement with a surface on the lay to move the feeler frontwardly and prevent replenishment should the shuttle be improperly boxed on a detecting beat.

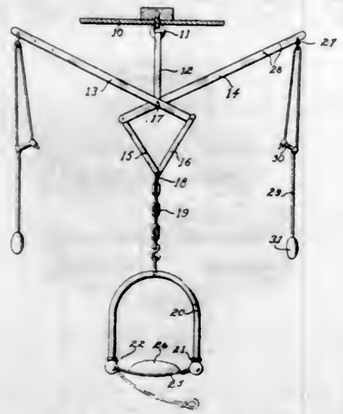
1,675,550. PRESS FOR SHAPING COVERS OF TEAPOTS AND THE LIKE. ARTHUR HANDLEY, Tunstall, England. Filed Dec. 29, 1927, Serial No. 243,289 and in Great Britain Dec. 8, 1926. 6 Claims. (Cl. 25—22.)



1. Apparatus for the manufacture of an earthenware cover for a teapot or container comprising in combination a male die, a female die consisting of a one-piece concavitous body part, opposed pairs of relatively slid-

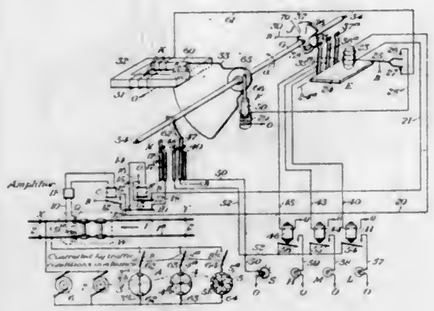
able upper and lower die sections associated with said female die, the lower sections being adapted to assist in constituting cover handle, and the upper sections as-

sist in constituting the annular wall and lateral locating flange of the said cover, and means for slidingly displacing the opposed pairs of die sections for the removal of the cover.



1,675,551. CYCLE SUPPORT. WILLIAM S. HARLEY and ARTHUR R. CONSTANTINE, Milwaukee, Wis., assignors to Harley-Davidson Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 5, 1925. Serial No. 35,152. 6 Claims. (Cl. 208—79.)

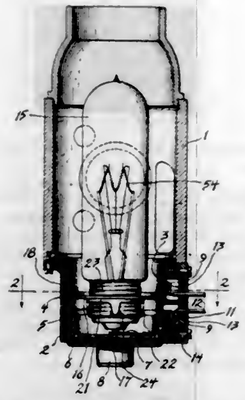
1. In combination, the frame of a motorcycle, a bracket carried by said frame, a support swingingly carried by said bracket, the axis of swing of said support being angularly disposed relative to the line of ground contact of the wheels of said motorcycle, said bracket and said support having sufficient play to permit movement in a vertical plane of said support relative to said frame, and a catch member rigidly mounted relative to said frame, said catch member having a pair of abutment portions defining a notch for receiving said support, one of said abutment portions being of sufficient length to abut said support throughout its range of play in a vertical plane, the other of said abutment portions being of sufficiently less length to permit swinging movement of said support when said support is in its lowermost vertical position.



1,675,552. GYMNASTIC APPLIANCE. HENRY I. HAWXHURST, Sierra Madre, Calif. Filed Nov. 2, 1923. Serial No. 672,401. 5 Claims. (Cl. 272—80.)

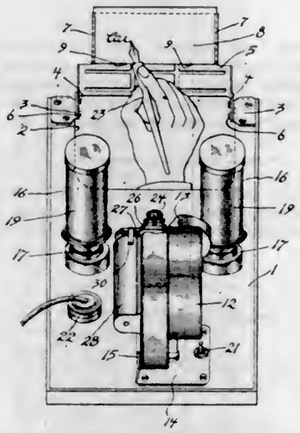
2. A gymnastic apparatus comprising a pair of levers pivoted together near the ends thereof; supporting means connected to said levers at their pivoted connection; a pair of links pivotally connected together and to the shorter ends of the levers; means connected to the links at their pivoted connection to engage the person of the user; and means connected to the outer

ends of the levers adapted to enable the user to operate the levers, whereby portions of the body of the user may be stretched.



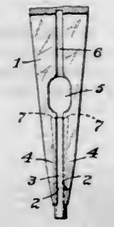
1,675,553. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HAROLD O. HOLTE, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 18, 1924. Serial No. 756,710. 21 Claims. (Cl. 246—63.)

3. Railway traffic controlling apparatus comprising a train carried member biased in one direction, means for retarding the movement of said member in the said one direction but not in the other direction, apparatus located partly on the train and partly in the trackway for moving said member in the said other direction to an initial position at intervals spaced in accordance with traffic conditions, and governing mechanism on the train selectively responsive to the amount of movement made by said member away from such initial position between successive intervals.



1,675,554. INCANDESCENT-ELECTRIC-LAMP SOCKET, LAMP, AND ADAPTER THEREFOR. ALBERT S. HOWELL, Chicago, Ill., assignor to Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1923. Serial No. 620,821. 12 Claims. (Cl. 173—357.)

1. An incandescent electric lamp socket adapted to have an incandescent electric lamp installed therein through the bottom thereof including a downwardly facing conductive contact adapted to have the body of the lamp passed by the same and to have an upwardly facing contact of the base of the lamp engaged against the same, and a conductive end contact removably mounted on the socket and adapted for contacting an end

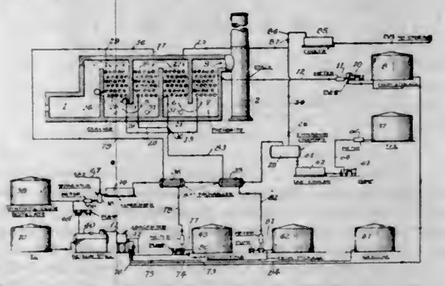


contact of the lamp base for holding the lamp in the socket with said first mentioned contact in contact with the second mentioned contact, the removal of said third mentioned contact permitting installation and removal of the lamp.

1,675,555. PHOTOGRAPHIC DEVICE. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 10, 1926. Serial No. 134,627. 5 Claims. (Cl. 88—24.)

1. In a device of the character described the combination of a flat support, means for securing a motion picture camera in a predetermined position thereon and above one face thereof, and an objective mounted on said support and presenting a surface extending upright from said face of the support and facing said camera for the photographing of matter on said objective, said support having an opening therethrough and extending forwardly of said surface of the objective and through which opening said surface is accessible for the inscription of matter thereon whereby to effect the photographing of the procedure of inscribing matter on said surface.

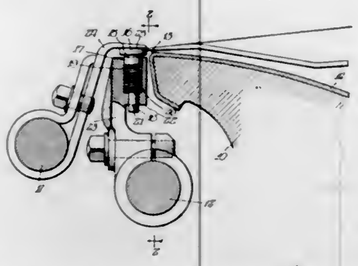
1,675,556. YARN GUIDE FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed May 21, 1927. Serial No. 193,279. 6 Claims. (Cl. 66—126.)



3. In combination in a yarn guide for full fashioned knitting machines, a member having spring jaws with grooves in their opposing faces, said grooves being enlarged at one point and presenting shoulders at their upper ends, and a yarn guide tube held between said jaws in the grooves and against the shoulders, and having an enlarged portion to fit the enlargement of the grooves to prevent lengthwise dislodgement of the tube, substantially as described.

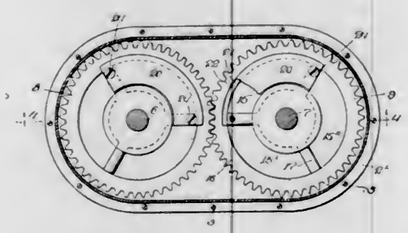
1,675,557. KNITTING IMPLEMENT FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed May 21, 1927. Serial No. 193,281. 7 Claims. (Cl. 66—107.)

1. A composite knitting implement for knitting machines having a main member provided with a forward or nose portion to work between the needles, and an integral stem portion provided with a butt, and an auxiliary member having a stem and butt portion to lie alongside the stem and butt portion of the main member and means for holding the butt portions of the said members together, said means presenting wear surfaces, substantially as described.



1,675,558. ART OF CRACKING HYDROCARBONS. EDWARD W. ISOM, Winnetka, Ill., and CHARLES L. PARMELEE, Orange, N. J., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 3, 1923. Serial No. 622,508. 23 Claims. (Cl. 196—58.)

1. A process of cracking heavy hydrocarbons to produce lighter hydrocarbons comprising passing the oil through a heating zone of restricted cross section, heat-



ing it therein to a cracking temperature and adding to the oil at an intermediate point of said heating zone during its passage therethrough and before the heated oil becomes saturated with tar an oil capable of acting as a solvent for the tar formed during cracking.

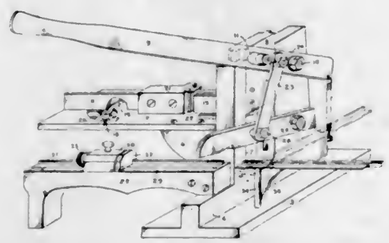
1,675,559. GRIPPER MECHANISM. ARTHUR G. JACOBSON, Chicago, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,349. 1 Claim. (Cl. 101—412.)

In a gripping mechanism, a support adjustably fixed relative to the surface of a drum, a gripper member mounted on said support yielding in a substantially radial direction only and presenting a roughened plane gripping surface, said gripper member having a limited outward movement, said surface in its limited outward position lying substantially in the plane of sheets to be gripped: a pivoted cooperating gripper having a relatively smooth plane surface, said last named surface being so disposed relative to the pivotal center on which it turns that its plane substantially coincides with the plane of the surface of said roughened gripper and the plane of said sheets when said grippers initially engage, said pivoted gripper being capable of slight additional movement to depress in its gripping action said roughened gripper, whereby a sheet is held immovably on said roughened surface as initially engaged while said smooth gripper slides slightly over the surface of said sheet.

1,675,560. AGITATOR. PAUL JUBIEN, Chicago, Ill., assignor to B. F. Gump Co., Chicago, Ill., a Corporation of Illinois. Filed July 29, 1921. Serial No. 488,388. 9 Claims. (Cl. 74—14.)

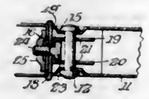
1. In an agitator, a framing, a pair of spur gears journaled in said framing and meshing with each other so as to revolve uniformly in opposite directions with their central planes coinciding, an overweighted sector formed integrally with each of said gears whereby when said gears are revolved uniform reciprocating transverse movement is given to said framing, and means carried by the gears and balanced in respect to their central planes for increasing the force of said reciprocating movement.

1,675,561. SENSITIZED SCREEN AND PROCESS OF MAKING SAME. GLEN IRVIN KEEL, Indianapolis, Ind. Filed Aug. 9, 1926. Serial No. 128,107. 3 Claims. (Cl. 41—38.6.)



1. The process of preparing and treating a screen stencil for reproducing colored designs consisting of applying a sensitizing solution over the surface thereof, printing a design thereon through a negative on which has been opaqued the desired design, washing the soluble solution therefrom, applying a lacquer over one side of the screen, and thereafter removing said lacquer from about the design formed from the non-soluble solution by applying a thinner and washing through the screen from the other side thereof.

1,675,562. FREIGHT-TRANSPORTATION MEANS. WILLIAM PLATTS KELLETT, Brantford, Ontario, Canada. Filed Aug. 12, 1926. Serial No. 128,846. 8 Claims. (Cl. 105—366.)

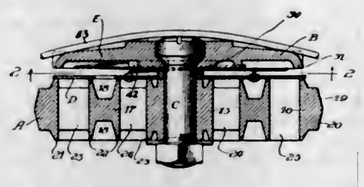


2. A freight transportation means, comprising a railway car, separate containers movably mounted on said car, compression buffers arranged on the ends of said containers, and compression buffers arranged at the ends of the railway car to engage the ends of the end containers.

1,675,563. MITERING AND CUTTING MACHINE. JOSEPH KLOHE, New York, N. Y. Filed Jan. 17, 1924. Serial No. 686,734. 7 Claims. (Cl. 164—10.5.)

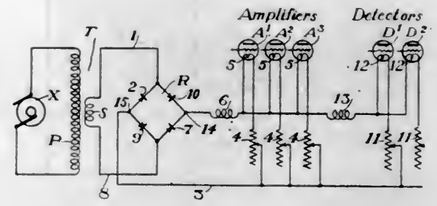
1. In a tool of the class described, a horizontal work table, means for gauging work thereon, and a pivot knife adjacent the end thereof, and in combination therewith another table parallel with said first mentioned table, and a cutter slidable adjacent the end thereof, said knife and cutter being pivotally connected.

1,675,564. BOLTED CONNECTION FOR BEDSTEAD-CORNER LOCKS. FRANK KUSTERLE, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 21, 1922. Serial No. 583,386. 4 Claims. (Cl. 5—289.)



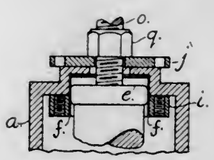
1. In a structure of the class described, a hollow post, a hook member, a pair of interthreaded members respectively provided on the inside and on the outside of the post, the wall of said post being provided with an aperture through which said interthreaded members communicate, the inner member being anchored against rotation and the outer member being keyed to said hook member whereby rotation thereof effects relative rotation between said interthreaded members and thereby forces said hook member toward the post, and means for locking said hook member against rotation on the post.

1,675,565. SAW. MATHIAS SYVERSEN LEE, Seattle, Wash. Filed Oct. 9, 1925. Serial No. 61,473. 1 Claim. (Cl. 143—133.)



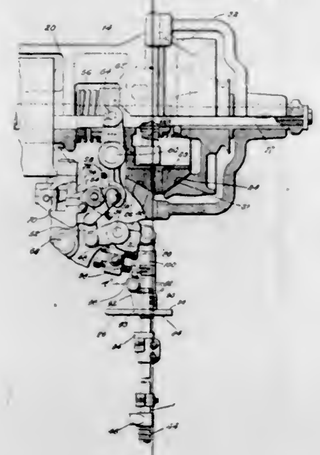
A hand saw having a blade provided on one edge with a series of evenly spaced teeth, each of said teeth having parallel rear and front edges, said teeth being parallel each to the others and inclined uniformly toward the handle end of the blade, the front edges of all of the teeth terminating at equal distances from the body of the blade and the ends of the teeth being disposed at slightly less than a right angle with respect to the front edges, the end edges and front edges of the teeth being beveled with the bevels of adjacent teeth facing opposite sides of the saw.

1,675,566. VALVE FOR COMPRESSORS. CHARLES H. LEINERT, Chicago, Ill., assignor to Leinert Valve Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1922. Serial No. 578,610. 5 Claims. (Cl. 251—119.)



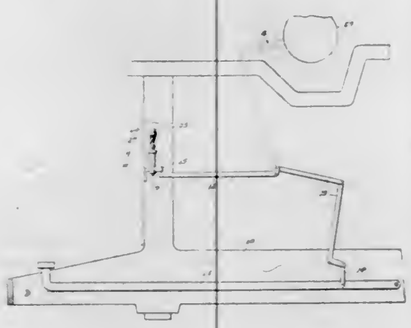
1. In a valve of the kind described the combination of a seat, a stop plate associated therewith, a disk interposed between the seat and stop plate, and a pair of springs slidably locked to the plate and formed to bear with pressure upon the disk at four equidistant points, substantially as described.

1,675,567. ELECTRICAL APPARATUS. LAURICE L. LOCKROW, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,398. 3 Claims. (Cl. 250—27.)



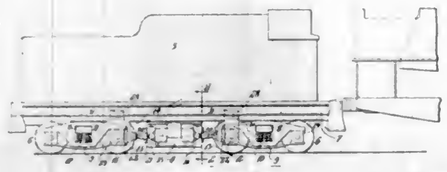
1. In combination, a source of pulsating current a plurality of reactors in series with the source, a plurality of electron tubes having their filaments connected in multiple, and a resistor in series with each filament and arranged to co-operate with the reactors to form a ladder filter.

1,675,568. MEANS FOR INSERTING OR SEATING THE OUTER RACES OF BALL BEARINGS, BUSHINGS, AND THE LIKE IN MACHINE HOUSINGS. ANDREW C. LYEN and CHARLES W. MORGAN, Chicago, Ill. Filed Aug. 4, 1926. Serial No. 127,077. 8 Claims. (Cl. 29—88.2.)



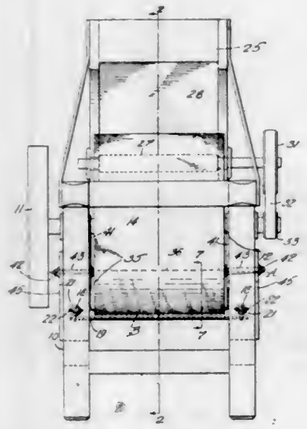
1. Means of seating the outer race of a ball-bearing in the recess provided therefor in a magneto housing wherein the recess is lined with a strip of paper or other thin material curled into the form of a wide cylindrical collar, comprising the combination of a ring with a puller, the ring having a cylindrical interior of approximately the same diameter as that of the housing recess and a width approximately equal to that of the outer race, the wide cylindrical collar being of sufficient size to line both the recess and the ring when the ring is placed in a framing position against the border of the recess preparatory to the seating of the race, the puller being devised to apply power to the periphery of the outer race of the ball-bearing and slide it axially along the interior of the wide cylindrical collar from an initial preparatory position in the ring to a final seated position within the housing recess; the particular purpose of the ring being to prevent slipping of the lining paper of which the wide cylindrical collar is composed by affording to it a substantial circumferential support during the seating operation.

1,675,569. FASTENING-INSERTING MACHINE. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 15, 1923. Serial No. 619,183. 12 Claims. (Cl. 192—144.)



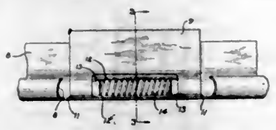
7. Controlling mechanism having, in combination, a clutch, a member arranged by its movement to render the clutch either operative or inoperative, a dog arranged to transmit movement to said member, and means carried by said member arranged to throw said dog into inoperative position when said member is moved to render the clutch operative.

1,675,570. ERASER. THOMAS J. MADIGAN, Brooklyn, N. Y. Filed Jan. 18, 1927. Serial No. 161,891. 11 Claims. (Cl. 197—181.)



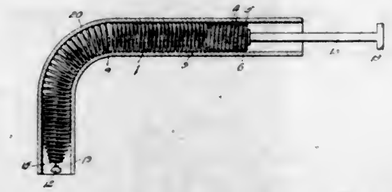
1. An eraser attachment for typewriting machines comprising a member provided at one end with means for securing it to a key actuated type bar of a typewriting machine and having an erasing element at the other end adapted to be carried into contact with the paper on the platen of the machine and effect the erasure when the type bar is actuated, said attachment forming an extension of the type bar to limit the throw of the bar to prevent the feeding of the carriage or the lifting of the ribbon while the erasing element is operating upon the paper to make the erasure.

1,675,571. RAILWAY BOOSTER. FREDERICK W. MARTIN, Manhattan Beach, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Dec. 7, 1923. Serial No. 697,077. 7 Claims. (Cl. 105—117.)



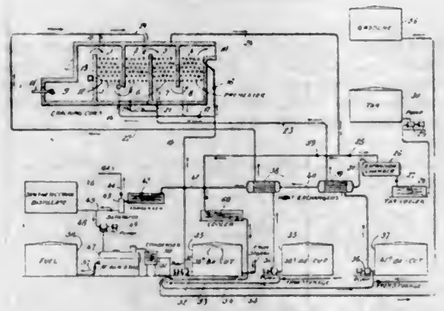
1. The combination with a railway vehicle having a plurality of trucks, of a shaft extending fore and aft thereof at one side, with driving connections to axles of different trucks close inside the corresponding wheels, and a booster motor at the other side of the shaft from said wheels driving them through the shaft.

1,675,572. SEPARATING MACHINE. THEODORE F. MORSE, Silver Creek, N. Y., assignor to Huntley Manufacturing Co., Silver Creek, N. Y. Filed May 14, 1923. Serial No. 638,688. 5 Claims. (Cl. 209—266.)



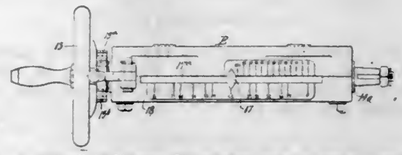
4. In a separating machine for seeds and analogous material, the combination of a rotating cylinder, a thin plate which partially surrounds and contacts with the periphery of the cylinder and is arranged to permit the entrance of the material between the cylinder and plate, means for holding the plate in contact with the cylinder, said plate having perforations in a portion thereof which contacts with the cylinder through which perforations a portion of the material is adapted to pass, and a divider arranged to separate the material passing through different perforated areas of the plate, an arm pivoted at one end of the axis of rotation of said cylinder and connected at its other end to said divider to permit the same to be adjusted concentrically with the curved portion of the plate to different positions to vary its separating action, and means for securing said divider in its different adjustments.

1,675,573. HINGE. DANIEL J. MURNANE, San Mateo, Calif. Filed Feb. 16, 1925. Serial No. 9,399. 10 Claims. (Cl. 16—179.)



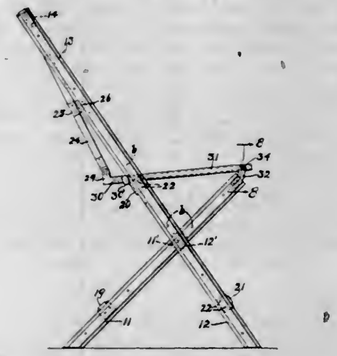
1. A casement window mounting comprising a fixed split-cylindrical slideway, a slide arranged on said slideway, a plate pivoted to the slide, a link fixedly pivoted at one end to said slideway and at the other end to said plate, and cylindrical shoes for creating a frictional resistance between the slide and the slideway.

1,675,574. PLUMBER'S LEAD-PIPE-BENDING SPRING. WILLIAM K. MYKINS, St. Louis, Mo. Filed Apr. 25, 1927. Serial No. 186,305. 4 Claims. (Cl. 153—63.)



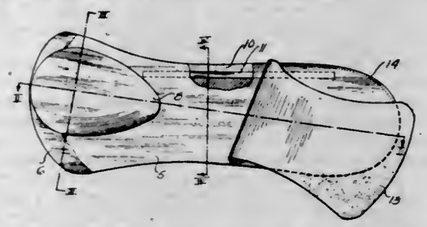
1. In a plumber's lead pipe bending spring, a spirally wound wire coil having one end tapered, a socket member fixed to one end of said wire coil, a flexible cable within the wire coil, a head member fixed to one end of the cable and swivelly seated in said socket member, a tapered seat formed upon the last coil of the tapered end of the wire coil and a head member fixed to the opposite end of the cable for swivel seating engagement with the tapered seat of said last coil, said head member having its major portion within the wire coil.

1,675,575. METHOD FOR CRACKING OILS. CHARLES L. PARMELEE, Orange, N. J., and EDWARD W. ISOM, Winnetka, Ill., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 13, 1923. Serial No. 656,990. 2 Claims. (Cl. 196—58.)



1. The improvement in the cracking of oil in tubular cracking stills which comprises forcing the oil in a single-pass through a cracking coil and heating the oil therein to a cracking temperature under a high pressure, introducing a solvent oil into the partially cracked oil at one or more intermediate stages of its progress through the cracking coil, and preheating the solvent oil by heat interchange with the cracked oil or with distillates therefrom.

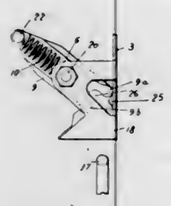
1,675,576. POWER REVERSE GEAR MECHANISM. MONTAGUE H. ROBERTS, Englewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 26, 1921, Serial No. 448,044. Divided and this application filed Feb. 7, 1924. Serial No. 691,218. 5 Claims. (Cl. 116—125.)



1. A cut-off indicator for power reverse gears comprising in combination, a screw shaft, a nut on said shaft having a protruding indicator thereon and a split casing adapted to house the shaft and nut and providing an elongated opening at the split through which said indicator is adapted to protrude.

1,675,577. FOLDING CHAIR. AARON E. ROSENTHAL and WERNER E. CLARIN, Chicago, Ill., assignors to Beacon Steel Furniture Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 22, 1926. Serial No. 103,769. 6 Claims. (Cl. 155—144.)

2. A chair comprising an upper frame member of two channel bars welded together and having curved edge flanges clamped together to provide a hollow construction, a back rest thereon, and pivot elements swingably mounting said back rest in said frame member and having a upset end concealed within said hollow frame member.

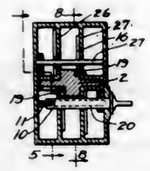


1,675,578. METATARSAL-ARCH-SUPPORTING PAD OR CUSHION. WILLIAM M. SCHOLL, Chicago, Ill. Filed Dec. 1, 1924. Serial No. 753,328. 2 Claims. (Cl. 36—71.)

1. A foot support in the nature of an insole for shoes, consisting of a body layer of material having a pocket formed in its under surface adjacent to one end and

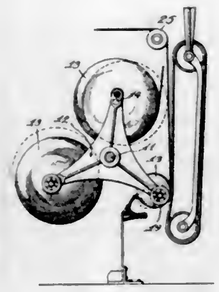
otherwise normally flat throughout, said body layer having a lengthwise slit in one edge terminating short of both ends thereof, a pad in said pocket, a pocket-closing layer of material attached to the lower surface of said body layer, and a thin flat resilient reenforcing strip disposed in said slit and in uniform contact throughout its length with the portions of the body strip above and below its slit.

1,675,579. DOUBLE-ACTING LATCH. RAYMOND PIERRE LOUIS SENG, Paris, France. Filed Apr. 28, 1926, Serial No. 105,324, and in France May 13, 1925. 2 Claims. (Cl. 292—71.)



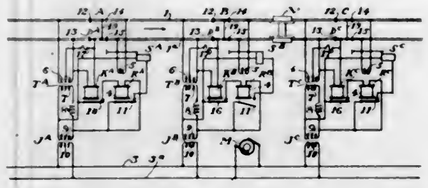
1. In a double acting latch, a fixed latch member, a base having wings supporting a transverse pivot, a slotted latch member mounted upon said pivot and provided at its free end with a seat, a spring extending from the opposite end of said latch to said pivot to project the latch into contact with the base, a hasp member disposed to travel parallel with said base and to enter said seat for retention therein when the latch is shifted to locked position, a guide wall upon said wings, and a projection upon the base opposite said seat when the latch is in open position and disposed to direct said hasp member into said seat.

1,675,580. SIGN. RAY WILBUR SEVERNS and EDWARD WILLIAM TIEMEYER, Lima, Ohio. Filed Dec. 5, 1927. Serial No. 237,823. 1 Claim. (Cl. 40—125.)



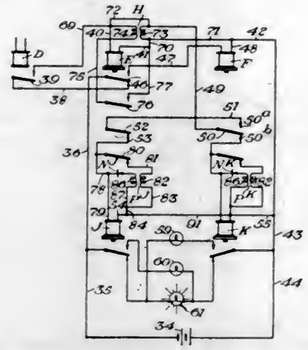
In a signboard structure comprising a frame including a plurality of vertically disposed frame members having their lower ends adapted to penetrate the ground whereby to form a support for the frame, a plurality of horizontally disposed frame members arranged in pairs at the opposite sides of said vertical members and spaced equidistantly throughout the height thereof, angular bolts extending through said vertical and horizontal frame member whereby to secure the same in position with respect to each other, a plurality of vertically disposed rods arranged against the outer edge of said horizontal members and having tie wire arranged to secure said rod in position, a covering of foraminous material disposed at each side of the frame outwardly of the rod and across the top thereof, and adapted to retain a coating of plastic material so as to enclose the frame except at its base portion, the top of the frame being formed with a trough extending longitudinally thereof whereby to form a sharp outline for the upper edge thereof, said trough being provided with a preservative coating.

1,675,581. LOCK. JOHN C. SHERRY, Wilmington, Calif. Filed June 2, 1925. Serial No. 34,321. 3 Claims. (Cl. 70—14.)



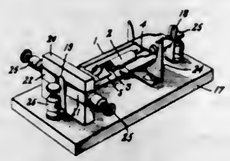
1. In a multiple stage lock, a plurality of compartments, partitions between the compartments, angularly disposed key openings in the said partitions, closures for each of the said openings, and locking means for engaging the said closures, said openings being adaptable to receive a flanged key which will operate the said closure locks as it passes therethrough.

1,675,582. ATTACHMENT FOR PRINTING PRESSES. IRVING I. STONE, Chicago, Ill. Filed Apr. 11, 1927. Serial No. 182,729. 15 Claims. (Cl. 242—58.)



1. The combination with a rotatable reel for supporting the running roll and the fresh roll of a web roll supply apparatus, of automatic means disposed in the path of said running roll as said reel is rotated for severing the web from said running roll when it is desired to feed the new web from said fresh roll.

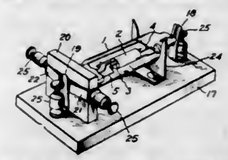
1,675,583. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1926. Serial No. 131,627. 4 Claims. (Cl. 246—34.)



1. In combination, a stretch of railway track divided into two track sections by a short intermediate portion of track separated from both such sections by insulated joints in the track rails, a jumper for connecting the rails of such intermediate portion together, an impedance connected across the rails of one section, means for connecting an intermediate point of the impedance with a rail of the intermediate portion, means for creating an alternating electromotive force across the rails of such one section, and a relay connected across the rails of the other section.

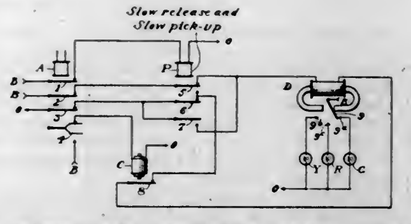
1,675,584. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1925. Serial No. 60,959. 22 Claims. (Cl. 246—63.)

1. In combination, a stretch of railway track, means for supplying said stretch with energy in the form of a series of impulses each separated from the preceding impulse by a time interval, and governing means selectively responsive to the time interval between a given point in each such impulse and a different point in the following impulse.



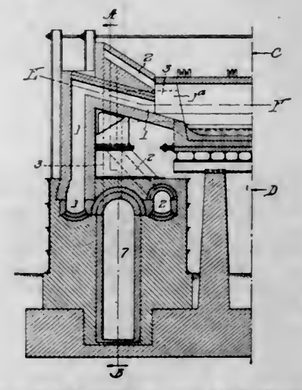
1,675,585. ELECTRON-DISCHARGE APPARATUS. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1922. Serial No. 566,024. 1 Claim. (Cl. 250—27.5.)

An electron discharge device having cathode, grid and anode electrodes, leading-in conductors for said cathode and grid electrodes extending from one end of said device, a leading-in conductor for said anode extending from the opposite end of said device and a plurality of spring contact members extending into one plane adapted to make contact with the ends of the leading-in conductors for the grid and cathode leading-in conductors, and a single contact member extending in a parallel plane and adapted to make contact with the end of the leading-in conductor for the anode.



1,675,586. ELECTRON-DISCHARGE APPARATUS. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed June 5, 1922, Serial No. 566,024. Divided and this application filed Mar. 27, 1924. Serial No. 702,450. 1 Claim. (Cl. 173—328.)

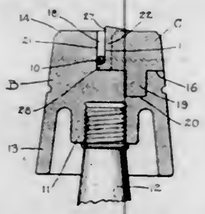
A mounting for an electron discharge device comprising a base member, a pair of flexible contact members mounted thereon, a supporting member provided with an opening, a pair of spring contacts mounted on the supporting member at opposite sides of said opening, said spring contacts and one of said flexible contact members being located in substantially the same plane,



the other of said flexible contact members being mounted in a plane substantially parallel to the first mentioned plane.

1,675,587. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. DONALD G. ACKERLY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 14, 1926. Serial No. 135,463. 5 Claims. (Cl. 246—62.)

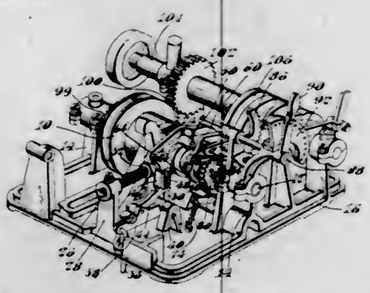
1. Railway traffic controlling apparatus comprising a main relay periodically closed for relatively short or relatively long intervals, a pole-changing relay energized while said main relay is closed but arranged to close only when the main relay is closed for relatively long intervals, a polarized relay, means operating when said main relay is closed to energize said polarized relay in one direction or the other according as said pole-changing relay is open or closed, and traffic governing mechanism controlled by said polarized relay.



1,675,588. REVERSIBLE REGENERATIVE FURNACE. JAMES STANLEY ATKINSON, London, England, assignor, by mesne assignments, to Open Hearth Combustion Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 8, 1921, Serial No. 490,697, and in Great Britain Sept. 22, 1913. 13 Claims. (Cl. 263—15.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

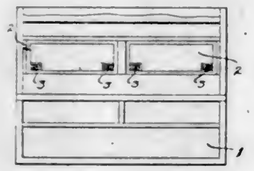
1. An open-hearth furnace comprising, in combination, a hearth, a combined fuel and air port at each end of the furnace of relatively small width as compared with

the hearth, regenerative chambers having communication with said ports, additional channels leading from the regenerative chambers to the interior of the furnace adjacent the ends thereof, and means for causing the entire air passing through the regenerative chamber at the inlet end of the furnace to pass through the combined fuel and air port.



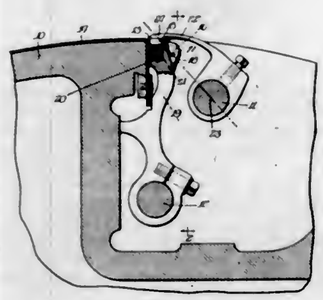
1,675,589. INSULATOR. OLIVER DAVID BABINEAU, Minneapolis, Minn. Filed Dec. 7, 1925. Serial No. 73,576. 7 Claims. (Cl. 173—314.)

1. An insulator comprising a body portion having an abutment formed with a depression for receiving a wire, a member pivoted to said body portion having a hump extending into said depression to engage a wire therein, said hump extending above the body portion and providing a guide for the insertion of the wire between said body portion and said member, said member being movable to clamp said wire and hold it from longitudinal movement in either direction.



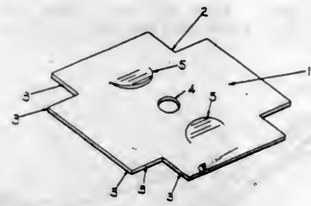
3. An insulator comprising a body having a part of the upper top thereof removed to leave a segmental shaped head and to form a rabbet opposite said head, a complemental head member of segmental shape positioned in said rabbet adjacent said segmental shaped head and being spaced therefrom to form a transverse groove for the reception of a wire, said segmental shaped head having a depression therein, and said complemental head member having a protuberance extending into said depression and engaging said wire, a socket formed in said body, and a trunnion formed on said complemental head member fitted within said socket for pivoting said complemental member on said body portion, said trunnion being disposed so as to throw said protuberance toward the wall of the depression at either side thereof upon movement of the complemental head member and wedge said wire against said wall to hold the wire against movement in either direction.

1,675,590. STOP MECHANISM. LEWIS J. BAZZONI, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 1, 1920. Serial No. 362,543. Divided and this application filed Apr. 5, 1924. Serial No. 704,519. 13 Claims. (Cl. 192—139.)



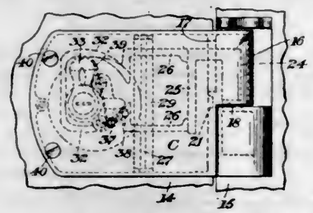
2. In a machine of the character described, a shaft, a driving member normally operatively connected to the shaft, normally inoperative means for disconnecting said member from the shaft, an actuator sleeved on the shaft for rendering said means operative to disconnect said member from the shaft, a ratchet wheel operatively connected to said actuator, and means adapted to be operatively connected to said ratchet wheel to impart step by step movement to said actuator.

1,675,591. CYLINDER DOOR LATCH. DANIEL BELL, Chicago, Ill., assignor to Invincible Laundry Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1926. Serial No. 131,333. 2 Claims. (Cl. 292—175.)



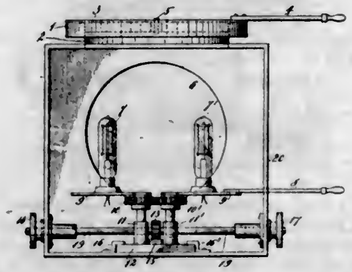
1. In a cylinder latch, a casing, a latch bolt slidable in said casing, said latch bolt having a finger piece and a lug projecting rearwardly of said finger piece, a cover plate secured to the bottom of the casing and having an upwardly offset portion defining a guideway for receiving said lug, and a spring cofined in said guideway at the rear end of said lug, said cover having an abutment adjacent said finger piece whereby the operator may grasp said finger piece and abutment for withdrawing said bolt.

1,675,592. GRIPPER MECHANISM. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,314. 7 Claims. (Cl. 101—412.)



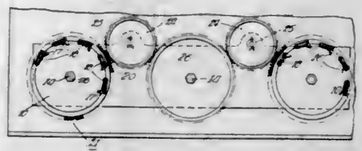
1. In gripper mechanism, the combination of a bodily movable gripper pad member, and a cooperating gripper member between which gripper members a sheet may be gripped, said gripper members being pivotally mounted on different relatively fixed centers in a manner whereby their gripping surfaces have practically no relative movement after the sheet is engaged thereby, to maintain the proper position of the sheet.

1,675,593. FLOOR SHIM. JOHN A. BOHNSACK, Cleveland Heights, Ohio, assignor to The E. F. Hauserman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 17, 1927. Serial No. 220,118. 2 Claims. (Cl. 20—4.)



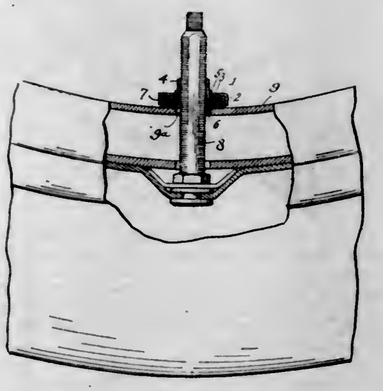
1. A floor shim for metallic building units contoured to provide maximum support for the superposed structure, and to not interfere with concealing elements of the structure located thereabout.

1,675,594. LOCK. AUGUST BOUCHERY, Brooklyn, N. Y., assignor of one-half to John O. Seifert, Auburndale-Flushing, N. Y. Filed Dec. 15, 1925. Serial No. 75,485. 13 Claims. (Cl. 70—29.)



1. In a lock, the combination of a casing, a locking bolt therein; a hand operated knob rotatably carried by the casing having operative connection with bolt actuating means within the casing operable by the manipulation of the knob to throw the bolt to locking and unlocking position; and a key barrel arranged with means for operative connection with the bolt actuating means operable through the movement of the key barrel by the manipulation of a key inserted therein, said connecting means of the barrel with the bolt actuating means being arranged to lock the actuating means against operation by the knob in one bolt locking position of the barrel and permit actuation of the bolt by the knob in another bolt locking position of the barrel.

1,675,595. LAMP HOUSE. CHARLES BOUIN, Boston, Mass. Filed June 24, 1922, Serial No. 570,627. Renewed Nov. 30, 1927. 1 Claim. (Cl. 88—24.)

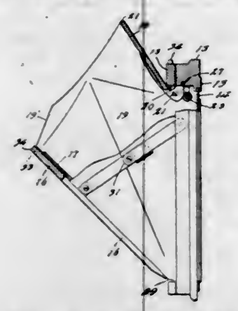


In a lamp housing, a pair of spaced apart brackets, a gear fixed to each bracket and the gears intermeshing for simultaneously moving the brackets, a lamp mounted on each bracket, and a handle on one of brackets for swinging the same to turn both brackets simultaneously to adjust the lamps.

1,675,596. VARIABLE-PITCH GEAR. CLIFFORD C. BRADBURY, Glencoe, Ill. Filed Mar. 18, 1926. Serial No. 95,543. 7 Claims. (Cl. 74—7.)

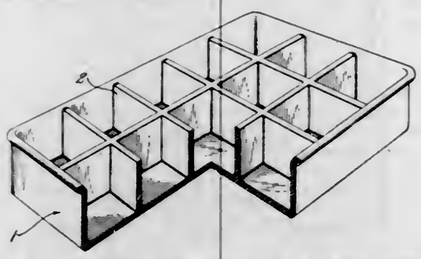
1. A gear wheel or sector comprising grooved pulley, a coiled spring lying within the groove of said pulley, the convolutions of said spring forming the cogs of the gear wheel or sector and means for shifting a portion of the spring along the groove of the pulley.

1,675,597. RIM NUT. ADELBERT E. BRONSON, Cleveland, Ohio, assignor to The Dill Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 31, 1924. Serial No. 758,983. 3 Claims. (Cl. 85—32.)



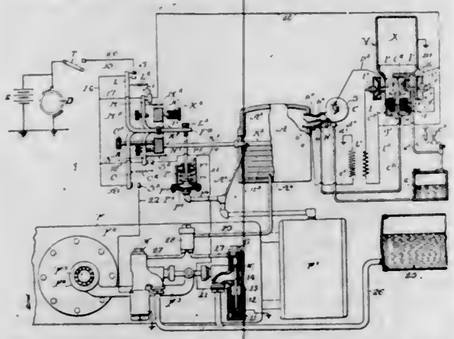
1. A rim nut comprising a cup-shaped portion, having a central opening therein, a member provided with fingers extending through the said opening, certain of said fingers being bent outwardly into engagement with the under surface of said cup-shaped portion and substantially into engagement with the inner walls of the latter to prevent relative rotation therebetween, and a packing member surrounding said extending fingers and within the cup-shaped portion.

1,675,598. CAMERA FOCUSING ATTACHMENT. RUDOLPH CHETTEVILLE, New York, N. Y. Filed Apr. 15, 1927. Serial No. 184,170. 6 Claims. (Cl. 95—47.)



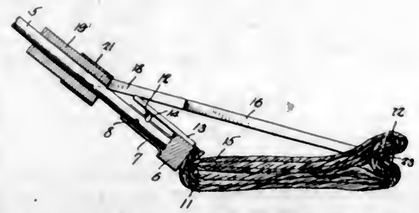
1. A camera attachment comprising a ground glass frame, a reflector frame, means hingedly connecting the bottom edges of said frames, a hood frame hingedly connected to the upper edge of the ground glass frame, collapsible sides connecting the adjacent edges of the reflector frame and the hood frame and coacting therewith to form a collapsible hood having a sight opening and said hood frame mounted for swinging movement from a position extending upwardly from the ground glass frame when the hood is distended into a depending position contained within the hood when the hood is collapsed, a spring between the ground glass frame and the hood

frame and tending to swing the hood frame from its depending into its upstanding position and thus tending to distend the hood and releasable means for securing



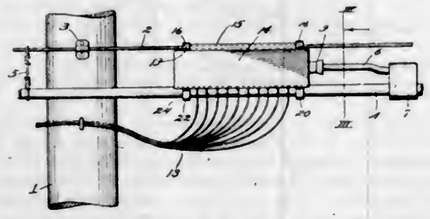
the reflector frame to the ground glass frame and thus secure the hood in collapsed position against the opening tension of said spring.

1,675,599. SHARP-FREEZING CONTAINER FOR MECHANICAL REFRIGERATORS. LLOYD G. COPEMAN, Flint, Mich. Filed May 3, 1928. Serial No. 274,717. 10 Claims. (Cl. 62—111.)



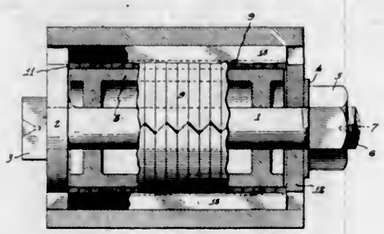
1. As a new article of manufacture, a sharp freezing container of the type adapted to be positioned in heat conducting relation with the low side of a mechanical refrigerating system and formed of material not readily wettable by water, part of the container being of non-metallic flexible material to permit easy removal of the frozen article or articles.

1,675,600. STEAM-GENERATOR REGULATION. ABNER DOBLE, Detroit, Mich., assignor to Doble-Detroit Steam Motors Co., Detroit, Mich., a Corporation of Delaware. Filed May 9, 1918. Serial No. 233,486. 15 Claims. (Cl. 122—448.)



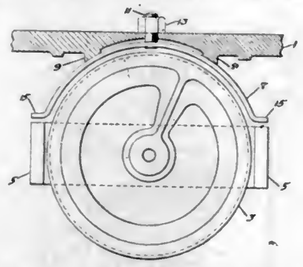
1. In a system for the control and regulation of steam for a steam power plant, means for initiating a supply of water to the generator upon attainment of a predetermined degree of steam temperature, and means for increasing the water supply upon attainment of a still higher predetermined degree of steam temperature.

11,675,601. MOP. JOHN W. DOTY, Olney, Ill. Filed July 5, 1927. Serial No. 203,478. 3 Claims. (Cl. 15—120.)



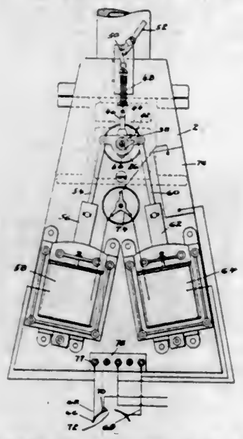
1. A mop including a handle, a clamp at one end of the handle, a frame including a block and body portion, said body portion being pivotally connected with the block, said block being slidably mounted for movement longitudinally of the handle, mop strands connected with the outer end of the frame, said clamp adapted to secure the mop strands to the handle portion, and said mop strands adapted to be twisted to wring the mop, when the block and frame are rotated relative to the handle.

1,675,602. SUSPENDED AERIAL-CABLE TERMINAL. WILLIAM N. FAUST, Kansas City, Mo. Filed Oct. 19, 1925. Serial No. 63,429. 3 Claims. (Cl. 247—1.)



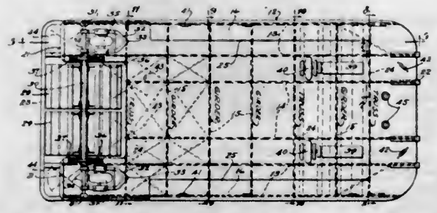
1. A terminal box having a clamp adapted for rigid engagement with a feeder cable and also being provided with means adapted for supporting and sliding connection with a suitable support, and a tail connection between said box and cable.

1,675,603. PISTON-RING CLAMPING DEVICE. HARRY S. GRAVES, Detroit, Mich. Filed Sept. 16, 1926. Serial No. 135,808. 5 Claims. (Cl. 29—89.)



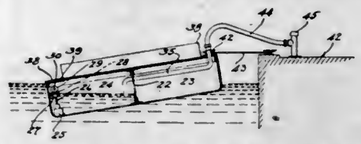
1. In a tool for exerting closing pressure upon piston rings, a holder for the piston rings, a casing adapted to be placed about the piston rings on the holder to exert pressure on the piston rings, invertible strips of yieldable material in said casing adapted to bear on the piston rings of said holder, and means at the ends of said holder adapted for clamping the piston rings on said holder.

1,675,604. CALIBRATION. EDWIN A. GUSTAFSON, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Apr. 28, 1926. Serial No. 105,137. 7 Claims. (Cl. 264—13.)



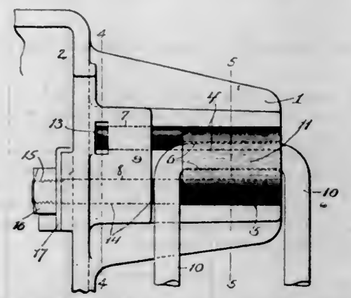
1. In a measuring instrument, a magnet, a magnet shunt having its ends positioned one adjacent each pole of the magnet, means including fixed fulcrums and a single intermediate adjusting member to distort the shape of the shunt to vary the spacing of its ends from the poles.

1,675,605. HEAT-CONTROLLING APPARATUS. FLOYD E. HARRIS, Flint, Mich. Filed Oct. 7, 1925. Serial No. 61,085. 14 Claims. (Cl. 236—74.)



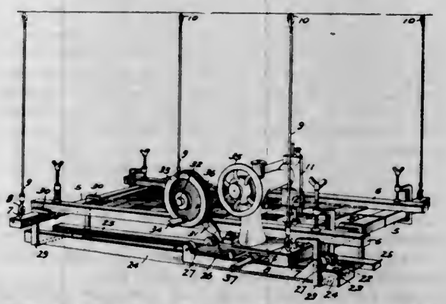
1. In a regulator for a burner of the type to which fuel and air are supplied by separate conduits provided with valves, means for biasing said valves to one position and thermally controlled means for simultaneously moving said valves to another position, said last named means comprising an electromagnet.

1,675,606. BOAT. FRANCIS M. HENRY, Minneapolis, Minn. Filed Feb. 3, 1927. Serial No. 165,555. 17 Claims. (Cl. 115—53.)



1. A boat hull, a paddle wheel having a shaft mounted on the hull, a motor, and driving connections from the motor to the paddle wheel, said motor being mounted in part on said shaft to partake of angular movements therewith in respect to the hull to keep said driving connections aligned.

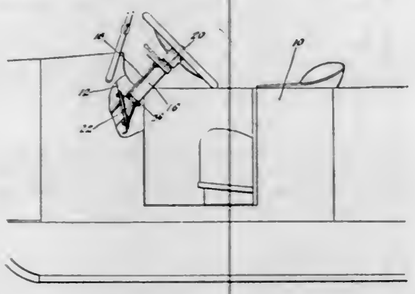
1,675,607. SELF-DUMPING BARGE. FRANCIS M. HENRY, Minneapolis, Minn. Filed Feb. 3, 1927. Serial No. 165,556. 5 Claims. (Cl. 114—38.)



1. A self-dumping barge having a flat deck with side boards, one of which is hinged to the deck at its lower longitudinal edge for outward swinging movement onto the deck, said deck outward of its hinged side board being countersunk to receive said side board with its upper face substantially flush with the top of the deck.

1,675,608. BRAKE HANGER. GEORGE T. JOHNSON, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed May 26, 1925. Serial No. 32,978. 4 Claims. (Cl. 188—209.)

1. In brake mechanism, the combination of a bracket having a rib thereon and grooves above and below the rib parallel therewith, a brake hanger having its upper end seating upon said rib, a keeper spanning the end of the hanger and the rib and having its side edges engaged in the grooves, said grooves and side edges being of counterpart contour whereby to permit endwise but prevent sidewise movement of the keeper, and means to prevent endwise movement of the keeper.



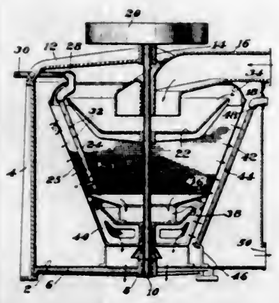
1,675,609. QUILTER. LAWRENCE E. KELLEY, Blue Ridge, Tex. Filed Sept. 11, 1926. Serial No. 134,879. 2 Claims. (Cl. 112—117.)

1. In a quilting machine, a quilting frame embodying end rails and side rails, means for adjustably connecting

the end rails and side rails, a track including parallel bars, spaced apart, supporting arms to which the bars of the track are secured, said supporting arms having hooks at their upper ends positioned over the end rails of the quilting frame, and adapted to be slid longitudinally of the end rails, a sewing machine embodying a base having rollers adapted to move over the track, and means for suspending the frame from an elevated supporting structure.

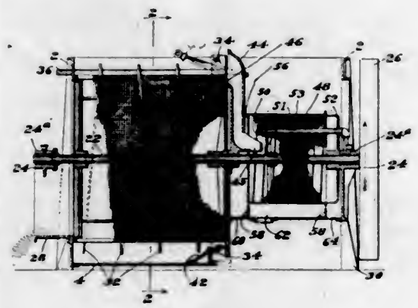
1,675,610. STEERING-COLUMN SUPPORT. WILLIAM S. KNUDSEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 12, 1924. Serial No. 712,751. 2 Claims. (Cl. 280—87.)

1. A steering column support in the form of an integral sheet metal stamping having a flange arranged to engage and be secured to a dash, a generally conical base extending therefrom with its axis at an acute angle to the plane of the flange, the base culminating in a coaxial sleeve arranged to embrace and hold a steering column, and the flange being formed with a pair of drawn sleeves or perforated bosses to support the spark and throttle control rods as described.



1,675,611. METHOD AND APPARATUS FOR REDUCING CARBON MONOXIDE IN MOTOR-EXHAUST GASES. EDWARD J. LACY, New York, N. Y. Filed May 17, 1926. Serial No. 109,713. 11 Claims. (Cl. 123—25.)

1. The combination with an internal combustion engine; of piping leading to the fuel inlet passage of the engine from the interior of the exhaust gas passage of said engine, a portion of said piping being disposed longitudinally in said exhaust passage and being formed with longitudinally spaced perforations for the purpose set forth.

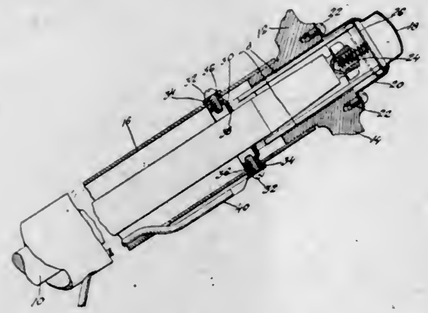


1,675,612. SCREEN FOR PAPER MAKING. ISAAC LAUREN LAIRD, South Walpole, Mass., assignor to Bird Machine Company, South Walpole, Mass., a Corporation of Massachusetts. Filed July 22, 1927. Serial No. 207,642. 15 Claims. (Cl. 92—34.)

1. In a centrifugal machine of the class described, having, in combination, a screen adapted to be rotated about an axis, means to distribute stock about the inside of the screen near one end, a shower adapted to clear clogged apertures in said screen, means to collect unscreened material and distribute it about the inside of a

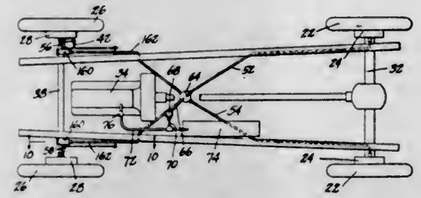
screening section, whereby said material is subjected to a second screening operation, and means to separately conduct the accepted stock and tailings from the screen.

1,675,613. SCREEN FOR PAPER MAKING. ISAAC LAUREN LAIRD, South Walpole, Mass., assignor to Bird Machine Company, South Walpole, Mass., a Corporation of Massachusetts. Filed July 22, 1927. Serial No. 207,643. 5 Claims. (Cl. 92—36.)



1. A machine of the class described, having, in combination, a vat, a rotary screen of the inflow type located therein, a spirally arranged member carried by the screen upon its exterior, serving to urge coarser particles of the stock along the outside of the screen and lengthwise of the vat, and a series of perforate members upon the exterior of and carried by said screening drum, adapted to elevate and discharge said coarser particles into a second screening drum, adapted to against screen said coarser particles.

1,675,614. CIRCUIT-CONTROLLING DEVICE. ALBERT R. LEWELLEN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Original application filed June 14, 1923, Serial No. 645,325. Divided and this application filed Mar. 7, 1925. Serial No. 13,765. 8 Claims. (Cl. 200—59.)



1. A controlling device comprising, in combination, a rotatable steering post, a steering wheel secured to the upper end thereof, a stationary protecting sleeve surrounding the steering post, an annular contact member secured to the protecting sleeve of its inner side and below its upper end, and which member surrounds and is

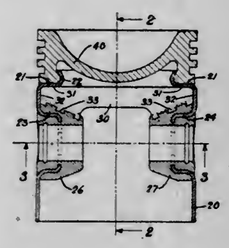
spaced from the steering post, and a circuit closing device including a cooperating contact member eccentrically mounted in the steering wheel and displaceable in a direc-

tion parallel to the axis of the steering post to cause its lower end to engage directly with different parts of the annular contact member.

1,675,615. CONTROL MECHANISM. WILLIAM LINCOLN MARTIN, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 17, 1924. Serial No. 686,936. 59 Claims. (Cl. 188—152.)

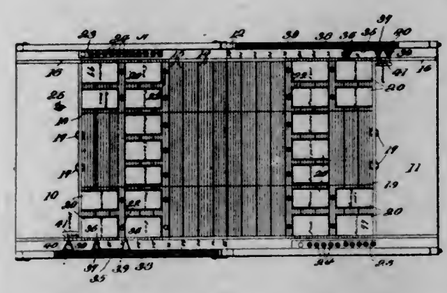
32. A vehicle having, in combination, a pair of dirigible wheels, brakes therefor, steering mechanism, conduits for applying the brakes by fluid pressure, and means automatically operated when the wheels are turned by the steering mechanism and which varies the pressure in the conduit for one of the brakes without affecting the pressure in the conduit for the other brake.

1,675,616. ROTARY BRUSH. RUDOLF R. RADINSE, Cleveland, Ohio. Filed Mar. 12, 1927. Serial No. 174,849. 6 Claims. (Cl. 15—179.)



3. A brush comprising a ring, clips extending around the ring and having projecting tongues at opposite sides thereof, and bunches of brush material folded around said ring and clips, the tongues being bent down upon said material at opposite sides of the ring and having interlocking portions to prevent disengagement of the tongues.

1,675,617. ROTARY WIRE BRUSH. RUDOLPH R. RADINSE, Cleveland, Ohio. Filed Sept. 29, 1927. Serial No. 222,800. 1 Claim. (Cl. 15—198.)

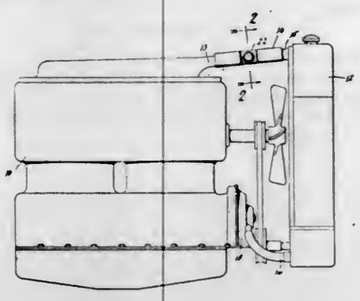


A brush comprising a metal plate having oppositely offset tongues at the edge, a plurality of tufts each comprising a plurality of wires twisted together at their middle portion, said portion being bent double, a ring in the bend between said twisted portions, and outer rings on opposite sides of said twisted portions, the tongues being pressed against said outer rings to clamp the parts together, said ring being notched to receive the bend of the tufts.

1,675,618. COMPOSITE PISTON. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 23, 1926. Serial No. 90,160. 5 Claims. (Cl. 74—108.)

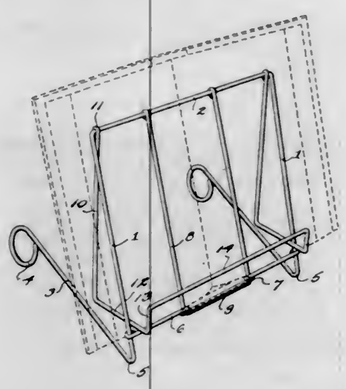
1. A composite piston comprising a skirt member; a head cast on the skirt; wrist pin lugs also cast on said skirt; and means interposed between the lugs separate from said head for increasing their rigidity.

1,675,619. GAME. HAROLD A. SORLIEN, Pasadena, Calif. Filed Aug. 21, 1926. Serial No. 130,713. 15 Claims. (Cl. 273—94.)



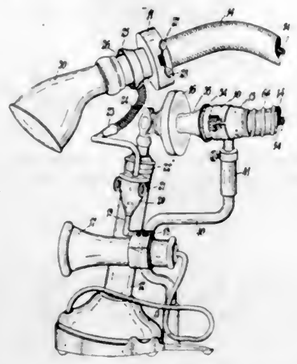
1. The combination with a game board having division lines indicated thereon representing uniform units of value, a normally stationary game piece having means for removably engaging said game board at any position thereon to indicate progress of the game, and two sets of duplicate playing cards, one set for each player of the

game, each set of cards containing numerical value indicia, correlated with the units of value indicated on the board, so that the difference in the numerical values of any two cards played in succession by the respective players will indicate the distance and direction that the game piece is to be shifted on said board.



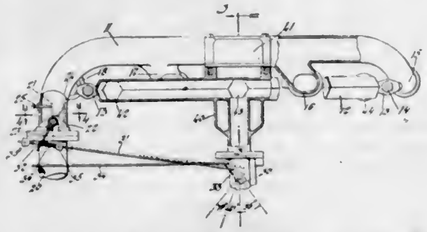
13. The combination with a game board having enclosing sides, one of which is provided with angularly disposed intersecting slots extending longitudinally thereof, of an indicator member having angularly related portions slidably mounted in said slots so that one of said angular portions may project over the face of said board and be moved with respect thereto.

1,675,620. THERMOSTATIC WATER VALVE. LOUIS M. SPENCER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,270. 19 Claims. (Cl. 236—34.)



5. In a cooling system, a valve casing having a passag. therethrough, a tubular valve-carrying shaft pivoted in said passage, a fixed element coaxial with said tubular shaft, and a thermostat connecting said fixed element and tubular shaft.

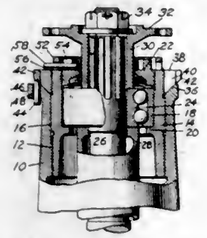
1,675,621. BOOKHOLDER. WILLIAM W. SPENCER, Kendallville, Ind. Filed July 10, 1926. Serial No. 121,656. 1 Claim. (Cl. 45—57.)



In a device for the purpose set forth, a wire frame comprising an outer substantially U-shaped part, the parallel arms of which are rounded and extend rearwardly at an upward angle and merge into downwardly rounded portions providing with the first mentioned rounded portion feet, a cross member connecting the sides of the frame, strands extending vertically and connecting the cross member with the top of the frame, a swingable holder hinged from said top having horizontal portions extending through the frame, said horizontal portions being provided with bent-up portions connected by a transverse portion at the front of the frame.

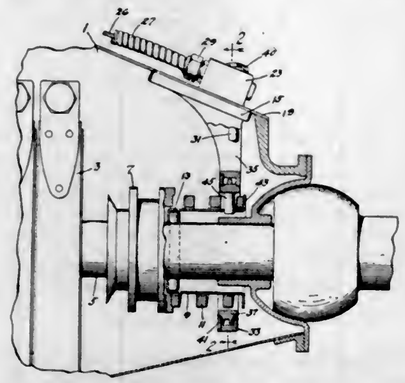
1,675,622. TELEPHONE ACCESSORY. DOUGLAS STUART SPENS STEUART, London, England. Filed Nov. 17, 1927, Serial No. 233,973, and in Great Britain June 14, 1926. 12 Claims. (Cl. 179—178.)

1. In combination, a telephone transmitter, a mouthpiece, a flexible tube connecting said transmitter to said mouthpiece, and a self-sustaining flexible support located inside the tube for maintaining said tube and mouthpiece in any adjusted position.



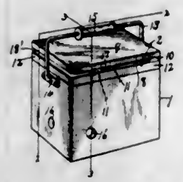
1,675,623. INTERNAL-COMBUSTION ENGINE. ALEX TAUB, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 14, 1925. Serial No. 9,256. 5 Claims. (Cl. 123—119.)

1. In an internal combustion engine an exhaust manifold having a discharge aperture constituting the sole outlet for exhaust gases from said engine, an intake conduit for combustible mixture, a valve in said outlet, a valve in said conduit, and means connecting the valves, said means being constructed and arranged to operate the first mentioned valve only during an intermediate portion of the operation of the second valve.



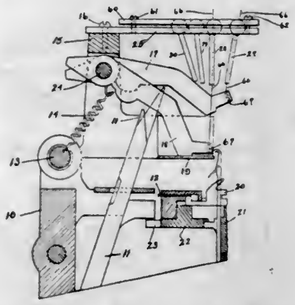
1,675,624. LOCKING DEVICE. HERBERT BERNARD TAYLOR, Syracuse, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 30, 1925. Serial No. 5,794. 5 Claims. (Cl. 74—7.)

1 In a device of the character described, in combination, a tubular carrier having a flange at one end, a sleeve adjustably mounted in said carrier, a locking ring threaded on said sleeve and having a plurality of spaced lugs, a locking pin to engage between adjacent lugs, and



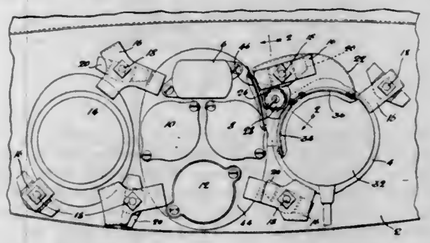
said flange having openings spaced apart a distance different from the spacing of said lugs and adapted to selectively receive said locking pin.

1,675,625. FORD TRANSMISSION SPEEDOMETER DRIVE. HARRY TITTENSOR, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Oct. 7, 1926. Serial No. 140,120. 5 Claims. (Cl. 74—7.)



1. In an instrument drive, a gear casing, a driven shaft therein, a removable cover therefor, a power take-off attachment positioned beneath said cover, means to secure said attachment to said cover, mechanism carried by said attachment for operating an instrument, a gear for actuating said mechanism supported by said attachment and surrounding but out of contact with said driven shaft, means whereby said gear is rotated by said shaft.

1,675,626. RADIO BATTERY-CHARGING CABINET. ARTHUR S. TUTTLE, Sherburne, N. Y. Filed July 24, 1926. Serial No. 124,658. 1 Claim. (Cl. 217—42.)

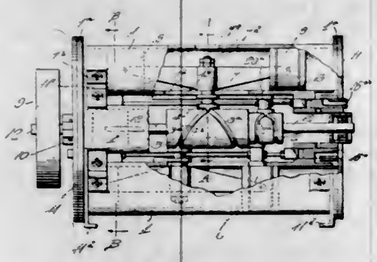


In a device of the class described, a box, a cover for the box, a transverse partition dividing the interior of the box into two compartments, a plurality of holes in the outer sides of one of said compartments located below the horizontal center of the box, open spaces between the cover and the top of the outside walls of said compartment, open spaces between the cover and the opposed outside walls of the other compartment, and a lengthwise opening in the top of the partition constituting the only means of communication between the compartments.

1,675,627. YARN DIRECTOR FOR KNITTING MACHINES. JAMES A. WILLARD, Greensboro, N. C. Filed Apr. 14, 1927. Serial No. 183,794. 8 Claims. (Cl. 66—125.)

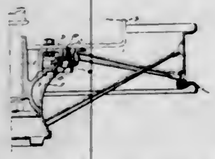
2. In a knitting machine, means for insuring an uninterrupted and unaccompanied travel of each strand of yarn to the yarn changing fingers, said means comprising a plurality of tubes, said tubes being pivotally secured at their upper ends to a plate and being capable of being swung laterally in any direction.

1,675,628. ILLUMINATED INSTRUMENT PANEL. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Feb. 28, 1927. Serial No. 171,602. 3 Claims. (Cl. 240—8.16.)



1. The combination of an instrument panel, an instrument mounted on the panel comprising a housing including a portion extending rearwardly of the panel, said last named portion being apertured at separated points to permit the passage of light into the housing for the illumination of the dial, a light source at the rear of the panel arranged for the projection of light upon the dial through one of said apertures and a reflector associated with said light source and arranged to project light into said housing through another of said apertures from a different angle to produce even illumination.

1,675,629. ENGINE CONSTRUCTION. ALBERT ANDREWS, Spearfish, S. Dak. Filed June 29, 1926, Serial No. 119,384, and in Canada December, 1925. 3 Claims. (Cl. 123—58.)

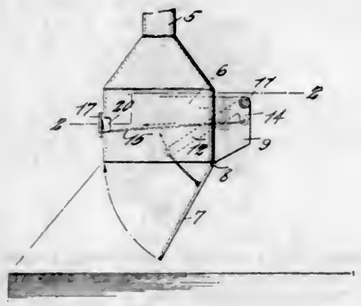


1. An engine comprising a shaft, two end plates having centrally arranged bearings for the shaft and having their edges formed with curved seats and inturned flanges, a plurality of parallel cylinders arranged around

the shaft and having flanged ends detachably engaged with said seats, the cylinders also having at their intermediate portions longitudinal slots and at their end portions outwardly projecting lugs detachably secured to the inturned flanges on the end plates, guide-ways on the cylinders adjacent their slots, a pair of pistons in each cylinder, a piston rod connecting the pistons of each pair, cross heads on the piston rods and slidable in the

guide-ways, a cylindrical enlargement on the shaft having a continuous cam groove extending a plurality of times around the enlargement, a traveler on each cross head to engage the cam groove, a valve mechanism at each end of each cylinder and detachable therewith, a slidable valve-operating rod for the valve mechanisms of each cylinder, a second cylindrical enlargement on the shaft and having a continuous cam groove, and members on said valve rods to engage the last-mentioned groove.

1,675,630. DISK WHEEL. CHARLES S. ASH, Detroit, Mich. Filed June 29, 1923. Serial No. 648,440. 6 Claims. (Cl. 301—9.)



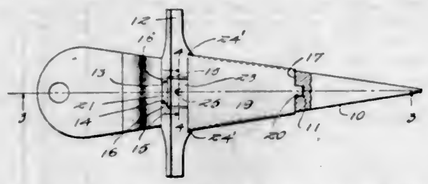
3. A demountable wheel structure including a hub structure having an outwardly extending flange adjacent its inner end, said flange being formed with a plurality of screw-threaded openings to receive bolts or studs and said hub structure being formed with a plurality of spaced-apart seats having said openings therein, for a demountable wheel to seat thereon having openings to register with said openings in said flange at said seats, and bolts to engage said registering openings to demountably secure said wheel upon said spaced-apart seats.

1,675,631. OIL COMPOSITION AND PROCESS OF RETARDMENT DEVELOPING OF RANCIDITY THEREIN. WALTER D. BALDSIEFEN, Parlin, N. J., and THOMAS HUNTON ROGERS, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 9, 1922. Serial No. 542,461. 28 Claims. (Cl. 134—79.)

4. A composition of matter comprising nitrocellulose, a vegetable oil, and an aromatic amine.

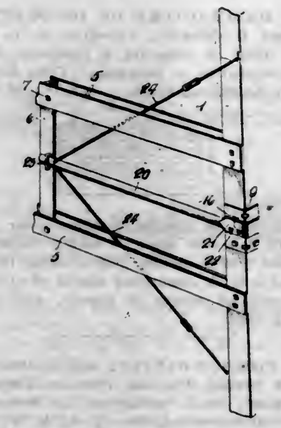
1,675,632. EGG-CANDLING DEVICE. RICHARD J. BELLMAN, Winfield, Kans. Filed July 11, 1927. Serial No. 204,815. 4 Claims. (Cl. 99—6.)

1. In a candling device, a casing adapted to have a source of light, the said casing having an opening in its wall, a shutter hinged to the casing at its lower end for opening and closing the said casing, an apertured mask movably mounted with relation to the



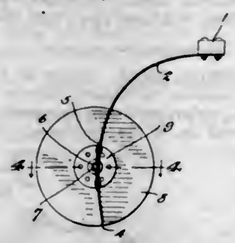
aperture of the casing and adapted to guard and unguard the aperture, and means for communicating the motion of the mask to the shutter.

1,675,633. DOOR. JOSEPH BOCA, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 18, 1925. Serial No. 69,834. 3 Claims. (Cl. 296—44.)



1. A metal door construction comprising a front member having upper and lower flanges forming the top and bottom of the door respectively, side members each having one edge thereof in interlocking engagement with the lateral edges of the front member, said side members being formed adjacent the opposite edges thereof to provide a channel, a brace connecting one of the legs of said channels and a panel member fitting in said channels.

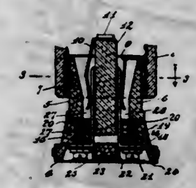
1,675,634. CUTTER GUARD AND LEDGER PLATE. ENDRE A. BOE, Watford City, N. Dak. Filed May 18, 1927. Serial No. 192,419. 2 Claims. (Cl. 56—311.)



1. A guard finger having a ledger plate seat and a transverse rib rearwardly of said seat, said rib having a central notch the walls of which incline, and a ledger plate on the said seat and having a lug engaged in said notch and having its side portions inclined in correspondence with the walls of the notch, and a locking key engaged in the notch above the lug.

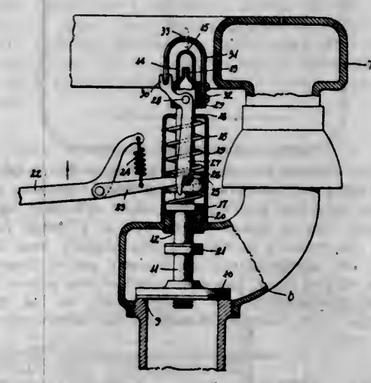
1,675,635. OIL-WELL DERRICK. ARLAN L. BOWERS, Bristow, Okla., assignor to Frank M. Mahan, Pawhuska, Okla.; Earnest McCarty, Wynona, Okla.; and Carl H. Besse, Burbank, Okla. Filed July 5, 1923. Serial No. 649,746. 3 Claims. (Cl. 20—0.5.)

1. In a derrick, trussed throughout its height, relatively superposed and spaced parallel bracing bars spanning one side of the derrick and connected at their opposite ends to adjacent portions of the correspondingly adjacent derrick legs, vertically disposed and relatively spaced bars arranged between said bracing bars and connected at their opposite ends to adjacent portions of said bracing bars, forming a walking beam receiving window therebetween, short girths arranged between said bracing bars substantially parallel thereto having their respective outer ends connected to adjacent portions of said derrick legs and their respective inner ends engaged with said vertical bars and bracing means engaging said inner ends of the short girths.



1,675,636. CULTIVATOR. JULIUS L. BRACK, Twining, Mich. Filed Jan. 21, 1927. Serial No. 162,540. 2 Claims. (Cl. 97—209.)

1. A cultivator including a pair of spaced spring strips constituting soil engaging teeth, and a combined cutting and guiding disk between and supported by said teeth, said disk being extended forwardly beyond the lower end portions of the teeth and downwardly between and below the points of the teeth.

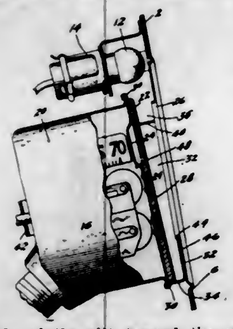


1,675,637. ADAPTER AND PLUG FOR CUT-OUTS. WILLIAM P. BRIGGS, New Bedford, Mass. Filed Aug. 4, 1926. Serial No. 127,132. 5 Claims. (Cl. 200—130.)

1. A fuse plug and adapter for screw sockets of cut-outs, comprising an adapter formed with a body having a pair of openings extending entirely therethrough and a post extending outwardly from that part of the body between said openings, a screw contact shell secured to the outer part of said body, an end contact secured to the inner end of that part of the body between said openings, a resilient contact member extending from said shell into one of said openings, a second resilient contact member extending from said end contact into

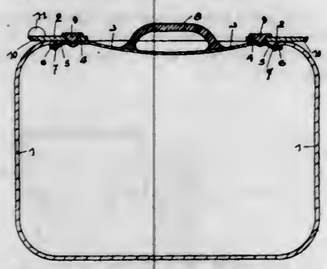
the other of said openings and a fuse plug co-acting with said adapter, said fuse plug having a pair of spaced prong contacts adapted to extend into said openings and into engagement with the contact members in said openings, said fuse plug being formed with an opening for receiving said post, and means for securing the respective ends of a fuse to said prong contacts.

1,675,638. PILOT-LIGHT-CONTROLLED GAS VALVE. FREDERIC H. BRINKERHOFF, Belleville, N. J. Filed Dec. 27, 1926. Serial No. 157,281. 10 Claims. (Cl. 67—116.)



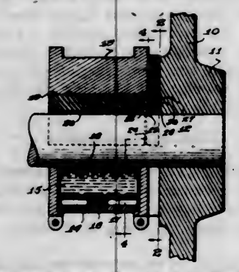
1. The combination of a burner and a gas supply conduit for the burner, a pilot light tube extending to the exterior of the burner and having a portion extending within said conduit and movable longitudinally of itself, and a valve on said portion of the tube and seatable in said conduit for shutting off the flow of gas through said conduit.

1,675,639. INSTRUMENT PANEL. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed July 2, 1926. Serial No. 120,240. 8 Claims. (Cl. 240—8.16.)



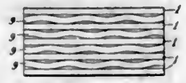
1. The combination of an automobile instrument panel, an instrument mounted on the panel, a face plate for the instrument, said face plate having an aperture for the display of the dial, a light source arranged at one side of the instrument, said face plate being formed with an aperture adjacent the first named aper-

ture and facing the light source for the projection of light upon the dial, said second named aperture being formed by slitting the face plate and pressing the mate-



rial at one side of the slit toward the rear of the instrument so as to render the aperture substantially invisible when viewed from ordinary reading position.

1,675,640. COOKING POT. CAMILLE CHARLIER and ABRAHAM ERRERA, Brussels, Belgium. Filed Nov. 18, 1926, Serial No. 149,156, and in Belgium Dec. 8, 1925. 3 Claims. (Cl. 53—1.)



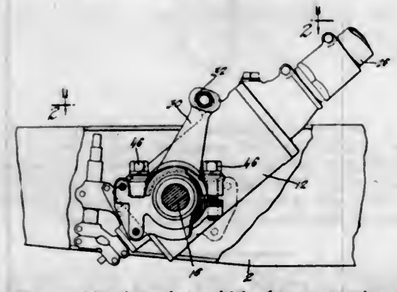
1. In a cooking pot, the combination with the pot and an inwardly arched cover of oval shape intended to be inserted into the pot and tightened upwardly against the upper rim or flange of the pot, of a flange formed around the opening of the pot and slightly bent downwardly and inwardly, and an annular groove formed in the rim of the cover, the outer wall of the groove being inclined downwardly, the flange fitting in the groove with the edge thereof engaging the downwardly inclined wall.

1,675,641. JOURNAL BOX. MATTHIAS CHRISTMAN, Springfield, Mo. Filed Mar. 1, 1927. Serial No. 171,819. 11 Claims. (Cl. 308—81.)

1. A journal box brass provided in its interior surface with a plurality of lubricant grooves extending throughout the greater portion of the length of the brass from a point adjacent one end to a point spaced from the opposite end, said brass being further provided in its interior surface between the last named end and the adjacent portions of said lubricant grooves with an independent supplemental lubricant groove and with passages extending from the supplemental groove to the adjacent end of the brass.

1,675,642. MANUFACTURE OF DECORATIVE PLASTIC. JOHN H. CLEWELL, Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 1, 1925. Serial No. 53,787. 5 Claims. (Cl. 18—48.8.)

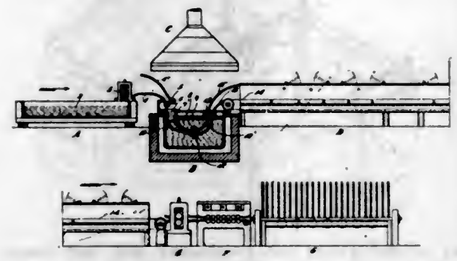
1. The process of making cellulose ester plastic pigmented with flake-like particles which comprises mixing said particles into a casting dope, casting the dope into film, making a stack comprising sheets of said film interlaid with crinkled sheets of plastic, and welding the stack into a block.



1,675,643. STORAGE-BATTERY GRID. REGINALD SCOTT DEAN, La Grange, Ill., and WILLIAM EWART HUDSON, Los Angeles, Calif., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1924, Serial No. 690,720. Renewed Sept. 27, 1927. 4 Claims. (Cl. 148—1.)

1. A storage battery grid formed of a lead alloy in which lead is the major constituent, characterized by the presence of finely divided particles of a solute material substantially uniformly dispersed throughout the lead.

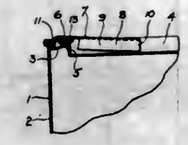
1,675,644. AGE-HARDENING PROCESS. REGINALD SCOTT DEAN, La Grange, Ill., and WILLIAM EWART HUDSON, Los Angeles, Calif., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1924, Serial No. 737,998. Renewed Oct. 20, 1927. 14 Claims. (Cl. 148—11.)



1. The method of treating an age-hardenable lead alloy, which consists in raising said alloy a plurality of times to the temperature at which the maximum amount of solute material present will enter solid solution, performing work thereon between successive heating steps, quenching said alloy and then aging said alloy.

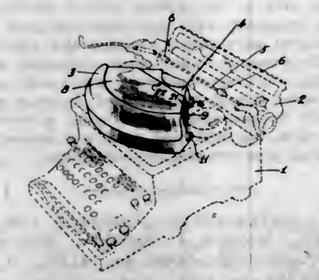
1,675,645. STEERING GEAR. HARRY M. DENYES, Saginaw, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 16, 1925. Serial No. 56,714. 8 Claims. (Cl. 74—79.)

1. The combination of a vehicle frame, steering gear, a housing for said steering gear including a laterally projecting arm, and a bracket on the frame having a universally adjustable connection with said arm for supporting the steering gear on the frame.



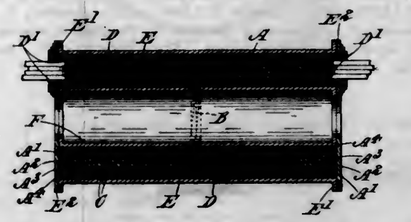
1,675,646. METHOD OF ZINC COATING FERROUS METAL. JOSEPH G. FITZ GERALD, Canton, Ohio, assignor, by direct and mesne assignments, to Central Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,381. 11 Claims. (Cl. 91—70.3.)

1. The method of zinc coating ferrous metal, which consists in heating the metal to be coated to from 850° to 950° F. and then coating it in a molten spelter bath to produce a tight coat.



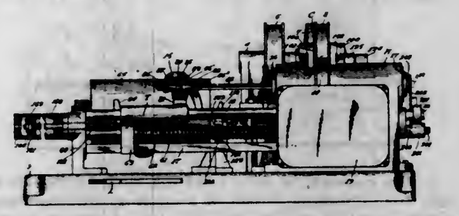
8. The method of zinc coating a ferrous metal, which consists in coating the metal in a molten spelter bath, and then controlling the temperature of the cooling of the hot coated metal to produce the desired character and appearance of the coating.

1,675,647. CAN-OPENING DEVICE. CONRAD GENJACK, Vancouver, British Columbia, Canada. Filed Apr. 25, 1927. Serial No. 186,301. 1 Claim. (Cl. 220—43.)



A can opener for cans provided with press on covers having a peripheral rim, comprising a lever adapted to be hingedly applied to the rim of the cover and having a downwardly turned tongue adapted to bear upon the can as the lever is raised to lift the cover from the can, said tongue having an inclined lower extremity.

1,675,648. COVER TABLE FOR TYPEWRITERS. CLARENCE A. GOURLAY, Jamaica, N. Y. Filed Feb. 8, 1927. Serial No. 166,660. 5 Claims. (Cl. 197—186.)

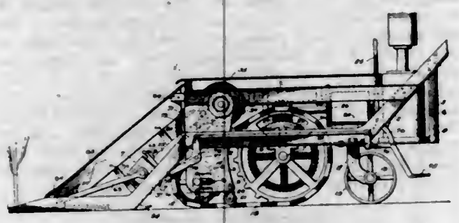


1. A cover table for Noiseless typewriters embodying a flat plate of substantially segmental contour to overlie and conceal the opening between the front shield and the comb guide of a Noiseless typewriter, with the forward margin of the plate extending beneath the rear margin of the front shield and with the rear margin of the plate overlying the comb guide, flanges formed at the lateral edges of said plate and extending downwardly to the frame of the machine, attaching lugs formed on the side flanges and adapted to be secured to the machine by screws which secure conventional parts of the machine to the frame of such machine, sound deadening lining covering the inner face of the plate and its flanges, and gaskets interposed between the plate and the front shield and the plate and the comb guide to preclude rattling between the plate and these parts.

1,675,649. LIGHTNING OR SURGE ARRESTER. LEWIS COLIN GRANT, Newcastle-upon-Tyne, England, assignor to Electrical Improvements Limited, Newcastle-upon Tyne, England, a Company of Great Britain. Filed Oct. 5, 1925. Serial No. 60,592. 5 Claims. (Cl. 175—30.)

1. A lightning or surge arrester in the form of a transformer comprising a secondary which consists of two concentric tubes electrically connected together, and a primary winding disposed in the annular space between the two tubes, the secondary acting to dissipate in the form of heat energy which it derives from a surge in the primary.

1,675,650. WINDING MACHINE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1926. Serial No. 104,606. 19 Claims. (Cl. 242—7.)

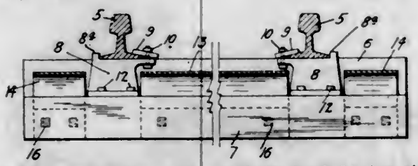


1. A winding machine including a rotating spindle, a coil receiving member supported by said spindle, a strand of material adapted to be wound upon said coil receiving member, and automatic means including a rotatable cam adapted to engage a feeding bracket associated with a feeding bar adapted to enter said spindle to engage the said coil receiving member for moving said coil receiving member relative to said strand of material to space the strand of material upon said coil receiving member.

1,675,651. MECHANICAL CANE CUTTER. THOMAS A. GUILD, Honolulu, Territory of Hawaii. Filed May 29, 1926. Serial No. 112,622. 18 Claims. (Cl. 56—17.)

1. A cane cutting machine comprising a frame mounted on wheels, a motor carried by the frame and geared to

drive said wheels, an inclined guideway pivotally connected to said frame and carrying a reciprocable knife,

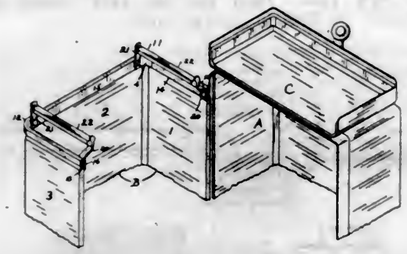


a crank shaft secured to said knife, means connecting the motor to said shaft whereby to reciprocate said knife once to every three revolutions of said shaft.

1,675,652. METHOD OF MAKING CONTAINERS FOR CAKES, ETC. GEORGE WILBUR GWINN, Hewlett, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed May 2, 1927. Serial No. 188,087. 5 Claims. (Cl. 93—60.)

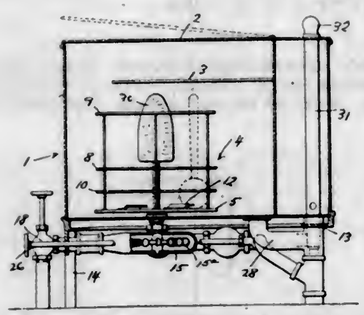
1. The method of making a package, which consists in folding a sheet of paper to form a container bottom having an upstanding wall provided with a series of outstanding loops, then forming said loops into box-pleats on said wall, then folding the upper part of said wall outwardly to form a flange, then filling the container so formed, then attaching a cover to said flange, and then folding said cover and flange down together on said wall.

1,675,653. CATTLE GUARD. ISAAC J. KILBURN, Denver, and JOHN T. DOYLE, Bloomfield, Colo. Filed Oct. 7, 1927. Serial No. 224,618. 7 Claims. (Cl. 256—14.)



1. The combination with a railway track having alternate ties of reduced height, of a cattle guard comprising a plate slanting between alternate ties of regular height and across the tie of reduced height.

6. A cattle guard comprising in combination with a railway track of standard construction, a flanged plate slanting from a face of a tie of the track across two following ties, the plate having its flanges fastened upon corresponding faces of the outer ties and the intermediate tie being reduced in height and providing a support for the plate, and chairs on the intermediate tie, supporting the rails of the track above the same.

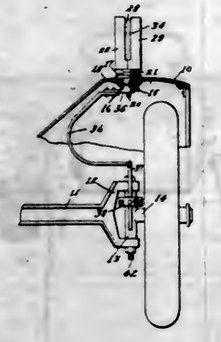


1,675,654. REENFORCING FRAME FOR WARDROBE-TRUNK SECTIONS. MERTON E. MAHAR, West Allis, Wis., assignor to Milwaukee Stamping Company, West Allis, Wis. Filed Mar. 3, 1923. Serial No. 622,490. 2 Claims. (Cl. 190—37.)

1. The combination with an open ended wardrobe trunk section, of protecting corner pieces applied thereto, and a channel shaped metallic sheathing covering the marginal portions of the walls and of said corner pieces at the open

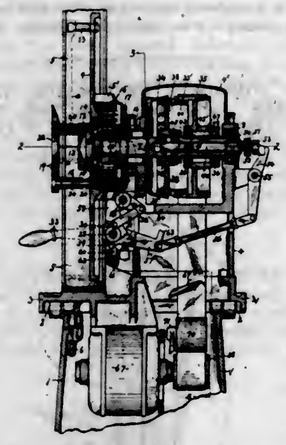
end of said section and co-operating with said corner pieces to completely conceal and protect said margins of the trunk section walls.

1,675,655. WASHER AND STERILIZER. HUGH KARNEY MCMANUS, Vicksburg, Miss. Filed June 17, 1926. Serial No. 116,651. 2 Claims. (Cl. 141—9.)



1. In a structure of the class described, a tank adapted to be filled with water, a utensil supporting and carrying rack located in said tank, a shaft carried by said rack and journaled for rotation in a bearing in the bottom of the tank, a hydraulic motor disposed beneath the shaft and including a housing and a rotor adapted for rotation in said housing, said shaft being connected with said rotor, a fluid intake connected with one side of the motor housing, fluid supply means connected with said intake, a discharge neck on the opposite side of the housing, a T-coupling connected with said discharge neck, branch pipes connected with said T-coupling and extending in opposite directions, a valved elbow connected with one branch pipe and also connected with said tank for supplying water to said tank, a valved discharge pipe connected with the remaining branch pipe, a drain elbow connected with said tank and with said discharge pipe, and a control plug for said discharge pipe.

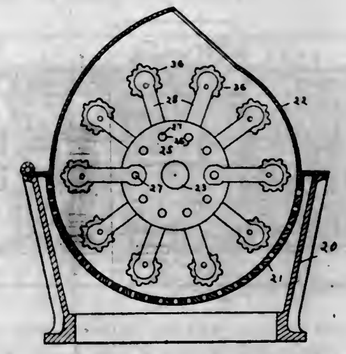
1,675,656. WHEEL-ANGLE INDICATOR FOR AUTOMOBILES. WILLIAM J. MEREDITH, Newton, Iowa. Filed Oct. 12, 1926. Serial No. 141,143. 4 Claims. (Cl. 116—31.)



3. In combination, an automobile axle and a fender, said axle being provided with a spindle and a spindle sleeve, said sleeve being pivotally mounted therein, a lamp casing secured to said fender and pivotally mounted

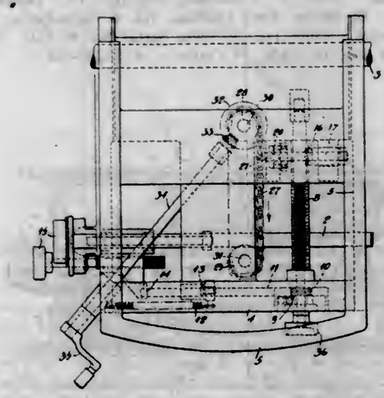
in alinement with said spindle sleeve, said lamp being provided with an illuminated character to indicate direction, a U-shaped resilient member having its closed por-

tion extending inwardly, one end of said U-shaped member being connected to the lamp pivot and the other end detachably connected to said spindle sleeve.



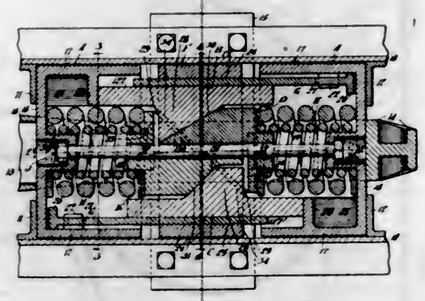
1,675,657. CENTRIFUGAL BABBITTING MACHINE. LLOYD W. MOULTON and OSCAR C. KAYLE, Syracuse, N. Y. Filed May 3, 1927. Serial No. 188,478. 7 Claims. (Cl. 22—65.)

1. In a metal casting machine, a work-holder having co-axial clamping members rotatable about a horizontal axis and provided with co-axial openings for permitting the entrance of molten metal into the work and for allowing air to escape from the work respectively, said members being relatively movable axially to grip and release the work, and a fan rotating with the work-holder and having its suction side connected to the air opening.



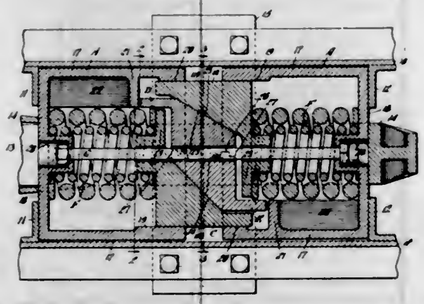
1,675,658. GRINDING MILL. JOHN MURSCH, Utica, N. Y., assignor, by direct and mesne assignments, to Buffalo Hammer Mill Corporation, Buffalo, N. Y., a Corporation of New York. Filed June 20, 1927. Serial No. 200,125. 17 Claims. (Cl. 83—11.)

1. A grinding unit for mills comprising a supporting member revolubly mounted, a pair of links pivotally connected to the supporting member, an intermediate member eccentrically and movably mounted on said links near their outer ends, a hammer having a plurality of grinding faces and revolubly mounted on said intermediate member, and means mounted on said intermediate member and engaging said hammer and adapted to positively



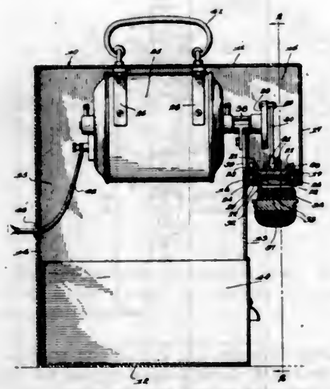
hold said hammer relative to said intermediate member with any one of its grinding faces in radial alignment with the heavy side of said eccentrically mounted intermediate member whereby said desired face is yieldingly held in operative position.

1,675,659. MEAT-SLICING MACHINE. JOSEF AUGUST NORDIN, Stockholm, Sweden, assignor to Aktiebolaget Stille-Werner, Stockholm, Sweden. Filed Dec. 2, 1925, Serial No. 72,781, and in Sweden Oct. 24, 1925. 3 Claims. (Cl. 146—102.)



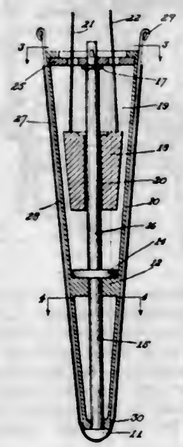
1. In a slicing machine of the reciprocating slide and cross feed table type, a separate returning and shifting mechanism for the said table comprising a motion transmitting member supported by the slide, a pivoted member connected to said motion transmitting member and pivotally supported by the table, a shiftable nut segment supported by the table, projecting parts on the said nut segment cooperating with the pivoted member and a spring tending to move the nut segment in engagement with the feed screw, which serves to feed the table by means of the said segment, the motion transmitting member being adapted, when acted upon to turn the pivoted member so that the same acts upon the projecting parts of the nut segment and disengage the latter from the feed screw, the continued motion of the motion transmitting member then causing a rapid movement of the table independent of the feed screw and the nut segment.

1,675,660. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 26, 1925, Serial No. 77,788. Renewed Feb. 16, 1928. 9 Claims. (Cl. 213—32.)



1. In a friction shock absorbing mechanism, the combination with front and rear follower elements relatively movable toward and away from each other; of a floating friction member interposed between said follower elements; a friction wedge system co-operating with said member, including a plurality of friction elements and wedge elements co-operating with the friction elements, said wedge elements having co-operating friction surfaces disposed longitudinally of the mechanism; and spring resistance means interposed between said follower elements and friction system.

1,675,661. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 9, 1926, Serial No. 80,151. Renewed Feb. 16, 1928. 6 Claims. (Cl. 213—32.)

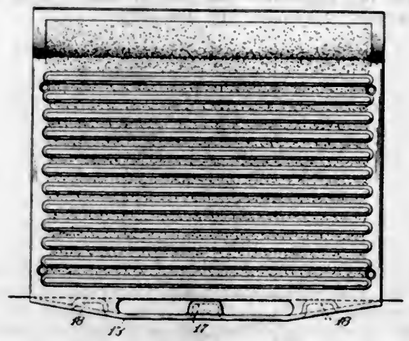


1. In a friction shock absorbing mechanism, the combination with front and rear relatively movable casings having longitudinally disposed interior friction surfaces; of a plurality of friction elements arranged in sets, said elements of each set having inter-engaging wedge faces, certain elements of said sets having friction surfaces cooperating with said interior friction surfaces and the remaining elements having co-acting friction surfaces disposed at an inclination to the longitudinal axis of the mechanism; means on said casings engaging said last named elements for effective relative movement of said sets of elements during movement of said casings toward each other; and yielding means for resisting relative movment of said sets of elements.

1,675,662. POLISHING DEVICE. LOYD F. PHILLIPS, St. Louis, Mo. Filed June 15, 1927. Serial No. 199,028. 9 Claims. (Cl. 132—74.)

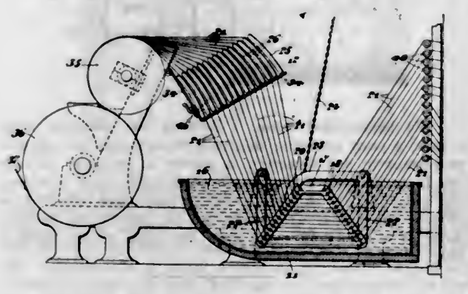
1. A polishing device comprising an electrically operated reciprocating member, a bracket carried by said reciprocating member and having a portion thereof arranged in a horizontal manner, a buffer, a U-shaped bracket carried by said buffer, the opposite parallel side portions of said U-shaped bracket being adapted to engage the portion of said first mentioned bracket extending in a horizontal manner so that said buffer may be detachably connected to said reciprocating member.

1,675,663. COMPOSITE PENETRATOR AND SHELL FOR PILES. LEON PIERCE, New York, N. Y. Filed Oct. 25, 1927. Serial No. 228,566. 7 Claims. (Cl. 61—78.)



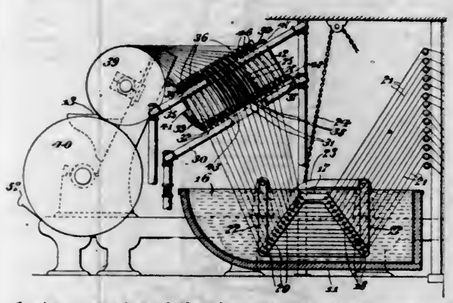
1. In a device of the class described, a substantially conical penetrator, a drop hammer slidably mounted therein, a shell of the same conformity of the penetrator loosely fitted over the latter, means for frictionally securing the shell to the penetrator, said means being capable of withdrawal to assist in relieving the penetrator, and means for jarring said penetrator on the upward or downward stroke of the hammer.

1,675,664. WELDING MEDIUM FOR ALUMINUM. WILHELM REUSS, Mannheim, Germany. Filed Dec. 3, 1927, Serial No. 237,582, and in Germany July 24, 1925. 2 Claims. (Cl. 148—26.)



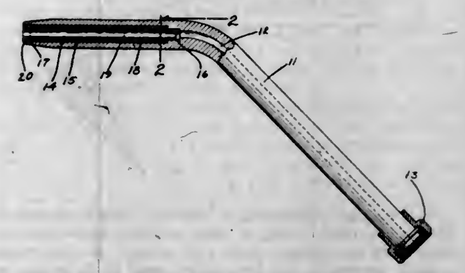
1. A soldering or welding medium consisting of a mixture of equal parts of borax, boracic acid and caustic potash.

1,675,665. STEP PLATE. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed May 27, 1925. Serial No. 33,231. 1 Claim. (Cl. 280—169.)



A step plate including a tread portion adapted to be secured to a step and having a marginal depending flange overlying the edge of the step, said depending integral flange having the ends thereof disposed in inclined planes to form gradual risers for preventing objects catching thereon and the medial portion of said flange being spaced from and substantially parallel to the adjacent edges of the tread and step, to afford a scraper and a passage-way for dirt and the like, and means for reinforcing said risers and said scraper including abutments pressed inwardly from the body of said flanges and disposed in contact with the adjacent edge of the step intermediately of the respective risers and scraper portions.

1,675,666. METHOD OF MAKING FIBER BOARD. WILLIAM M. SHOEMAKER, Jr., Kennett Square, Pa., assignor to National Vulcanized Fibre Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,219. 6 Claims. (Cl. 154—34.)

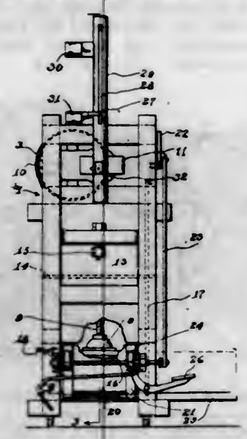


1. The method of forming a fiber sheet from a plurality of sheets of cellulosic material, which consists in impregnating a plurality of said sheets of cellulosic material with a suitable chemical, thereafter subjecting each sheet of cellulosic material to the action of heat at the requisite temperature, and thereafter superposing said sheets of cellulosic material and effecting union thereof.

1,675,667. APPARATUS FOR MAKING FIBER BOARD. WILLIAM M. SHOEMAKER, Jr., Kennett Square, Pa., assignor to National Vulcanized Fibre Company, Wilmington, Del., a Corporation of Delaware. Original application filed Dec. 27, 1926, Serial No. 157,219. Divided and this application filed Aug. 13, 1927. Serial No. 212,657. 12 Claims. (Cl. 154—34.)

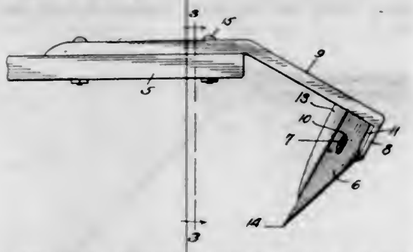
1. An apparatus of the character described comprising, in combination, a bath of impregnating solution, means for feeding a plurality of sheets of cellulosic material through said bath, means for superposing and effecting union of said sheets, and means between said bath and the said second named means for subjecting said sheets to the action of heat to effect uniform heating of said sheets.

1,675,668. TORCH TIP. ELMER H. SMITH, Minneapolis, Minn. Filed Feb. 11, 1927. Serial No. 167,527. 2 Claims. (Cl. 158—27.4.)



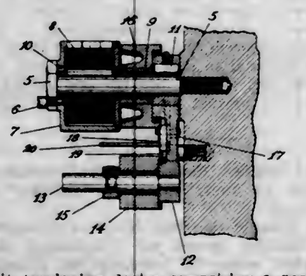
1. A torch tip comprising an elongated body having a fuel duct therein, said body being constructed of a single piece of heat-conducting metal whereby heat, generated at the discharge end of the body, will be conducted rearwardly away from said end without resistance, said body having an axial bore therein, a socket at the bottom of said bore communicating with said fuel duct, an elongated tube mounted in said bore and having one end movably received in said socket, the exterior diameter of said tube being relatively smaller than the diameter of said bore to provide an annular chamber around said tube, means for securing the opposite end of the tube to the tip body adjacent the discharge end thereof, and an insulating material in said annular chamber adapted to insulate the fuel passage through said tube against excessive heat to prevent pre-ignition of the fuel mixture therein.

1,675,669. PRESS. JOHN L. SNYDER, Grandview, Wash. Filed Oct. 10, 1927. Serial No. 225,248. 2 Claims. (Cl. 100—8.)



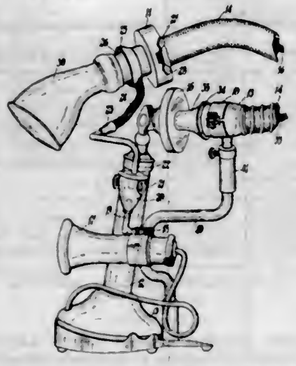
1. In a press of the class described in combination, a pressure chamber, means for compressing material in said chamber, means for releasing the pressure of the said material, and means for moving the pressed material out of the pressure chamber on a platform, the said

means consisting of a pivoted foot pedal, a rod attached to said pedal, the opposite end of said rod being attached to a lever, a curved arm adapted to shove the compressed



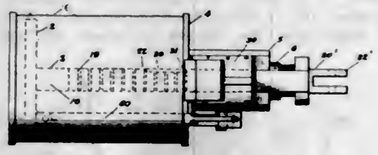
material on said platform when the said pedal is moved down, and a spring for normally keeping said foot pedal in a raised position.

1,675,670. LAWN EDGER. JOHN G. SPAHN, Lyons, Iowa. Filed Nov. 8, 1926. Serial No. 147,014. 1 Claim. (Cl. 97—227.)



A lawn edger including a handle, a shank secured to the handle and having a right angled end portion arranged at an oblique angle with respect to the shank, a blade secured to the end portion, said blade having an obliquely disposed cutting edge and having a rearwardly extended flange, the lower end of the flange merging into the blade and tapered to provide a cutting edge.

1,675,671. BELT-TENSIONING DEVICE. JOHN A. STEIN, New York, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Mar. 26, 1926. Serial No. 97,512. 5 Claims. (Cl. 64—5.)

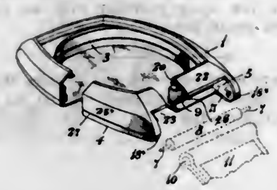


1. A belt tensioning device comprising a post, an idle pulley rotatable about said post and adapted to underrun a belt to be tensioned, an arm swingable about said post, an idle pulley carried by said arm and adapted to overrun said belt, and spring-actuated means surrounding said post for causing said arm to swing, said means including a sleeve rotatable on said post and fast to said arm, a spring one end of which is secured to said sleeve, and an adjustable stationary member to which the other end of said spring is secured.

1,675,672. FLEXIBLE SUPPORTING DEVICE. DOUGLAS STUART SPENS STEUART, London, England. Original application filed Nov. 17, 1927, Serial No. 233,973, and in Great Britain June 14, 1926. Divided and this application filed Dec. 27, 1927. Serial No. 242,941. 4 Claims. (Cl. 181—22.)

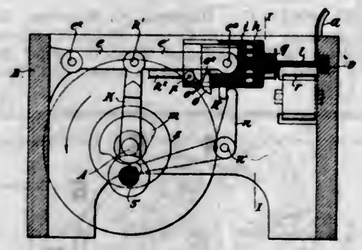
1. A speaking tube or the like, having a flexible, non-resilient internal supporting device which comprises a nontubular stranded cable of aluminium wire and a flexible tube closely surrounding said cable, means for supporting the cable and tube at one end, and means at the other end of said cable and tube for securing thereto an object to be supported.

1,675,673. BRAKE MECHANISM. ROBERT D. STROUP, Marfrance, W. Va., assignor of one-third to H. S. Nelson, Leslie, W. Va., and one-third to John B. Laing, Lewisburg, W. Va. Filed Sept. 18, 1923, Serial No. 663,360. Renewed May 3, 1928. 10 Claims. (Cl. 303—89.)



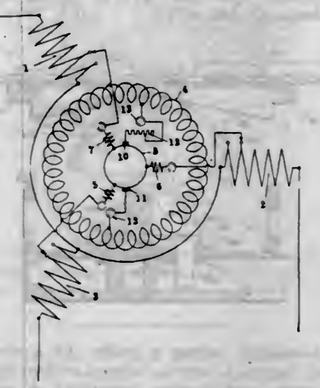
1. In brake mechanism, a holding bar provided with a rack, a pawl engaging said rack to lock said bar against movement in one direction, a groove in said bar extending for a portion of the length of said bar only, a releasing pawl carried by said locking pawl and adapted to ride in the groove aforesaid, and to control the engagement of the locking pawl with the rack of the holding bar.

1,675,674. PROCESS FOR THE PRODUCTION OF CARBON ELECTRODES. IMRE SZARVASY, Budapest, Hungary. Filed Mar. 16, 1927, Serial No. 175,937, and in Germany Nov. 15, 1926. 2 Claims. (Cl. 266—1.6.)



1. Process for the production of carbon electrodes from gases containing methane, as for example natural gas, comprising subjecting the gas to heat cleavage in such a manner, that a mixture of finely divided carbon and tar like products and in addition solid coherent hard carbon are formed, mixing the molecular mixture of the finely divided carbon and tar like products with the solid coherent hard carbon, coking this mixture and grinding, mixing with binding agents, moulding and burning it to a finish in a manner per se known.

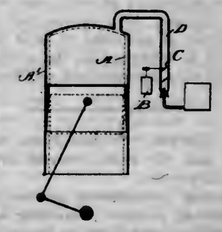
1,675,675. WATCHCASE. ARTHUR W. WADSWORTH, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Oct. 22, 1926. Serial No. 143,491. 3 Claims. (Cl. 58—88.)



2. In a watch case construction, the combination of a movement ring having spaced apart holding lugs, the end of said movement ring being concaved or hollowed out between said lugs, a back and bezel adapted to be removably mounted upon said movement ring and holding lugs and in engagement with each other, and a strap bar attached to said lugs, whereby when a strap having a loop is mounted on said bar between said lugs and within said hollowed out space said strap covers and conceals the inner exposed sides of said holding lugs and whereby said center and holding lugs are completely concealed by said back, bezel and strap.

1,675,676. PRESS FOR THE COLD EXTRUDING OF TUBES FROM METAL DISKS. EWALD WALTHER, Durlach, Baden, Germany. Filed Jan. 15, 1927, Serial No. 161,454, and in Germany Mar. 12, 1925. 2 Claims. (Cl. 207—9.)

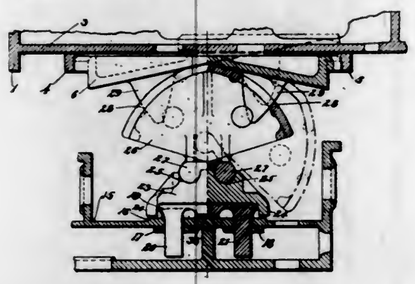
1. A press for the cold extruding of tubes from a metal disk comprising in combination a stationary matrix having a cavity shaped according to the head and neck of the tubes to be formed, and adapted to extrude rearwardly the surplus tube forming material; a plunger shaped according to the tube body and serving as a carrier for the extruded tube material; a mandrel extending throughout said plunger and having a pointed free end adapted to form an opening through the neck and head of the tube; means to shift the plunger and mandrel, said means adapted at first to introduce the plunger and mandrel into the matrix, then to withdraw the same with the tube from said matrix, whereupon said means will set the plunger at rest and withdraw further the mandrel whereby to permit air to enter into the tube, said means finally withdrawing against the plunger and mandrel; a stripping member riding over the mandrel; and means for conveying away the finished tubes.



1,675,677. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Mar. 24, 1926. Serial No. 96,932. 5 Claims. (Cl. 172—120.)

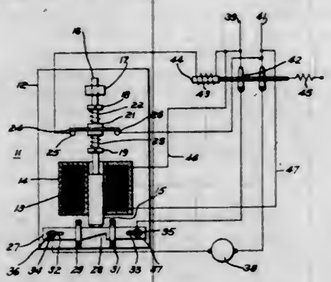
1. In a synchronous motor, the combination of a stator provided with an inducing winding, a rotor having a direct current exciting winding and a converter winding provided with a commutator and slip rings, said converter winding being in poor inductive relation with the stator winding, means for impressing an alternating current on the converter winding, and means for impressing on the exciting winding a direct current E. M. F. derived from the converter winding.

3. In a synchronous motor, the combination of a stator provided with an inducing winding, a rotor having a direct current exciting winding located in peripheral slots and a converter winding separated from the exciting winding by means forming a path permitting a portion of the stator flux to link with the exciting winding without linking with the converter winding, means for impressing alternating current on the converter winding, and means for deriving a direct current E. M. F. from the converter winding and impressing it on the exciting winding.



1,675,678. EXPLOSION MOTOR TO BE UTILIZED UNDER VARIOUS ATMOSPHERIC CONDITIONS. CHARLES WEISMANN, Paris, France, assignor to Hugo Junkers, Dessau, Germany. Filed Nov. 12, 1917, Serial No. 201,671, and in France Nov. 23, 1915. 7 Claims. (Cl. 123—75.)

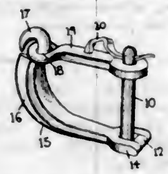
6. Internal combustion engine comprising a cylinder, a piston reciprocable in said cylinder, means arranged to supply said cylinder with the quantities of fuel and of



air of the reduced pressure prevailing at great altitudes, which are required for the development of a predetermined number of horse-power at these altitudes, and automatically active means for varying one of said quantities at lower altitudes to the extent of keeping said number of horse-power substantially constant at all altitudes.

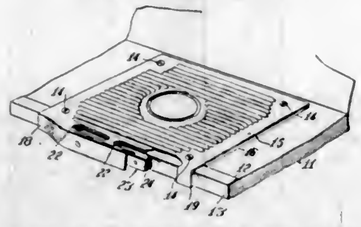
1,675,679. LOCOMOTIVE TRAILER TRUCK. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Apr. 4, 1925. Serial No. 20,832. 7 Claims. (Cl. 105—174.)

3. A locomotive having a cradle and a trailer truck connected thereto, a bearing between said cradle and said trailer truck, said bearing comprising a curved face rocker pivotally mounted, a bearing plate mounted on said cradle adapted for contact with said bearing, and lugs on said bearing plate engaging said rocker.



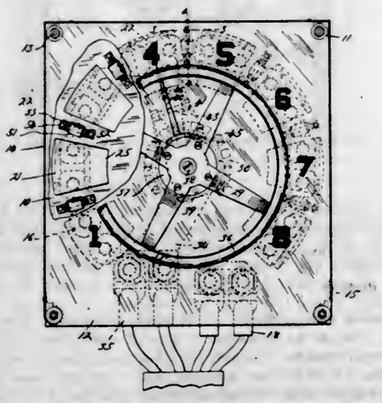
1,675,680. MAGNETIC THERMAL RELAY. HAROLD E. WHITE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 27, 1925. Serial No. 5,064. 9 Claims. (Cl. 200—88.)

1. A thermal relay comprising an energizing winding, a magnetizable core member therefor, contact members controlled by the movement of said core member, a normally magnetic member, and means for permitting of varying the amount of material of said normally magnetic member that is subjected to the action of the magnetic field of said core member and winding.



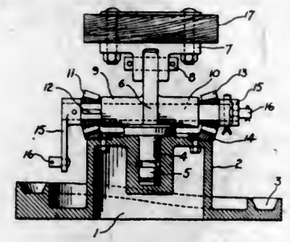
1,675,681. CLEVIS. ERNEST PAUL WIESE, Lincoln, Nebr. Filed Apr. 3, 1926. Serial No. 99,579. 2 Claims. (Cl. 278—96.)

1. A clevis having a horizontal portion and a vertical portion and a curved portion connecting said horizontal and vertical portions, said three portions being of integral construction, a rib projecting outwardly from said curved portion and from said vertical portion, said horizontal portion being provided with an opening and having a transverse pin therein, a clevis pin seated in the opening in said horizontal portion and having an outwardly curled tongue embracing said transverse pin, and a flat link having an eye adjacent one extremity thereof,



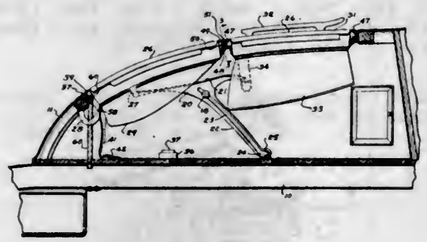
said vertical portion terminating in an outwardly curled tongue hingedly engaging said link through the eye thereof, said link being provided with an aperture for receiving said clevis pin.

1,675,682. STEP PLATE. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed Aug. 17, 1925. Serial No. 50,724. 1 Claim. (Cl. 280—169.)



In a step plate adapted to be secured to the running board of a vehicle, a tread having an open portion adjacent its outer edge, a riser having two inclined ends engaging the running board, a scraper extending between said ends in spaced relationship to the adjacent edge of the running board, and a reinforcing means for said risers and scraper portions comprising an elongated member having its medial portion fixedly secured to the inner face of said scraper portion and having ends bent inwardly adjacent to the inclined end risers and into abutting engagement with the adjacent edge of the running board.

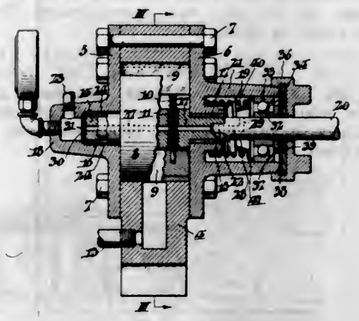
1,675,683. SWITCH. HERBERT A. WOOFTER, Kenton, Ohio, assignor to Swift Electric Welder Company, Detroit, Mich., a Corporation of Michigan. Filed May 24, 1926. Serial No. 111,402. 12 Claims. (Cl. 200—11.)



1. In a regulator switch, a contact arm and a pair of contacts spaced apart a distance less than the width of said contact arm and means including a plurality of rollers engageable with said arm for moving the same substantially perpendicularly to its plane of contact during its transient movement between contacts.

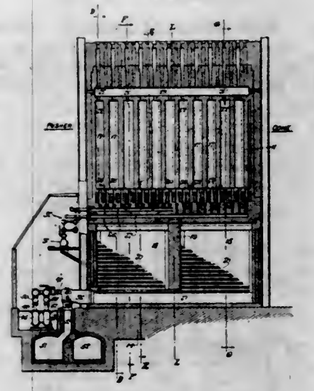
1,675,684. AMUSEMENT DEVICE. SEWELL POWIS AMBROSE, Vancouver, British Columbia, Canada. Filed Oct. 4, 1927. Serial No. 224,006. 3 Claims. (Cl. 272—33.)

2. An amusement device comprising a base, having a concentric gear ring, a standard upon the base pivotally supporting a seesaw, a shaft carried by the standard having a pinion in mesh with said gear ring, and means operable by one of the users for imparting rotation to the shaft and to cause the pinion to travel about the ring whereby rotation is imparted to the seesaw, and means as the seesaw is rotated about the base for imparting reciprocation to the seesaw.



1,675,685. RUMBLE SEAT FOR AUTOMOBILE BODIES. JULIUS ANDRADE, East Cleveland, Ohio, assignor to Chandler Motor Car Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1925. Serial No. 36,608. 5 Claims. (Cl. 296—66.)

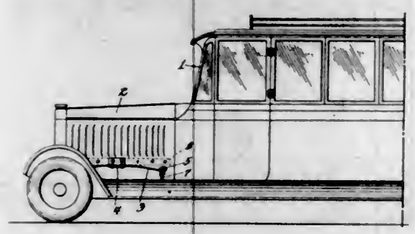
1. In a vehicle, a rumble seat comprising a pair of lids of relatively different widths folding into the body of the vehicle, and arranged in closed position so that an edge of one of said lids is contiguous with an edge of the other lid, a drip bead on one of said contiguous edges, a gutter basin on the other of said edges to catch liquid dropping from said drip bead, and a gutter secured to the body of the vehicle into which liquid from said basin may discharge.



1,675,686. COMPRESSOR. EUGENE L. BARNES, Buffalo, N. Y., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed July 20, 1926. Serial No. 123,642. 8 Claims. (Cl. 230—153.)

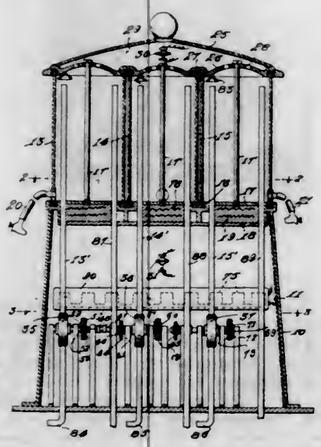
8. The combination with a rotary compressor casing and its end heads, and aligned bearings and oil chambers in said heads of a rotor in the casing with spuds in said bearings, a shaft also mounted in one of said heads in driving connection with the corresponding rotor spud,

means for supplying oil to one of said oil chambers, and an oil passage from said chamber through the rotating parts to the other oil chamber.



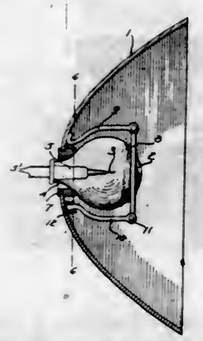
1,675,687. COKING RETORT OVEN. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 26, 1920, Serial No. 426,415. Renewed June 18, 1926. 5 Claims. (Cl. 202—9.)

1. In a coke oven battery, in combination: a plurality of horizontally elongated coking chambers arranged side by side; heating walls contiguous to such coking chambers and respectively constituted of vertical combustion flues; horizontally elongated regenerators located at a lower level than the coking chambers and the heating walls and parallel therewith, said regenerators being grouped into pairs crosswise of the battery and communicably connected with combustion flues of said heating walls; a producer gas main located on one side of the battery; reversing valve connections between said main and alternate pairs of said regenerators; reversing valve connections for connecting the pairs of regenerators that are intermediate such alternate pairs of regenerators with the outer air; a stack; a pair of waste gas tunnels located on the same side of the battery as said producer gas main and adapted to be communicably connected with



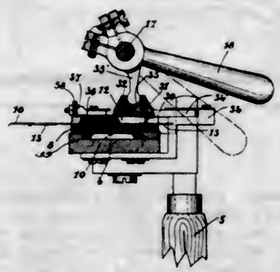
said stack; valve connections between one of said tunnels and the pusher side regenerators on one side of the oven; valve connections between the other of said tunnels and the coke side regenerators on the opposite side of the oven; and controlling valve mechanism for communicably connecting one of said tunnels with the stack while shutting off the other from communication therewith; substantially as specified.

1,675,688. FASTENING MEANS. HERSCHEL A. BENEDICT, East Orange, and EDVARD M. MOLLER, South Orange, N. J. Filed Jan. 30, 1926. Serial No. 84,953. 4 Claims. (Cl. 292—91.)



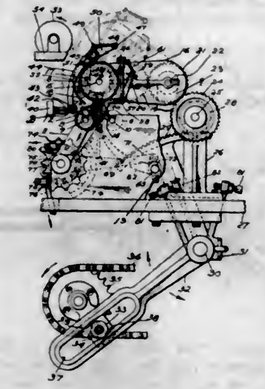
1. In combination with a motor vehicle having a hood, a leaf spring secured to said hood at one side thereof and releasably attached to a fixed part of the vehicle at the same side of the vehicle as said leaf spring is attached for securing the hood in closed position.

1,675,689. ELECTRICALLY-HEATED DISPENSING PUMP. CHARLES P. BIGGS, Mound City, Mo., assignor to William Henry Crawford, Mound City, Mo. Filed Sept. 15, 1926. Serial No. 135,624. 2 Claims. (Cl. 219—19.)



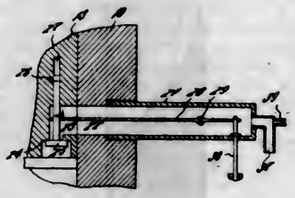
1. In an apparatus of the class described, a housing, containers therein for dispensing fluid, electric resistance units within the upper portion of the housing and below the containers, means defining a chamber above the containers and communicating with the interior thereof, and thermostatic means within the chamber for controlling, when influenced by outside temperature and temperature within the containers, the resistance units for all of the containers.

1,675,690. PROJECTOR LAMP FOR MOTOR VEHICLES. CLYDE C. BOHNER, East Orange, N. J., assignor to Tung-Sol Lamp Works, Newark, N. J., a Corporation of New Jersey. Filed Jan. 5, 1927. Serial No. 159,041. 7 Claims. (Cl. 240—41.)



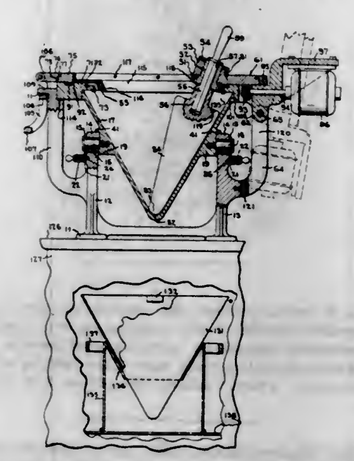
1. A projector or head lamp for motor vehicles having a projecting reflector, an electric lamp having a conical bulb neck part and having its filament positioned and definitely located with reference to points about the bulb neck in a plane at right angles to the bulb axis, a centrally disposed fixed rear support adapted to directly engage the conical part of the neck of the electric bulb and cooperating supporting means holding said lamp tightly against the rear support with the latter engaging the neck at points disposed in the aforesaid plane.

1,675,691. KNITTING MACHINE FOR THE MANUFACTURE OF CORSETS AND BELTS. EDMOND ETIENNE BOUDIOS, Paris, France, assignor to Les Fils de Emile Boudios, Romilly s/Seine, Aube, France. Filed May 23, 1923, Serial No. 640,997, and in France June 28, 1922. 4 Claims. (Cl. 66—96.)



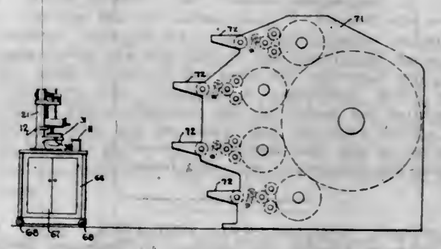
1. In a straight knitting frame, the combination with a needle-bar and the sinkers, of a carriage parallel to the needle bar, means for imparting to said carriage a reciprocating movement in a direction substantially at right angles to the needle bar and a rocking motion about its own longitudinal axis, two point-supports movably supported by the carriage and symmetrically disposed with respect to the middle transverse plane of said needle-bar, means for displacing said point-supports along the carriage in reverse directions, main fashioning points secured to said point-supports in front of the needles and spaced apart by two needle-divisions, auxiliary fashioning points slidably mounted on said point-supports between the said main fashioning-points so as to alternate with the latter, and means for simultaneously moving the auxiliary fashioning-points towards and away from the needle-bar with respect to the said point-supports.

1,675,692. MACHINE FOR LABELING CIRCULAR ARTICLES. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed July 2, 1927. Serial No. 203,002. 11 Claims. (Cl. 216—9.)



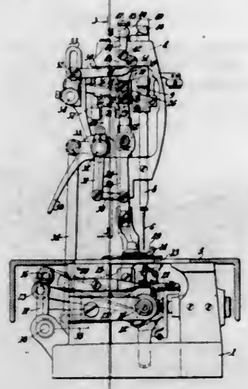
1. The combination with two rollers supporting a label and a circular article to be labeled, of a driving roller bearing down on and rotating the article to wind the label thereon, an arm in which said driving roller is mounted, gearing within said arm actuating said driving roller, and means for raising said arm to move said driving roller out of operative position to provide a fairway for incoming articles.

1,675,693. ROTARY MOTOR. ISIDORE CAVAZOS, Kingsville, Tex. Filed Aug. 24, 1925. Serial No. 52,019. 1 Claim. (Cl. 123—16.)



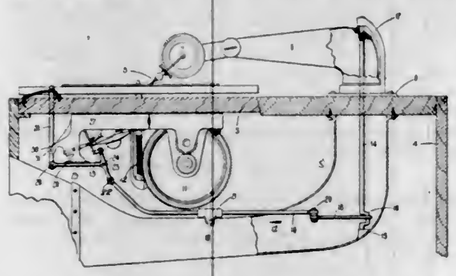
The combination with an engine casing having a fuel inlet bore formed to provide a valve seat, of a fuel supply pipe threaded into the casing and communicating with said bore, a sliding valve normally engaging said seat and including a stem, said casing being recessed to receive said stem, a valve operating rod arranged within the supply pipe, and pivoted between its ends, and connected with said stem, a sliding rod operating through an opening in the supply pipe and connected with the adjacent end of the valve operating rod, a bracket, a rocking lever pivoted on said bracket and connected with said sliding rod, a rotary shaft, and a cam carried by the shaft for intermittently rocking said lever to open the valve, said valve gravitating to its closed position after each operation.

1,675,694. MIXING MACHINE. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Dec. 11, 1925. Serial No. 74,773. 19 Claims. (Cl. 83—10.)



1. In a mixing machine, the combination of a main frame, a gear-frame pivoted thereto, a ring-gear rotatable therein, a mixing bowl pivoted to said main frame, and a rotatable tool in said mixing bowl, said ring-gear coacting with said rotatable tool in said mixing bowl, and the pivotal axes of said gear-frame and of said mixing bowl being in separated relations to each other for noninterferingly tilting said gear-frame and said mixing bowl respectively.

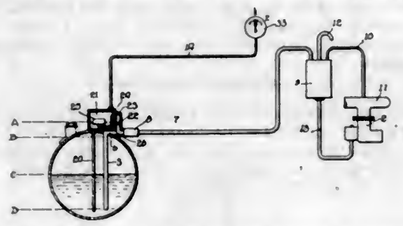
1,675,695. METHOD OF CONDITIONING PRINTING INK. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed Dec. 11, 1925. Serial No. 74,774. 4 Claims. (Cl. 101—364.)



1. In the art of printing, the method which comprises thoroughly stirring previously made ink together with drier added immediately previous to the printing with said ink, and then immediately printing with such ink thus prepared.

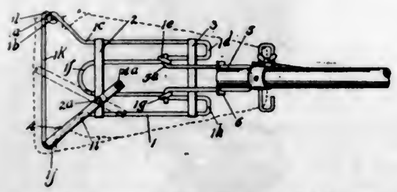
1,675,696. PRESSER MECHANISM FOR SEWING MACHINES. ANDREW B. CLAYTON, Union, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Nov. 12, 1926. Serial No. 147,893. 7 Claims. (Cl. 112—207.)

1. In a sewing machine, the combination with an upper four-motion feed-foot, of a spring-pressed presserfoot, and automatic means for reducing the pressure of the presser-foot upon the work during the feeding stroke of the feed-foot, without lifting the presser-foot from the work.



1,675,697. PHONOGRAPH-RECORD-ROTATING MECHANISM. ALEXANDER ROY DAVIDSON, Edmonton, Alberta, Canada. Filed Mar. 17, 1926, Serial No. 95,404, and in Canada Feb. 24, 1926. 2 Claims. (Cl. 188—187.)

1. In combination, record plate rotating means; a governor therefor; a speed control for said governor; a laterally swinging tone arm; a rod extending vertically through the pivotal axis of said tone arm and engaged to turn therewith; the lower end of said rod being bent in crank formation; a connecting rod reciprocally mounted and having one end connected to said control; a second connecting rod having one end pivotally connected to the first mentioned connecting rod and its other end connected to said crank formation.

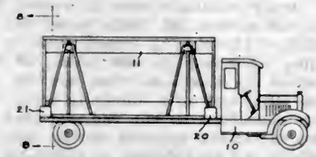


1,675,698. LIQUID-LEVEL INDICATOR. JOHN A. DIENNER, Chicago, Ill., assignor to Stromberg Motor Devices Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1922. Serial No. 531,596. 3 Claims. (Cl. 73—54.)

1. In combination, a main tank, a casing arranged above the normal level of the liquid in the tank, a conduit extending from said casing to the bottom of the tank, a suction operated indicator, a tube connecting said indicator with the upper end of said casing, a suction operated delivery line also extending substantially to the bottom of the tank, a connection between said

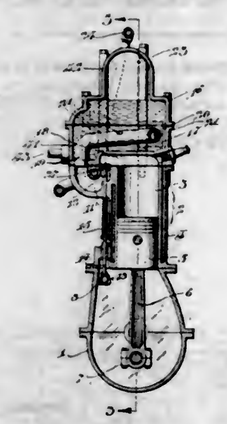
line and said casing above the normal liquid level therein, and means controlled by the level of the liquid in said casing for controlling said connection.

1,675,699. MOP. WILL EVANS, Inglewood, Calif. Filed July 8, 1925. Serial No. 42,206. 2 Claims. (Cl. 15—120.)



1. In a mop of the class described, a flat mop cloth supporting member provided with a relatively wide front portion adapted to receive the front loop portion of a mop-cloth, a handle pivotally connected to said mop cloth supporting member, a wringer crank member revolubly mounted on said handle provided with a loop adapted to receive the opposite loop end of the mop cloth, a lever member pivotally mounted on said mop cloth supporting member and extending forwardly and adapted to engage the one side of the loop portion of said mop-cloth for shifting the same on the front end of said mop cloth supporting member for contracting the front end of said mop-cloth.

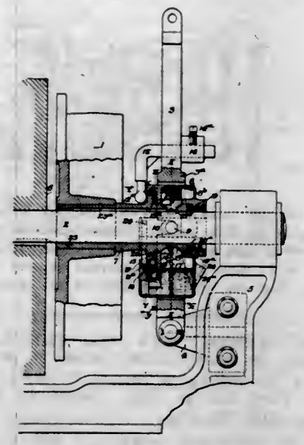
1,675,700. DISPENSING CABINET. WILLIAM FAIRCHILD, Albany, N. Y., assignor to Albany Perforated Wrapping Paper Company, Albany, N. Y., a Corporation of New York. Filed Jan. 19, 1927. Serial No. 162,027. 6 Claims. (Cl. 312—60.)



2. A dispensing cabinet for paper packages, said packages being composed of separate units, said cabinet having a support for the package, said support having an opening therein, and guides below said opening and acting to bend the unit being withdrawn in reverse directions.

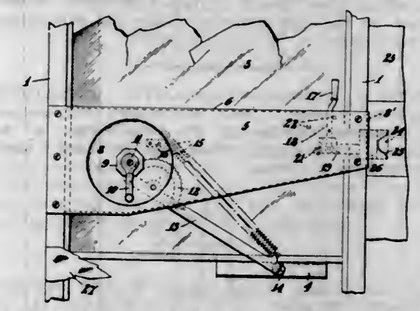
1,675,701. FREIGHT TRUCK. BENJAMIN F. FITCH, Greenwich, Conn., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 13, 1925. Serial No. 62,250. 8 Claims. (Cl. 296—28.)

1. In combination, a truck frame, means thereon for positioning a container, a container having a door in one wall thereof, and means pivotally mounted on, and extending upwardly from the frame and projecting across the door, and adapted to be locked for preventing opening of said door while the container is on the frame, said means being operable to permit opening of the door while the container is on the frame.



1,675,702. INTERNAL-COMBUSTION ENGINE. JOHN N. FULLER, Lansdale, Pa. Filed May 22, 1926. Serial No. 110,835. 5 Claims. (Cl. 123—25.)

1. In an internal combustion engine provided with cylinders, intake and exhaust gas controlling valves and a cam shaft for actuating the valves; a steam generator mounted on the cylinders and having its bottom wall forming the upper wall of the combustion chambers of the cylinders; steam controlling valves communicating with the generator and the cylinders and operatively connected with the cam shaft for admitting steam into the cylinders, and a conduit connected with the exhaust gas controlling valve and passing through the steam generator.

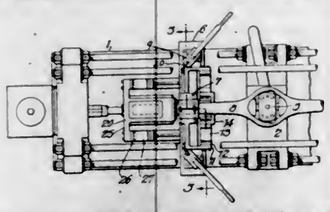


1,675,703. LUBRICATING MEANS FOR LOOSE PULLEYS AND THE LIKE. HARALD F. GADE, Philadelphia, Pa., assignor to Standard Pressed Steel Co., Jenkintown, Pa., a Corporation of Pennsylvania. Filed July 19, 1922. Serial No. 576,022. 20 Claims. (Cl. 192—113.)

1. In a lubricating device for loose pulleys and the like, the combination with a shaft and a loose pulley journaled on said shaft and movable longitudinally of the same, of a shaft engaging portion operatively connected to said pulley and interposed between the same and the shaft and longitudinally movable with the pulley, a shell receiving a body of liquid lubricant held against rotation and longitudinally movable with the shaft engaging portion and pulley; said shaft engaging

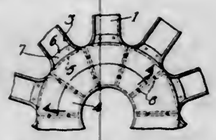
portion having a portion projecting into said lubricant-receiving shell, and movable lubricant-distributing means within the shell cooperating with said projecting portion of the shaft engaging portion for distributing lubricant to the same and the shaft.

1,675,704. WINDOW AND DOOR CONSTRUCTION. BERTRAM J. GOLDSMITH and EMIL KOEB, New York, N. Y., assignors, by mesne assignments, to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Aug. 28, 1924. Serial No. 734,583. 5 Claims. (Cl. 268—126.)



1. In a device of the character described, a frame provided with side members, a window slidable therein, a metallic plate secured to one of said side members and provided with a projecting portion removed from the plane thereof, mechanism for raising and lowering said window positioned upon the outer face of said projecting portion and a handle mounted in said depression and associated with said mechanism for actuating the same.

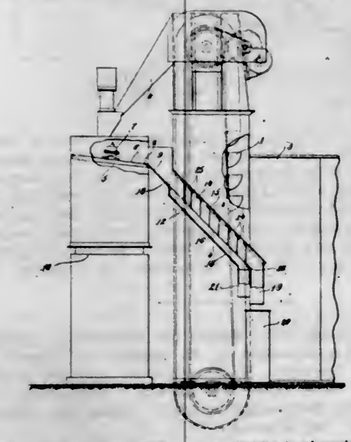
1,675,705. ELECTRIC WELDING MACHINE. LE ROY H. HOFFER, Brooklyn, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Original application filed Apr. 10, 1924, Serial No. 705,419. Divided and this application filed Aug. 13, 1927. Serial No. 212,621. 2 Claims. (Cl. 219—4.)



1. In a welding machine for tubular work the combination of electrodes at opposite sides of the work and

movable toward each other to engage and clamp the work between them, switch blades carried by said electrodes at different points in their cross section so as to equalize the distribution of current, a transformer and two sets of stationary switch blades connected to one

terminal of the transformer and located in positions to be engaged by the switch blades carried by the respective electrodes as the latter are moved toward each other so as to distribute the current equally to the two electrodes and the opposite sides of the work.



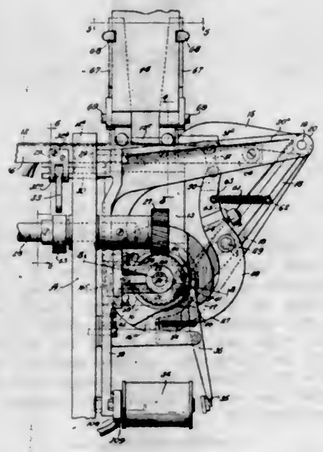
1,675,706. WHEEL NAVE AND THE LIKE AND METHOD OF FORMING IT. HENRY S. HOLMES, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Apr. 21, 1926. Serial No. 103,461. 8 Claims. (Cl. 29—174.)

1. A wheel nave which is removably applicable to a hub composed of radial members with flanges on their longitudinal edges, in combination with an annular plate covering the edges of said flanges and welded to said radial members.

7. The method of producing a wheel nave, which consists in forming radial members with flanges on their longitudinal edges shaped to form a butt-joint between members in the same transverse plane and butt-welding the parts together.

1,675,707. SAND-BLAST-ABRASIVE RECLAIMING CHUTE. FOSTER J. HULL, Hagerstown, Md., assignor to Pangborn Corporation, Hagerstown, Md., a Corporation of Maryland. Filed Sept. 22, 1927. Serial No. 221,237. 1 Claim. (Cl. 209—353.)

The combination with a sand blast abrasive reclaiming apparatus comprising a screen adapted to pass the abrasive as undersize, means for feeding used abrasive to the screen, a supplementary screen receiving oversize with residual unrecovered abrasive from the first mentioned screen and adapted to separate abrasive as undersize, means for delivering the oversize of said supplemental screen to waste, and means for delivering the undersize thereof including the thereby recovered residual abrasive, to the initial feed means.

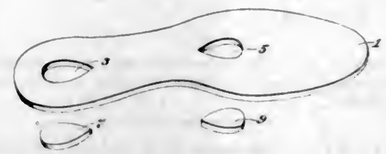


1,675,708. ALLOY. NOAK VICTOR HYBINETTE, Wilmington, Del. Filed Sept. 23, 1922, Serial No. 589,996. Renewed Nov. 17, 1927. 3 Claims. (Cl. 75—1.)

1. An alloy of aluminum with metals of the iron group in which the aluminum forms upwards of about 90% of the alloy, said alloy containing nickel and iron in small but substantial amount, and said alloy containing at least one of the following metals, namely, chromium, tungsten and molybdenum, in substantial amount less than 1%, said alloy being practically free from copper.

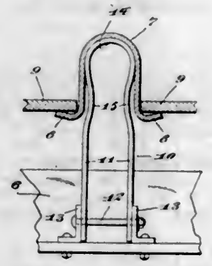
1,675,709. HEAT-RESISTING ALLOY AND STRUCTURE. NOAK VICTOR HYBINETTE, Wilmington, Del. Filed Feb. 2, 1924. Serial No. 690,306. 7 Claims. (Cl. 75—1.)

1. An alloy which is heat resisting at high temperatures containing the following ingredients in approximately the following proportions: nickel from about 5 to about 10%, chromium from about 15 to about 25%, carbon from about 1 to about 2%, aluminum from about ½ to about 2%, the remainder mainly iron.



1,675,710. SELECTOR-DISCHARGE MECHANISM. JOHN E. JOHNSON, Chicago, Ill., assignor to Speedumat Addressing Machinery, Incorporated, Chicago, Ill., a Corporation of Delaware. Filed Aug. 7, 1922. Serial No. 580,003. 12 Claims. (Cl. 209—110.)

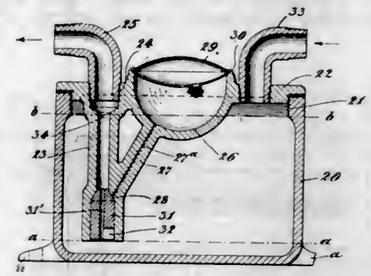
1. An attachment for a printing machine employing address mats, said attachment comprising a selector to which the address mats are delivered from said printing machine, electric circuit connections that are energized by said selector when it responds to predetermined distinguishing characteristics of said address mats, two receiving receptacles for the address mats, a common actuator that is adapted to operate intermediate said receiving receptacles, said actuator permitting the delivery of



address mats not possessing said predetermined distinguished characteristics to one of said receptacles, and electrical means energized by said electric circuit connections for controlling the proper response of said actuator in accord with said predetermined distinguishing characteristics of the address mats whereby said address mats are delivered to the other of said receiving receptacles.

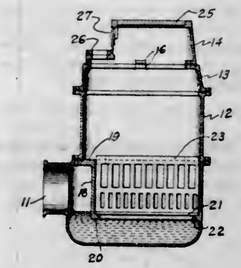
1,675,711. SHOE. GEORGE A. JONES, Lynn, Mass., assignor to Shoe Products, Inc., Lynn, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1927. Serial No. 164,465. 2 Claims. (Cl. 12—146.)

1. The process of preparing a shoe insole for receiving heel and metatarsal arch supporting cushions, which consist in punching slugs from an insole to form holes in the heel and ball portions of the insole, and leaving the slugs in the insole, that the slugs may be removed at will from the insole when in a manufactured shoe.



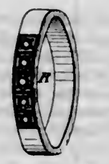
1,675,712. GREENHOUSE. THOMAS EDWARD KING, Westfield, N. J., assignor to Hitchings & Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 29, 1927. Serial No. 222,779. 5 Claims. (Cl. 189—4.)

1. In a roof construction, in combination with the framework including stringers and covering elements, resilient channel-like sash-bars for supporting said covering elements and adapted to absorb the expansion of said elements, and resilient channel-like means for supporting said sash-bars.



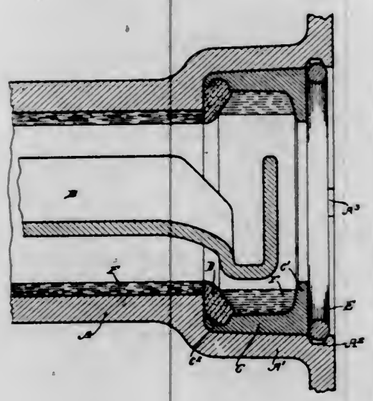
1,675,713. SIGNAL APPARATUS. FREDERICK KLEIN, College Point, N. Y. Filed Sept. 5, 1924. Serial No. 736,004. 19 Claims. (Cl. 116—109.)

16. In a device of the class described, a container, a suction dip pipe extending thereinto, an inlet through which liquid is adapted to be sucked into the container, a signal, an air duct controlling the same and communicating with the dip pipe, a cylindrical slide valve in the dip pipe operable under the influence of liquid flow therethrough to cut off the air port and adapted to gravitationally descend from air port closing position upon cessation of said flow and a vent near the upper end of the



dip pipe and within the container determining the normal liquid level and preventing siphonic action from the dip pipe when no suction is applied.

1,675,714. CATCH BASIN. FRED KOCH, Brooklyn, N. Y., assignor to The Sanitation Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1926. Serial No. 141,687. 6 Claims. (Cl. 182—6.)



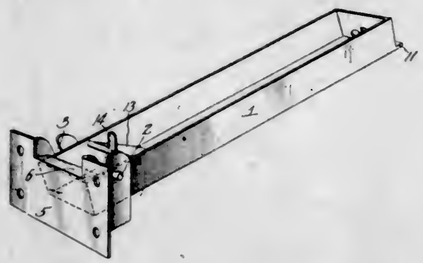
1. In a catch basin, an inlet member, and an outlet member joined thereto, said outlet member having inwardly extending flanges for supporting a filter box and sections supported on said flanges forming a filter box, said filter box having a removable imperforate bottom and opposing removable perforated side walls.

1,675,715. FINGER RING. DANIEL LIFTIN, New York, N. Y. Filed Feb. 26, 1926. Serial No. 90,828. 3 Claims. (Cl. 63—15.)

1. As an improved article of manufacture, a ring comprising a circlet having therein cuts forming facets in imitation of a cut gem and means forming imitations of clamping prongs, the whole giving in effect the appearance of a setting containing a cut diamond.

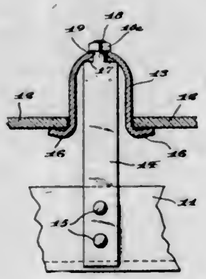
1,675,716. APPARATUS FOR CASTING PIPE AND OTHER ANNULAR ARTICLES CENTRIFUGALLY. ARTHUR LOSEY, Bay Shore, N. Y., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed Dec. 30, 1925. Serial No. 78,389. 4 Claims. (Cl. 22—65.)

1. A centrifugal pipe mold having an annular receptacle for molten metal at its end separated from the mold proper by a removable annular ridge.



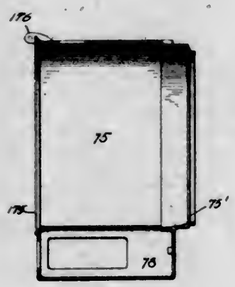
1,675,717. DRYING APPARATUS FOR ROTARY KILNS. FRITZ LUTHER, Dessau, Germany, assignor to G. Polysius, Dessau, Germany, a Firm of Germany. Filed May 26, 1927. Serial No. 194,510. 2 Claims. (Cl. 34—6.)

1. A rotary drum for the heat treatment of material, having at the inlet portion thereof comparatively wide longitudinally curved baffle plates extending lengthwise of the drum, one edge of each baffle being secured to the peripheral wall and the other edges being free, the said baffles being flexible whereby as material falls from the longitudinal free edge thereof, the said edge may oscillate and scatter the falling material.



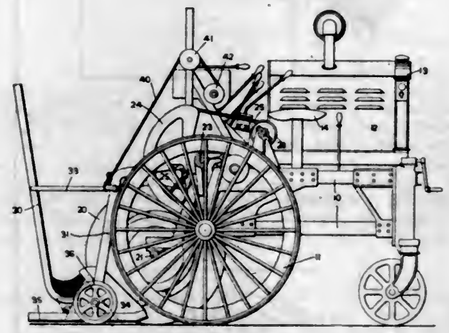
1,675,718. LAUNDRY-CHECKING DEVICE. JOSEPH H. LYNCH, Asbury Park, N. J. Filed Mar. 9, 1927. Serial No. 173,868. 4 Claims. (Cl. 40—19.5.)

1. A holder for identification tags having an orifice at one end, of a shape to admit only tags having a corresponding shape, flanges on the holder with a slot between them into which tags may be passed and upon which said tags may be supported, and an opening in



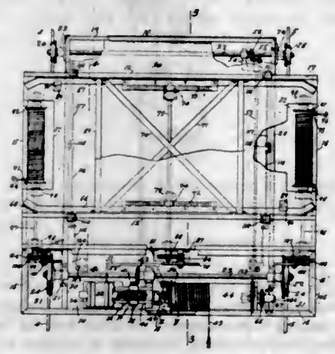
the rear of the holder where the supporting flanges are discontinued so as to permit the tags to drop free of the holder.

1,675,719. GREENHOUSE. JOHN K. MACDONALD, Ridgewood, N. J., assignor to Hitchings & Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 23, 1927. Serial No. 221,478. 4 Claims. (Cl. 189—4.)



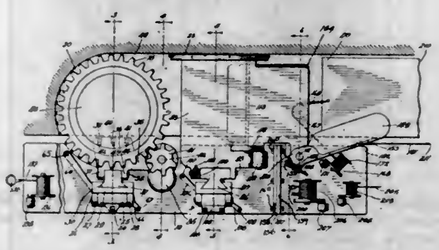
1. In a roof construction including stringers and channel-like sash-bars for supporting covering elements, means of resilient material connecting a sash-bar and a stringer.

1,675,720. SEARCHLIGHT. CHESTER B. MILLS, Brooklyn, N. Y., assignor to Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 26, 1922. Serial No. 584,399. 3 Claims. (Cl. 240—26.)



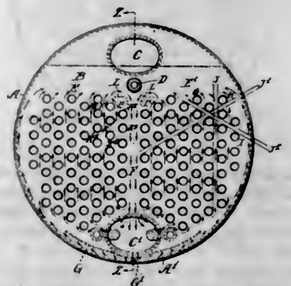
3. A cast metal searchlight drum comprising a body having a ventilation housing formed integral therewith, said body having front and rear openings, a cover for sealing said rear opening, said ventilation housing having an opening, and a detachable cover for sealing said last-named opening.

1,675,721. SAND-TREATING MACHINE. VERNE E. MINICH, Scarsdale, N. Y., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 6, 1927. Serial No. 181,340. 8 Claims. (Cl. 262—2.)



1. A cutting, screening and piling machine comprising a framework mounted upon wheels for movement over a floor, a prime mover carried by said framework for propelling the same, a cutting cylinder mounted for rotational and transaverse movement with respect to said framework, a hoisting cable for controlling the transaverse position of said cylinder with respect to said framework, a screen pivotally mounted at the rear of said cutting cylinder and adapted to receive material impelled from said cylinder, a shroud for directing said material against said screen, a hoisting cable for controlling the position of said screen, and means for vibrating said screen.

1,675,722. TRANSFER CAR FOR MOVING BOXES IN WAREHOUSES AND THE LIKE. CHARLES H. MOORES, New York, N. Y., assignor to Moores & Dunford, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 24, 1923. Serial No. 659,084. 7 Claims. (Cl. 214—16.1.)

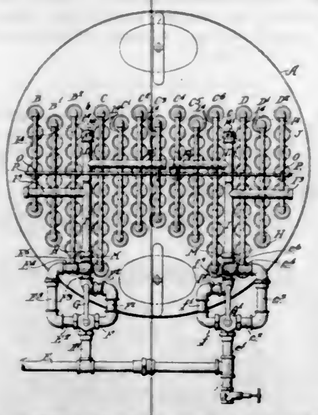


1. In a storage structure, storage compartments, tracks therein, a line of tracks along the compartments at right angles to the tracks therein, a transfer car movable on these latter tracks, tracks on the transfer car, and means carried by the car and cooperating with the tracks in the compartments to move the car to align the tracks on the car and in the compartments and for holding the car against movement after the tracks have been aligned.

1,675,723. MINING AND LOADING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed July 28, 1922. Serial No. 578,027. 70 Claims. (Cl. 262—27.)

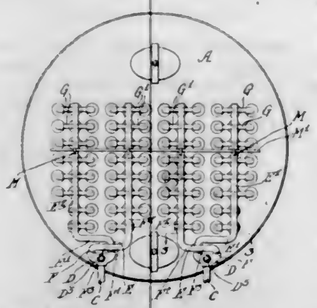
1. In a mining and loading machine, the combination with dislodging mechanism, of a flexible extensible conveyer, a belt adapted to be rolled up and means for operating said flexible extensible conveyer belt to receive the dislodged coal and convey it toward loading position.

1,675,724. FIRE-TUBE BOILER. JOHN PETTY, Lebanon, Pa., assignor to Jo Pet, Inc., Lebanon, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1922. Serial No. 608,853. 4 Claims. (Cl. 122—51.)



1. In a fire tube boiler, a boiler shell having tube groups extending through it separated by a vertical space for down flow of water in combination with a feed water pipe extending horizontally through the boiler directly above the vertical space between the tube groups, said pipe having downwardly directed openings for the outflow of water throughout its length.

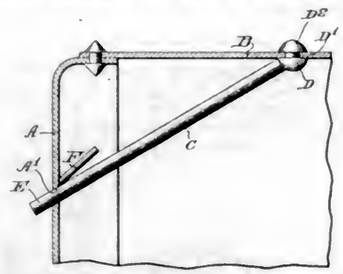
1,675,725. SOOT BLOWER. JOHN PETTY, Lebanon, Pa., assignor to Jo Pet, Inc., Lebanon, Pa., a Corporation of Pennsylvania. Filed May 19, 1923. Serial No. 640,189. 3 Claims. (Cl. 122—391.)



1. In combination with a fire tube boiler having tube groups separated by vertical spaces, a soot blower

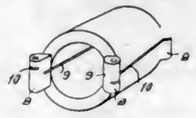
construction comprising rotatable steam conduits arranged opposite to the vertical spaces between the tube groups, tubular soot blower frames connected to each

rotatable conduit and steam nozzles connected to said frames spaced to register with the tubes of the respective tube groups when in operative position.



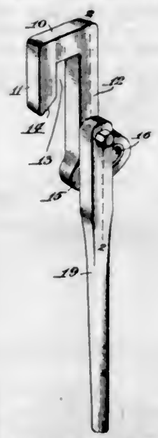
1,675,726. SOOT BLOWER. JOHN PETTY, Lebanon, Pa., assignor to Jo Pet, Inc., Lebanon, Pa., a Corporation of Pennsylvania. Filed Aug. 9, 1923. Serial No. 656,529. 1 Claim. (Cl. 122—391.)

In combination with a fire tube boiler, a soot blower construction comprising in combination a pair of tubular soot blower frames adapted when in operative position to extend over and lie close to separate groups of tubes, steam pipes rotatably supported at one side of the tubular frames to which they are connected, said rotatable steam pipes having angular extensions respectively connecting with said frame, each of said steam pipes being rotatably supported at one side of the respective frame, said angular extensions overlapping each, and one being so formed as to clear the rotatable pipe having the other extension so as to permit either member of the pair of frames to be swung away from in front of the group of tubes it normally faces.



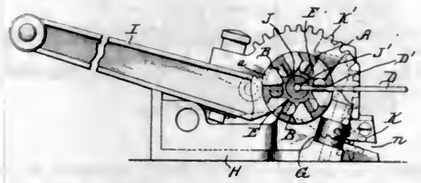
1,675,727. METHOD OF SECURING STAY RODS TO PLATES. JOHN PETTY, Lebanon, Pa., assignor to Jo Pet, Inc., Lebanon, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1927. Serial No. 223,307. 2 Claims. (Cl. 78—46.)

1. The method of securing a stay rod to a sheet metal plate which consists in inserting the stay rod in a hole in the plate to a position in which its end will project beyond the outer surface of the plate to a sufficient extent to be formed into a rivet head, then securing the rod to one side of the plate by a fused union, then



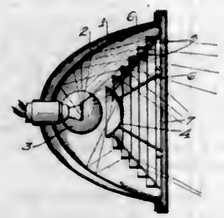
heating the projecting end of the rod to forging temperature and forging it into a rivet head against the outer face of the plate.

1,675,728. ANTIFRICTION BEARING. WINSLOW S. PIERCE, Jr., Bayville, N. Y. Filed Dec. 17, 1925. Serial No. 76,006. 7 Claims. (Cl. 308—216.)



1. A bearing race comprising a longitudinally divided sleeve having a bearing surface, the said sleeve having the two parts thereof contacting with each other across a broken surface extending throughout the length of the sleeve in such a manner that at least part of an edge of this broken surface, contiguous with the bearing surface, is inclined at an angle to any plane containing the axis of the race, so that the edges of the broken surface, remote from the bearing surface, are substantially parallel to the axis of the race.

1,675,729. SUCKER-ROD WRENCH. THOMAS A. REYNOLDS, Los Angeles, Calif. Filed Mar. 16, 1927. Serial No. 175,860. 1 Claim. (Cl. 81—177.)



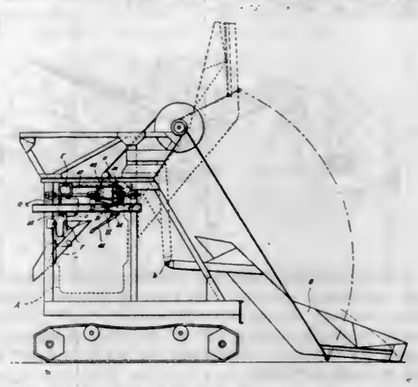
In a sucker rod wrench, a substantially U-shaped integral jaw having a non-circular opening for the reception of a sucker rod, a handle pivotally connected to one of the legs of said jaw and a pin and slot connection between said jaw and handle, said slot being concentrically arranged relative to the axis of pivotal connection between said jaw and handle.

1,675,730. TENSION DEVICE FOR WIRE-TYING MACHINES. FRANK RYCHLEWSKI, Chicago, Ill., assignor, by mesne assignments, to The Gerrard Company, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Feb. 26, 1925. Serial No. 11,631. 13 Claims. (Cl. 254—51.)

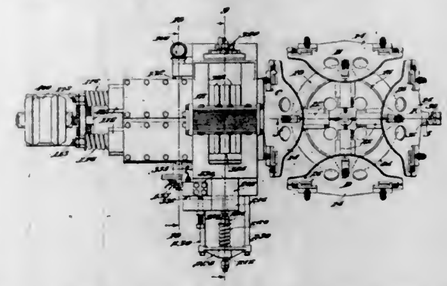
2. A tensioning device for wire tying, embodying a head provided with a tie-engaging member, a second tie-engaging member movable relatively to the first-named member and cooperable therewith in producing a tie-receiving space, and means operable for holding the second member in spaced relation to the first member, said head being movable bodily for bending an inserted wire tie and for effecting a gripping engagement by said two named members with said tie adapted to be inserted into said tie-receiving space.

1,675,731. ANTIGLARE AND LIGHT-DISTRIBUTING MEANS FOR VEHICLE HEAD LAMPS. GEORGE L. SCHOFIELD, National City, Calif. Filed Apr. 8, 1925. Serial No. 21,525. 7 Claims. (Cl. 240—48.4.)

1. In a device of the class described, the combination with a conventional headlamp and reflector, of supports positioned near one end of said reflector, a solid curved shield positioned in axial alinement with said reflector and supported by said supports and a plurality of bands positioned around said shield and spaced therefrom and supported by said supports.



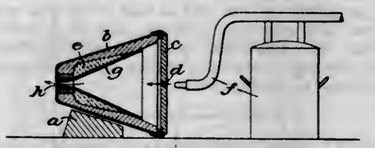
1,675,732. WAX DENTAL FORM AND METHOD OF MAKING SAME. HEINRICH SCHWEITZER, New York, N. Y. Filed July 29, 1925. Serial No. 46,757. 5 Claims. (Cl. 32—6.)



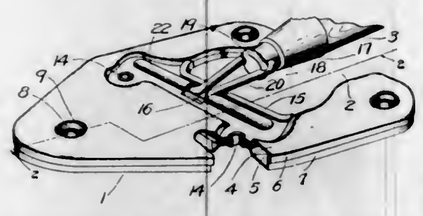
1. A dental wax tooth shell crown comprising a plurality of layers of dental wax having different degrees of hardness.

1,675,733. MECHANISM FOR TIMING THE OPERATIONS OF CONCRETE-MIXING AND OTHER MACHINES. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1926. Serial No. 135,909. 7 Claims. (Cl. 83—73.)

1. In a machine whose operations are to be timed, the combination with a charging means for the machine, of a timing device arranged to be set and to run for a determined time when released, means, manually operated, for controlling the movements of the charging means to deliver its charge and setting the timing device, and means, also manually operated, for controlling the return movements of the charging means and releasing the timing device.

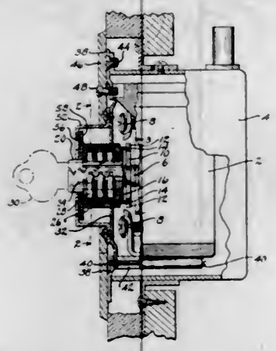


1,675,734. WELDING MACHINE. ARTHUR M. STANLEY, Lynn, and JAMES E. SIMS, Quincy, Mass., assignors to Stanley Steel Welded Wheel Corporation, Boston, Mass., a Corporation of Delaware. Filed Nov. 25, 1921, Serial No. 517,460. Renewed Mar. 10, 1927. 40 Claims. (Cl. 219—4.)



1. A machine for butt welding rim portions of a vehicle wheel having, in combination, welding electrodes, rim holding means, and means for relatively moving the welding electrodes and rim holding means to present successive circular rim portions to a position to weld adjacent ends of the rim portions.

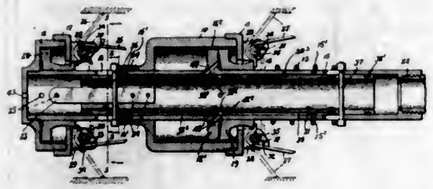
1,675,735. METHOD OF BAKING THE LININGS OF CRUCIBLES. FRANZ STÖHR, Essen/Ruhr, Germany. Filed June 29, 1927, Serial No. 202,292, and in Germany Nov. 18, 1926. 4 Claims. (Cl. 25—157.)



1. The method of baking the refractory linings of crucibles provided with an open top at one end and a tap opening at the other end, which comprises applying a closure to the open top of the crucible, projecting a combustible fluid jet through said opening, and venting the products of combustion through the tap opening.

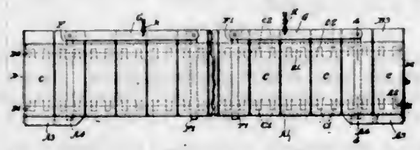
1,675,736. MOP HEAD. HERBERT M. STURGIS, Kansas City, Mo., assignor to Sturgis Mop Company, a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,531. 5 Claims. (Cl. 15—228.)

1. A mop head comprising separate plate members, a clip interposed between the plate members, including prong bearings arranged longitudinally of the clip and spaced centrally thereof and of the plate members, and means permanently connecting the plate members and clip to form the head.



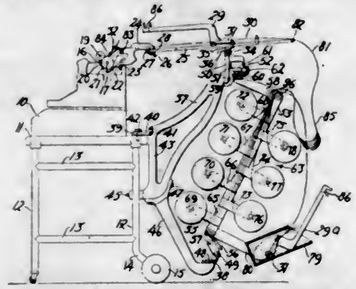
1,675,737. LOCK-CONTROLLED ELECTRIC SWITCH. ERNEST L. TEICH, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Nov. 27, 1926. Serial No. 151,057. 4 Claims. (Cl. 200—42.)

1. In an electric switch the combination of a cup-like base, a switch mechanism contained within said base and having an axial rotatable actuating shaft, a cover for the mouth of said cup-like base, a lock carried by said cover and having a rotatable key-controlled plug adapted to be locked in any one of four positions upon removal of the key, separable coacting coupling members secured to adjacent ends of said plug and shaft, respectively, and screws passing through said cup-like base from rear to front and securing said cover thereto, the casing of said lock projecting on both side of said cover, and having on its rear side reentrant portions, said cover having projections extending into said reentrant portions, and screws having rearwardly facing heads securing said projections to said portions.



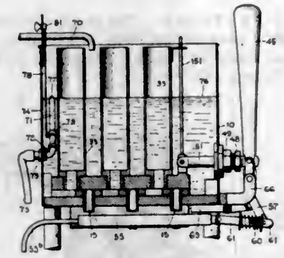
1,675,738. NOZZLE-PROPELLING MECHANISM AND METHOD OF PROPELLING THE SAME. LEE R. TITCOMB, Brooklyn, and HARRY S. ASHMUN, New York, N. Y. Filed Oct. 19, 1926. Serial No. 142,760. 8 Claims. (Cl. 137—70.)

1. A nozzle comprising two relatively slidable parts movable away from each other, the said parts having associated pressure faces, means adapted to supply water under pressure to the said pressure faces of the said parts to move them away from each other, and means



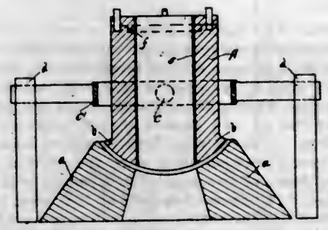
adapted to prevent the rearward movement of that one of said parts which is rearwardly urged by the said water pressure.

1,675,739. FURNACE DOOR. JOHN H. UHRIG, Beverly, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed July 28, 1927. Serial No. 209,036. 4 Claims. (Cl. 110—173.)



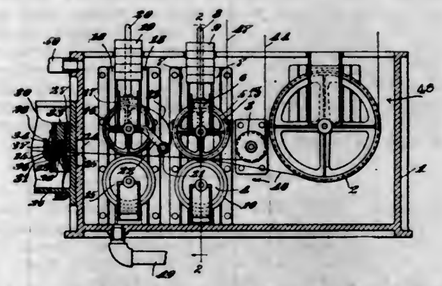
1. A furnace door comprising in combination a channel beam forming the bottom of the door, a series of metal plates forming the front and back faces of the door, resting on and loosely engaged with the flanges of the channel beam, a second channel beam resting on and loosely engaged with the front and back plates and means for raising and lowering the door connected to the lower channel beam.

1,675,740. APPARATUS FOR HOLDING WORK WEBS FOR TYPEWRITING MACHINES. JOHN WALDHEIM, Elizabeth, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 14, 1922. Serial No. 568,093. 3 Claims. (Cl. 312—39.)



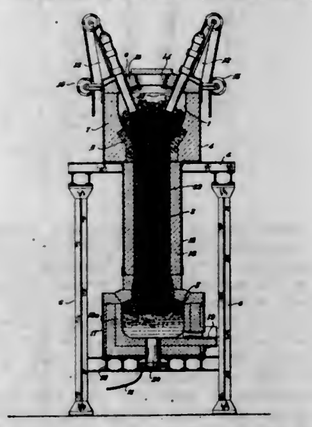
1. The combination with a stand adapted to support a typewriting machine of carbon-carrier type, of brackets mounted on the stand, a movable rack including a plurality of supports and work-sheet-holder rolls arranged in banks in said supports, runways on the brackets supporting the rack whereby the rack may be moved to bring the holder rolls into operative position, rearwardly-extended arms supported on said supports of the rack, and a trough supported on said arms adapted to receive a carbon-carrier usable with the holder rolls.

1,675,741. FILLING MACHINE. OLAF I. WARING, Long Island City, N. Y. Filed Oct. 17, 1924. Serial No. 744,252. 12 Claims. (Cl. 226—102.)



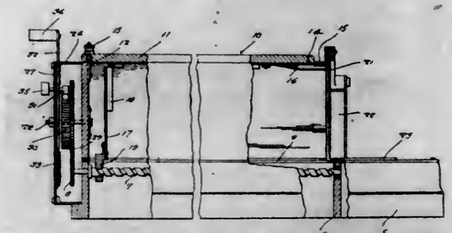
9. The combination of a tank provided at a certain location with a plurality of openings at predetermined spacing, a set of individual compartments disposed within said tank, said individual compartments having openings respectively disposed at said predetermined spacing from one another, means disposed within said tank for determining the amount of fluid received within said individual compartments respectively, means for movably supporting said individual compartments within said tank, said supporting means being provided with clearances for affording the communication therethrough between said openings of said individual compartments with the interior of said tank and means for moving said individual compartments jointly within said tank to move said openings of said individual compartments respectively into communication with said openings of said tank, said supporting means being provided with openings communicating jointly with said openings of said individual compartments and said openings of said tank respectively.

1,675,742. ELECTRODE HOLDER FOR ELECTRIC FURNACES. FERDINAND WECKERLE, Munich, Germany, assignor to Studiengesellschaft fuer Wirtschaft u. Industrie m. b. H., Munich, Germany. Filed Aug. 28, 1925, Serial No. 53,136, and in Germany Sept. 5, 1924. 3 Claims. (Cl. 266—1.5.)



1. In an electrode-holder for electric furnaces and in combination a pedestal having a spherical depression, two standards, a carbon-holder provided with a spherical bottom surface having an air-tight-engagement in the spherical hollow of said pedestal and provided with an inner enamel-lining, a gimbal mounted in said standards, trunnions on said carbon-holder and supported by said gimbal to permit swinging movements of said holder in planes perpendicular to each other, and a stuffing-box at the upper end of the carbon-holder adapted to secure an air-tight closing between carbon and holder.

1,675,743. METHOD AND APPARATUS FOR CONTACTING FILMS. MELVIN G. YOUNG, North Cambridge, Mass., assignor, by mesne assignments, to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed May 27, 1927. Serial No. 194,642. 18 Claims. (Cl. 101—130.)



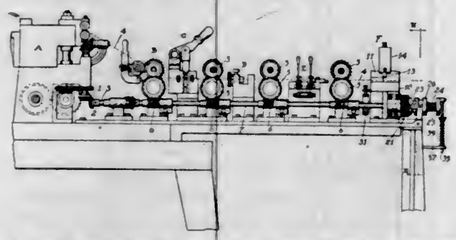
1. A method of printing cinematographic films and the like which comprises contacting the matrix or printing surface and blank surface to be printed, while submerged in a liquid medium.

1,675,744. SHAFT-TYPE ELECTRIC FURNACE. THADDEUS F. BAILY, Alliance, Ohio. Filed July 19, 1927. Serial No. 206,865. 9 Claims. (Cl. 266—1.5.)

1. A shaft type resistance furnace having an electrode at each end and a loose carbonaceous resistor within the furnace extending from one electrode to the other and means for melting a charge of material and passing the molten material downward through the carbonaceous resistor.

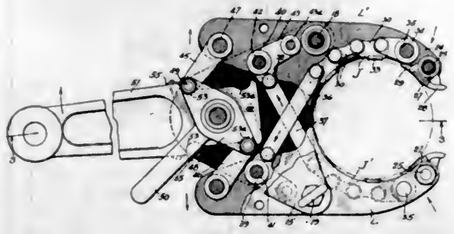
1,675,745. CHEESE CUTTER. JAMES L. BARTON, Summer Shade, Ky. Filed May 19, 1927. Serial No. 192,662. 1 Claim. (Cl. 31—17.)

In a structure of the class described, a hollow base, a feed screw mounted for rotation in said base, an



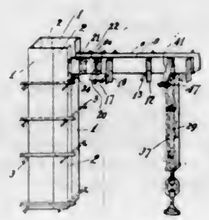
article container, a follower plate mounted for sliding movement in said container, said follower plate having screw threaded connection with said feed screw, a pinion carried by said feed screw, a casing supported against the container and base, said pinion extending into said casing, a shaft mounted for rotation in said casing, a gear fixedly mounted on said shaft, a ratchet wheel carried by said gear, a lever pivotally mounted on said shaft, a spring connected with one end of said lever and with said casing, and a pawl carried by said lever and engageable with said ratchet wheel, said casing being provided with a slot, a pin carried by said pawl and movable through said slot, a knob carried by said pin, whereby to permit said pawl to be reversed.

1,675,746. WIRE-TIE-TWISTING APPARATUS. ADELMER M. BATES, Chicago, Ill., assignor, by mesne assignments, to Bates Valve Bag Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1924. Serial No. 733,876. 7 Claims. (Cl. 140—93.)



1. In combination, a tie-twisting tool, means for supporting and operating the tool with its axis substantially horizontal, a receptacle mounted above and to the rear of the tool and adapted to contain ties arranged substantially horizontally and parallel wtih the axis of the tool, the end of the receptacle towards the tool being open and there being a slot in the tool adapted to receive the end of a tie, and a guide between the receptacle and tool narrowing to a slot above the tool and adapted to guide the rear end of a tie into the slot in the tool when the forward end of the tie is pulled forward from the receptacle and over the tool.

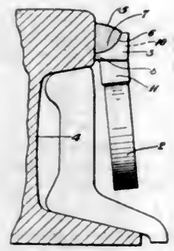
1,675,747. MACHINE FOR SEVERING WIRE FABRIC. WILLIAM E. BOWLER, Niagara Falls, N. Y., assignor to The Spirella Company, Meadville, Pa., a Corporation of Pennsylvania. Original application filed June 17, 1925, Serial No. 37,731. Divided and this application filed Mar. 26, 1927. Serial No. 178,618. 13 Claims. (Cl. 140—145.)



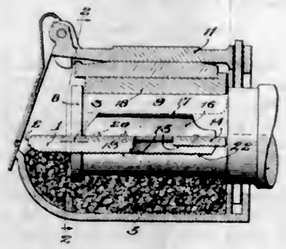
1. Wire fabricating mechanism comprising mechanism for forming a wire fabric, severing mechanism to which said fabric is fed, a clutch for intermittently actuating said severing mechanism, an automatically reversible mechanism, and means controlled by said reversible mechanism for actuating said clutch.

1,675,748. PIPE TONGS. FRANK S. BUNKER, Long Beach, Calif., assignor to Jesse W. Hughes, Compton, Calif. Filed May 19, 1926. Serial No. 110,211. 14 Claims. (Cl. 81—66.)

1. Pipe tongs comprising a pair of flexible jaws, means for supporting the jaws for bodily movement to occupy contracted and expanded positions, means for actuating the first means, and means for drawing the jaws inwardly in opposed directions as they are moved to contracted position by the first means.



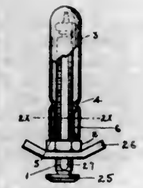
1,675,749. FORM FOR CONCRETE. PRESTON M. CRAWFORD, Pittsburgh, Pa. Filed Mar. 25, 1927. Serial No. 178,302. 1 Claim. (Cl. 25—131.5.)



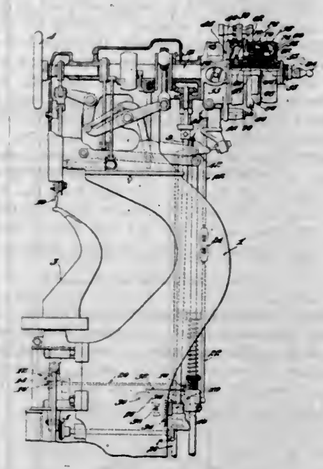
In means for molding concrete columns and beams into a monolithic structure, the combination of hollow forms for said columns and of forms for said beams, and means for securing the ends of said beam forms to their corresponding column forms; said means consisting for each beam-end of two channel-shaped members secured by one flange to the column form in spaced parallel relation to receive between their webs the vertical sides of said beam form, of two angle-iron members each secured by one flange to one vertical side of the beam form, the other flanges of said angle-iron members being adapted to contact with the outer flanges of the channel-members, said contracting flanges having registering apertures, and bolts engaging said apertures for securing said angle-iron members to said channel-iron members.

1,675,750. RAIL BOND. FRANK P. DAHLSTROM and CHARLES L. LARSON, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Sept. 2, 1921. Serial No. 498,122. 2 Claims. (Cl. 173—278.)

1. A rail bond comprising a flexible conductor having T-head terminals welded to the ends thereof, said terminals having a central core or body formed of cuprous metal and welded to an outer shell of ferrous metal, said shell extending over all but one side face of said cuprous core or body, and said composite terminals having a concave face on one of the shell covered sides thereof, with the portion of said side below said concave face adapted to engage the rail when the bond is put into use.

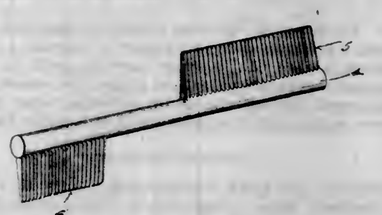


1,675,751. WASTE RETAINER. REAMEY H. DYER, Roanoke, Va. Filed July 25, 1927. Serial No. 208,203. 4 Claims. (Cl. 308—89.)



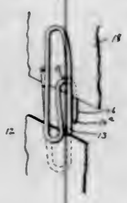
1. A waste retainer for car axle journal boxes, comprising a U-shaped metal structure the end and side members of which have downwardly projecting flanges with teeth on their lower edges to engage the waste, and upwardly projecting means on said side members to engage the bottom surfaces of the journal brass.

1,675,752. VALVE CAP. FRED D. FARR, Perry, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 12, 1921. Serial No. 451,834. 3 Claims. (Cl. 152—12.)



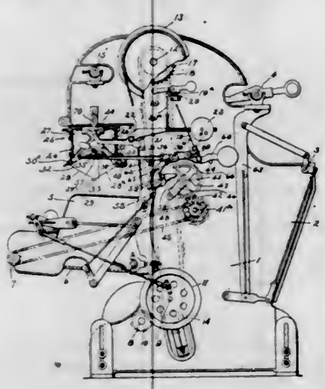
2. A quickly detachable cap for a valve comprising a cap having a bead formed circumferentially around the body thereof, a spring sleeve held loosely in place within said cap and made of sheet metal bent into substantially circular form to fit the cap and left open on one side, said sleeve resting against the bead at one end, the end of the cap being bent inwardly to form a flange to hold the sleeve at the other end and said sleeve having its ends expanded.

1,675,753. MACHINE FOR OPERATING UPON BOOTS AND SHOES. JOSEPH GOULDBOURN and FRED RICKS, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Feb. 3, 1921, Serial No. 442,040, and in Great Britain Feb. 16, 1920. Divided and this application filed Feb. 8, 1923. Serial No. 617,737. 4 Claims. (Cl. 112—220.)



1. A machine of the class described having, in combination, means for operating upon a boot or shoe, a work support arranged to turn as successive portions of the work are presented to said operating means, mechanism for varying the speed of operation of said operating means, a cam arranged to turn with said work support, means operated from said cam for controlling said mechanism to vary the speed of operation of said operating means, and means under the control of the operator for controlling said mechanism to vary the speed of operation of said operating means while said mechanism remains under the control of said cam.

1,675,754. FINGER-WAVE COMB. LOUISE GROM, New York, N. Y. Filed Dec. 2, 1927. Serial No. 237,210. 1 Claim. (Cl. 132—9.)



As a new product of manufacture, a finger wave comb comprising a substantially cylindrical backing member provided with two groups of independent rigidly mounted teeth located adjacent the ends and on diametrically opposite sides of the backing member, the innermost teeth of the two groups being spaced apart to leave a blank portion at the center of the backing member.

1,675,755. SHEET-SUPPORTING CLIP. ELIZABETH E. HENDERSON, Dedham, Mass. Filed Feb. 10, 1928. Serial No. 253,352. 2 Claims. (Cl. 24—85.)

1. A clip composed of a length of bent wire including opposed gripping jaws, adapted to grasp an edge portion of an interposed sheet or sheets, the wire being provided with an extended bent end portion including a neck projecting laterally from one side of the clip, midway between the longitudinal edges of the clip, and a terminal extending from the neck beside the jaws and offset by the neck from the clip, the neck being arranged to bear on a support at one side of the clip, and the terminal being arranged to extend below the support and prevent accidental removal of the neck and clip from the support, the arrangement of the neck relative to the longitudinal edges of the clip being such that the clip and a sheet engaged thereby are adapted to hang vertically from said support.

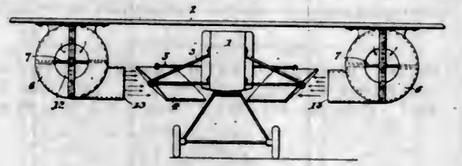
1,675,756. CARD-FEEDING MECHANISM. JOSEPH B. HOWE, Worcester, Mass., assignor to George S. Harwood & Son, Boston, Mass., a Copartnership consisting of Sydney Harwood, Newton, Mass., and John H. Harwood, Brookline, Mass. Filed Nov. 16, 1926. Serial No. 148,688. 16 Claims. (Cl. 249—4.)

1. A machine of the class described comprising a scale beam, a dumping scale pan supported thereby, a movable closure for the pan, a lever operative both to initiate opening of said closure and to restore the closure to normal closed position, and power actuated means for positively moving said lever alternately in opposite directions.

1,675,757. NECKTIE RENOVATOR. JOHN H. JACKSON, Needham, Mass. Filed Jan. 3, 1925. Serial No. 402. 1 Claim. (Cl. 223—19.)

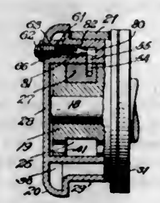
A device of the character described comprising a single length of spring wire bent midway to form two normally divergent spring members and a flat tab having one side crimped over its body portion to form two parallel adjacent runways or grooves for receiving and holding the ends of said spring members; the end of each spring member being bent inwardly toward the end of the other spring member and normally in angular relation thereto in order that when said ends are inserted in their respective runways or grooves in said tab, in parallel relation

each to the other, the friction engendered by said parallel relation will be sufficient to maintain them in any adjusted separated relation.



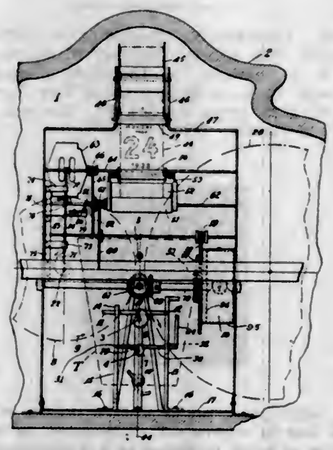
1,675,758. NECKTIE. HUGO LEONI, New York, N. Y. Filed Mar. 2, 1927. Serial No. 172,053. 1 Claim. (Cl. 2—146.)

A necktie comprising a tubular body portion stretchable lengthwise; a rubber lining provided with a plurality of perforations, said perforations being of relatively large size with respect to the stitching passing therethrough, extending the length thereof; and a line of stitches extending through the perforations and engaging the body, said stitches being loosely drawn, whereby the tie may elongate and return to its initial condition.



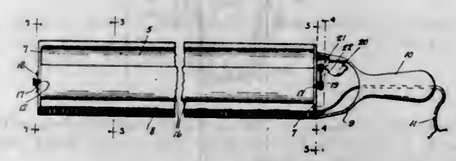
1,675,759. AEROPLANE. GUSTAV A. LUND, Milwaukee, Wis. Filed Sept. 29, 1927. Serial No. 222,884. 4 Claims. (Cl. 244—18.)

1. An aeroplane comprising a fuselage a sustaining plane mounted thereon lifting planes carried at the sides of the fuselage and disposed below the sustaining plane, fan casings carried at the under side of the sustaining plane and located at opposite sides of the fuselage, said fan casings having inlet openings disposed toward the



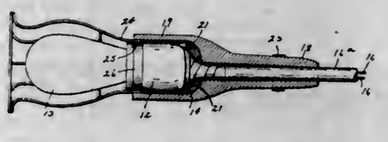
forward edge of the sustaining plane and discharge outlets disposed inwardly toward the lifting planes, fan blades mounted for rotation in the casings and means for rotating the blades.

1,675,760. HYDRAULIC SHOCK ABSORBER. CHARLES W. MANZEL, Buffalo, N. Y. Filed May 6, 1926. Serial No. 107,065. 24 Claims. (Cl. 267—8.)



1. A shock absorber, comprising a stator, a rotor mounted on said stator and containing a fluid reservoir, an operating chamber communicating with said reservoir and formed between the bearing faces of the stator and rotor, respectively, cooperating blades carried by said last-named parts and arranged in said operating chamber, and means for automatically controlling the admission and expulsion of the fluid to and from the operating chamber.

1,675,761. CALENDAR CLOCK. MARCO MARTINI, Oakmont, Pa. Filed Jan. 2, 1926. Serial No. 78,799. 4 Claims. (Cl. 58—6.)

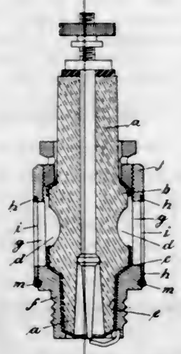


1. In a device for intermittently moving a ribbon, such as the calendar-strip of a clock, the combination of a spring-motor; a moving means for said ribbon; a train of gears interposed between said spring-motor and said moving means, and an escapement mechanism adapted for intermittently operating said moving means by said spring-motor; said escapement mechanism comprising a pin connected to and rotated by said moving means; a bell-crank-lever normally in locking engagement with said pin; a vertical slidable rod; a dog rockably mounted thereon in such a manner as to break the engagement between said bell-crank-lever and pin on the downward movement of said rod, and means for lifting said rod and subsequently causing the sudden drop thereof.

1,675,762. HAIR-STRAIGHTENING DEVICE. ORALEE MATHEWS, Detroit, Mich. Filed Feb. 3, 1928. Serial No. 251,649. 3 Claims. (Cl. 132—14.)

1. In a hair straightening device of the character described, an elongated cupped body, comb teeth formed at one longitudinal edge of the body, a heating coil arranged within the body, a mandrel mounted longitudinally within the body for rotation, and means arranged at one end of the body whereby said mandrel may be rotated.

1,675,763. HANDLE FOR PORTABLE INCANDESCENT LAMPS. CHARLES T. MCCARTHY, South Weymouth, Mass., assignor of one-half to Edward R. Wharton, Medford, Mass. Filed Apr. 25, 1927. Serial No. 186,242. 2 Claims. (Cl. 173—322.)

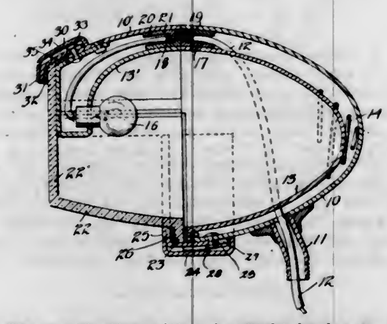


1. A handle adapted for engagement with a portable electric lamp socket, and with a flexible conducting cable connected with the socket, said handle comprising an elongated tubular grip portion whose bore is formed to receive the cable, and an enlarged head portion having a recess formed to receive the lamp socket, the grip portion having longitudinal slots rendering its outer end compressible, so that its bore is adapted to grip the cable and prevent the separation of the cable from the socket, the handle comprising also a clamp embracing the longitudinally slotted portion and adapted to maintain the same compressed on the cable.

1,675,764. SPARKING PLUG. GEORG MICKEL, Lobau, Germany. Filed July 18, 1927, Serial No. 206,763, and in Germany Oct. 19, 1926. 1 Claim. (Cl. 123—169.)

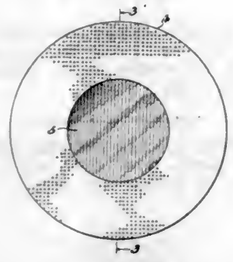
Spark plug with air cooling for internal combustion engines, comprising in combination an insulator having a circular groove in its middle portion of greater diameter than the remainder and forming an air chamber around the insulator, a sparking plug body in which said insulator is located and having openings in the form of slots, a metal sleeve tightly fitting over the lowermost

portion of the insulator and extending up to said air chamber, and a metal sleeve mounted on said sparking plug casing so that it can turn around the same said



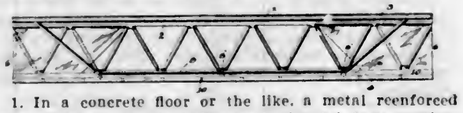
regulating envelope having openings corresponding with said openings in the sparking plug casing which can be closed partly or entirely.

1,675,765. ROTARY CUTTING HEAD. WILLIAM H. O'CONNOR, East Orange, N. J., assignor to John F. Conroy, sr., East Orange, N. J. Filed Apr. 21, 1925. Serial No. 24,893. 10 Claims. (Cl. 144—225.)



2. A rotary cutting head comprising a shaft, a rectangular body portion on the shaft a plurality of slots in each face of the rectangular body portion, bits in the slots, and plates mounted upon the faces over the bits.

1,675,766. AUTOMOBILE HEADLIGHT. DAVID W. OHAVER, Rockville, Ind. Filed Sept. 7, 1926. Serial No. 134,047. 2 Claims. (Cl. 240—41.)

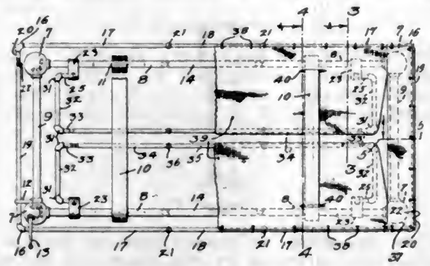


1. The combination with a headlight having an outer casing and a curve parabolic reflector spaced from the walls of said casing, of a curved, detachable, overhanging forward casing, a similarly arranged curved reflector disposed in spaced relation in said forward casing, said detachable casing and reflector terminating in a horizontal plane passing through the longitudinal axis of the parabolic reflector, a lens for said overhanging portion comprising an upright portion on the front end of the lens and a portion extending rearwardly therefrom to the main portion of the headlight for permitting light to shine directly downwardly through the same, and a source of light supported in the forward portion of the overhanging parabolic reflector, substantially as set forth.

1,675,767. HEADLIGHT ATTACHMENT. SAM D. RICH and MINNIE D. RICH, Columbus, Ohio. Filed Dec. 31, 1927. Serial No. 244,013. 2 Claims. (Cl. 240—48.4.)

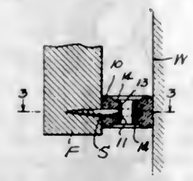
2. An attachment for headlights including two superposed annular members of foraminous material, means for relatively adjusting said members circumferentially to render said members opaque, and a colored disc of translucent material concentrically arranged with respect to said annular members.

1,675,768. REENFORCED SUPPORTING MEMBER. PETER H. SEREFF, Lima, Ohio. Filed May 12, 1926. Serial No. 108,643. 6 Claims. (Cl. 72—71.)



1. In a concrete floor or the like, a metal reenforced supporting member including a horizontal base portion, flanges on said base portion, and tongues struck up from said flanges, whereby the edges of core forms may be mounted between said flanges and their respective tongues.

1,675,769. PROTECTIVE PAPER AND METHOD OF MAKING THE SAME. BURGESS W. SMITH, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 27, 1922, Serial No. 532,334. Renewed June 15, 1926. 35 Claims. (Cl. 283—8.)

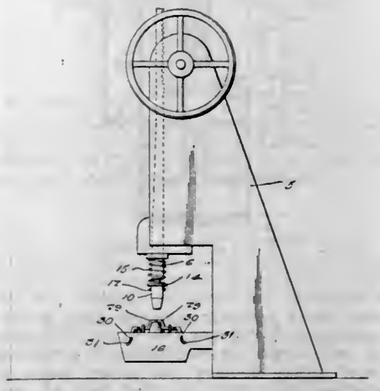


1. A safety paper having marked thereon with erasable ink and in superposed relation two or more patterns, one of which is formed by a multiplicity of closely arranged spots of area bounded by area portions of a different color and combining in superposition with the other pattern or patterns to form an intricate resultant pattern for the paper composed of repeated figures.

1,675,770. GRAVE COVERING AND LINING DEVICE. GUSTAF A. STARK, Atwater, Minn. Filed Nov. 15, 1926. Serial No. 148,348. 20 Claims. (Cl. 27—32.)

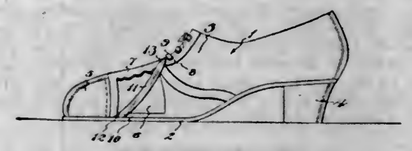
1. In combination, a casket lowering device and flexible means for lining a grave as a casket is lowered therein by said device.

1,675,771. ANTIMARRING MEANS FOR PICTURE FRAMES. SIDNEY STERLING, Los Angeles, Calif. Filed June 12, 1926. Serial No. 115,688. 8 Claims. (Cl. 40—145.1.)



8. In combination, an eye screw, a body formed of yieldable material, in covering relation to the eye of the screw, said body having an opening therethrough, and means for holding the body on the eye of the screw, with the opening in the body registering with the opening in the eye of the screw so as to permit a picture hanging wire to be threaded through the openings.

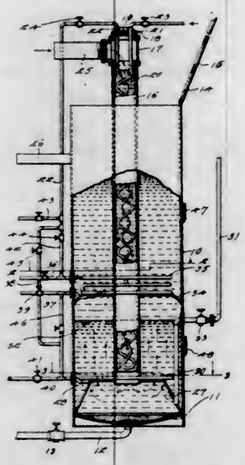
1,675,772. COMPRESSED-AIR WELL PUMP. FLOYD TEEPLE, Muscatine, Iowa. Filed June 14, 1927. Serial No. 198,764. 4 Claims. (Cl. 103—243.)



1. In a pump mechanism of the class described, a cross piece adapted to be inserted in a well below the level of the fluid, a supporting structure adapted to be supported above the well, a tank, a pipe, a second pipe, bearings on the cross piece through which the pipes are slidable, the first pipe connected to the top of the tank, the second pipe extending through the top of the tank terminating adjacent the bottom thereof, a check valve at the bottom end of the second pipe, a second valve in the bottom of the tank opening inwardly thereof, a lever supported on the supporting structure being pivoted intermediate its ends, counter-balancing means on the lever, a member connected to the top end of the pipe, a link supporting the member from one end of the lever, a flexible pipe connected to the first pipe, branches leading therefrom, valves in the branches, means for connecting one of the valves with a source of compressed air, air escape means connected with the other valve, and a means operable by the lever for alternately opening and closing the valves.

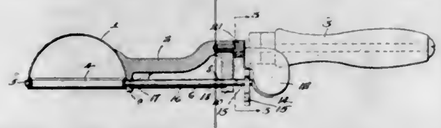
1,675,773. RIVET HOLDER. JOSEF TISSLER, Philadelphia, Pa. Filed Nov. 29, 1926. Serial No. 151,549. 2 Claims. (Cl. 78—53.5.)

1. A device of the class described, including a supporting structure having a recess and a pocket in the recess, a shank movable in the pocket, a head on the shank in the recess, a cross member adjustable on the shank, links pivoted to the cross member, fingers pivoted intermediate their ends to the links, the side walls of the recess being provided with slots, said fingers having pins extending into the slots, a spring means normally urging the shank upwardly and the fingers in a position to engage the rivet on the top of the head, said slots being curved to direct the fingers away from the head when the head is moved downwardly.



1,675,774. SHOE. ALICE M. TUCKER, East Orange, N. J. Filed Nov. 15, 1927. Serial No. 233,461. 1 Claim. (Cl. 36—45.)

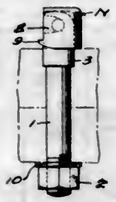
A shoe comprising a sole and an upper, said upper having openings formed in its side portions in spaced relation to the toe of the shoe and having their lower edges terminating in spaced relation to the sides of the sole to provide marginal strips joining the toe portion of the upper to the portions thereof at the rear of the side openings, and strips extending diagonally across



the side openings with their lower ends secured adjacent the forward ends of the marginal strips and their upper ends converging and secured to the upper at the rear of and between the openings.

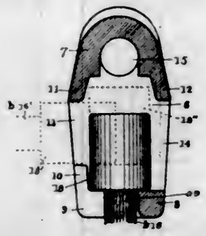
1,675,775. APPARATUS FOR THE TREATMENT OF CRUDE OIL. JOSEPH C. UMBARGER, Cedar Grove, La. Filed Jan. 18, 1927. Serial No. 161,861. 8 Claims. (Cl. 196—5.)

1. In apparatus for removing sediment and water from crude oil, a vertically elongated tank having an outlet adjacent its upper end and an oil inlet adjacent its lower end, means for maintaining a predetermined water level within the tank and unitary means below the water level and above the inlet both for heating the water and agitating the same to cause the same to move circumferentially of the tank.



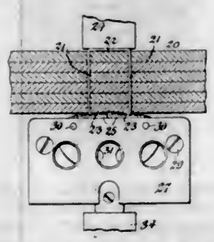
1,675,776. ICE-CREAM DIPPER. SIDNEY B. WHITESIDE, New York, N. Y. Filed July 21, 1926. Serial No. 124,042. 12 Claims. Cl. 107—48.)

12. In an ice-cream dipper, the combination of a bowl, a scraper movable about an axis extending transversely of the bowl, a shank projecting from the bowl, a handle carried by the shank, a rock shaft on which the scraper is mounted extending in a direction lengthwise of the shank, a thumb lever pivoted to the shank, the rock shaft having an eccentric pin and the thumb lever having a cam slot for receiving the pin.



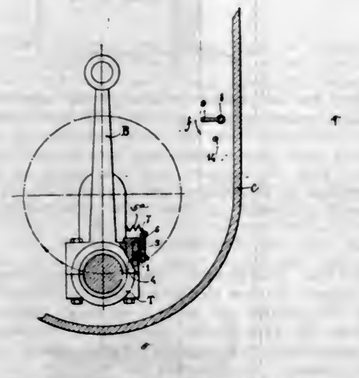
1,675,777. BOLT. SCOTT L. WILSON, Dinuba, Calif. Filed June 16, 1927. Serial No. 199,318. 2 Claims. (Cl. 85—9.)

1. In combination, a shank provided at one end portion with opposed sides having open recesses, and a caplike nut to receive said end portion, said nut being provided with inwardly directed lugs engaging within the recesses when the nut is in applied position, said nut having one side open to facilitate said engagement



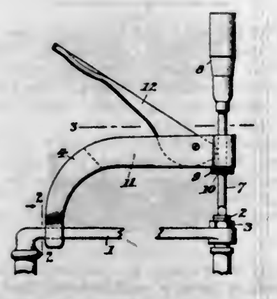
of the lugs within the recesses, said nut when in a second position having its side opposed to its open side substantially in contact with the shank.

1,675,778. CHOKER-HOOK RIGGING. OSCAR A. WIRKKALA, Deming, Wash. Filed Feb. 6, 1926. Serial No. 86,485. 1 Claim. (Cl. 24—123.)



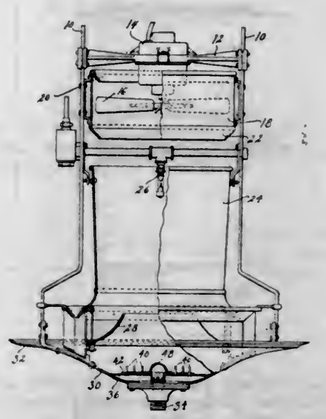
In a choker hook rigging in combination, a choker hook consisting of a sleeve eye, U-form hook jaws, a hook-shank disposed between said sleeve eye and said jaws integral therewith, a socket beneath said sleeve eye opposite said jaws, and a boss projecting from the point of each of said jaws toward said eye, said shank having a transverse hole therethrough intersected by a narrower slot between said jaws and said bosses; and a cable narrower than said slot with a cylindrical knob smaller than said hole and wider than said slot centrally fixed on one end of said cable axially therewith, said cable operatively disposed between said jaws with the inner end of said knob seated on said jaws behind said bosses and the outer end of said knob adapted to enter said socket as said cable moves within said hook between said jaws.

1,675,779. CLINCHER FOR WIRE-STAPLING MACHINES. HOWARD G. ALLEN, Niagara Falls, N. Y., assignor to Morrison Stitcher Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed July 17, 1926. Serial No. 123,221. 2 Claims. (Cl. 1—4.)



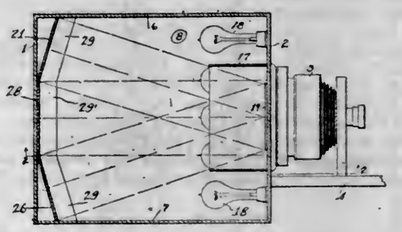
1. A clincher for wire stapling machine provided on its face with a plurality of guide grooves arranged parallel and lengthwise of the clincher, each of said grooves being of the same V-shape cross-section throughout its length; and the summit of the walls between adjacent grooves being flat and of the same width throughout the length thereof.

1,675,780. METHOD AND MEANS FOR PREVENTING OVERHEATING OF BEARINGS. EMILE ALBERT MARIUS ALRIC, Portes, near La Vernarede, France. Filed Oct. 20, 1925, Serial No. 63,750, and in France Feb. 9, 1925. 3 Claims. (Cl. 192—129.)



1. In combination with a movable machine element, a bearing member movable with said machine element, a fuse mounted directly on said bearing element and fusible thereby when said bearing element is overheated, an actuating element also carried by said bearing element and movable to actuating position, a controlling element held by said fuse and normally holding said actuating element in inopertiave position, said actuating element being released by the melting of the fuse and its consequent release of said controlling element and functioning apparatus including a controlling member, said controlling member being normally out of the path of movement of said actuating member and in the path of movement of said actuating member, for engagement thereby, when said actuating member is released upon the fusion of the plug.

1,675,781. VALVE-ADJUSTING TOOL. CARL O. ANDERSON, Mitchell, S. Dak. Filed Dec. 1, 1927. Serial No. 237,111. 5 Claims. (Cl. 81—3.)



1. A valve adjusting tool comprising a frame having angularly disposed end portions one of which is provided with spaced lugs, the other end portion having an opening, a screw driver shaft received in said opening, a collar mounted upon the shaft and engaging the frame, and a cam lever pivoted upon the frame and having a working end adapted to impinge the screw driver shaft.

1,675,782. HUMIDIFIER. JOSEPH ARMSTRONG, Allston, Mass., assignor to American Moistening Company, Boston, Mass., a Corporation of Maine. Filed Oct. 8, 1926. Serial No. 140,373. 6 Claims. (Cl. 210—149.)

1. The combination, with a pan and drain, of a lint collector comprising a horizontal plate set in the pan in the course of water therein flowing to the drain, with a multiplicity of arresting elements on the plate and distributed through said course.

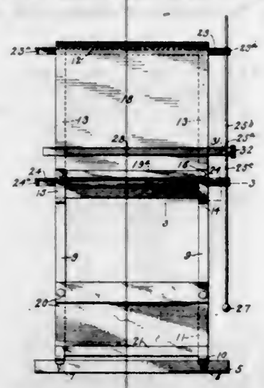
1,675,783. PHOTOGRAPH-ENLARGING LIGHT BOX. CHARLES L. BEAL, San Francisco, Calif. Filed Apr. 22, 1925. Serial No. 24,981. 5 Claims. (Cl. 88—24.)

1. In a light box for reproducing cameras, the combination of an enclosure, a plate support therefor, a series of lights in the front end of the enclosure, a shield on said front end to prevent direct rays from the lights from striking the plate, and several light reflecting surfaces arranged normal to lines therefrom to corresponding points on the plate covered with a material capable of reflecting a strong and evenly distributed light to said plate.

1,675,784. TYPEWRITER COPYHOLDER AND LINE MARKER. PRESTON L. BLAKE, Amarillo, Tex. Filed Jan. 20, 1925. Serial No. 3,619. 4 Claims. (Cl. 120—34.)

1. A copy holder which includes two spaced pairs of relatively thin and wide springy strips, the strips of each pair having their wide sides confronting one another, a horizontal plate to be seated on a table and to extend under a typewriter, a copy-holding plate, and means securing the copy-holding plate to the spaced pairs of strips over said horizontal plate, said strips of each pair including horizontally extending parts which are superposed upon one another and upon said horizontal plate and secured to the latter, said strips having juxtaposed parts fixedly secured to one another at points above said

horizontal plate and thus forming relatively stiff upright supporting parts, the parts of said strips which extend up from said stiff upright parts to said copy-holding



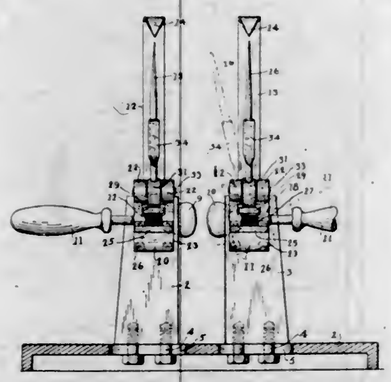


plate being forwardly and downwardly bowed and spaced from one another to provide a springy support for said copy-holding plate.

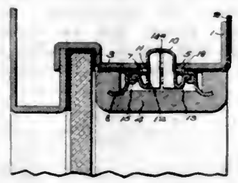
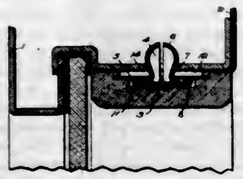
1,675,785. RAIL-BOND STRAIGHTENER. ORRIN W. BRICKER, Cleveland, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 4, 1925. Serial No. 54,481. 11 Claims. (Cl. 153—40.)



1. In an apparatus of the class described, a base, standards carried thereby, one of said standards being adjustable, clamping devices carried by said standards for clamping the ends of a rail bond, each of said clamping devices being rockable as a unit on said standards and independent of each other, and separate means to rock each of said clamping devices.

1,675,786. PROCESS FOR THE PRODUCTION OF CARBONATES. MAX BUCHNER, Hanover-Kleefeld, Germany, assignor to Albert Fritz Meyerhofer, Zurich, Switzerland. Filed June 18, 1925, Serial No. 38,100, and in Germany June 14, 1924. 17 Claims. (Cl. 23—61.)



1. The improvement in the art of obtaining soluble carbonates from fluorides by reaction with carbonates that produce therewith insoluble fluorides, which comprises carrying out the reaction under pressure above atmospheric pressure.

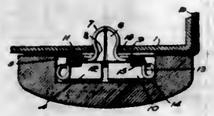
1,675,787. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,695. Divided and this application filed Aug. 25, 1925. Serial No. 52,317. 5 Claims. (Cl. 24—213.)

1. A fastener stud installation comprising, in combination, a casing presenting a plurality of attaching prongs bent outwardly from the inner periphery of said casing into a rigid support, the outer face of said casing being flush with the support, and a laterally shiftable stud part held in said casing and having a head and a neck extending beyond the outer face of said casing.

1,675,788. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,696. Divided and this application filed Aug. 25, 1925. Serial No. 52,318. 6 Claims. (Cl. 24—213.)

6. A stud unit comprising a stud member having contractible and expansible head and neck portions and a base, and an attaching plate presenting an aperture therethrough of smaller diameter than the normal diameter of the head of the stud through which the head is snapped to secure the two parts together and a plurality of initially bent pointed attaching portions presented at the outer periphery of said attaching plate for securing said unit to a support.

1,675,789. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,697. Divided and this application filed Aug. 25, 1925. Serial No. 52,319. 3 Claims. (Cl. 24—213.)



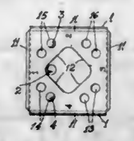
1. A fastener comprising, in combination, a stud having a head and a base, a stud-securing part presenting a face underlying said base, a rim surrounding said base while providing clearance permitting lateral shifting of said stud relative to said securing part and a flanged-in rim on said securing part overlying said base at the side thereof opposite said face, and attaching prongs integral with said securing part and projecting from said face in a direction opposite to that in which said head extends.

1,675,790. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,698. Divided and this application filed Aug. 25, 1925. Serial No. 52,320. 4 Claims. (Cl. 24—213.)

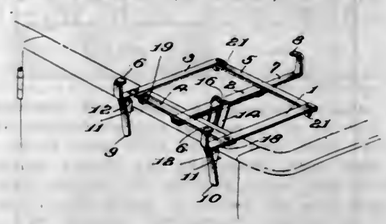
1. A separable fastener unit comprising, in combination, two socket-engaging stud members secured together at their bases, and means permitting substantial lateral shifting movement of each stud relative to the other for alignment with their respective stud-receiving apertures.

1,675,791. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,699. Divided and this application filed Aug. 25, 1925. Serial No. 52,321. 2 Claims. (Cl. 24—213.)

1. A separable fastener unit comprising, in combination, two resilient stud members secured together and facing in opposite directions, one of said stud members presenting a ringlike socket-engaging portion and said other stud presenting a ball-shaped socket-engaging portion, and means provided by said stud members to permit substantial lateral shifting of said stud members relative to each other for alignment with their cooperating stud-receiving apertures.



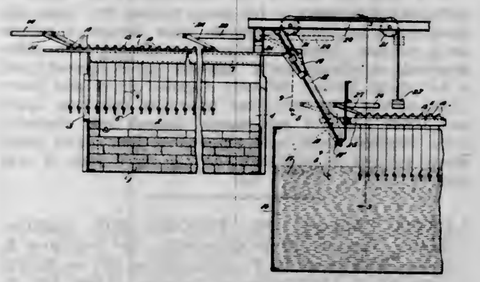
1,675,792. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed Feb. 26, 1925, Serial No. 11,700. Divided and this application filed Aug. 25, 1925. Serial No. 52,322. 5 Claims. (Cl. 24—213.)



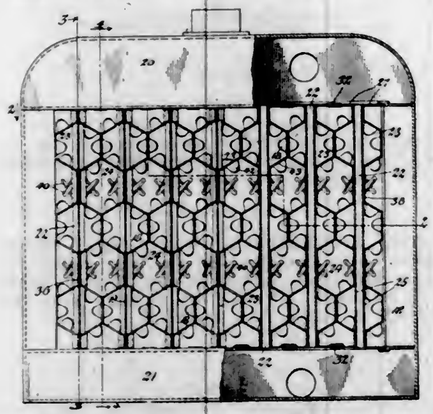
1. A fastener stud unit including a casing having a collapsible peripheral wall portion for securing said casing to a support and a socket-engaging stud part assembled with said casing and adapted to be secured to said support by the collapsible wall portion of said casing.

1,675,793. SAFETY RAZOR. GUILLERMO DIAZ DEL CASTILLO, Habana, Cuba. Filed Sept. 15, 1926, Serial No. 135,659, and in Cuba Apr. 19, 1926. 3 Claims. (Cl. 30—12.)

1. A safety razor comprising supporting and cover plates and a razor blade placed between them, all of which are of practically square shape in their outline, the supporting and cover plates having their respective clamping stems and holes to one side of their middle transverse lines, and the razor blade having its four edges sharpened and series of holes distributed in square form so that at least three of them will register vertically with the stems of the supporting plate and the holes of the cover plate in the four different positions that can be adopted by the razor blade.



1,675,794. DETACHABLE SUPPORTING STAND. HARRIS C. COLEMAN, Fort Worth, Tex., assignor, by mesne assignments, to Tray Service Company, Dallas, Tex., a Corporation. Filed Dec. 7, 1923. Serial No. 679,186. 8 Claims. (Cl. 45—51.)



1. A serving tray for automobiles and the like comprising two interconnected substantially parallel supports, each having a corresponding end curled upwardly to form one member of a tray clamp, an intermediate support having its end curled in opposition to the first-mentioned curled ends to form the supplementary tray clamping member, a pair of feet, each being pivoted to and depending from the end of each support and arranged to fold substantially flat to the underside of said support, and a central foot hingedly connected to said intermediate member and depending downwardly in spaced relation to said pair of feet whereby to receive therebetween the upstanding edge of an automobile door or other support, said central foot also being arranged to fold substantially flat to the underside of said support.

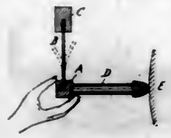
1,675,795. DISCHARGING AND QUENCHING MECHANISM FOR FURNACES. FRANK T. COPE, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a Corporation of Ohio. Filed Mar. 5, 1925. Serial No. 13,135. 3 Claims. (Cl. 266—4.)

1. A heat treating furnace including pusher means for moving material continuously through the furnace and independent pusher means for rapidly discharging and quenching the material as it reaches a point spaced from the discharge end of the furnace.

1,675,796. RADIATOR. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,556. 3 Claims. (Cl. 257—130.)

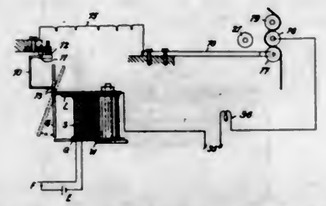
2. A radiator comprising a plurality of water tubes and a plurality of air passages arranged between adjacent water tubes, each of said water tubes having opposite sheet metal walls, and two spacing strips of corrugated sheet metal arranged on opposite sides of each water tube and having the intermediate parts of one set of alternate corrugations engaging with the outer sides of said walls and the opposite end portions thereof opposing each other, said corrugations thus forming a plurality of air passages which are traversed by the respective water tube, and the other set of alternate corrugations engaging the corresponding corrugations associated with an adjacent tube and forming therewith a row of air passages which are not traversed by a water tube, each of said spacing strips having laterally projecting inclined wings which are struck out of the same and the wings on the strips of adjacent tubes being inclined in opposite directions and interlocking with each other.

1,675,797. UNIT FOR USE IN THE MANUFACTURE OF SEPARABLE CUFF LINKS. SIGMUND FISCHER, Providence, R. I. Filed Apr. 18, 1927. Serial No. 184,776. 8 Claims. (Cl. 24—102.)



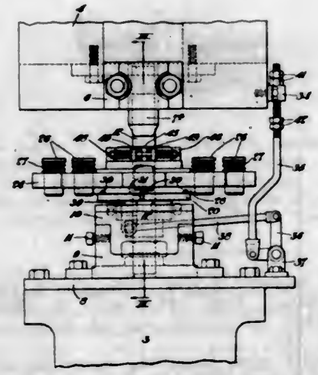
1. A unit for use in the manufacture of separable cuff links comprising a top plate having two holes disposed on diametrically opposite sides thereof, a bottom plate of any desired configuration having two holes disposed on diametrically opposite sides thereof, and a flat shank having obliquely disposed upper and lower edges having lugs projecting integrally from the upper and lower edges of said shank through said diametrically disposed holes, said top and bottom plates being firmly secured to said shank by the upset ends of said lugs.

1,675,798. ALLOY AND PROCESS FOR MAKING SAME. RUSSELL FRANKS, Brooklyn, and BURNHAM E. FIELD, Douglaston, N. Y., assignors to Haynes Stellite Company, a Corporation of Indiana. Filed Jan. 8, 1925. Serial No. 1,305. 7 Claims. (Cl. 75—1.)



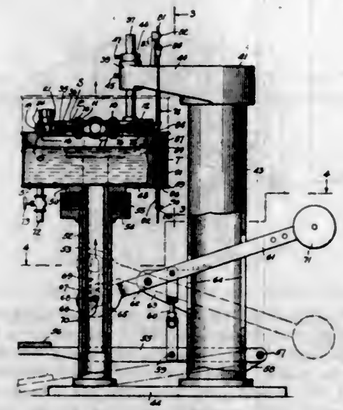
1. An alloy containing from 3 to 5% aluminum, 3.5 to 6% silicon, 5 to 12% tungsten, 6 to 12% zirconium, boron in substantial and effective amounts up to 1%, the balance being principally nickel.

1,675,799. MECHANISM FOR MEASURING THE FREQUENCY OF THE PULSE. RUDOLF GOLDSCHMIDT, Charlottenburg, Berlin, Germany. Filed Jan. 7, 1926, Serial No. 79,880, and in Germany Jan. 10, 1925. 19 Claims. (Cl. 128—2.)



1. A resonance speedometer for measuring the frequency of the pulse consisting essentially of a series of oscillatory bodies capable of resonance and tuned in steps to the pulse frequency of humans and means to cause these bodies to oscillate under the influence of the pulse.

1,675,800. MECHANISM FOR MEASURING THE FREQUENCY OF THE PULSE. RUDOLF GOLDSCHMIDT, Charlottenburg, Berlin, Germany. Filed Sept. 8, 1926, Serial No. 134,304, and in Germany July 29, 1926. 8 Claims. (Cl. 128—2.)

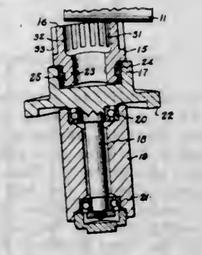


1. Mechanism for measuring and recording low frequencies especially the frequency of the pulse consisting essentially of a series of pendulums containing iron and suspended in the vicinity of a wire bobbin, this bobbin being connected to the source of the low frequency current, the bobbin containing an iron core having pole-shoes, the magnetic field being arranged thus, that the pendulums tuned to frequencies above the resonance point oscillate in a smaller degree than those turned to frequencies below the resonance point.

1,675,801. STAMPING APPARATUS. THOMAS A. GONMAN, Johnstown, Pa. Filed Sept. 23, 1926. Serial No. 137,313. 10 Claims. (Cl. 101—3.)

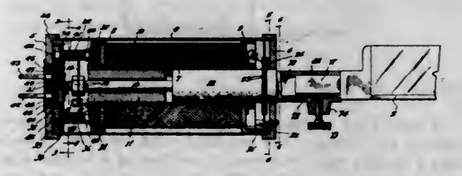
1. A stamping apparatus comprising a housing, a reciprocating plunger, a work support below said plunger, a center post secured to said housing, a stamp disk revolvably mounted on said post and extending into the space between said plunger and work support, a plurality of stamps carried by said disk, said plunger being adapted to be reciprocated to strike said stamps, and means operable by said plunger for rotating said disk.

1,675,802. TESTING MACHINE. FERDINAND A. HAMILTON, Los Angeles, Calif., assignor, by direct and mesne assignments, to Southern California Gas Company, a Corporation of California. Filed Jan. 5, 1926. Serial No. 79,432. 9 Claims. (Cl. 73—51.



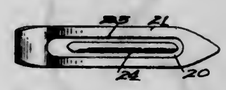
1. A testing machine of the character described comprising a fitting supporting and sealing device including a stationary head supported in elevated position and having fixed and movable sealing elements between which a fitting to be tested is adapted to be interposed and clamped with its openings hermetically sealed, a liquid containing receptacle mounted for movement to occupy one extreme position in which the fitting is emerged from the liquid and a second extreme position in which the fitting is submerged in the liquid, one of said sealing elements having a passage therethrough communicating with the interior of the fitting when clamped in the head, a pipe connected to a source of fluid supply under pressure and connected to said head in communication with said passage, a fluid admission valve and a fluid vent valve in said pipe, said valves normally urged to closed position, and means operatively connected to said receptacle for alternately opening said valves to either admit fluid to the interior of the fitting or vent the interior of the fitting to atmosphere according as the fitting is submerged or emerged.

1,675,803. SHEET-FEEDING GUIDE FOR EXPANDING MACHINES. HAROLD FROST HEWETSON, Youngstown, Ohio, assignor, by mesne assignments, to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Sept. 27, 1924. Serial No. 740,312. 3 Claims. (Cl. 164—6.5.)



1. A sheet feeding device for expanding machines including a guideway having a substantially horizontal portion and a substantially vertical portion and a guard roller arranged about said substantially vertical portion.

1,675,804. ABRADING NIB FOR ABRADING MACHINES. FERDINAND J. HOHNHORST, Covington, Ky. Filed Jan. 31, 1927. Serial No. 164,831. 6 Claims. (Cl. 125—37.)

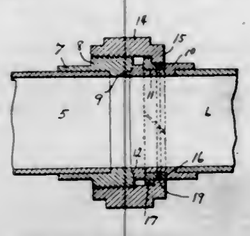


1. A rotatable abrading nib for coaction with the grinding face of a grinding wheel, said rotatable abrading nib having an end-contact abrading face and holes in said end-contact abrading face at different radial distances from the axis of rotation of said rotatable abrading nib movable in circles of different diameters across said grinding face of the grinding wheel.

1,675,805. ELECTRIC RAZOR. JARRETT C. HOLCOMB, Sulphur Springs, Tex., assignor of one-half to Robert F. Cameron, Dallas, Tex. Filed Sept. 28, 1927. Serial No. 222,641. 13 Claims. (Cl. 175—338.)

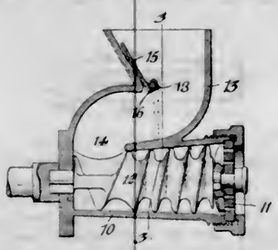
1. In a device of the character described, a handle comprising a casing, a solenoid in said casing including a coil and a plunger extending through the coil and projecting from its ends, one end portion of the plunger extending out of the handle and constituting a blade holder, and a resilient strip in the casing extending transversely thereof and secured at its ends and having its intermediate portion engaged with said plunger to yieldably support the plunger and permit the same to be intermittently drawn inwardly when the coil of the solenoid is energized.

1,675,806. CLASP. CROFTON C. HOLDEN, Leominster, Mass., assignor to Royal Comb Company, Leominster, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1924. Serial No. 729,644. 1 Claim. (Cl. 24—259.)



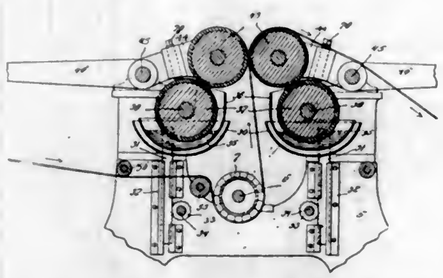
A clasp formed of an integral piece of resilient material bent to a substantially U-shape, one leg of the U forming a continuous frame about a longitudinal elongate opening, and the other leg being provided with an integral elongate rib of substantially smaller dimensions than said opening and adapted normally to extend substantially centrally thereinto, said rib gradually decreasing in thickness toward each end of said opening, and the leg having the rib being wider than said opening.

1,675,807. CAN OPENER. EROL V. HOUGHTON, Syracuse, N. Y. Filed Aug. 11, 1927. Serial No. 216,753. 4 Claims. (Cl. 220—48.)



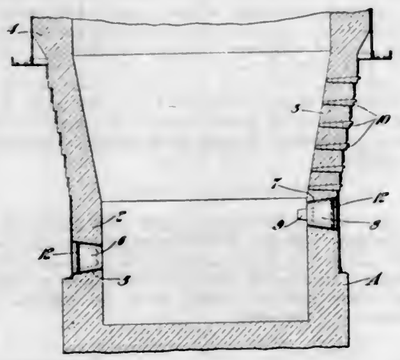
1. A can opener arranged to be permanently mounted upon the head of a can, comprising a strip of flexible metal folded upon itself to provide a long and a short arm, the free end of the short arm adapted to pivotally engage the central portion of the head of the can, said strip being sheared adjacent the fold for providing a cutting-spur that projects beyond the bend adapted when the long arm is swung from the horizontal to the vertical position to pierce the head adjacent its periphery, and said long arm adapted when bent forwardly and downwardly to be rotated for causing the said spur to cut a circular opening in the head.

1,675,808. PIPE JOINT. CHARLES J. KLISS, Scranton, Pa. Filed Feb. 5, 1927. Serial No. 166,191. 1 Claim. (Cl. 285—120.)



A pipe joint of the class described, including a sleeve having an enlarged end provided with external threads and a beveled edge, a second sleeve having a beveled edge for engaging the first-mentioned beveled edge and provided with an annular exterior groove, ring sections receivable in said groove and formed with ribs and with grooves, a split ring receivable in the grooves of the ring sections to hold them assembled in the groove of the second sleeve and to form a packing gland, and a nut internally threaded at one end and at its other end provided with an internally extending annular flange to engage the rib when the threads thereof are engaged with the threads of the enlarged end of the first sleeve, said flange also engaging the packing split ring.

1,675,809. SANITARY MEAT GRINDER. EUGENE W. KNOWLTON, Buffalo, N. Y. Filed Feb. 18, 1927. Serial No. 169,202. 1 Claim. (Cl. 146—189.)

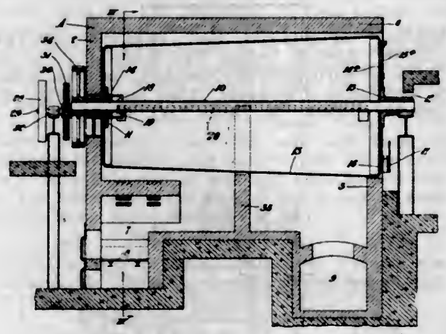


In a substance grinder, a casing having a perforated plate at one end, a feed-screw in the casing, an upright hopper mounted on the casing and having a horizontally-extending discharge-spout leading into the rear portion of the casing, a vertically-swinging pressure-paddle and hand guard arranged in the hopper and pivoted to the rear wall thereof at its junction with the spout, the paddle in its raised position lying against the rear wall of the hopper and in its lowered position extending across the mouth of the spout.

1,675,810. PADDING AND SIZING MACHINE FOR SILK OR COTTON FABRIC. JOHN LATERRA, Paterson, N. J. Filed Mar. 2, 1927. Serial No. 172,064. 5 Claims. (Cl. 8—19.)

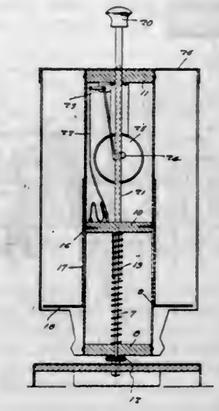
1. A machine of the class described comprising a frame, a pair of basins mounted in the frame, a pair of rollers journaled in the frame to dip into a solution carried by the basins, a second pair of rollers, bracket arms in which the second pair of rollers are journaled, said bracket arms being pivotally mounted on the frame so that the second rollers rest on the first rollers, means for driving the first rollers so that solution will be imparted to the second rollers and said second rollers will rotate in order that fabric may be trained between the second rollers and the solution applied thereto, and means for swinging the bracket arms for raising the second rollers from the first rollers.

1,675,811. TUYÈRE COOLER. JAMES E. LOSH, Wilkinsburg, Pa. Filed Jan. 21, 1925. Serial No. 3,873. 2 Claims. (Cl. 266—41.)



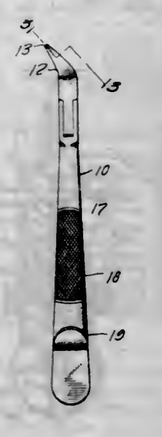
1. The combination with a blast furnace wall having at least one inwardly tapering cooler opening therein, of a tapered cooler adapted to be inserted in said opening, and an asbestos packing ring mounted on said cooler and adapted to be automatically moved longitudinally of said cooler as said cooler is driven home in said opening, thereby compressing said ring and forming a sealed joint between said cooler and furnace wall.

1,675,812. STORAGE-BATTERY TOOL. LEE G. LOYD, Ardmore, Okla. Filed Mar. 15, 1927. Serial No. 175,615. 5 Claims. (Cl. 16—114.)



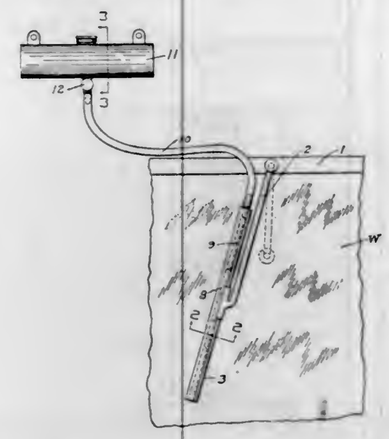
1. In a storage battery tool, a plug having a threaded portion and adapted to replace the usual vent plug of a storage battery cell, a handle therefor and means operated by the application of strain to the handle for expanding the threaded portion of the plug.

1,675,813. GREASE-MELTING FURNACE. WILLIAM C. LOYD and ARTHUR R. MCARTHUR, Gary, Ind., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 26, 1926. Serial No. 97,672. 2 Claims. (Cl. 87—13.)



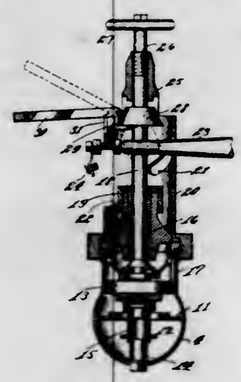
1. A grease melting furnace comprising an enclosing structure, a hollow shaft extending through said structure, a closed frusto-conical grease pot secured on said shaft and rotatable therewith, said pot having a gradually decreasing diameter toward one end, said enclosing structure being provided with an opening in one end to expose the larger circular end of said pot, an inlet opening in said exposed larger circular end of said pot, a closure for said inlet opening, a valved outlet in said exposed larger end of said pot at a point therein substantially diametrically opposite from said inlet opening and near the periphery thereof through which melted grease may be withdrawn from said pot, a pair of diametrically opposite baffle plates secured to the inside walls of and extending longitudinally of said pot for mixing and stirring the grease in said pot during the rotation thereof, and means for rotating said shaft and said pot.

1,675,814. CIGARETTE-PACKAGE DISPENSER. LUCIAN B. MARBURY, Metropolis, Ill. Filed June 2, 1927. Serial No. 196,015. 4 Claims. (Cl. 312—42.)



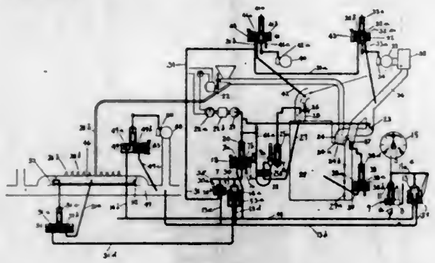
1. In a device of the class described, a rotatably mounted vertically extending casing, a plurality of package compartments arranged about the side thereof, said compartments being open at their lower ends, a package carrier movably mounted within each of said compartments and means arranged within the casing operatively connected with the carrier whereby to move the same outwardly from the lower end thereof.

1,675,815. DENTAL FORCEPS. JOHN E. MILLER, Huntington, W. Va. Filed Mar. 26, 1927. Serial No. 178,752. 2 Claims. (Cl. 32—34.)



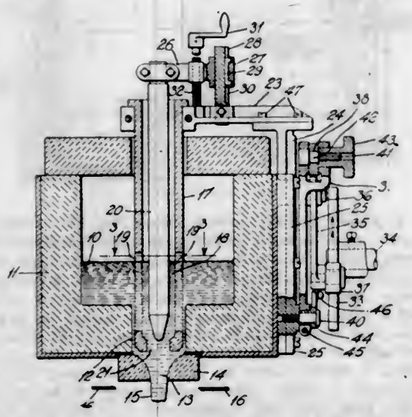
1. A forceps comprising plier connected elements each having at one end an arcuately bowed jaw bluntly tapering to a sharp point, said jaws being oppositely curved and being disposed at an angle of 45° to the general plane of the forceps, the longitudinal axes of the jaws being straight from end to end and in parallelism, the free ends of said jaws being well spaced from one another when the jaws are at the limit of their closing movement.

1,675,816. WINDSHIELD WIPER. FREDERIC MOKMA, Sand Creek, Mich. Filed Feb. 14, 1927. Serial No. 167,921. 2 Claims. (Cl. 15—255.)



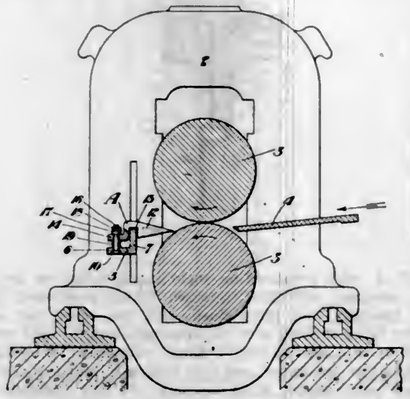
1. A windshield wiper comprising an inverted U-shaped holder of elongate form having one side wider than the other, an operating arm fixed to said holder intermediate the ends thereof, a rubber strip between the sides of said holder in abutment with the wider side and having a portion projecting beyond the edge thereof for engagement with a windshield, a folded strip of absorbent material in engagement with the inner side of said rubber strip and held in clamped relation by the other side of said holder, and a tubular perforated stem within said folded strip for feeding liquid to saturate the folded strip.

1,675,817. VALVE MECHANISM. THOMAS H. MOSELEY, Oklahoma City, and CHARLES E. DROEGE, Cushing, Okla. Filed Nov. 29, 1926. Serial No. 151,530. 2 Claims. (Cl. 137—68.)



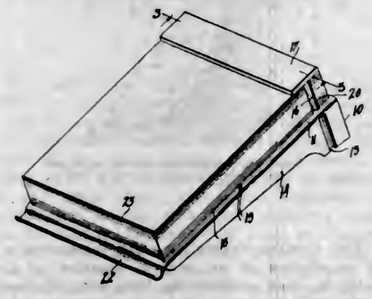
2. In a valve mechanism, the combination of a valve, a valve stem rising from the valve, means tending constantly to close the valve, means for opening the valve, a shoulder on the valve stem, an upwardly tapered surface rising from the shoulder, a housing around the stem, a latch pivotally mounted on the housing and having its inner end bearing against said tapered surface when the valve is in closed position and adapted to engage under the shoulder when the valve is in open position, an arm extending outwardly from the latch and having its end free, and float-controlled means to impinge against and lift the outer free end of said arm whereby to release the latch and permit the valve to close.

1,675,818. APPARATUS FOR CONTROLLING STEAM GENERATION. THOMAS A. PEEBLES, Pittsburgh, Pa., assignor to John M. Hopwood, Dormont, Pa. Filed July 22, 1926. Serial No. 124,248. 26 Claims. (Cl. 236—14.)



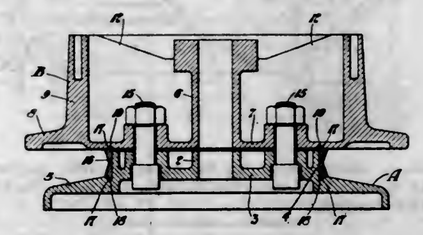
1. A steam generating system, comprising a plurality of steam generators, a common header receiving steam from said generators, and an individual furnace for each generator, fuel feeding mechanisms for each furnace, air supplying mechanisms for each furnace, a separate regulator responsive to variations in steam conditions within said header for controlling the operation of each furnace, a regulator responsive to variations in steam conditions within said header, as reflected by said first mentioned regulator and as modified by pressure conditions within the air delivery passages to the furnace for controlling the operation of said air supply mechanisms, and a regulator responsive to variations in pressure within the furnace for controlling the delivery of a portion of the air from said air supplying mechanisms to said furnace.

1,675,819. APPARATUS FOR FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 27, 1923. Serial No. 615,308. 16 Claims. (Cl. 49—55.)



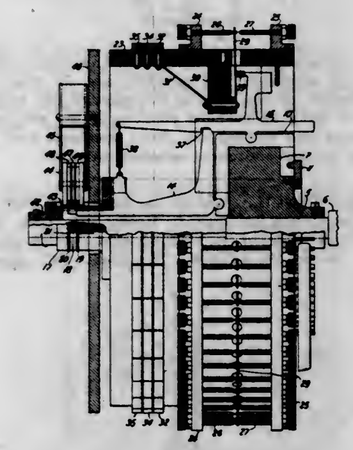
2. In apparatus for segregating mold charges from a body of molten glass, the combination with a glass container provided with a well terminating in a discharge outlet, of a plunger projecting into the well and provided with an internal flow passage communicating with the glass above its discharge end at all positions of the plunger, means for varying the resistance to the flow of glass in said passage, and means for reciprocating the plunger within the well.

1,675,820. ROLLING-MILL GUIDE. ANDRO PISARCIK, Vandergrift, Pa., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed June 6, 1927. Serial No. 196,752. 2 Claims. (Cl. 80—51.)



1. The combination with a stand of sheet rolls comprising the usual housings and a pair of horizontal rolls journaled therein, of an angle shaped guide rest-bar extending between and secured to said housings on the delivery side of said rollers, said bar being positioned with one flange extending horizontally and its other flange extending upwardly next to said rolls, at least one sheet guide supported entirely on said bar, said guide comprising a body portion having its upper face inclined upwardly and rearwardly to form a guide for the sheets delivered from said rolls, said body having a transversely extending recess in its bottom face adapted to have a loose fit over the upwardly extending flange of said rest-bar and form a rocking support for said guide, a rearwardly extending flange formed integral with said guide body and overlying said horizontal flange of said rest-bar, and means co-operating with said flange on said guide for securing said guide to said rest-bar, said means being adjustable to rock said guide on said rest-bar and thereby move its forward end toward or away from the lower one of said pairs of rolls.

1,675,821. PAD HOLDER. GEORGE M. PORTER, New York, N. Y. Filed Jan. 6, 1928. Serial No. 244,809. 6 Claims. (Cl. 129—18.)

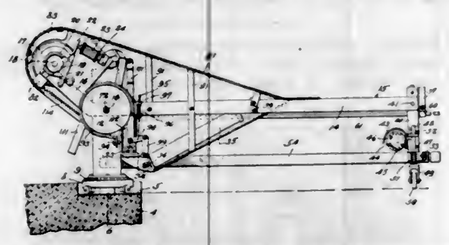


1. A pad holder, comprising a pad supporting base having openings therein, the said pad being provided with open grooves at its sides in alinement with the openings in the base and a top plate having means thereon coacting with the grooves in the pad and the openings in the base to maintain the pad on the base.

1,675,822. WIRE-DRAWING BLOCK. STANLEY PUSHALSKI, Cleveland, Ohio. Filed June 20, 1927. Serial No. 199,958. 1 Claim. (Cl. 205—20.)

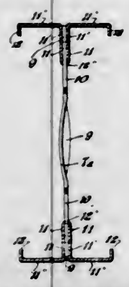
A wire drawing block composed of two parts arranged one above the other and rigidly bolted together, each of said parts having a wire receiving drum formed thereon, circular grooves formed in opposite faces of said parts, said lower wire receiving drum being provided with a continuous one-piece removable metallic wearing ring, vertically extending flanges on the edge faces of said ring extending into said grooves whereby said ring is fixedly clamped between the parts of said block, and said ring having its wire receiving face constantly tapered inwardly from each edge toward its center.

1,675,823. TELEGRAPH TRANSMITTER. LOUIS M. POTTS, Tenafly, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1924. Serial No. 753,025. 20 Claims. (Cl. 178—17.)



1. A high speed tape controlled transmitter comprising a plurality of contact elements for controlling the transmission of the signals, a member individual to each of said elements operated upon their registration with perforations in the continuously moving tape, and means for rotating said contact elements and said members at a speed not greatly different from that of the tape at the time of registry with a perforation.

1,675,824. GATE MECHANISM. JOHN B. RODGERS, Little Rock, Ark. Filed Nov. 26, 1926. Serial No. 150,639. 9 Claims. (Cl. 39—7.)

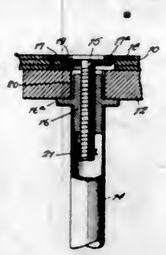


1. In a device of the class described, a gate mounted for vertical swinging movement, means for swinging the

gate vertically, said means including a motor on the gate, a brake restraining the vertical movement of the

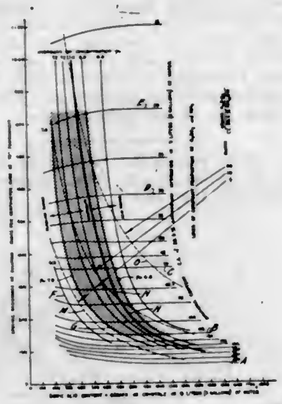
gate, a switch controlling the brake, a traffic platform, and an operative connection between the traffic platform and the switch.

1,675,825. TRUSSED BEAM. JULIUS H. SCHLAFLY, Canton, Ohio, assignor, by mesne assignments, to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 17, 1925. Serial No. 50,750. 2 Claims. (Cl. 189—37.)



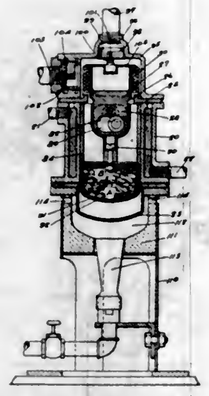
1. A trussed beam including a transversely slit longitudinally expanded web member, and an angle strip chord member on the sides of the edges of the web member, there being unexpanded portions of the web member for spacing and staying the chord members, and means securing the web and chord members together.

1,675,826. PENCIL. WALTER A. SHEAFFER, Fort Madison, Iowa, and LUCIFER J. MOST, New York, N. Y.; said Most assignor to said Sheaffer. Filed Nov. 12, 1920. Serial No. 423,518. 26 Claims. (Cl. 120—18.)



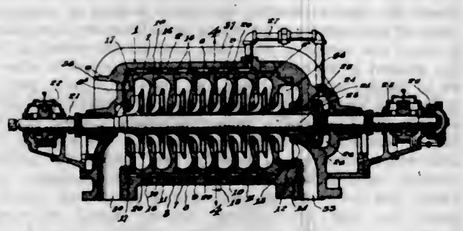
1. A pencil comprising a casing having a lead opening at one end, a rod slidably mounted in the casing in alinement with said lead opening, a cup-shaped lead clamp slidably mounted on the rod, and an elongated sharp edge on the rod within the cup adapted to co-operate with the latter to hold a lead against turning.

1,675,827. TAKE-DOWN TABLE. ARTHUR T. SHRADER, New Albany, Ind. Filed June 30, 1925. Serial No. 40,550. 13 Claims. (Cl. 45—116.)



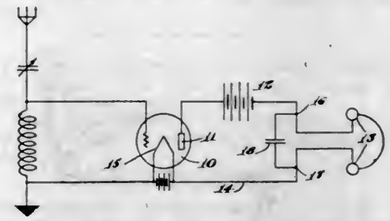
13. A table construction including a table top having leg openings, apertured recessed plates positioned over the openings and lying flush with the table top, said plates being secured over the openings, legs for said table, each of said legs having a flange extending thereabout adjacent to its upper end and having a reduced portion above said flange fitted in one of said openings, a threaded member extending into the reduced portion of said leg and engaging the plate associated therewith whereby said threaded member is adapted to move the leg towards the table top to set up a binding action between the flange and under surface of the table top upon rotative action of the leg.

1,675,828. ELECTROLYTE. HUMPHREYS O. SIEGMUND, West Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,574. 11 Claims. (Cl. 175—315.)



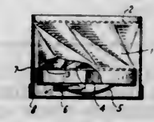
1. A film forming electrolyte which comprises a mixture of a solution of an acid, a solution of a base, and water in such proportions that said mixture possesses a specific resistance value between 150 and 800 ohms per cubic centimeter and a hydrogen ion concentration value between 6.8 and 7.8.

1,675,829. HEAT ENGINE. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 2, 1923. Serial No. 629,353. 18 Claims. (Cl. 103—47.)



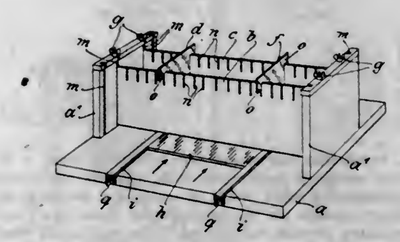
1. An engine of the character described, comprising, in combination, a cylinder; a piston therein; a hollow, perforated, displacement member containing a filamentous material, such as spun glass or the like, within said cylinder, the construction being such that the surface of the displacement member exposed to the fluid within the cylinder is increased, to cause said displacement member to function as a regenerator.

1,675,830. HIGH-PRESSURE CENTRIFUGAL PUMP. MAX SPILLMANN, Richfield, and OSCAR H. DORER, East Orange, N. J., assignors to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 7, 1926. Serial No. 100,205. 15 Claims. (Cl. 103—108.)



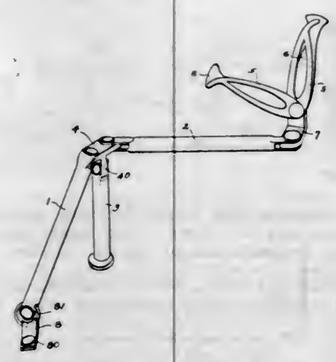
1. In a centrifugal pump, an outer casing and series of diffusion rings within the outer casing disposed in engagement one with the one next thereto and constructed and providing exposed surfaces whereby the stage pressure in the pump causing thrust pressure on the diffusion rings will maintain the rings in tight engagement with each other, and means engaging the last diffusion ring in the series and engaging said outer casing for joining, in effect, said rings and outer casing in a unit, said outer casing and diffusion rings having a chamber between their facing surfaces, said chamber having communication with the interior of the diffusion rings at a predetermined stage to receive fluid under pressure from within the rings and hydraulic end thrust balancing means having communication with said chamber.

1,675,831. TONE-CONTROL MEANS. ROBERT C. SPRAGUE, Quincy, Mass. Filed May 29, 1925. Serial No. 33,724. 2 Claims. (Cl. 250—20.)



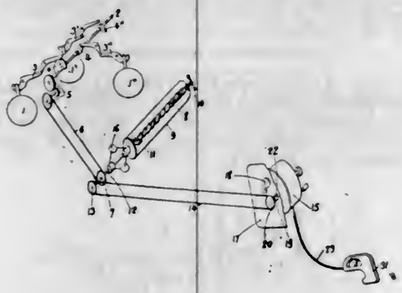
1. An improved tone control for radio receiving circuits, comprising an output circuit, means for delivering audio frequency current thereto, telephone receiving instruments in series in said circuit, and a variable condenser of from 0.01 to 0.05 of a microfarad capacity in shunt to said receiving instruments.

1,675,832. VOICE-PRODUCING APPARATUS FOR DOLLS AND OTHER TOY FIGURES. ERICH FERDINAND STEINER, Sonneberg, Germany, assignor to Karl Ohlbaum & Son Inc., New York, N. Y., a Corporation of New York. Filed Apr. 14, 1927, Serial No. 183,870, and in Germany Dec. 3, 1926. 8 Claims. (Cl. 46—46.)



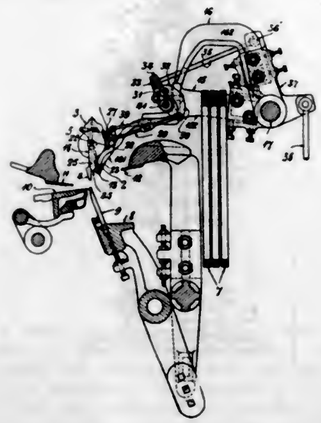
1. In a voice producing apparatus of the character described, an air bellows, a rim ring of angle cross-section secured to fit into one end of the bellows, and a pressure weight fitted into the ring for inflating and deflating the bellows.

1,675,833. APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL-MARBLE SLABS. AUGUST STRITTMATTER, Freiburg, Baden, Germany. Filed Feb. 18, 1927, Serial No. 169,283, and in Germany Feb. 16, 1926. 6 Claims. (Cl. 25—42.)



1. In apparatus for manufacturing artificial marble slabs, a receptacle for the color-mass having two opposing vertically adjustable walls, means for spacing said walls at variable distances apart, and means for holding the said walls in elevated position, in combination with plates slidable below the elevated walls, across the receptacle, and in succession constituting the bottom of the latter, the bottom edge of the rear wall constituting a striker for the mass conveyed from the receptacle by each plate.

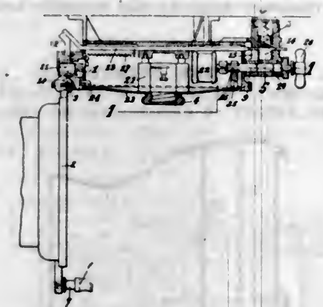
1,675,834. MUSIC HOLDER. ALBERT H. YOUNG, Victoria, British Columbia, Canada. Filed Jan. 19, 1927. Serial No. 161,969. 5 Claims. (Cl. 45—59.)



1. A music holder comprising a pivot base, two arms pivoted by one end to said pivot base to swing freely in substantially the same plane, a music holding means carried by the outer end of one of said arms, and means for holding engagement of said pivot base in the crook of the user's arm.

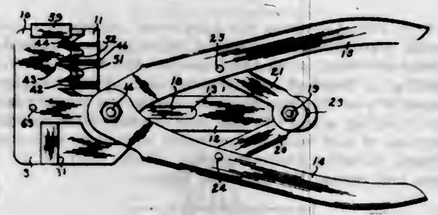
1,675,835. REGULATING APPARATUS FOR OPERATING FROM A DISTANCE DEVICES FOR RELEASING PROJECTILES FROM AIRCRAFT. ROBERT ALKAN and GEORGES LESOURD, Paris, France. Filed July 18, 1927. Serial No. 206,759. 7 Claims. (Cl. 244—1.)

1. A regulating apparatus for operating from a distance for releasing projectiles from aircraft, comprising in combination a main shaft, a motor for rotating said main shaft, means for connecting said main shaft with said releasing devices, an abutment on said main shaft, three pawls adapted to cooperate with said abutment, means for operating one of said pawls directly from the driver's seat, an arm on the second pawl, a secondary shaft above said main shaft, a cam on said secondary shaft co-operating with said arm of said second pawl, means for regulating the position of said cam according to the number of successive releasings to be effected, a driving mechanism independent of the main motor, and adjustable means for operating from said separate driving mechanism said third pawl which regulates the interval between two successive releasings.



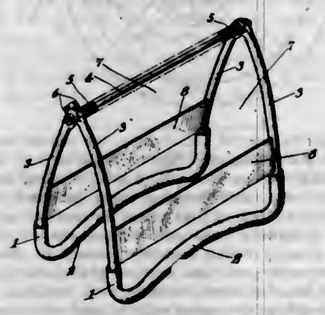
1,675,836. LOOM FOR WEAVING TUFTED PILE FABRICS AND APPARATUS FOR USE THEREWITH. FREDERICK WILLIAM AUSTIN, Oldham, England. Filed May 15, 1925, Serial No. 30,643, and in Great Britain May 17, 1924. 6 Claims. (Cl. 139—9.)

1. In a mechanism for taking tube frames carrying spools of tuft yarn carrying chains and presenting the yarn tubes of such tube frames between warp threads in a tufted pile fabric loom and after severance of the tuft yarn between the warp threads from that remaining on the spools, restoring the tube frames to the carrying chains, an intermediate holder intermediate between the sides of the loom which presenting a notch for receiving hook like projections extending in the general plane of end plates of tube frames is adapted to receive simultaneously two end plates of tube frames placed end to end in line, pressing means mounted to be oscillated on said intermediate holder for acting upon and releasing chain engaging devices on tube frame end plates in the notch of said holder and holding tube frame end plates therein, two other holders at opposite sides of the loom each of which other holders presenting a notch for receiving hook like projections extending in the general plane of end plates of tube frames is adapted to receive one tube frame end plate at a time, pressing means respectively mounted to be oscillated on said other holders for acting upon and releasing chain engaging devices on tube frame end plates in the notches of said other holders and holding tube frame end plates therein, intermediate carrying means intermediate between the sides of the loom providing pivotal attachment for said intermediate holder, lateral carrying means at the sides of the loom providing pivotal attachment for said other holders, means for moving said intermediate and lateral carrying means down from and up to a position to present said holders in position for receiving and leaving end plates of tube frames suspended on chains to and from position for presenting the yarn tubes of tube frames between warp threads, means for oscillating said holders on said carrying means and means for oscillating said pressing means on said holders.



1,675,837. EXPLOSIONPROOF FITTING FOR ELECTRIC GLOWLAMPS. JOHANNES BECKMANN, Altona-Ottensen, Germany. Filed Aug. 15, 1927. Serial No. 213,055. 4 Claims. (Cl. 240—17.5.)

1. In an explosionproof fitting for electric glowlamps, the combination with a stationary fitting member, a movable fitting member hinged to the former, a glowlamp switch axle in said stationary fitting member, and a slotted locking bolt arranged in the stationary fitting

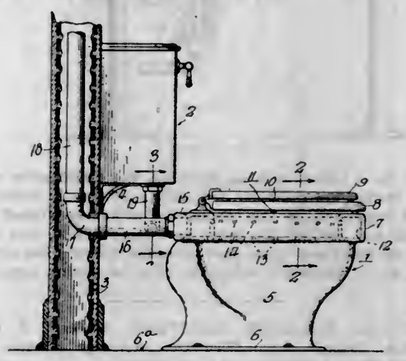


member and adapted with open fitting to lock the switch axle against turning, of means for securing said bolt in its locking position with open hinged fitting member.

1,675,838. HAND TOOL. WILLIAM A. BERNARD, New Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn. Filed Apr. 23, 1924. Serial No. 708,556. 22 Claims. (Cl. 81—9.5.)

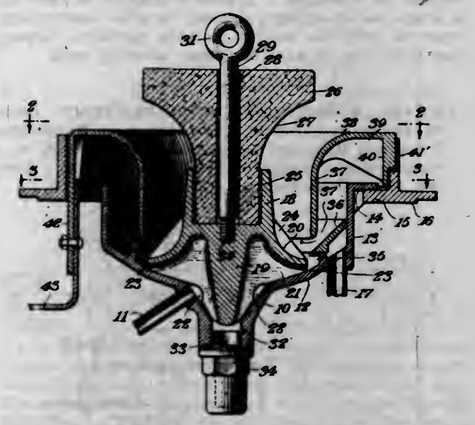
5. In a hand tool, a pair of parallel operating cutting jaws, means to move said jaws toward each other, said jaws being adapted to cut through the insulation about the wire of an insulation covered conductor, and means to subsequently strip the severed portion of said covering from the wire while said cutting jaws are being moved toward each other.

1,675,839. WAVE SETTER FOR HAIRDRESSING PURPOSES. JULIUS BLOOM, West Bronx, N. Y. Filed Apr. 3, 1928. Serial No. 266,909. 4 Claims. (Cl. 132—31.)



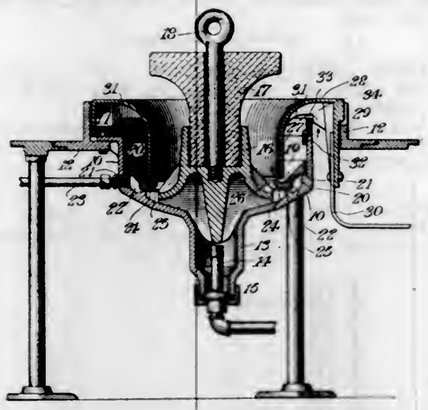
1. A wave setter for hair dressing purposes having a pair of substantially parallel jaws each provided with a relatively long hair engaging base, and means connecting said jaws permitting movement thereof substantially directly toward and away from each other, whereby the jaws may be placed in engagement with a wave of hair and moved toward each other to draw together the ends of the wave.

1,675,840. SKIN PREPARATION. DELLA BRANDON, Oak Park, Ill. Filed Aug. 14, 1924. Serial No. 731,964. 6 Claims. (Cl. 167—9.)



1. A composition adapted to be used externally as a skin treatment consisting of peroxide of hydrogen, yeast and the white of egg.

1,675,841. TOILET CONSTRUCTION. LUTHER E. COHOON, La Grange, Ill. Filed Feb. 12, 1926. Serial No. 87,741. 3 Claims. (Cl. 4—72.)

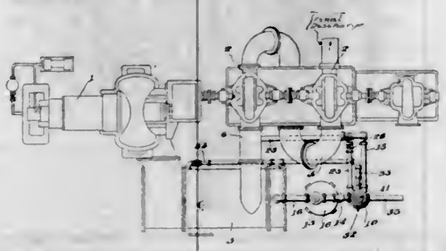


1. A toilet bowl including a bowl body and a hollow rim, having a single chamber therein, said rim having inner and outer side walls and top and bottom walls, there being a set of openings in said bottom wall adjacent the bowl body and a second set of openings in the inner wall of said rim above said first mentioned set of openings, both sets of openings communicating with the single chamber in said rim.

1,675,842. OIL BURNER. GEORGE B. DAHL, Brooklyn, N. Y. Filed Apr. 28, 1927. Serial No. 187,159. 6 Claims. (Cl. 158—67.)

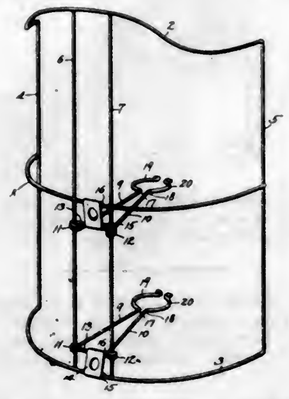
1. An oil burner having a centrally disposed tapered oil well therein, a vaporizer coaxially seated in the well and having a downwardly and outwardly extending oil deflector, and a spreader seated coaxially on the vaporizer, and having an outwardly and upwardly curved wall.

1,675,843. OIL BURNER. GEORGE B. DAHL, Brooklyn, N. Y. Filed July 19, 1927. Serial No. 206,816. 5 Claims. (Cl. 158—67.)



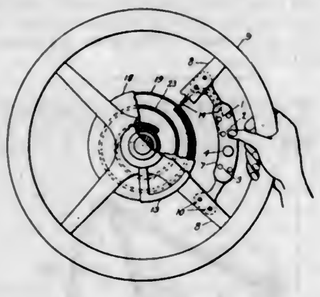
1. In a burner such as described, the combination with the casing, the vaporizer and mixing drum, of a deflecting ring supported on the casing and extending around the drum and beneath the lower part thereof, said ring having its lower and inner part upturned whereby the inflowing air is discharged upwardly into the mixing drum.

1,675,844. WEATHER STRIPPING. WILLIAM J. DENNIS, Chicago, Ill. Filed Oct. 9, 1924. Serial No. 742,588. 4 Claims. (Cl. 20—69.)



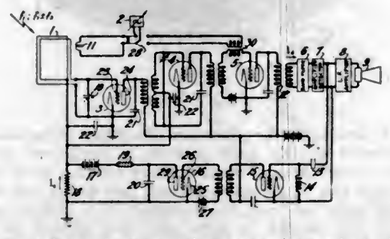
1. A weather stripping of the character described comprising a body portion of yieldable material and a flexible covering enclosing the body, the longitudinal edges of the covering being brought together in contact extended to form an attaching flange, one edge being folded to enclose the other and to provide a plurality of plies, and a single row of stitching securing the plies together adjacent the body, the faces of the plies contacting throughout their area to make the flange relatively rigid.

1,675,845. WATERWORKS AUXILIARY PUMP. OSCAR H. DORER, East Orange, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 23, 1926. Serial No. 150,220. 15 Claims. (Cl. 103—6.)



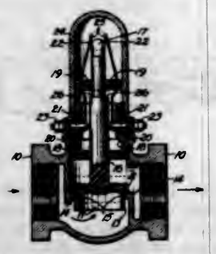
1. The combination with a main pumping unit and a condenser, of a hydraulic vacuum pump for drawing air from the condenser and deriving its operating fluid from the discharge of said main pumping unit, a hydraulic turbine interposed in the connection between the hydraulic pump and main pumping unit and driven by the operating fluid, and a condensate pump for removing condensate from said condenser driven by said hydraulic turbine.

1,675,846. SCREEN FOR TELEPHONES. CHARLES FISCHER, New York, N. Y. Filed Sept. 17, 1924. Serial No. 738,320. 6 Claims. (Cl. 45—105.)



2. A shiftable screen for telephones comprising a wire frame wall having a vertical wire member extending across the front of the frame, said wire frame wall extending in front of and partially around the telephone stand, a wire clamping member and means for attaching the clamping member to said vertical wire, the clamping portions of said member comprising wire arms with loop-shaped normally separated ends which yield so as to open and engage the telephone stand.

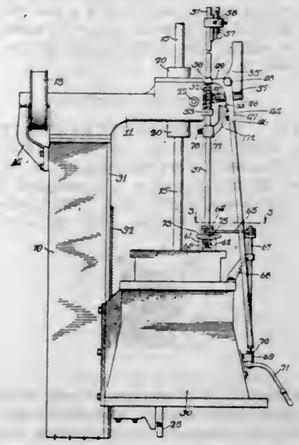
1,675,847. ELECTRIC SWITCH ATTACHMENT. CARL G. FISHER, Port Washington, N. Y. Filed Sept. 30, 1924. Serial No. 740,777. 1 Claim. (Cl. 173—324.)



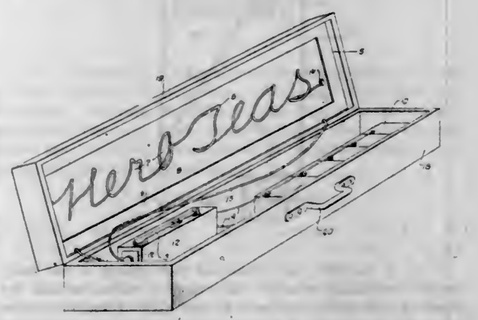
In an electric switch attachment, the combination with a cylindrical housing, of a flexible cable spirally coiled in said housing, the outer wall of said housing extending above said cable, said housing being provided with an aperture for a steering post of an automobile, a bushing extending downward from said housing around said aperture and slidably fitting said post, means to attach said bushing to said post, one end of said cable extending from said housing down through said bushing, a cover for said housing, the outer wall of said cover extending outside of said outer wall of said housing, said cover being provided with an aperture for the hub of a steering wheel, a bushing extending from said cover around said aperture and adapted to fit said hub, means to attach said bushing to said hub, said cover being adapted to rotate with said wheel without touching said housing, the other end of said cable extending through said cover to said hub and to said wheel to electrical switches on said wheel, and means to render said cable resilient inside of said housing.

1,675,848. TRANSMISSION REGULATION. HARALD T. FRIIS, Red Bank, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1924. Serial No. 752,891. 6 Claims. (Cl. 250—2.)

5. In a heterodyne receiving system, a method of controlling the volume of the detected signals which comprises simultaneously amplifying the incoming wave and the heterodyne wave, and controlling the degree of amplification in an inverse manner as the amplitude of the received wave varies.



1,675,849. ALARM AND CONTROL DEVICE. MILES E. FULTZ, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1924. Serial No. 754,640. 3 Claims. (Cl. 200—81.)



3. In a flow alarm device comprising a valve casing, a movable valve member, a conductive head supported by said movable valve member, a plurality of contact points adapted to be bridged by said conductive means, and an air-tight holow dome for enclosing said contact points, a free passage from said valve casing to said hollow dome, the fluid passing through said device being prevented from reaching and engaging said contact members by the air in said air-tight hollow dome.

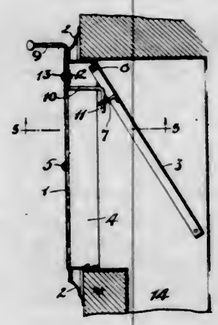
1,675,850. REVERSING MECHANISM FOR DRILLING MACHINES. ROBERT M. GALLOWAY and RAYMOND E. STERLING, Richmond Ind., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Aug. 1, 1923. Serial No. 655,009. 3 Claims. (Cl. 10—137.)

1. A drilling and tapping machine combining a translatable tool-head; a spindle driving shaft carried by said tool-head, a forward and a reverse drive for said shaft; a clutch embodied in each of said drives; a clutch actuator common to both of said clutches; yielding means acting upon said clutch actuator normally to maintain the reverse drive clutch effective; a member moving with said tool-head and acting upon said clutch actuator in opposition to the last named means to cause said clutch actuator to disengage the reverse drive clutch and to engage the forward drive clutch; a latch mechansim, including a spring-pressed bell-crank lever providing a latch plate adapted to engage a shoulder on the clutch actuator, to hold the clutch actuator in position to maintain the forward drive effective; a trip dog movable with the tool-head during its advance and adapted to engage the bell-crank lever and swing it in opposition to the spring pressure thereon to release said latch mechanism, thereby to permit said yielding means to move the clutch actuator to render effective the reverse drive clutch; and a handle attached to said bell-crank to permit manual release of said latch mechanism to effect emergency reversal of the spindle rotating shaft.

1,675,851. ELECTRIC SIGN. STANLEY GATKOWSKI, Chicago, Ill. Filed July 23, 1927. Serial No. 207,970. 3 Claims. (Cl. 40—130.)

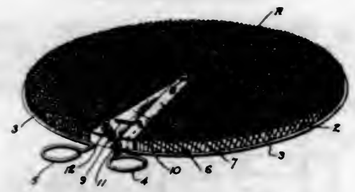
1. A portable electric sign comprising, in combination, a supporting frame; a transparent tube having an electric conducting medium therein; said tube being formed into characters; means for passing an electric current through said tube for illuminating said characters, comprising a source of direct current and means for converting said current into a current of high frequency for causing a flickering illumination of said characters; a carrying case for said sign; said sign being displayed on the inner side of said case lid.

1,675,852. RECORD STOP. EDMUND S. GEER, New York, N. Y. Filed May 29, 1924. Serial No. 716,546. 2 Claims. (Cl. 274—42.)



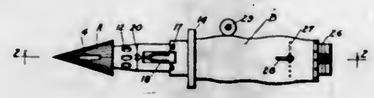
1. A device of the character described, comprising a phonograph record adapted to be used with a tone arm carrying a needle, said record having a slot therein associated with the end of the sound groove of sufficient depth and width to engage the parallel sides of the needle to lock the record in place.

1,675,853. WAVE-ENERGY-TRANSLATING DIAPHRAGM AND METHOD OF MOUNTING SAME. HENRY C. HARRISON, Port Washington, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 30, 1924. Serial No. 729,002. 8 Claims. (Cl. 181—31.)



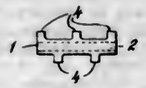
1. In combination, a diaphragm, a ring of soft metal, clamping means between which said diaphragm and ring are clamped, said clamping means having corrugations therein, into which portions of the diaphragm are progressively forced by said soft metal ring to tension the diaphragm.

1,675,854. REGISTER AND VENTILATOR. STANLEY HART, New Britain, Conn., assignor to The Hart & Cooley Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Feb. 10, 1926. Serial No. 87,233. 4 Claims. (Cl. 98—106.)



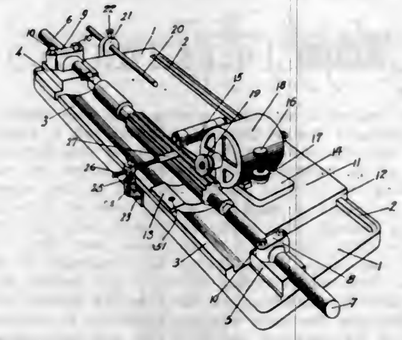
1. In a register, a perforated face plate, a set back border extending around the same, a valve, means for pivoting said valve adjacent to the back of the face plate to swing on either of a plurality of axes, means for operating said valve comprising an axle pivotally mounted on the back of the face plate and projecting through a side of the set back border adjacent to one corner thereof, a handle on the outer end of said valve arranged in one operative position to stand substantially parallel with the border and back of the plane of the outer face of the perforated face plate and wholly within the field of said border, and means of connection between the other end of the axle and said valve, whereby motion of the axle will be transmitted to the valve to operate on either of the pivotal axes of the latter.

1,675,855. COMBINATION STRAINER AND CONTAINER. ELSA S. KOGLER and ALBERT P. KOGLER, San Francisco, Calif. Filed Oct. 12, 1927. Serial No. 225,728. 4 Claims. (Cl. 210—155.)



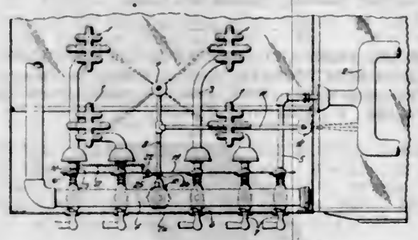
1. A device of the character described comprising a foraminated flexible body portion, a peripheral downwardly turned flange formed thereon adapted to fit over the upper end of a cooking utensil, said flange and body portion being cut from the periphery to a central point in the body portion, a split wire ring secured to the flange, the split portions of the ring terminating at the cut portion of the flange and the split portions of the ring terminating in a pair of handle members, and a latch member carried by one handle and adapted to interlock with the other handle.

1,675,856. SLAUGHTERING DEVICE. EWALD KREFT, St. Louis, Mo., assignor of one-sixth to Richard Hoeller, one-sixth to Fred L. Werner, one-sixth to Ferdinand Schindler, one-sixth to Frank Amishaensel, and one-sixth to Louis Neudecker, St. Louis, Mo. Filed July 15, 1925. Serial No. 43,691. 9 Claims. (Cl. 17—1.)



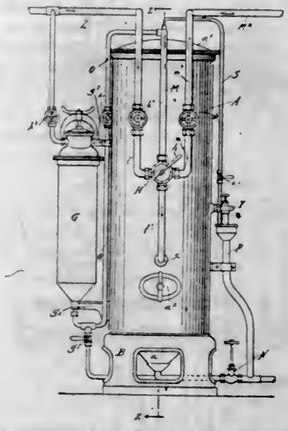
1. An apparatus for slaughtering animals, comprising a vacuum tank, a compressed air tank, a pump arranged intermediate said tanks so as to produce a vacuum in one and compress air into the other, a hollow conduit leading from the compressed air tank and adapted to be connected to a slaughtering tool for delivering air thereto and operating the latter, and a second conduit leading from the vacuum tank and adapted to be connected to the tool for withdrawing liquid therethrough.

1,675,857. WIRE CONNECTER. BENJAMIN LIEBOWITZ, Pennside, Pa. Filed Nov. 11, 1924, Serial No. 749,194. Renewed Nov. 23, 1927. 3 Claims. (Cl. 173—263.)



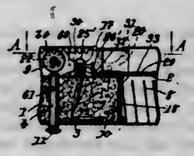
1. A wire connecter comprising a ductile metal block formed with an internal longitudinally extending cavity for receiving a wire, and having integral transversely extending external projections arranged alternately on two of its opposite faces.

1,675,858. REAMER GRINDER. FREDERICK A. LITTER, Columbus, Ohio. Filed Oct. 27, 1926. Serial No. 144,602. 2 Claims. (Cl. 51—48)



1. In reamer grinding apparatus having a base and centering pins for holding the reamer on said base, a carriage slidable longitudinally of said base and in parallelism with a reamer carried by such centering pins, a motor support mounted upon said carriage, a motor mounted upon said support and having its shaft disposed substantially at right angles to a reamer carried by the centering pins and a grinding wheel directly connected to the shaft of said motor to rotate in a longitudinal vertical radial plane of the reamer and grinding in substantial parallelism with the longitudinal axis of the reamer, said motor support having one end pivoted to the carriage to adjust said wheel in said plane, and means for fixing such adjustment.

1,675,859. IGNITION DEVICE FOR GAS BURNERS. CARL E. METHUDY, St. Louis, Mo., assignor, by mesne assignments, to Alvin D. Goldman, St. Louis, Mo. Filed July 23, 1927. Serial No. 207,882. 14 Claims. (Cl. 158—115.)

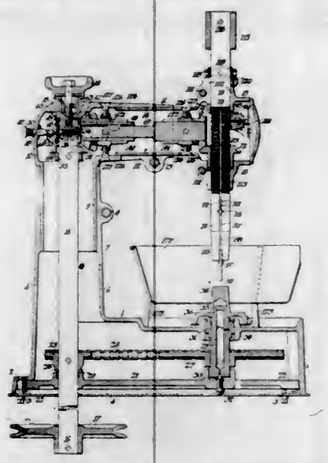


14. An ignition device for gas burners comprising a gas manifold, valves controlling passage of gas from said manifold to said burners, respectively, a flashing pilot light for igniting gas issuing from said burners, a valve controlling passage of gas from said manifold to said pilot light, a longitudinally movable actuator, means in connection with said first-named valves for supporting and guiding said actuator in its longitudinal movements, means under control of said actuator leaving said pilot light valve in position to permit a relatively small amount of gas to pass to said pilot light and operating said pilot light valve to admit an additional amount of gas to said pilot light to cause said pilot light to flash to ignite gas issuing from said burners, means operated by said first-named valves for moving said actuator to cause said pilot light valve to permit gas to pass to said pilot light to flash as aforesaid, and means for restoring said actuator to its initial starting position.

1,675,860. APPARATUS FOR SOFTENING WATER. AUGUST NEUMANN, Reppen, Germany, assignor, by mesne assignments, to The Permutit Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 20, 1923. Serial No. 681,687. 6 Claims. (Cl. 210—24.)

1. A water softening apparatus comprising a casing, a separate loose lying mechanical filter bed of comminuted buoyant material therein, a loose lying zeolite filter bed above said mechanical filter, said zeolite bed resting on a perforated support and means for passing the water to be treated upwardly through said beds.

1,675,861. POCKET LIGHTER. LOUIS AUGUSTE NEVIÈRE, Tours, France, assignor to American Lighter Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1925, Serial No. 76,876, and in Belgium Dec. 22, 1924. 4 Claims. (Cl. 67—7.1.)

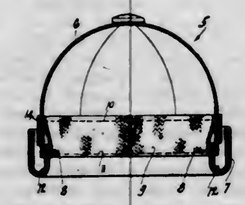


1. An automatic lighter comprising a cartridge having a fuel container and a wick associated with said fuel container, the said cartridge having the exterior thereof provided with air inlets located below the top of said wick and auxiliary concave walls located between the wick and the said cartridge.

1,675,862. SURFACING MECHANISM. ARTHUR E. PAIGE, Philadelphia, Pa. Filed July 16, 1921. Serial No. 485,314. 18 Claims. (Cl. 51—124.)

5. In surfacing mechanism, the combination with a hollow articulated frame, including relatively movable members; of two spindles mounted to rotate in said frame and adapted to carry surfacing tools; the members of said frame being arranged for relative adjustment to present said spindle in different relative angular positions; means carried by said frame arranged to clamp the members thereof in adjusted position; and driving mechanism inclosed by said frame, arranged to connect said spindles in cooperative relation; means arranged to variably spring press one of said spindles toward the work; and adjustable stop mechanism arranged to variably limit the movement of said spring pressed spindle, toward the work, including a collar adjustable longi-

tudinally on said spindle; a screw sleeve encircling said spindle, a spline extending from said frame in engagement with said sleeve, preventing rotation of the latter,

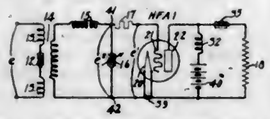


and a nut engaging said sleeve and bearing upon said frame, rotatable to adjust said sleeve toward and away from said frame.

1,675,863. UNLOADING DEVICE FOR SLITTER AND REWINDING MACHINES. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Sept. 4, 1924. Serial No. 735,771. 13 Claims. (Cl. 242—55.)

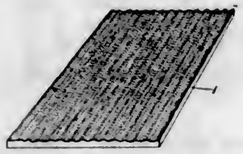
1. A winding and unloading means for a slitting machine, comprising a main frame, a rotatable winding mandrel, a hinged frame in which the mandrel is journaled, and by which it is hingedly connected to the main frame, said hinge having an upright axis positioned to the rear of the axis of the mandrel and its bearing whereby one end of the mandrel may be freed and swung from winding position to an unloading position while the mandrel is supported by the hinged frame, and operating means cooperating with the free end of the mandrel for rotating it when swung into winding position.

1,675,864. CLOTH HAT. LOUIS I. PEKOWSKY, New York, N. Y. Filed Nov. 3, 1927. Serial No. 230,725. 1 Claim. (Cl. 2—197.)



In a cloth hat having an expansible zone at the juncture of the crown and brim, a knitted sweat band secured to the hat at the said zone and an outer hat band secured to the crown and having a fullness therein to permit expansion of the hat at the said zone.

1,675,865. METHOD OF MAKING WOODEN-SOLE SHOES. ERNESTO PEESTROFF, Porto Alegre, Brazil. Filed Aug. 11, 1924, Serial No. 731,517. Renewed Apr. 28, 1928. 1 Claim. (Cl. 36—33.)

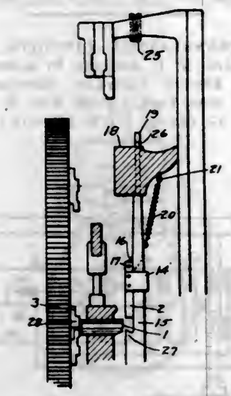


The method of making a wooden soled shoe comprising cutting a flexible piece of material and a wooden board into the outline of the sole of the shoe with the grain of the wood running transversely across the sole, attaching the strip of flexible material to the wooden strip by means of regularly spaced rows of nails extending through the flexible strip part way into the wooden strip, thereafter forming saw cuts from the under side of the wooden strip into proximity to the flexible strip and stopping short of the flexible strip and thereafter attaching an upper to the flexible strip and finishing the shoe, whereby said sole is attached while in its unbroken condition and will subsequently break at the slits into accurately defined transverse strips when in use.

1,675,866. SELECTIVE SIGNALING CIRCUITS. PAUL H. PIERCE, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 13, 1921. Serial No. 484,342. 4 Claims. (Cl. 179—171.)

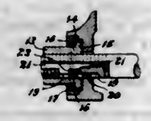
1. A selective receiving circuit comprising a loop tuned circuit, a thermionic amplifier having an input circuit including a heated filament and an impedance control element associated with said loop tuned circuit at two electrically separated points, and means to increase the selectivity of the loop tuned circuit comprising a high resistance to increase the apparent resistance of the input circuit viewed from said two points.

1,675,867. PRODUCTION OF WROUGHT IRON DIRECT FROM ELECTROLYTIC IRON. ROBERT D. PIKE, San Francisco, Calif. Filed June 30, 1924. Serial No. 723,234. 6 Claims. (Cl. 75—48.)



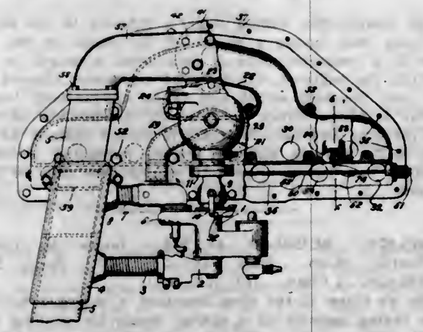
1. As an article of manufacture, wrought iron consisting of substantial laminations of electrolytic iron in cathode sheets, with intermediate laminæ of slag.

1,675,868. AUXILIARY VISE AUTOMATIC. DE WITT C. SCOUGAL, Seattle, Wash. Filed May 23, 1927. Serial No. 193,393. 6 Claims. (Cl. 199—52.)



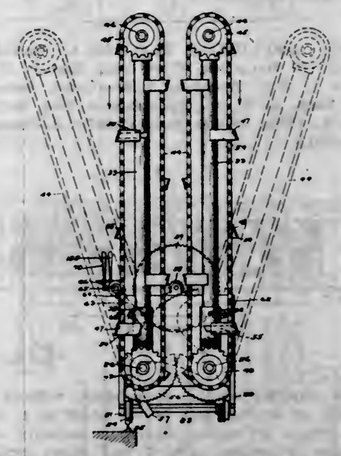
1. In a device of the class described, a split dog, means for resiliently holding the members endwise, said dog being adaptable to replace the vise automatic stop mold disc dog of a casting machine, a clip adaptable to be attached to the mold disc to engage a portion of the said dog, a bar slidable on the vise automatic stop rod, means whereby the said bar will be automatically moved downward to engage another portion of the said dog when the first elevator slide fails to stop at

the correct position, means for resiliently holding the said bar upward and another portion of the said dog adaptable to be engaged by the mold on the said mold



disc so that it will engage the vise automatic stop rod to stop the machine and thereby perform the normal function of the dog.

1,675,869. TIRE-RIM CLAMP. JARVIS E. SMITH and JOSEPH J. HERLBAUER, Jamaica, N. Y. Filed Apr. 8, 1926. Serial No. 100,471. 12 Claims. (Cl. 301—22.)



1. A device of the character described including, in combination, a screw member having a slot thereon with axially extending circumferentially displaced parts, a clamp movable from obstructing position to freeing position, a nut engaging said screw member for tightening said clamp in clamping position, and a lug carried by said clamp and engageable in said circumferentially displaced slot parts for positioning the clamp, respectively, in obstructing position or freeing position.

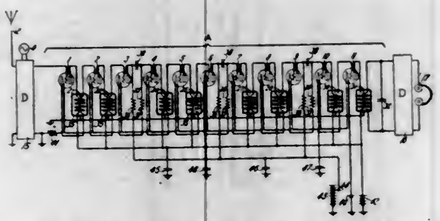
1,675,870. MANIFOLD AND THERMOSTATIC REGULATING DEVICE THEREFOR. WILLIAM E. S. STRONG, New York, N. Y., assignor to William P. Deppé, New York, N. Y. Filed May 18, 1921. Serial No. 470,736. 12 Claims. (Cl. 123—122.)

2. In an internal combustion engine, the combination with an intake manifold, comprising a riser and spreader arms, the ends of said spreader arms merging into a chamber extending transversely of all the intake ports, connecting nipples between said chamber and the respective intake ports, an exhaust manifold surrounding and enclosing said intake manifold and formed with a continuous chamber located below said intake chamber and provided with openings connecting it with the exhaust ports of the engine, said exhaust chamber being provided with an outlet opening leading directly into the exhaust pipe, a member pivotally mounted in said exhaust chamber transversely of the exhaust ports and a thermostat located within said intake chamber and operatively connected with said member for controlling the position thereof to regulate the flow of exhaust gases about the intake manifold in accordance with the temperature of the mixture therein.

1,675,871. ACID-PHOSPHATE HOT-DEN EXCAVATOR. FRANK M. WEVER, Anderson, S. C. Filed Sept. 30, 1926. Serial No. 138,774. 10 Claims. (Cl. 83—6.)

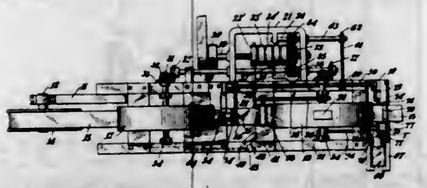
1. A machine for cutting acid phosphate in a den or the like comprising, a carriage, a pair of normally upstanding supports pivotally mounted upon the carriage to be swung outwardly toward the horizontal, endless cutting devices mounted upon the supports, gears connected with the supports and in mesh to cause the supports to swing simultaneously in opposite directions, an operating element connected with one of the supports to turn the same and having a trip pin, driving means to move the operating element, and means automatically actuated by the trip pin to render the driving means inoperative with respect to turning said operating element when the operating element has turned to a selected position.

1,675,872. PERMANENT MAGNET AND METHOD OF MAKING THE SAME. JOHN H. WHITE, Cranford, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed May 8, 1925. Serial No. 28,873. 4 Claims. (Cl. 175—21.)



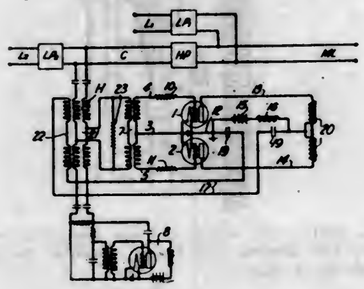
2. The method of making permanent magnets consisting in pouring molten magnet steel into a chilled mold and thereafter magnetizing the casting.

1,675,873. HANDPIECE FOR TOOTH-BORING MACHINES. MARTIN BAUER, Berlin, Germany. Filed Apr. 18, 1927, Serial No. 184,529, and in Germany Sept. 24, 1926. 5 Claims. (Cl. 32—15.)



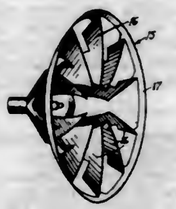
1. A dental hand-piece comprising a body member having a conical outer end portion, a spindle journaled in said body member, and having a conical outer end portion, and a sleeve enclosing the projecting portion of the spindle and conical end portion of the body member and having its bore of conical form at its ends for reception of and engagement with the conical end portions of the body member and spindle, said sleeve having a fastening connection with the body member operative in the fastening and unfastening movements to move the sleeve endwise inward and outward on the body member and spindle.

1,675,874. AMPLIFYING ELECTRICAL VARIATIONS. HAROLD C. BAUMANN, West Long Branch, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 4, 1926. Serial No. 113,607. 3 Claims. (Cl. 179—171.)



1. An amplifier adapted to produce, without singing, high gain at a frequenmy of the order of at least one million cycles per second having a plurality of amplifier stages in tandem, each of said stages including an electric space discharge device having input and output circuits, said amplifier comprising resistance coupling means coupling two of said devices in tandem, and said amplifier comprising means coupling the input circuit of one of said two devices to another of the devices, said last means and circuit having a natural period corresponding to a frequency of the order of at least one million cycles per second, and said amplifier also comprising means coupling the output path of the other of said two devices to the input circuit of another of the devices, said last mentioned means and circuit having a natural period corresponding to a frequency of the order of at least one million cycles per second.

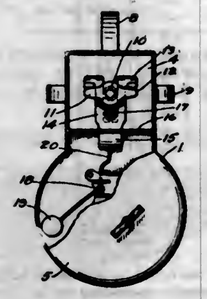
1,675,875. MACHINE FOR CUTTING OFF AND SKIVING STOCK. THOMAS ARTHUR BEANEY, Poughkeepsie, N. Y., assignor to Beaney Rubber Company Inc., New York, N. Y., a Corporation of New York. Filed Mar. 7, 1925. Serial No. 13,777, and in Canada Feb. 23, 1925. 7 Claims. (Cl. 164—77.)



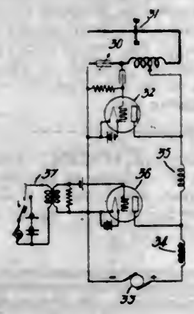
7. In a machine of the class described, means for positioning a strip of stock, a cut-off device comprising a plurality of disc cutters of opposed pitch, means for moving the cut-off device across the stock, and means carried by the moving means for simultaneously rotating the disc cutters.

1,675,876. TRANSLATING CIRCUITS. HAROLD S. BLACK, Newark, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 3, 1925. Serial No. 6,528. 17 Claims. (Cl. 179—15.)

1. An electric system comprising divided input and output circuits, means for supplying different waves to said input circuits, means in said input circuits for combining said waves to produce combination frequency components of the supplied waves, and means in said output circuits offering a high impedance to the unmodified wave components flowing therein, said means offering low impedance to the combination frequency components flowing in said output circuits.



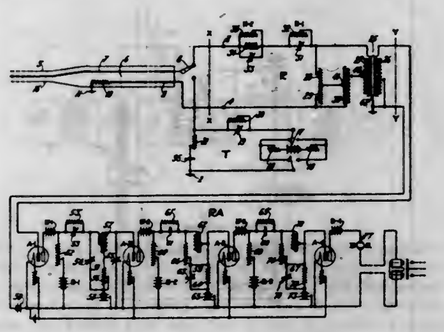
1,675,877. LIGHT. HUGO C. BURDT, Chicago, Ill. Filed May 17, 1926. Serial No. 109,525. 1 Claim. (Cl. 240—48.2.)



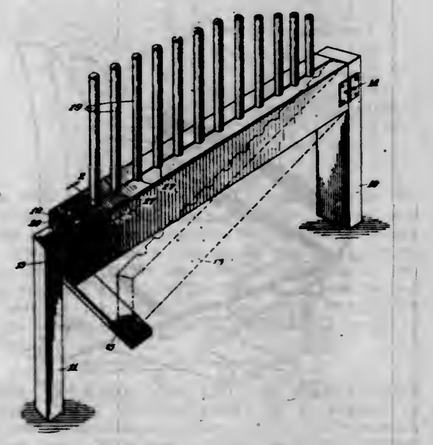
In combination with a light, a reflector in the light, a lamp bulb having a socket at the center of the reflector, a truncated cone of thin metal arranged to lie within the reflector, the apex of said cone adapted to fit over the bulb socket and vanes substantially triangular in shape struck up from an intermediate section of the cone and bent inwardly to extend radially about the bulb, and an annular section remaining at each end of the truncated cone to support the ends of the vanes.

1,675,878. BURGLAR ALARM. JAMES M. CODY, Seattle, Wash. Filed Jan. 24, 1927. Serial No. 163,026. 1 Claim. (Cl. 116—79.)

In an alarm of the class described, a casing, a bell in the casing operable by a spring, means for winding the said spring, a lever slidably and vertically mounted in said casing and positioned to engage said bell clapper to prevent the bell ringing, a horizontal lever passing through a slot in the said vertical lever and adaptable to raise the said vertical lever to release the said bell clapper with either end as either end is raised, said horizontal lever mounted upon a shaft extending through the said casing and adaptable to turn as the said shaft is rotated, and means on the outer end of the said shaft for attaching the said device to a door knob or the like to cause the shaft to rotate with the knob while the casing hangs vertical.



1,675,879. SYSTEM FOR PRODUCING AND TRANSMITTING HIGH-FREQUENCY SOUND ENERGY. IRVING B. CRANDALL, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,618. 5 Claims. (Cl. 179—171.)

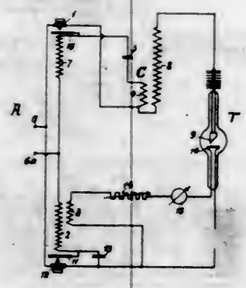


4. An oscillator comprising an electric discharge device having coupled input and output circuits, a condenser sound transmitter associated with said output circuit, means for supplying current in said discharge device, and means for varying said current in accordance with low frequency impulses.

1,675,880. ELECTRIC-CURRENT TRANSMISSION. AUSTEN M. CURTIS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1926. Serial No. 97,875. 10 Claims. (Cl. 178—63.)

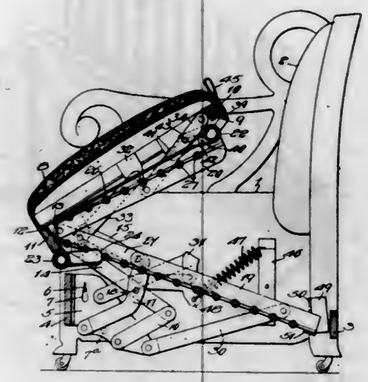
1. In combination, a circuit comprising a resistance and means for producing potential variations across said resistance, a vacuum tube having input electrodes, and a connection for conductively impressing said variations on said electrodes, said connection comprising a series arm including a condenser and a resistance shunted thereabout and a conductive shunt arm having one of its ends connected to said series arm at a point between said condenser and said electrodes, said shunt arm including resistance.

1,675,881. APPARATUS FOR FORMING ROPE MATS. LAWRENCE A. DENNEY, Chicago, Ill. Filed Dec. 6, 1926. Serial No. 152,820. 7 Claims. (Cl. 139—34.)



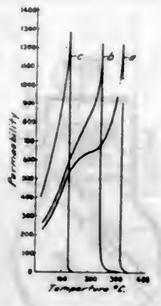
1. Mechanism for use in weaving rope mats comprising a plurality of shed forming bars, and a clamping device arranged to grip the ends of said bars to hold said bars rigidly in spaced parallel relation, said clamping device being releasable to permit removal of said bars therefrom.

1,675,882. HIGH-FREQUENCY CIRCUITS. GERHARD FREIHERR DU PREL, Munich, Germany, assignor to Dr. Du Prel Elektromedizinische Apparate G. m. b. H., Munich, Germany. Original application filed Aug. 11, 1925, Serial No. 49,506, and in Germany Aug. 11, 1924. Divided and this application filed Sept. 17, 1927. Serial No. 220,232. 3 Claims. (Cl. 250—34.)



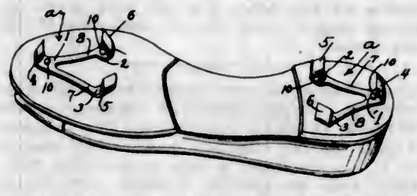
1. A supply circuit comprising a thermionic Roentgen tube, a Tesla transformer for the tube, an interrupter

governing said transformer for controlling the circuit to produce oscillation discharges, a heating transformer, and means for controlling said heating transformer for supplying alternating current of reduced voltage to heat the



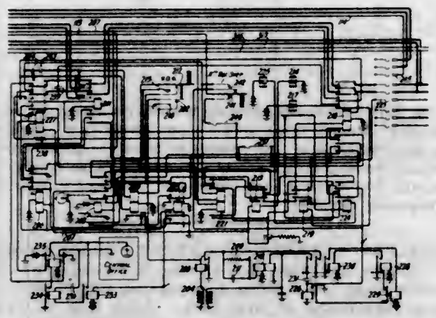
cathode of the tube comprising a second interrupter operating to chop up the current delivered by the heating transformer at a constancy suitable for a cathode heating action.

1,675,883. BED DAVENPORT. DARRELL F. DYKE, Chicago, Ill., assignor to The Seng Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1920. Serial No. 424,113. 7 Claims. (Cl. 5—13.)



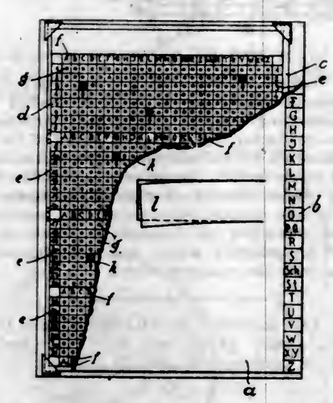
1. In a bed davenport, a frame including a fixed front board, a plurality of foldable bed sections, a supporting plate at each end of the frame behind the front board extending neither above nor below the board immediately at the back thereof but extending rearwardly and downwardly therefrom, links connecting some of the sections to the seat, hinging links pivoted in the downwardly extending plate portion behind and below the front board to swing the seat forwardly and support it adjacent the frame, a holding support for the outer side of the seat when it is inverted, operated by the movement of the outer links which connect one of the sections to the seat, and other links also pivoted in the downwardly extending plate portion for swingingly mounting the rear bed section in the frame, the plates constituting the sole support in the frame for the seat and the bed sections.

1,675,884. MAGNETIC MATERIAL. GUSTAF W. ELMEN, Leonia, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,450. 13 Claims. (Cl. 175—21.)



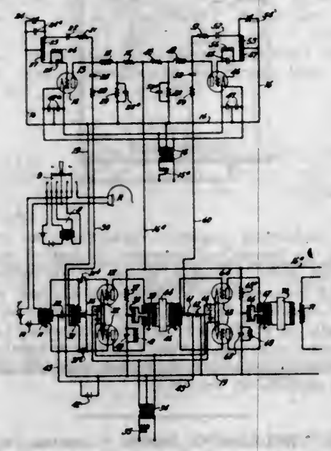
1. A magnetic material comprising nickle and copper and having a higher permeability at low magnetizing forces than iron.

1,675,885. NONCLOGGING BASEBALL-SHOE SPIKE. RAYMOND E. FRENCH, Los Angeles, Calif. Filed Feb. 1, 1927. Serial No. 165,130. 2 Claims. (Cl. 36—59.)



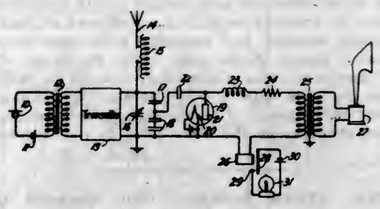
1. A spike attachment for shoes, constructed as a unit of metal and comprising three perforated feet having plane faces for bearing against the tread member of a shoe; calk-blades formed as marginal extensions from the feet respectively, and a relatively slender connecting limb extending from one of the feet to each of the remaining feet, whereby to provide comfort to the wearer and to minimize breaking of the sole over the spike attachment between said remaining feet.

1,675,886. TELEPHONE SYSTEM. ALFRED E. HAGUE, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 8, 1927. Serial No. 159,760. 16 Claims. (Cl. 179—27.)



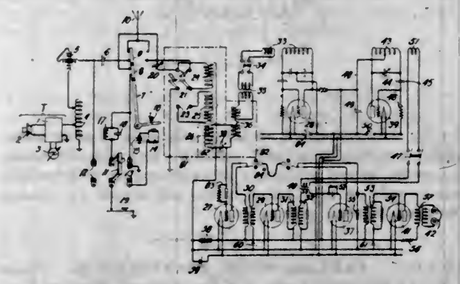
2. In a telephone system, a local exchange, a distant exchange, telephone lines terminating in the local exchange, trunk lines extending between said exchanges, an automatic switch, means for associating a calling telephone line with said switch, means for associating a trunk line with said switch, means at said local exchange for supplying talking current to calling and called lines, means for disconnecting said supply means, a relay operable when said switch is associated with a calling telephone line to render said disconnecting means ineffective and means for preventing the operation of said relay when said switch is associated with a trunk line to render said disconnecting means effective.

1,675,887. DAYBOOK. HANS HAMMER, Munich, Germany. Filed July 16, 1927, Serial No. 206,212, and in Germany Oct. 22, 1926. 3 Claims. (Cl. 129—15.)



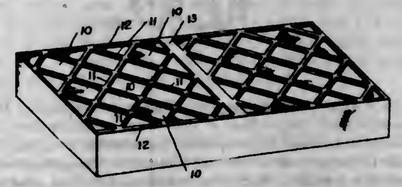
1. A day-book, comprising in combination with a file having index-sheets, a marking-device subdivided into squares designated by figures and letters, and markers adapted to be fixed on the squares which correspond to certain dates and to certain letters filed under the corresponding letter in the book or file.

1,675,888. RADIOTRANSMISSION. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1924. Serial No. 700,386. 7 Claims. (Cl. 250—6.)



6. The method of transmitting speech by electric waves which comprises modulating a carrier wave in accordance with speech, suppressing the carrier wave and one side band and partially suppressing the waves of the other side band corresponding to the lower speech tones.

1,675,889. ELECTRIC WAVE SIGNALING SYSTEM. ARTHUR W. KISHPAUGH, East Orange, N. J., assignor by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 28, 1925. Serial No. 26,334. 8 Claims. (Cl. 250—17.)

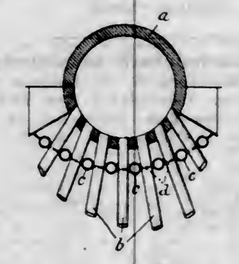


1. A monitoring system for modulated high frequency waves comprising a signal pick-up means for the waves, one device supplied by said pick-up device for indicating the presence of the waves and another device for indicating the presence of and the nature and effectiveness of the signaling varintions therein.

1,675,890. HIGH-FREQUENCY TRANSMISSION. JOHN C. GABRIEL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,299. 5 Claims. (Cl. 250—9.)

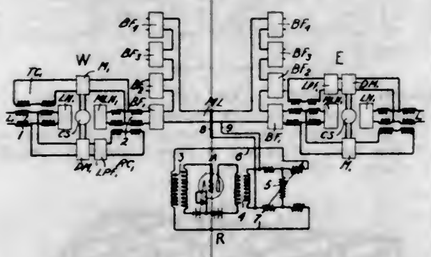
4. A radio receiver for use with a transmitter for duplex radio communication by combining incoming and outgoing carrier waves to produce intermediate frequency waves which comprises a cord circuit and jacks for bypassing detected waves around the intermediate frequency selecting and detecting circuits, in combination with switches for cutting the transmitter circuit off from the antenna and connecting the receiving circuit to the antenna.

1,675,891. DOMINO AND ART OF MAKING THE SAME. TOM C. GRAHAM, Albany, N. Y., assignor to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed Nov. 9, 1926. Serial No. 147,234. 7 Claims. (Cl. 273—137.)



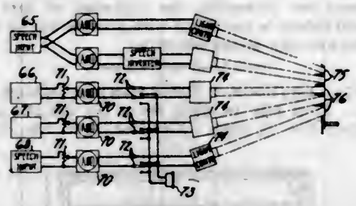
1. In the art of making dominoes, the improvement comprising shaping the dominoes and providing each with pip-areas in numbers suitable for dominoes of high denominations and separated from each other by intervening spaces of the same color as but different elevation

from the pip-areaa themselves, and coloring different numbers of pip-areas on the several dominoes to provide the desired denominations, dominoes contrastively to the other pip-areas of lower denominations being left with one or more pip-areas of the same color as the intervening spaces.



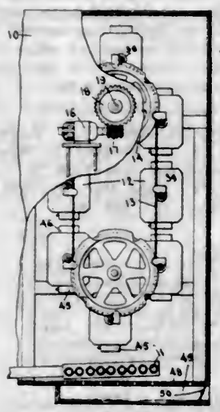
6. A set of dominoes each having on its face recessed pip-areas in numbers suitable for dominoes of high denomination, bounded and separated from each other by intervening spaces of the same color, the areas of different dominoes being distinctively colored in different numbers to form pips of the different denominational numbers, each domino of lower denomination having one or more pip-areas of the same color as the intervening spaces.

1,675,892. STEAM BOILER. OTTO HERMANN HARTMANN and EDUARD BLEITNER, Kassel-Wilhelmshohe, Germany, assignors to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Kassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed June 15, 1923, Serial No. 645,500, and in Germany June 28, 1922. 3 Claims. (Cl. 122—235.)



1. In a steam boiler, a water container, spaced water tubes extending from said container and communicating therewith, spaced protective tubes extending between and transversely of said water tubes, and means for closing the gaps between said tubes.

1,675,893. CARRIER-WAVE TRANSMISSION. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 17, 1923. Serial No. 652,031. 10 Claims. (Cl. 179—15.)



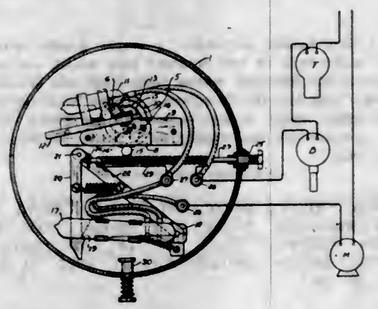
1. In a signaling system including a transmission line, the method of employing a one way repeater for two way operation which comprises impressing part of the amplified energy upon the transmission line, impressing the energy received from the transmission line and another part of the amplified energy on the input of the repeater to control the amplification of the received energy, and attenuating the energy impressed on the input sufficiently to prevent singing while amplifying the received energy.

1,675,894. METHOD AND APPARATUS FOR RECORDING AND REPRODUCING SOUND. CHARLES D. LINDRIDGE, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1924. Serial No. 721,360. 29 Claims. (Cl. 179—100.1.)

23. The method of recording and reproducing sound, which comprises producing waves corresponding to the sound, modulating a carrier wave in accordance with said waves, producing a photographic record of the modulated components in the resulting waves, simultaneously producing a photographic record of the unmodulated first mentioned waves, separating reproducing waves corresponding to said records, demodulating the resulting carrier waves, combining the demodulated waves with the reproduced unmodulated waves, and producing sound in accordance with the combined waves.

1,675,895. INCUBATING APPARATUS. JAMES H. LORD, Methuen, Mass. Filed June 28, 1923. Serial No. 648,204. 8 Claims. (Cl. 119—35.)

1. An incubating apparatus comprising an enclosure providing an incubating chamber, a pair of conveyers in parallel, each making a closed circuit between the upper and lower parts of said chamber, pivot rods carried by said conveyers, and egg carriers mounted on said pivot rods, each adapted to rotate thereon to invert its comtained eggs and having shiftable weighting means to cause it to be stably suspended from its pivot rod in either position of inversion.

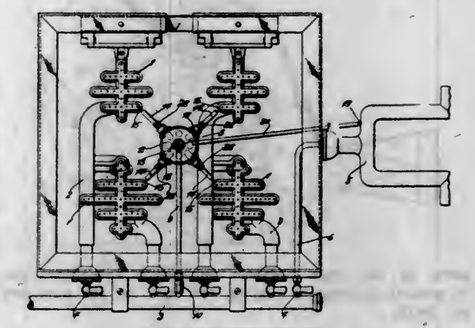


1,675,896. RELEASING HOOK. ARTHUR W. LYDA, North Canton, Ohio. Filed Aug. 12, 1927. Serial No. 212,484. 2 Claims. (Cl. 294—84.)

1. A releasing hook including a plate for connection with a supporting member, a hook member pivotally connected with the plate, a lever normally holding the hook member in locked supporting position, a plunger connected to the lever and provided with a foot and arranged to be engaged by a member sustained by the hook member,

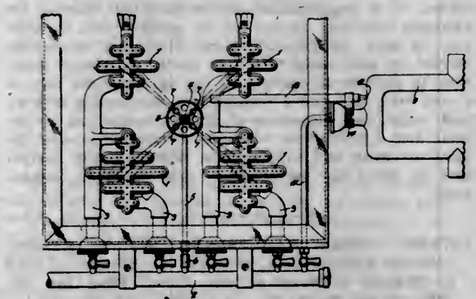
and spring means for moving the lever out of engagement with the hook member when the pull upon the sustained member is released.

1,675,897. SAFETY ELECTRIC CONTROL DEVICE. IRA E. MCCABE, Chicago, Ill. Filed June 4, 1925. Serial 34,794. 11 Claims. (Cl. 200—122.)



1. A safety electrical control device including a thermostatically controlled electric switch, an additional switch normally in circuit between said first switch and the main circuit, and a time element between the poles of the first switch completing the main circuit to the second switch for breaking the circuit through the second switch, whereby the closing of the main circuit when the first switch is in open position will, upon failure of thermostatically controlled switch to close within a predetermined time, break the main circuit through the second switch.

1,675,898. HOUSING FOR LIGHT-ACTUATED SWITCHES. IRA E. MCCABE, Chicago, Ill. Filed Jan. 10, 1927. Serial No. 160,164. 5 Claims. (Cl. 158—42.4.)

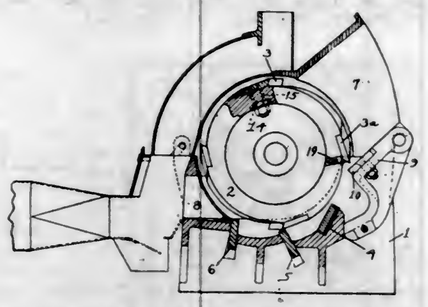


1. In a housing for a light actuated electric switch, means for mounting said switch and supporting it within the housing, means for rotating said switch mounting to place said switch in an inoperative position, and means for securing said housing with said switch in operative position co-acting with said latter means.

1,675,899. AUTOMATIC IGNITER FOR GAS STOVES AND THE LIKE. CARL E. METHUDY, St. Louis, Mo., assignor, by mesne assignments, to Alvin D. Goldman, St. Louis, Mo. Filed July 21, 1927. Serial No. 207,391. 9 Claims. (Cl. 158—115.)

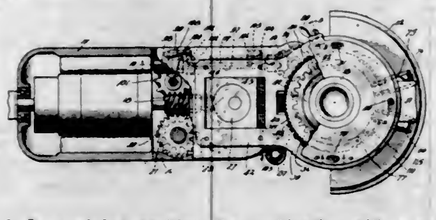
7. An automatic igniter for a gas burner having gas jet-forming openings through one wall, and having a gas outlet through another wall at an angle to said openings, comprising a casing for confining a body of combustible gas, a pilot light burner in said casing, and means for conducting gas from said outlet to said casing for ignition by said pilot light burner and for discharging the pressure of combustion and the combustion flame in a plane parallel with the wall of said first named burner having jet-forming openings.

1,675,900. OVEN LIGHTER FOR GAS STOVES. CARL E. METHUDY, St. Louis, Mo., assignor, by mesne assignments, to Alvin D. Goldman, St. Louis, Mo. Filed Aug. 20, 1927. Serial No. 214,233. 6 Claims. (Cl. 158—115.)



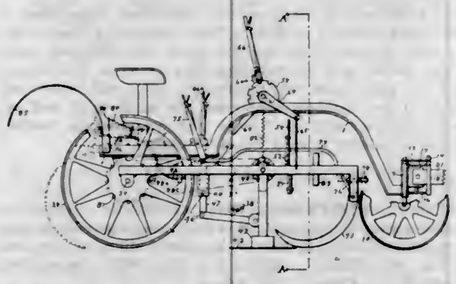
2. A device of the character described comprising a pilot light adapted to flash a flame outwardly therefrom, a burner spaced from the pilot light and provided with a gas outlet, and a tube supported between the burner and the pilot light and having an open end below the plane of the flame issuing from the pilot light and an open end arranged to receive and conduct gas issuing from the burner toward the pilot light.

1,675,901. DISINTEGRATING MACHINE. PHILIP S. MITTS and WILLIAM J. WINSTON, Saginaw, Mich., assignors to Mitts & Merrill, Saginaw, Mich., a Corporation of Michigan. Filed Feb. 26, 1925. Serial No. 11,873. 1 Claim. (Cl. 83—6.)



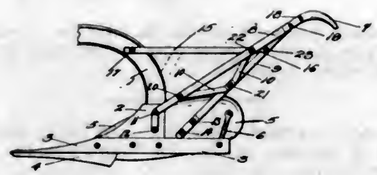
In a machine of the character described, a revolving drum having flat straight-edged knives on the peripheral face thereof extending angularly across the drum, suc-

cessive knives having opposite angular inclinations with respect to the axis of the drum, each knife having a straight-edged material-beating face, those peripheral



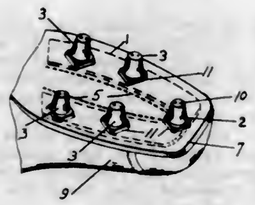
parts of the drum between successive knives warped to present alternately sloping surfaces, for the purposes set forth.

1,675,902. MINING AND LOADING APPARATUS. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Oct. 24, 1921, Serial No. 509,981. Renewed Nov. 28, 1927. 20 Claims. (Cl. 262—5.)



1. In a mining machine, the combination with a main frame, of a supplemental frame mounted thereon for swinging relatively thereto on an upright axis, a radial arm on said supplesental frame, dislodging mechanism carried by said radial arm for bodily movement therewith in position to operate on the upright solid face of a coal vein, and power transmission mechanism between said main and supplemental frames comprising a circular and a multiplicty of pawls distributed around the same to swing said supplemental frame on said upright axis to effect the operation of said dislodging mechanism.

1,675,903. BEAN HARVESTER. ROY E. MURPHY, Colorado Springs, Colo., assignor of one-third to Fred E. Mefford, Colorado Springs, Colo. Filed Jan. 30, 1926. Serial No. 84,891. 6 Claims. (Cl. 55—107.)

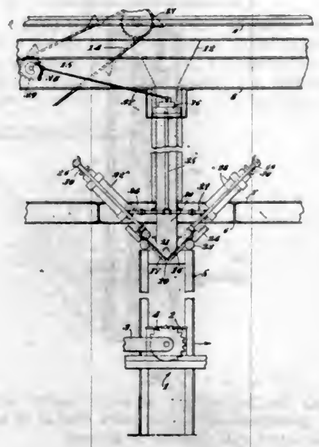


1. In a bean harvester, the combination of a rigid frame; drive shafts journalled at the rear of said rigid frame, each shaft carrying a traction wheel keyed thereon; front axles and wheels mounted at the front of said rigid frame; a frame having a transversely disposed actuating shaft journalled therein, pivotally mounted on each drive shaft; driving means for said actuating shafts; a vertically disposed housing, having a vertically disposed shaft journalled therein, pivotally mounted on each actuating shaft, and actuating gears for said vertically disposed shafts.

1,675,904. PLOWHANDLE. SATURNINO GARCIA NAVARRO, Habana, Cuba. Original application filed Dec. 27, 1924, Serial No. 758,393. Divided and this application filed Mar. 1, 1927. Serial No. 171,802. 1 Claim. (Cl. 97—191.)

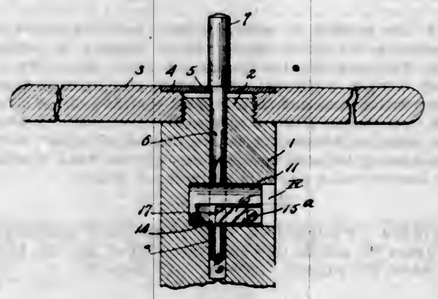
In a plow-handle structure, a single handle attached to the upper ends of two straight rods which are united by an angular link and whose lower ends are secured to the lower portion of the plow-standard and the moldboard, while their upper ends are connected to the upper portion of the standard by two parallel horizontal rods.

1,675,905. SPORT BOOT AND SHOE. KEITH SALAMON NETTHEIM, Manly, near Sydney, New South Wales, Australia. Filed Apr. 13, 1926, Serial No. 101,683, and in Australia July 17, 1925. 1 Claim. (Cl. 36—59.)



A sport shoe comprising inner and outer soles, a reinforcing thin U-shaped penetrable metal plate interposed between said soles, a U-shaped reinforcing row of stitching in said soles and disposed closely adjacent the inner contour of the plate studs carried by the plate and projecting from the outer sole, and nails for attaching the said studs to the plate, the said nails being driven thru the studs, the outer sole and plate turned over within the inner sole whereby they are prevented from repassing thru said plate.

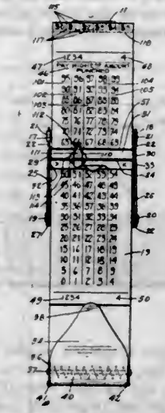
1,675,906. METHOD OF AND MEANS FOR FORMING AND DELIVERING CHARGES OF FICTILE MATERIAL. ABRAM A. OEFFNER, Mount Union, Pa., assignor to The Harbison-Walker Refractories Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1926. Serial No. 157,224. 15 Claims. (Cl. 25—103.)



3. Apparatus of the class described comprising a hopper, means for dropping a charge of material from a substantial height onto the bottom of the hopper,

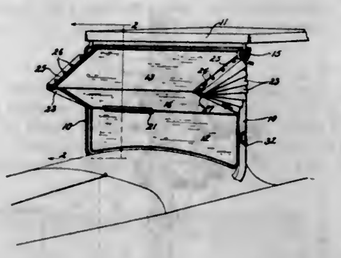
means for supporting a mold vertically below the hopper at such a distance that a charge falling from the hopper will acquire sufficient momentum to cause it com-

pletely to fill the mold, and means for suddenly opening the hopper to permit the entire charge to fall therefrom in the form of a dense swarm of discrete particles into a mold carried by said supporting means.



1,675,907. JACK SPOOL. CARL P. PARK, Lewiston, Me., assignor to U. S. Bobbin & Shuttle Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 5, 1926. Serial No. 146,362. 5 Claims. (Cl. 242—124.)

1. A spool of the class described comprising a head and a barrel, and means for fastening the head upon the barrel comprising cooperating screw-threaded portions within the barrel, and means within the barrel normally operative automatically to lock the screw-thresded portions against loosening as the head is brought into tighter engagement with the barrel.

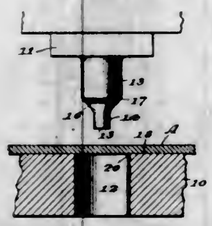


1,675,908. SALES-CHECK SYSTEM. CHARLES T. RASCHICK, St. Paul, Minn. Filed Jan. 5, 1922. Serial No. 527,182. 3 Claims. (Cl. 33—198.)

1. A check severing device comprising an elongated support adapted to extend longitudinally of the checks, a plate like member slidably mounted upon the rear of the said support, said plate like member having ears formed at the corners thereof extending upwardly along the edges of said support, a spring member secured to the ears of said plate like member and having a portion positioned transversely across said support, a cutter hingedly connected to said transverse portion and a

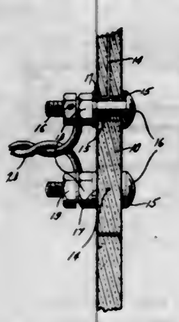
notching device slidably mounted upon said transverse portion having a cutting edge extending outwardly beyond said cutter.

1,675,909. WINDSHIELD. ANDREW L. RIKER, Fairfield, Conn. Filed Feb. 3, 1923, Serial No. 616,716. Renewed May 7, 1928. 5 Claims. (Cl. 296—95.)



1. In combination with a vehicle, a shield member associated with the forward portion of the vehicle and extending forwardly of the vehicle and downwardly at an acute angle with respect to the vertical, a vision member associated with the vehicle and shield member and extending forwardly of the vehicle and upwardly at an acute angle with respect to the horizontal, the vision member being adapted to completely fill the space between the vehicle and shield member in any of several positions of adjustment, and side protecting devices associated with the shield member, vision member and vehicle, said side protecting devices being adapted to allow relative adjustment of the vision member and shield member.

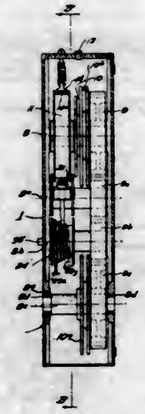
1,675,910. TOOL FOR DRAWING TUBULAR BOSSES. ANDREW L. RIKER, Fairfield, Conn. Filed Feb. 19, 1926. Serial No. 89,345. Renewed May 7, 1928. 3 Claims. (Cl. 113—42.)



1. A tool comprising a female member adapted to have placed thereon a strip of metal from which a tubular boss is to be struck, and a male member having an end portion adapted to provide a drawing and piercing element and an annular shoulder extending outwardly of said element and away from said female member, the outer end of said end portion being at an angle slightly less than 90° to

said drawing and piercing element, and the opening in said female member being of diameter greater than the largest diameter of said annular shoulder and including a circular bending edge, said element and edge being adapted to cooperate to cause metal to define a tubular boss to be displaced from the plane of said strip into the opening of said female member, said element being

adapted to pierce said displaced metal, and said annular shoulder and said edge being adapted to cooperate to complete the shaping of the tubular boss after the piercing is accomplished by further displacing and expanding the metal for the boss and within the opening of the female member to enlarge the opening in said metal defined by said element.

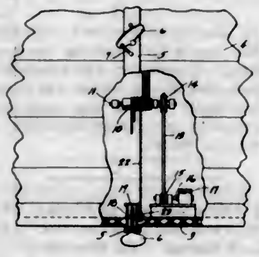


1,675,911. WINDSHIELD HEATER. FLOYD E. ROBERTS, Melbourne, Iowa. Filed Feb. 1, 1926. Serial No. 85,193. 2 Claims. (Cl. 173—259.)

1. In combination with a sheet of glass or the like having an opening formed therein and a wire imbedded in the glass with one end extending into said opening, an electrical connection comprising a soft metal bushing of the same diameter as the opening, said bushing being forced into said opening whereby the extending end of the wire in said opening is imbedded in said bushing and means for connecting a source of electric current to said bushing.

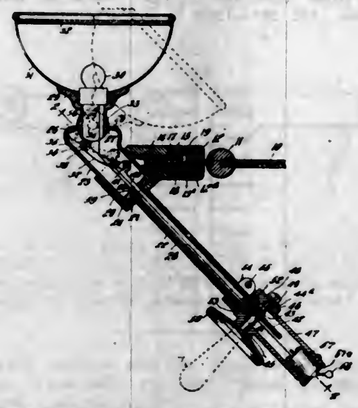
1,675,912. YIELDABLE BARRIER. EMERSON D. SAWYER, Chicago, Ill. Filed July 31, 1926. Serial No. 126,280. 3 Claims. (Cl. 39—1.)

2. In a device of the class described comprising a pair of columns and a barrier net supported therebetween, a counterweighted carriage adapted to move vertically within each column, each carriage supporting reserve cables, said reserve cables being connected to said barrier net and terminating within said carriage, automatically tightening braking devices associated with each carriage for initially slowing down and finally stopping the payment out of said reserve cables when said barrier net is struck by a moving vehicle, means for the prevention of the freezing together of brake band and brake drum, parts of the said braking devices, when those parts are in con-



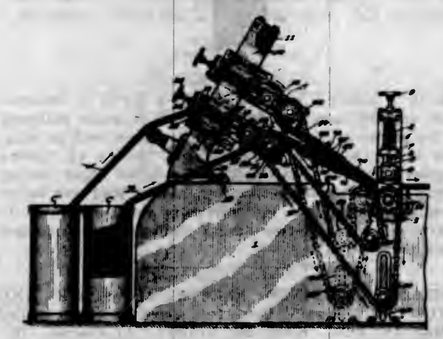
tact during the paying out of said reserve cables, and manually operatable means for quick release of said braking devices after said vehicle is stopped.

1,675,913. METHOD OF MAKING EYELETS. EDWARD L. SIBLEY, Bennington, Vt. Original application filed Dec. 19, 1925, Serial No. 76,525. Divided and this application filed May 5, 1926. Serial No. 106,975. 3 Claims. (Cl. 113—40.)



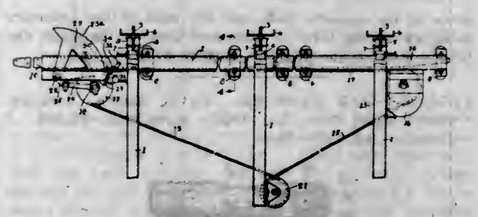
1. The method of making eyelets having a series of longitudinally slitted fingers, which consists in slitting the stock and forming the fingers about such slits, so that there is a slit extending lengthwise in each finger between its ends, and then forming the thus slitted blank cut from the stock into a collapsible eyelet, whereby when the eyelet is collapsed or set the fingers will divide along the lines of the slits and produce twice as many heading or flange-forming elements as there are fingers.

1,675,914. PROPELLER FOR DIRIGIBLE AIRSHIPS. JESSE W. SILVER, Tacoma, Wash. Filed Apr. 17, 1926. Serial No. 102,697. 1 Claim. (Cl. 244—6.)



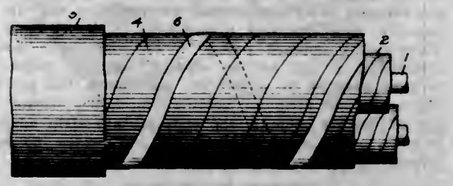
In a ship of the character described, a raceway fixed about the body of the ship, anti-friction members carried by the raceway, a ring revoluble about the body of the ship on the anti-friction members an internally toothed ring gear fixed within the ring, propeller fins fixed to the ring, a plurality of circumferentially spaced driving gears mounted within the body of the ship and engaging the ring gear and a driven means located centrally of the ship operatively connected with all of said gears.

1,675,915. DIRIGIBLY-MOUNTED LIGHT. CLIFFORD SKLAREK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1921, Serial No. 464,069. Renewed Oct. 7, 1927. 4 Claims. (Cl. 240—61.)



2. In a dirigible light mounting, the combination with a support adapted to be rigidly secured to a relatively stationary element, said support comprising an axially rotatably adjustable part adapted to be clamped in fixed relation to the other part; of a carrier having an opening therethrough, said carrier being oscillatably mounted on said adjustable part of said support to turn about a substantially horizontally extending axis; a hollow extension rigid with said carrier and extending therefrom to one side of said support and through which oscillation of said member is adapted to be effected; a lamp holder pivotally mounted on said carrier on the opposite side of the support and arranged to oscillate about an axis extending at right angles to the first named axis; means operatively associated with said lamp holder and including an element extending through said hollow extension to the free end of the latter; and manually operable means, located at the free end of said hollow extension, for actuating said first named means and for turning said rigid extension.

1,675,916. METHOD OF AND MACHINE FOR BLENDING FIBERS. JOHN R. STEWART, Rydal, Pa. Filed Mar. 7, 1927. Serial No. 173,227. 15 Claims. (Cl. 19—145.)

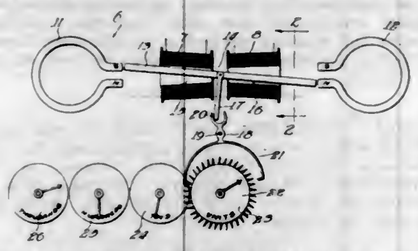


1. The method of blending fibers of different characteristics when formed in separate continuous slivers into a continuous composite sliver adapted to be formed into a top, which comprises the steps of mechanically feeding the different kinds of slivers separately but progressively in the same direction, bringing the moving slivers into intimate contact with each other, and then selectively arresting and resuming the feed of predetermined slivers for definite periods while continuing the feed of the other slivers.

1,675,917. AUTOMATIC ROPE TAKE-UP FOR LEVELER BARS. IVOR D. THOMAS, Palmyra, and PAUL H. DOUGLAS, Cleveland Heights, Ohio, assignors to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1926. Serial No. 90,938. 10 Claims. (Cl. 214—23.)

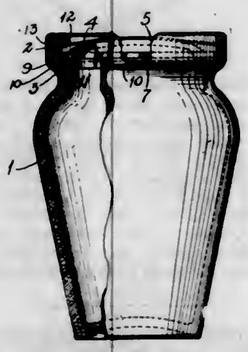
1. In a device of the character described, a reciprocating member, a supporting frame having a guideway for said member, sheaves adjacent opposite ends of said guideway, a winding drum, operating cables, each attached at one end to said member, extending over one of the sheaves and attached at the opposit eend to said drum, a movable support for one of said sheaves, means for taking up slack in the cables comprising a counterweighted lever pivoted to the frame and connected to said movable sheave support, and means engageable with said lever to hold the same in adjusted positions.

1,675,918. HIGH-TENSION CABLE. RALPH W. ATKINSON and GEORGE J. SHUBTS, Perth Amboy, N. J., assignors, by mesne assignments, to General Cable Corporation, a Corporation of New Jersey. Filed May 9, 1923. Serial No. 637,698. 2 Claims. (Cl. 173—264.)



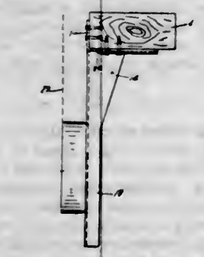
1. A multiple-conductor electrical cable of maximum carrying capacity and minimum diameter, including in its structure a cable body formed of a plurality of insulated conductors eccentrically assembled within a lead sheath, means for preventing separation of the conductors, such means consisting of a band of metal surrounding the body of assembled conductors and extending at an angle to the length of the cable body exceeding fifteen degrees, the sheath enveloping such banded cable body.

1,675,919. METER-OPERATING MEANS. GARRISON BABCOCK, Everett, Wash. Filed June 11, 1921. Serial No. 476,712. 3 Claims. (Cl. 175—339.)



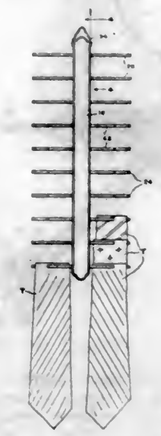
1. In combination, a permanent magnet having its poles brought relatively close together, a second permanent magnet having its poles brought relatively close together and facing opposite poles of said first magnet, and an armature pivoted between said magnets and adapted to swing from one diagonal position to another

diagonal position in line with unlike poles of said magnets, said armature being of a length less than the distance between said magnets and free of the magnet



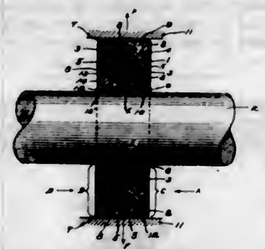
poles at its opposite ends and the ends of the armature being swingable through distances greater than the distances between the adjacent magnet poles.

1,675,920. JAR CLOSURE. DAVID BLOOM, Berkeley, Calif. Filed Nov. 17, 1925. Serial No. 69,599. 2 Claims. (Cl. 215—31.)



1. In combination a jar and a closure therefor, the jar having a relatively deep rim around the opening in the same, opposed open notches on said rim, recesses in the circumference of the rim commencing at the open notches and extending around the inside of the rim in opposite directions and terminating in closed ends at diametrically opposed points in the rim; said closure comprising a cap having opposed laterally projecting tongues adapted to occupy the notches in the jar rim and a resilient strip for holding the closure within the rim of the jar opening, the ends of said strip adapted to slide in the recesses in the rim and engage the same through the opposed open slots in the rim.

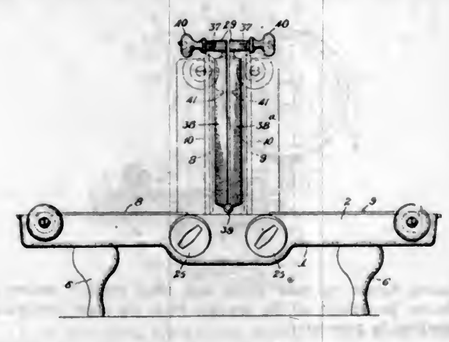
1,675,921. MEANS FOR MOUNTING ELECTRICAL FITTINGS. STEPHEN N. BUCHANAN, New York, N. Y., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 6, 1927. Serial No. 159,439. 12 Claims. (Cl. 247—21.)



1. Means for mounting an electrical fitting comprising; a bracket and an arm adjustably carried on the bracket, said bracket having a part for attaching to a support and another part consisting of two side members and a tongue spaced between the side members, said arm having portions passing through the spaces on both sides of the tongue and terminating in flanges overlying said side members, said arm further being provided with means for longitudinally adjustably mounting said fitting thereon.

1,675,922. NECKTIE RACK. ISAAC E. BURT, Minneapolis, Minn. Filed Jan. 11, 1927. Serial No. 160,393. 3 Claims. (Cl. 211—120.)

1. A necktie rack comprising a front casing member having a plurality of notches, a rear casing member having a plurality of corresponding notches terminating in longitudinal slots, and pairs of necktie supporting arms held in said notches and slots when said casing members are telescoped with each other.

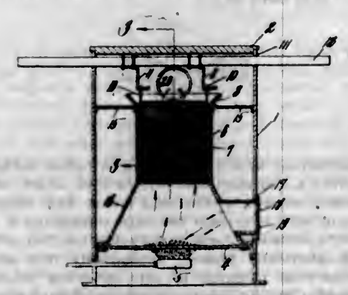


1,675,923. PACKING. ARTHUR W. CHESTERTON, Brookline, Mass. Filed Dec. 4, 1924, Serial No. 753,863. Renewed May 8, 1928. 4 Claims. (Cl. 154—45.5.)

3. In a packing, in combination, a series of substantially parallel layers of sheet material arranged obliquely to the planes of forces tending to compress said packing, said layers being in integral pairs formed by folding lengthwise of the packing, with the folded edges thereof forming the faces of the body of said packing, the layers forming each of said integral pairs being separated to receive one layer of two similar but oppositely arranged pairs of layers.

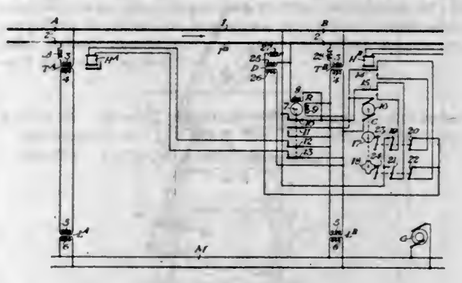
1,675,924. COMBINED ELECTRICAL STOVE AND TOASTER. EARL V. COULSTON, Cleveland, Ohio. Filed Mar. 16, 1927. Serial No. 175,677. 11 Claims. (Cl. 53—5.)

1. A combined electric cooking stove and grill comprising, a supporting frame, and a pair of hot plates pivotally mounted thereon, the pivotal points being spaced apart and disposed below the plane of the upper surfaces of the plates and adjacent to the opposed ends of the



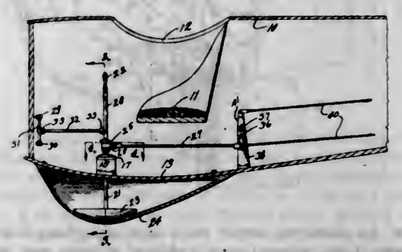
latter, said hot plates being adapted to lie horizontally for general cooking purposes or to be moved to opposed spaced relation in vertical planes to heat an object simultaneously on opposite sides with direct radiant heat.

1,675,925. TIMER BRUSH. CHARLES DAY, Fort Smith, Ark. Filed Sept. 28, 1927. Serial No. 222,472. 1 Claim. (Cl. 200—26.)



A timer brush assembly comprising a holder, brush holding brackets extended from the holder in spaced relation, the said brackets having circular brush bearings formed therein, a brush element mounted on the said brackets, the same including a flat spring and small, cylindrical twin brushes rigidly mounted at the ends of the spring, one of the said brushes engaging the said bearings of the brush holding brackets.

1,675,926. METHOD OF TREATING ARTICLES BEING GALVANIZED. THEODORE A. DISSEL, Winchester, Mass., assignor to Cameron Appliance Company, Everett, Mass., a Corporation of Massachusetts. Filed Dec. 23, 1925. Serial No. 77,260. 6 Claims. (Cl. 91—70.2.)

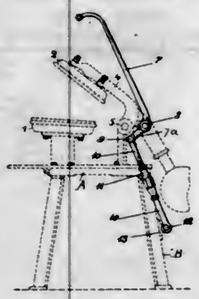


1. Those steps in the process of galvanizing articles which comprise vaporizing a flux, and passing the vapor through a mass of the hot zinc coated articles.

1,675,927. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. CHARLES W. FAILOR, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 6, 1927. Serial No. 189,269. 3 Claims. (Cl. 246—34.)

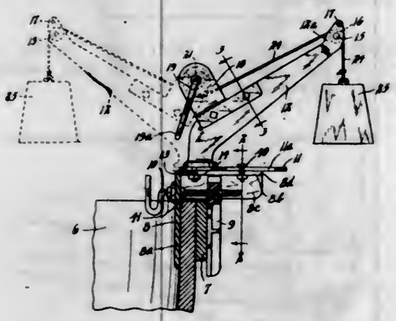
1. In combination, a section of railway track, a source of track circuit current connected with the rails adjacent the entrance of said section, a track relay connected with the rails adjacent the exit end of said section through its own front contact, means including a motor and a contact operated thereby for periodically applying train governing current to the track rails at the exit end of the section, and means operated by said motor for closing a shunt around said front contact of the track relay during each interval between applications of train governing current but not during the application of train governing current.

1,675,928. CONTROL FOR AIRCRAFT. ALFRED LEROY FISHER, Yale, Iowa. Filed Aug. 31, 1925. Serial No. 53,617. 1 Claim. (Cl. 244—29.)



In combination with an air craft, a control means therefor comprising a control stick universally pivoted, a weight on the lower end thereof, a pair of rock shafts at right angles to each other and spaced from said control stick, an arm on each rock shaft, a pair of yokes each pivoted to one of said arms, a second pair of yokes, rods rotatably mounted in said second yokes and secured to the first yokes, and a pair of members rotatably mounted on said control stick, said second yokes being pivoted to said members, and means for operatively connecting the ailerons and elevators of said air craft to said rock shafts.

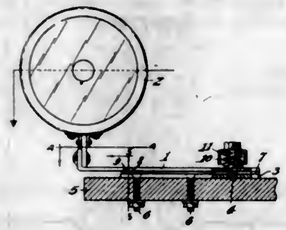
1,675,929. PRESS FOR DRYING AND IRONING WEARING LINEN. LOUIS FLORI, Boulogne sur Seine, France. Filed Dec. 8, 1925. Serial No. 74,021, and in France Dec. 24, 1924. 3 Claims. (Cl. 68—9.)



1. A press of the type set forth for drying and ironing linen, comprising in combination a frame, a stationary buck to receive the linen, a pressure head arranged over the buck, steam ducts imbedded in said buck and head for heating purposes, an arcuate arm rigidly secured to said pressure head and pivotally mounted on the press, said pivotal mounting comprising a transverse spindle supported rearwardly of the buck, a counterweight car-

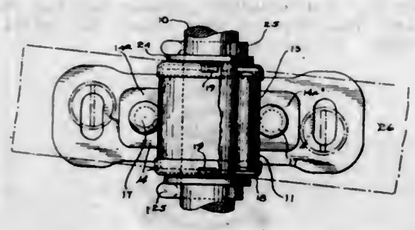
ried by an integral rearward projection of said arm, a second transverse spindle supported in the latter projection of the arm, and a bell crank lever pivoted on the

second transverse spindle and at one end extending over the pressure head, the opposite end of the lever being pivoted to a link pivoted on the press.



1,675,930. ANCHORING DEVICE FOR BOATS. OTTO S. GABRIELSON and MALCOLM J. WENNERSTROM, Minneapolis, Minn. Filed Apr. 22, 1927. Serial No. 185,820. 10 Claims. (Cl. 114—210.)

10. An anchoring device for a boat comprising a clamp adapted to be secured to the side of a boat, said clamp having a flat upper surface with an open ended slot formed therein, a plate bearing on the flat upper surface of said clamp, a standard carried by said plate, a reel mounted on said standard, a cable secured at one end to said reel, an anchor secured to the other end of said cable, two studs adjacent opposite ends of said plate and extending downwardly through said plate and the slot in said clamp, whereby said plate can be slid outwardly in respect to said clamp to cause one of the said studs to be withdrawn from said slot to permit said plate to be swung about the other stud as an axis.

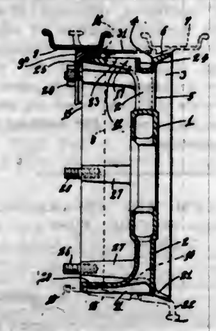


1,675,931. LAMP SUPPORT FOR AUTOMOBILE RUNNING BOARDS. WILLIAM A. GULLETTE, Wheeling, W. Va., assignor, by mesne assignments, to Mary Isabel Gullette, Wheeling, W. Va. Original application filed May 12, 1927, Serial No. 190,809. Divided and this application filed Nov. 14, 1927. Serial No. 232,999. 4 Claims. (Cl. 240—57.)

1. A lamp support for automobile running boards, comprising a base plate adapted to be rigidly mounted transversely upon the running board, an upright pivot pin carried by the inner end of said plate, a plate-like bracket having an end mounted on said pivot pin and adapted to swing upon the latter to and from a position in overlying relation to said base plate, said bracket having its outer end constituting a lamp mounting, and coacting

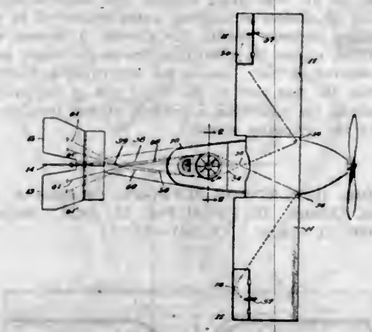
means borne by said plate and said bracket whereby chance movement of the bracket from its plate overlying position is prevented.

1,675,932. BEARING MECHANISM. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The Murray Manufacturing Company, Cleveland, Ohio, a Corporation of Michigan. Filed Sept. 6, 1924. Serial No. 736,224. 4 Claims. (Cl. 308—31.)



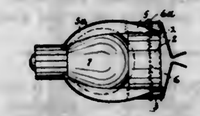
2. In combination, a bearing adapted to support a rotatable member, a plurality of roller members contacting directly with the rotatable member, a sleeve forming a cage for the roller and a base member supporting the sleeve and having formed thereon end closure portions for the sleeve to retain the rollers therein, the ends of the sleeve being formed to interengage with the closure portions of the base member in such manner that the sleeve holds the closure portions in place.

1,675,933. BEARING. CARL W. JOHNSON, Shaker Heights, Ohio, assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 16, 1925. Serial No. 23,532. 1 Claim. (Cl. 308—72.)



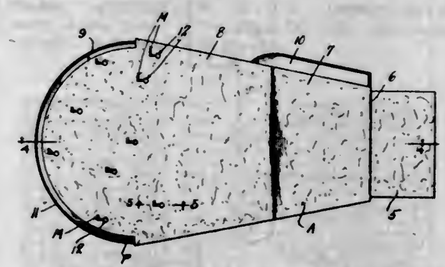
In combination with a rod having a hollow socket and a rod having a ball receivable within said socket, of bearing members carried within said socket and adapted to engage said ball, each said bearings comprising a socket element of cylindrical form and having the face adjacent said ball spherically formed, a relatively thin sheet of bearing material mounted in said spherical recess, the socket member having integral portions adapted to engage over the edge of said sheet to hold the latter in position, and said sheet also having its spherically shaped outer surface provided with a series of lubricant-containing recesses.

1,675,934. DUAL-TIRED TRUCK WHEEL. LLOYD D. KAY, Los Angeles, Calif. Filed Jan. 11, 1927. Serial No. 160,350. 8 Claims. (Cl. 301—65.)



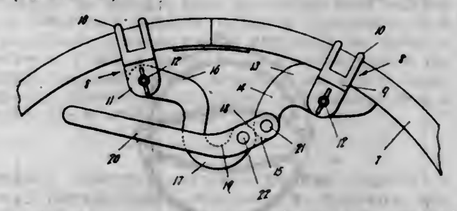
1. A dual-tired truck-wheel having a hub with a plurality of hollow spokes extending radially from the hub, an inboard felloe extending around the wheel, connecting the spokes, said felloe consisting of a flange having a substantially conical face on its outer side, constituting an inboard tire-rim seat, an outboard felloe extending around the wheel, having a face constituting a seat for the outboard tire-rim, said wheel having a relatively shallow dished concavo-convex web connecting the inboard felloe and the outboard felloe between the spokes, said web having its convex face disposed toward the axis of the wheel and its concave face disposed outwardly, and transverse ribs disposed in substantially radial planes with respect to the axis of the wheel, extending across the concave side of the web and connecting the felloes.

1,675,935. AEROPLANE STEERING DEVICE. ANDREW KOLODY, Chicago, Ill. Filed May 1, 1926. Serial No. 106,118. 11 Claims. (Cl. 244—29.)



1. In an aeroplane having a rudder, front planes including ailerons, rear planes, and fuselage, including the floor and side walls, the steering mechanism comprising a transversal brace connecting said walls, a rotatable shaft passing through said brace and mounted upon said floor, a stationary gear mounted upon said floor, another stationary gear mounted upon said brace; said shaft passing centrally through said gears, a gear rigidly mounted upon said shaft, a drum upon said shaft positioned between said first named gear and said gear upon the shaft, another drum upon said shaft positioned between said second named gear and the gear upon said shaft, said drums being adapted for upright shifting movement upon said shaft, internal gears in said drums for selectively engaging said gear upon the shaft and said stationary gears, means associated with each drum for shifting each drum in or out of engagement with said gear on the shaft, a cable upon said first named drum connecting with the ailerons, a second cable upon the same drum connecting with said rudder, said two cables being adapted to steer the aeroplane in horizontal plane on rotating said shaft when said drum remains in engagement with said gear on the shaft, and cable upon said second named drum connected to the rear planes of the aeroplane to steer the aeroplane on vertical plane when said second named drum remains in engagement with said gear on the shaft.

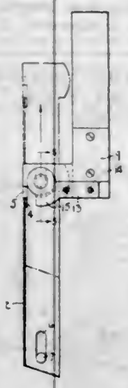
1,675,936. GLARE SHIELD. FREDERICK C. KUEPPERS, Hawthorne, N. J. Filed Jan. 27, 1928. Serial No. 249,834. 3 Claims. (Cl. 240—48.6.)



1. In a glareshield for an electric light bulb, the combination of a shield and bulb-gripping members projecting from the shield in the same general direction and each fulcrumed between its ends thereon and spring-urged toward and otherwise independent of each other.

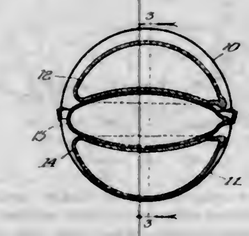
1,675,937 GOLF GAME. HYMAN B. LASTING, Portsmouth, Va. Filed Nov. 2, 1927. Serial No. 230,561. 5 Claims. (Cl. 273—36.)

1. A game apparatus of the class described comprising a platform having an opening therein, said platform provided with a slot adjacent the opening, a marker having a reduced shank one end of which is offset and merges into a weight element, said reduced shank portion being slidable in the slot so that it may be laid flat on the platform with the weight element under the opening so that a ball passing through the opening will engage the weight element and swing the marker so as to slide downwardly and stand up in the slot at an angle to the platform.



1,675,938. RIM REMOVER. JOHN B. LAW, Jersey City, N. J. Filed Feb. 9, 1925. Serial No. 7,938. 1 Claim. (Cl. 157—1.)

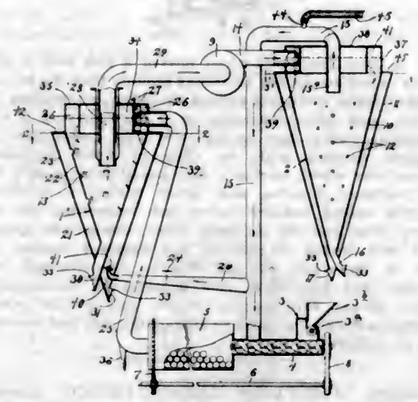
A rim remover comprising two clamps each composed of a pair of sections adapted to bear against the inner periphery of a demountable wheel rim, the sections of each clamp having outstanding hooks at their opposite ends to engage the flanges of the rim and said sections having inturned ears at their adjacent ends, each clamp



including a clamping bolt extending through said ears of the clamp sections for drawing said ears toward one another and causing said sections to bear against the inner periphery of the rim, a plate disposed between the ears of one clamp and having an outer edge formed to bear against the inner periphery of the rim to prevent turning movement of said plate, the bolt of said clamp engaging through said plate, a bar having one end portion engaging the bolt of the other clamp between the ears of said clamp, said plate having a portion extending toward the center of the rim and curved away from the second named clamp, and a lever pivotally connected with said portion and said bar, said bar being offset adjacent to the lever away from the rim to receive said portion so that said portion and offset hook together when the lever is swung to move the clamps toward one another.

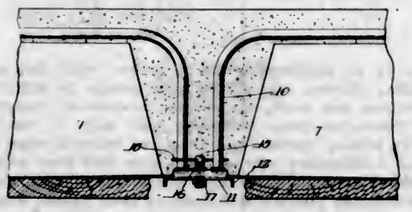
1,675,939. WINDOW SUPPORT. CLAUDE A. LEWIS, Houston, Tex., assignor to American Window Company, a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 133,928. 5 Claims. (Cl. 20—49.)

1. In a window, upper and lower sashes, a rider for said lower sash, a pin at the lower end of said lower sash projecting into a slot in said rider, a laterally extending plate at the upper end of said lower sash, said plate being adapted to be received in a slot in said rider, whereby said sash may be released from said rider at its upper end in the manner described and said sash be then free to swing into reversed position.



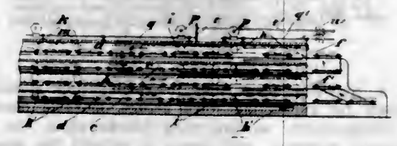
1,675,940. ART OF DISPERSING NOXIOUS MATERIALS. WINFORD LEE LEWIS, Evanston, Ill. Filed Dec. 19, 1921. Serial No. 523,384. 10 Claims. (Cl. 167—3.)

1. The method of dispersing noxious material which comprises bringing together stannic chloride and an aqueous solution of ammonia and introducing the noxious material into the reaction zone.



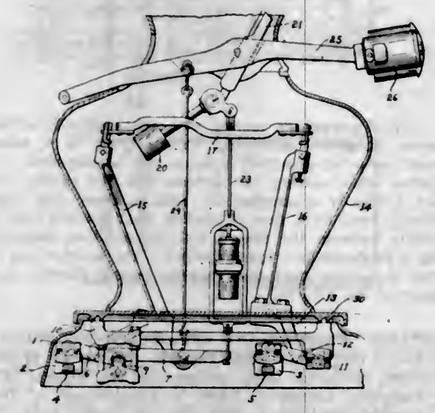
10. In means for dispersing noxious materials, a plurality of separate containers, stannous chloride in one of said containers, an aqueous solution of ammonia in another of said containers, one of said containers also containing ammonium chloride, means for retaining said containers in close proximity to each other so that mixture of said materials will take place on discharge thereof, and means for introducing the noxious material into the admixed compounds.

1,675,941. VACUUM AIR SEPARATOR. LYCURGUS LINDSAY, Los Angeles, Calif. Filed Jan. 14, 1925. Serial No. 2,340. 7 Claims. (Cl. 83—9.)



1. In an air separating system, the combination of a plurality of conical separating units connected in series, a grinding element within the circuit, a blower within the circuit, means for admitting gas to the upper zone of each separating unit, means for returning a portion of gas from the last unit to the lower end of the first unit, and means for returning a portion of gas from the last unit to the grinding element.

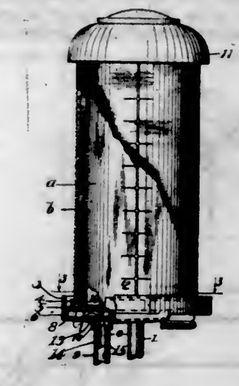
1,675,942. OUTLET-BOX SUPPORT. CHARLES A. LUNDBERG, Chicago, Ill. Filed Feb. 11, 1926. Serial No. 87,486. 1 Claim. (Cl. 247—21.)



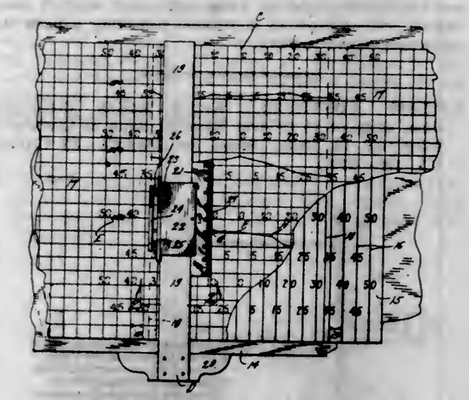
An outlet box support for use in concrete construction comprising a substantially flat metallic plate of a length such that the opposite ends thereof are adapted to rest upon the upper surfaces of two adjacent parallel supporting members, said plate being made of thin sheet metal so that the ends of filler pans spaced apart on said supporting members may overlap the side edges of the plate resting on top of the supporting members, and stiffening means for the plate extending longitudinally thereof but terminating short of the end portions of the plate which are adapted to rest upon the spaced supporting members, said plate being apertured to permit the passage of securing means therethrough whereby an outlet box may be temporarily secured in position upon the upper side of the plate between said pans.

1,675,943. BAKEHOUSE OVEN. CARL MAIRICH, Berlin, Germany. Filed Dec. 2, 1925, Serial No. 72,777, and in Germany Nov. 29, 1924. 7 Claims. (Cl. 107—57.)

4. In a bakehouse oven of the continuous type, an oven chamber, a plurality of aligned conveying units for the batch carriers arranged in series along the path of the carriers through the oven chamber so as to act in succession and in the same direction thereon, each unit comprising a short chain drive, the said units being arranged at spaced intervals in such a manner that the whole length of the said conveying units is only a part of the length of the travel of the said batch carrier.



1,675,944. WEIGHING-SCALE MECHANISM. CHARLES O. MARSHALL, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Feb. 14, 1923. Serial No. 618,902. 10 Claims. (Cl. 265—36.)

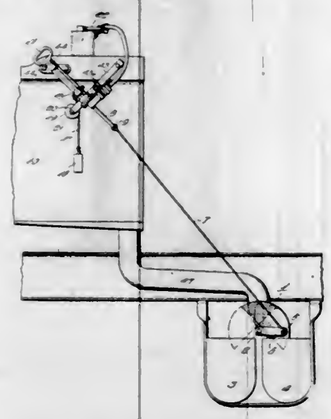


1. In a weighing scale, in combination, a base, an upwardly extending housing at one side of said base, a pair of levers supported by said base, and means within said housing for connecting said levers to cause them to move through equal arcs in the same direction.

1,675,945. PUMP. GEORGE C. MARTIN, Los Angeles, Calif. Filed Aug. 14, 1923. Serial No. 657,305. 1 Claim. (Cl. 221—100.)

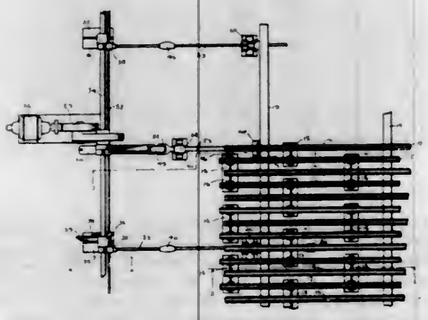
Means for reducing the fire hazards in connection with containers of visible gasoline pumps comprising a base plate for supporting the container and having spaced flanges forming channels adapted to receive gasoline from the container in event of breakage, a drain pipe communicating with said channels, and a metallic screen of relatively fine mesh supported on said base plate and extending throughout the height of the container and surrounding the same and to serve as a heat dissipating flame resisting sheath therefor.

1,675,946. SURVEYOR'S DEVICE. ROBERT MCCORMICK, Ames, Iowa. Filed Sept. 13, 1926. Serial No. 135,099. 5 Claims. (Cl. 33—76.)



1. The combination of a flat support having a straight edge with a sheet having parallel rulings and arranged symmetrically on the support with the rulings perpendicular to the straight edge, the rulings being supplied with designating numbers, having a transparent sheet symmetrically arranged on the first sheet and ruled in squares a T square having its head resting against the straight edge and movable therealong, and a ruler longitudinally adjustable on the shank and graduated from a medial zero in both directions.

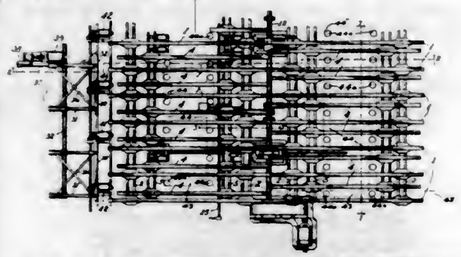
1,675,947. CONTROL APPARATUS FOR CENTRIFUGAL SEPARATORS. FREDERICK W. MCENTIRE, Salt Lake City, Utah. Filed Jan. 3, 1927. Serial No. 158,767. 4 Claims. (Cl. 210—75.)



1. In a sugar separating machine, the combination of a centrifugal separator, a discharge pipe, a pair of troughs for conveying syrups and wash liquors, a diverting pan positioned intermediate said discharge pipe and

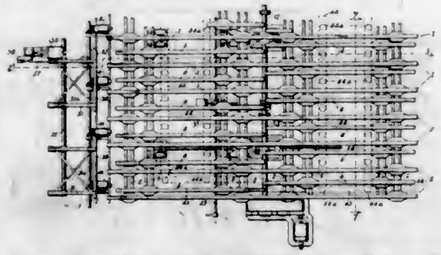
said troughs, an actuating rod connected to said diverting pan for moving said pan to one or the other of two extreme positions for selectively directing the discharge into one trough or the other of said troughs, a control rod for governing the position of said actuating rod, said control rod being mounted for reciprocal movement and having a groove throughout a portion of its length

an obstructing pin spring pressed into said groove, a socket adjacent the end of said groove into which said pin is arranged to project for latching said control rod in its extreme upper position and time control mechanism for withdrawing said pin from said socket whereby said control rod operates to move said deflecting pan to its extreme opposite position.



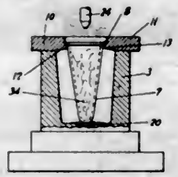
1,675,948. CONVEYER. WILLIS MCKEE, Cleveland, Ohio, assignor to Central National Bank of Cleveland. Filed Oct. 16, 1923. Serial No. 668,890. 33 Claims. (Cl. 198—219.)

19. A hot bed comprising work supporting members, mechanism for intermittently moving material across said bed, and means for regulating the distance of the intermittent movements of the material while the moving mechanism is in motion.



27. A conveyer comprising a stationary member, continuously moving means for intermittently advancing work blanks simultaneously and at two different rates of speed along the stationary member, drive means for actuating the said moving means, and means independent of the drive means for varying the rates of speed of movement of the work blanks without altering the original ratio between the said rates of speed thereof.

1,675,949. HOTBED. WILLIS MCKEE, Cleveland, Ohio, assignor to Central National Bank of Cleveland, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1925, Serial No. 64,194. Renewed May 28, 1928. 14 Claims. (Cl. 80—42.)



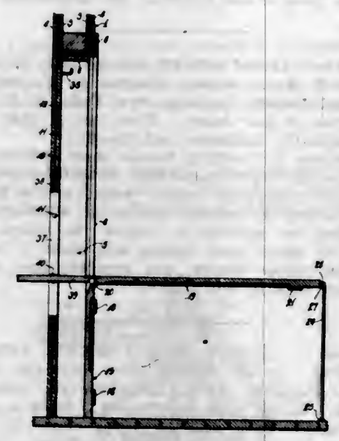
1. A conveyor comprising in combination stationary members for supporting work blanks, movable members for intermittently moving work blanks along the said stationary members, and means to actuate the movable members, the tops of the movable members being movable in two different parallel orbits one above the other.

1,675,950. METHOD OF COOLING WORK BLANKS. WILLIS MCKEE, Cleveland, Ohio, assignor to Central National Bank of Cleveland, Cleveland, Ohio, a Corporation of Ohio. Original application filed Oct. 22, 1925, Serial No. 64,194. Divided and this application filed June 18, 1926. Serial No. 116,871. 11 Claims. (Cl. 80—60.)

1. The method of cooling elongated, metallic articles which comprises delivering such articles in a heated condition in substantially side by side arrangement to a cooling zone, moving the articles into the cooling zone and gradually separating the articles from each other, thereby creating a flow of cooling fluid beneath and upwardly between the spaced articles, for then maintaining a predetermined spacing between the articles and the flow of cooling fluid therebetween during further movement of the articles.

1,675,951. PROCESS AND APPARATUS FOR PRODUCING CRACKLED GLASSWARE. DAVID L. MIDDENDORF, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Feb. 4, 1926, Serial No. 85,872. Divided and this application filed June 21, 1926. Serial No. 117,357. 15 Claims. (Cl. 49—77.)

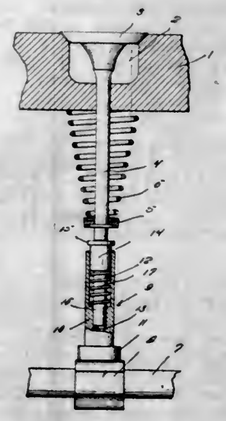
7. The method of producing crackled ware which comprises throwing a fluid against the blank of a quantity



and quality to produce crackling in the finished article and without changing the temperature of the blank to a degree that will prevent proper shaping thereof.

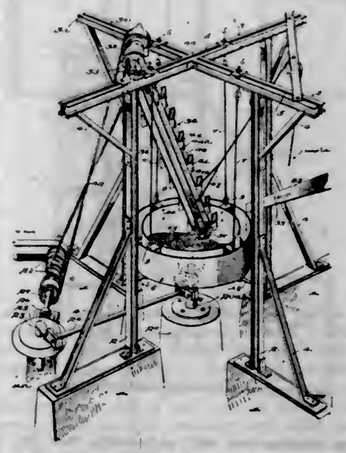
1,675,952. PROCESS AND APPARATUS FOR PRODUCING CRACKLED GLASSWARE. DAVID L. MIDDENDORF, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Aug. 6, 1926. Serial No. 127,669. 11 Claims. (Cl. 49—77.)

1. The method of producing crackled ware which comprises causing a fluid to play upon the mold exterior so as to maintain the interior of the mold at such temperature at which crackling of the ware being formed therein will be effected.



1,675,953. BUILT-IN FOLDING TABLE. DORSEY E. NICHOL, Washington, D. C. Filed Nov. 24, 1924. Serial No. 751,907. 3 Claims. (Cl. 20—1.11.)

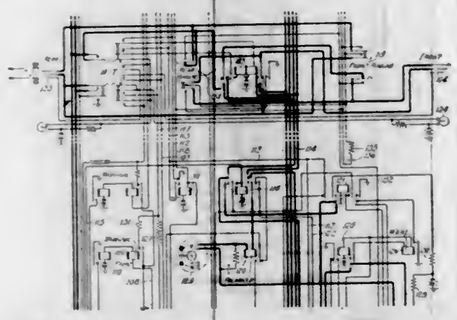
1. The combination with a standard partition wall having an opening therethrough, of a door vertcially hinged in said opening substantially flush with one face of said wall, said door being transversely divided to provide an upper section adapted to fold outwardly and downwardly to constitute a table; and a horizontally pivoted serving door mounted substantially flush with the other face of said wall and adapted to be swung to a horizontal position substantially flush with said table section when the latter is lowered.



1,675,954. VALVE-TAPPET CONSTRUCTION. CHARLES H. PAGE, Charlottesville, Va., assignor of one-third to L. G. Hoxton and one-third to J. H. Ryalls, Charlottesville, Va. Filed Aug. 26, 1924. Serial No. 734,256. 1 Claim. (Cl. 123—90.)

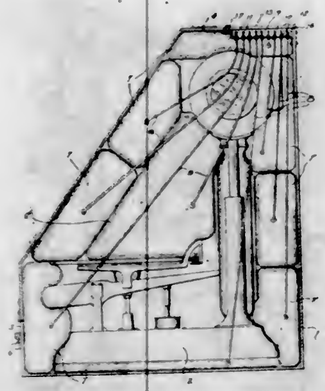
A tappet construction for internal combustion engine valves comprising a body portion formed with an enlarged bore opening through one end portion thereof, and a smaller concentric bore in the central portion thereof communicating with said large bore and axially aligned therewith, a plunger slidably mounted in the larger bore and projecting beyond the end of said body portion for engagement with the valve stem of said engine, said plunger having a reduced cylindrical extension extending through said larger bore and slidably fitting in the smaller bore, and resilient means interposed between the

end of said plunger and the end of said larger bore in said body portion, the slidable mounting of the plunger providing bearings at spaced points adjacent the ends and beyond the ends of said resilient means for maintaining the axial sliding movement of the plunger in the bores, said small bore normally having a pocket formed beyond the end of said reduced extension providing a cushioning chamber for said plunger.



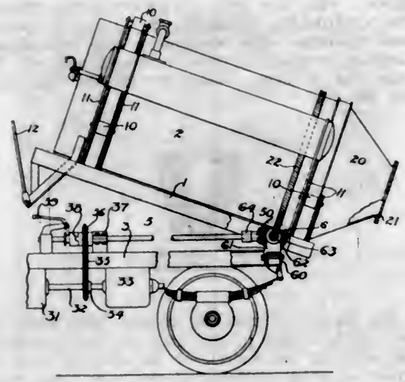
1,675,955. ORE-CONCENTRATING APPARATUS. HOWARD E. PETRO, Salt Lake City, Utah. Filed June 26, 1925. Serial No. 39,746. 17 Claims. (Cl. 209—446.)

1. A concentrating apparatus comprising a pan, a spindle carried by the pan, a guide bearing, said spindle being slidable and rotatable within the bearing, a sup-



port overlying the pan, flexible means for suspending the pan from the support, and means to oscillate the pan about the spindle as an axis, the points of suspension of the pan on the support being fixed against angular movement with respect to the axis of oscillation whereby to impart to the pan a simultaneous movement of vertical reciprocation.

1,675,956. TELEPHONE SYSTEM. LESLIE F. PORTER, Passaic, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1927. Serial No. 194,014. 16 Claims. (Cl. 179—27.)

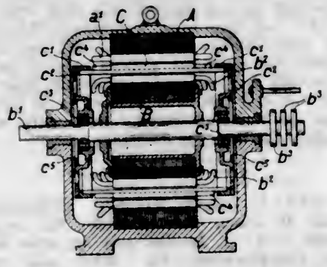


12. In a telephone system, a cord circuit, a trunk line accessible to said cord circuit, automatic switches operable over said trunk line, a switch controlling circuit common to said cord circuit, a polarized relay in said controlling circuit responsive to the setting of a switch, a relay responsive to said polarized relay for applying ringing current to said trunk line, and a plurality of relays for counting time for limiting the energization of said last relay to a predetermined period of time.

1,675,957. PACKING CASE. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 8, 1923. Serial No. 678,084. 3 Claims. (Cl. 206—65.)

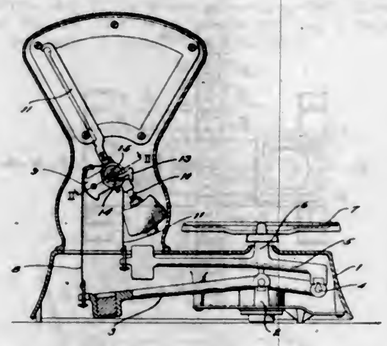
1. The combination with a packing case for weighing scales, of a plurality of pneumatic supporting cushions disposed therein, each of said cushions having an individual inflation tube leading to a point readily accessible from the exterior of said case.

1,675,958. TRANSIT CONCRETE-MIXER DRIVE MEANS. CHARLES L. REYNOLDS, Seattle, Wash. Filed Aug. 15, 1927. Serial No. 213,095. 10 Claims. (Cl. 83—73.)



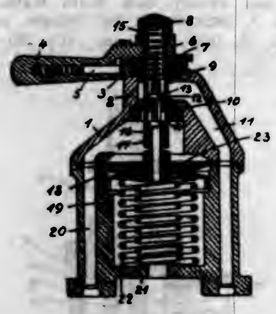
1. The combination with an automobile truck chassis and a subframe pivotally mounted thereon, a rotative mixer element mounted on said subframe, and drive means connecting said mixer element with the truck's power plant, including an element journaled coaxially with the pivot of said subframe, but independent thereof.

1,675,959. MANUFACTURE OF SHEET MATERIAL. REED P. ROSE, Jackson Heights, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,312. 5 Claims. (Cl. 92—21.)



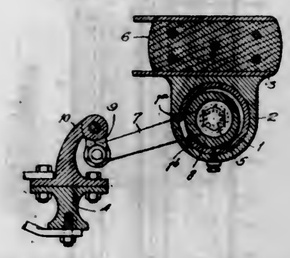
1. Process for making fibrous sheet material which comprises mixing a suspension of beaten fibres and a dispersion comprising rubber, water, and a protective agent having a negative charge in alkaline medium, acidifying the mixture to reverse the charge on the protective agent, thus causing said agent to carry the dispersed rubber towards and onto the fibre, and subsequently forming into sheets.

1,675,960. ALTERNATING-CURRENT INDUCTION MOTOR. LUDWIG SCHÖN, Essen, Germany, and WILHELM LEUKERT, Leipa, Czechoslovakia, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Mar. 7, 1925, Serial No. 13,827, and in Germany Mar. 13, 1924. 5 Claims. (Cl. 172—120.)



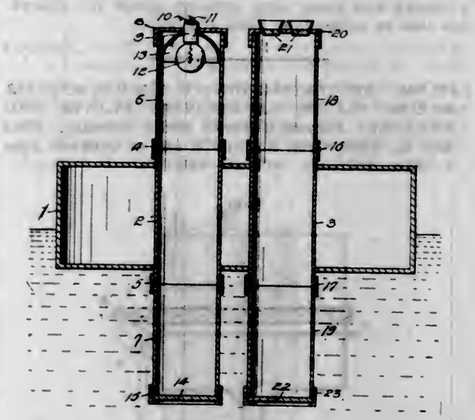
1. An alternating current induction motor comprising a stator, a rotor and an auxiliary rotor all concentrically arranged, a stator winding and a rotor winding, one of said windings being connected to a source of alternating current, a short-circuit armature winding carried by the auxiliary rotor and an exciting winding also arranged on the auxiliary rotor to generate a magnetic flux passing through the stator, the auxiliary rotor and the rotor.

1,675,961. PIVOT-ADJUSTING MEANS. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed June 16, 1926. Serial No. 116,358. 4 Claims. (Cl. 265—36.)



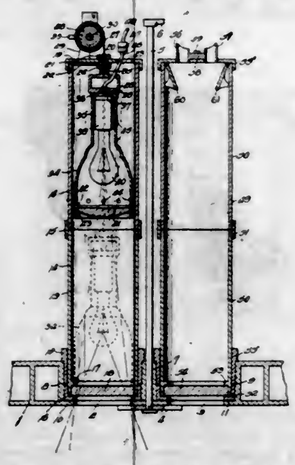
1. In a device of the class described, in combination, an arm, a pivot mounted thereon, an anchor for said arm including an eccentric trunnion, and means for turning said eccentric trunnion for adjusting the position of said pivot.

1,675,962. ONE-LINE BRAKE. IWAN TROFIMOFF, Moscow, Russia. Filed June 2, 1927, Serial No. 196,067, and in Russia June 15, 1926. 8 Claims. (Cl. 303—28.)



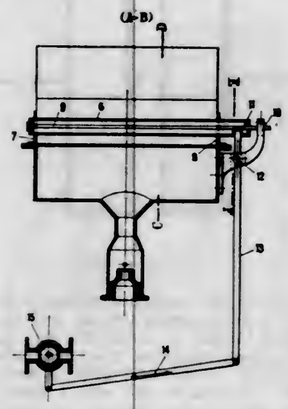
2. A brake of the one line type, comprising in combination a brake pipe, a brake cylinder, a principal air reservoir, an auxiliary air reservoir, a leaders valve, a ruling valve, a leaders handle on said leaders valve, a screw like part, said handle being movable on said screw like part, a hollow spindle, a double valve inside said spindle, a brake pipe chamber, one cone of said double valve governing an air inlet to said chamber, an atmospheric outlet, a valve seat on said outlet, the other cone of the double valve governing said outlet against said seat, said seat being influenced by the air pressure in said chamber and a spring.

1,675,963. RESILIENT SUSPENSION FOR MOTOR VEHICLES. GAETANO VEGLIO, Levallois-Perret, France, assignor to Societe Anonyme Overcau, Paris, France, a French Company. Filed July 27, 1925, Serial No. 46,382, and in France Aug. 8, 1924. 2 Claims. (Cl. 267—20.)



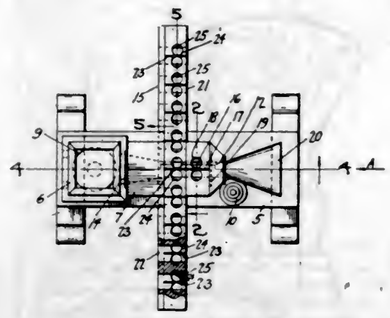
1. In a suspension device for vehicles, a cylindrical casing adapted to be secured to the vehicle, a cylindrical barrel eccentrically disposed within said casing, a lever secured at one end to said barrel and connected at its other end to the axle of the vehicle, and an arcuate spring surrounding less than 360° of said barrel, said spring being secured at one end to said barrel and at its other end to said casing.

1,675,964. DEVICE FOR LOCATING SUBMERGED BODIES. CHRIST G. WEINREICH, St. Louis, Mo. Filed Sept. 14, 1925. Serial No. 56,227. 3 Claims. (Cl. 88—1.)



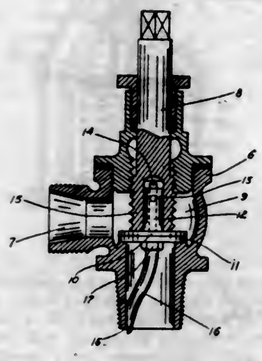
1. In a device for locating submerged bodies, a buoyant member, a tube passing through said buoyant member and fixed thereto, a closure for the upper end of said tube, a lamp supported below said closure, a reflector positioned behind said lamp, a transparent closure for the lower end of said tube, a second tube passing through said buoyant member and fixed thereto in spaced parallel relation to the first mentioned tube, a closure for the upper end of said second tube, lenses carried by said closure and a transparent closure for the lower end of said second tube.

1,675,965. DEVICE FOR LOCATING SUBMERGED BODIES. CHRIST G. WEINREICH, St. Louis, Mo. Filed Apr. 25, 1927. Serial No. 186,337. 2 Claims. (Cl. 114—66.)



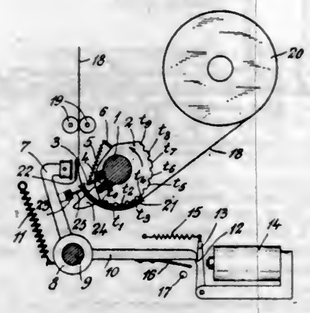
1. In a device of the class described, in combination with the hull of a watercraft having a light opening and a sight opening therein, a tube supported by the hull in alignment with the light opening therein, a vertically movable reflector within the light tube, a lens carried by the lower end of the reflector, an electric lamp within the reflector, a transparent window removably carried within the lower end of the light tube, cable openings within the upper end of said tube, means for closing said openings, an observation tube supported by the hull in alignment with the sight opening therein, sight openings in the upper end of said tube and means for automatically closing said upper sight openings should the observation tube be accidentally filled with water.

1,675,966. REGULATING DEVICE FOR GAS AND AIR MIXING PLANTS, GAS-DELIVERY PLANTS, AND THE LIKE. FRIEDRICH WOLFF, Berlin, Germany. Filed May 21, 1925, Serial No. 31,979, and in Germany June 3, 1924. 3 Claims. (Cl. 48—180.)



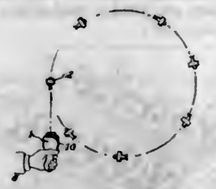
1. A regulating device for use in connection with gas and air mixing plants and gas delivery plants, comprising a test burner arranged to produce a broad flame, means for feeding a portion of the fuel mixture to said test burner, an expansible body comprising a tube fast at one end and passing through the core of the flame, a rod within said tube, said rod being fixed at both ends and said tube being free to expand along said rod, a gas supply, a valve controlling the gas supply, a lever actuating said valve, and a connection between said lever and the said expansible tube.

1,675,967. COMPARATOR. EMIL C. ZITKOWSKI, San Fernando, P. I. Filed Mar. 15, 1927. Serial No. 175,603. 12 Claims. (Cl. 99—14.)



1. In an instrument of the character described, a sight-box having a light passage and pockets for test-tubes, divided by a partition dividing the field of the passage, and a carrier movable across the passage and having pockets for test-tubes, divided by partitions, the partitions being so disposed in the carrier that they register respectively with that of the sight box in the travel of the carrier across the passage.

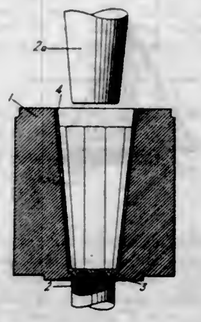
1,675,968. MEANS FOR CLEANING THE COCK CONNECTIONS BETWEEN MAINS AND SERVICE OR BRANCH PIPES. CHARLES ALBERT BRITNELL, Marrickville, near Sydney, New South Wales, Australia. Filed Dec. 3, 1926, Serial No. 152,496, and in Australia Dec. 15, 1925. 1 Claim. (Cl. 251—29.)



A valve for use as a connection between a main and a service pipe and comprising a body having a nipple for attachment to a main and provided with a seat at the inner end of its bore, a nipple for attachment to a service pipe, arranged at an angle to the first-named nipple said body having a chamber in the angle between and forming a connection between said nipples: a stem arranged axially with respect to the main nipple and threadedly connected to the body, a valve disc having a stud arranged in a bore in the lower portion of said stem, said stem having a longitudinal slot and said stud having a pin slidably engaged in said slot, said valve disc being arranged to close on the said seat and to turn on said seat but remain closed thereon when said stem is unscrewed, and being further provided with a scraper arm arranged for action in the bore of the main nipple.

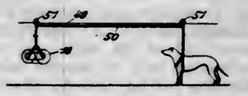
1,675,969. AUTOMATIC PRINTING MACHINE. FREDRIK ROSING BULL, deceased, Oslo, Norway, by Ernst Hilditch and Ulrich Strøm, executors, Oslo, Norway. Filed Feb. 18, 1926, Serial No. 89,265, and in Norway Feb. 20, 1925. 1 Claim. (Cl. 101—93.)

An automatic printing machine for recording statements or indications given by the perforation of cards, paper strips and the like, in which the types are placed on the circumference of wheels mounted on a shaft which rotates synchronously with the passing of the card or the like by a contact device, said type wheels being arranged on the shaft in such a manner to permit said wheels to remain in a fixed stationary position during partial rotation of the shaft.



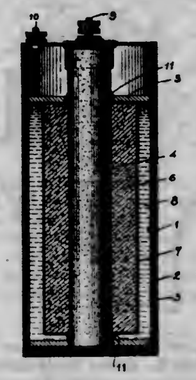
1,675,970. FLYING TOY. JOSÉ CALVO, New York, N. Y. Filed Jan. 18, 1927. Serial No. 161,833. 6 Claims. (Cl. 46—50.)

5. A flying toy comprising a projectile having head, tail and wing portions, the tail portion being crimped longitudinally to form a depending skid fin tapered forwardly and having side portions diverging upwardly.



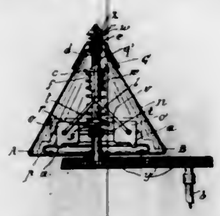
1,675,971. APPARATUS FOR FORMING GLASSWARE. VIRGIL O. CORNWELL, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Sept. 18, 1925. Serial No. 57,179. 4 Claims. (Cl. 49—72.)

1. In the art of molding in block mold, the combination of a block mold having an integral body, a valve structure in the base of the mold and a depression formed in said valve and spaced from the joint between



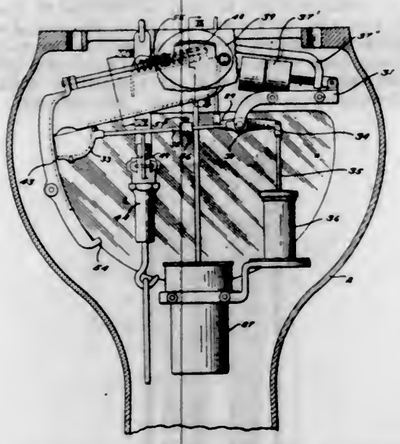
the valve and mold body for imparting a smooth projection to the base of the article.

1,675,972. COURSING TRACK. WALTER CECIL COX, Denver, Colo. Filed Aug. 11, 1923, Serial No. 656,961. Renewed Dec. 12, 1927. 25 Claims. (Cl. 272—4.)



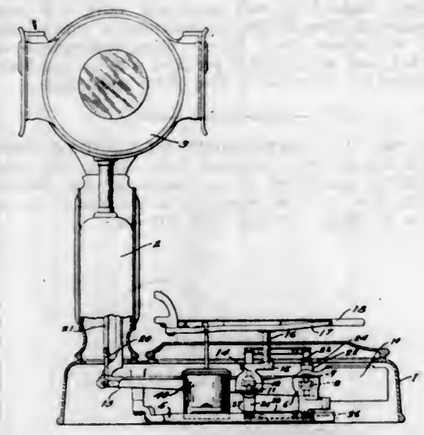
1. In a course of the character described, a lure supporting element adapted to move along the course, and means associated with said element for its propulsion by movement of an animal in its natural pursuit of the lure.

1,675,973. BATTERY CELL. HENRY CSANYI, New York, N. Y., assignor to Lee Klopman and William W. Huselton, New York, N. Y.; Samuel Lebson, executor of said William W. Huselton, deceased, assignor to Dry Storage Battery Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 17, 1924, Serial No. 738,247. Renewed May 19, 1928. 1 Claim. (Cl. 136—138.)



A battery cell including a negative electrode of metal, a positive electrode of carbon, an electrolyte including ammonium chloride, and a depolarizer of carbon, manganese hydroxid, manganese dioxid, ammonium chlorid and aluminum chlorid in substantially the proportions specified.

1,675,974. SPEED-INDICATING DEVICE. PIERO GAMBAROTTA, Quinto al Mare, Italy. Filed Dec. 12, 1924. Serial No. 755,539. 4 Claims. (Cl. 116—57.)

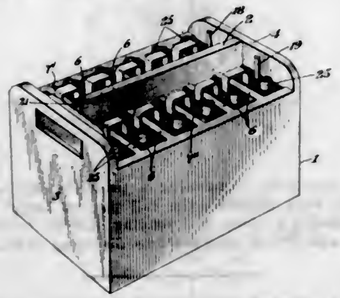


4. A speed indicating device for vehicles comprising a hollow shaft, means for gearing said shaft to a moving part of the vehicle, an indicating body loosely mounted on said shaft, radial arms fixed to said shaft, weights slidably mounted on said arms, a collar slidable on said shaft connected by links to said weights, longitudinal slots in said shaft, a rod slidable in said hollow shaft and having pins on one end projecting through said slots, the other end of said rod being threaded, and projecting beyond the end of said shaft, a nut on the threaded end of said rod, a second collar slidable on said shaft and mounted on said pins, a spring interposed between said collars, said weights being adapted to slide outwardly against the action of said spring as their speed of rotation increases and to engage said indicating body when their speed extends a predetermined limit, and a member clamped between the adjusting nut and the adjacent end of the shaft, and extending outside of the indicating body to provide means for determining whether the gearing between the shaft and the moving part of the vehicle is functioning.

1,675,975. COIN-OPERATED WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed June 9, 1924. Serial No. 718,785. 4 Claims. (Cl. 194—47.)

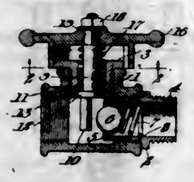
1. In a device of the class described, in combination, an arm adapted to be moved downwardly by the weight of a coin, a connecting member consisting of two sections longitudinally movable relatively to each other, a dog pivoted to one of said sections and extending to a position under said arm, means whereby said dog is moved from position under said arm by relative movement of said sections, and resilient means yieldably holding said sections against relative movement.

1,675,976. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 18, 1926. Serial No. 142,218. 7 Claims. (Cl. 265—71.)



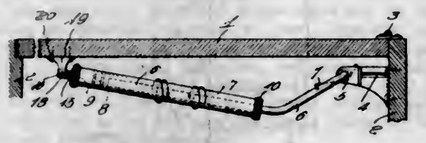
1. In a device of the class described, in combination, a frame, a lever fulcrumed thereon, said lever having a load pivot, a platform support carried thereby, and check links connecting said platform support and said frame above and below said load pivot.

1,675,977. PROCESS OF MAKING SOLVENT OIL. SATOYASU IYMORI and KOJI SUZUKI, Tokyo, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Filed Aug. 4, 1923, Serial No. 655,761, and in Japan Nov. 1, 1922. 2 Claims. (Cl. 203—4.)



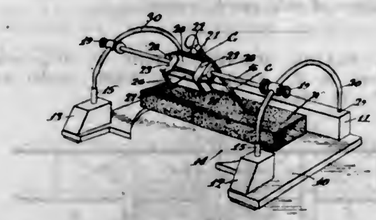
1. In a process of producing an oil suitable as an organic solvent from resinous materials present in coniferous woods, the steps consisting in mixing such material with an acid earth and heating the mixture at about 500° C. until decomposition occurs.

1,675,978. STORAGE BATTERY. RAYMOND A. KLOCK, Rockaway Beach, and THEODORE B. ENTZ, Brooklyn, N. Y., assignors, by mesne assignments, to Gould Storage Battery Company, Inc., a Corporation of New York. Filed Dec. 23, 1922. Serial No. 608,607. 32 Claims. (Cl. 136—166.)



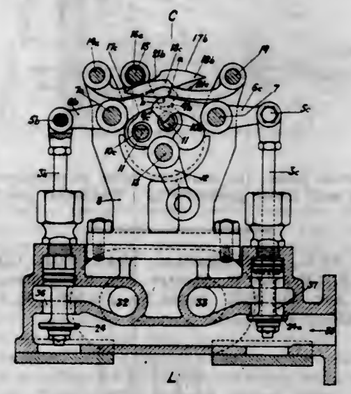
1. In a storage battery, the combination of a container having therein a plurality of battery units, each unit comprising a positive and negative plate and electrolyte, a sealing compound sealing the tops of the units, a vent tube opening a substantial distance above said sealing compound, and partitions secured to and extending between opposite walls of the container and extending into the sealing compound and projecting above the level of the upper surface of the same so as to prevent leakage of the electrolyte from the terminals of a unit on one side of a partition to those on the other side.

1,675,979. VALVE. FRANK J. LAIRD, Butte, Mont. Original application filed Dec. 11, 1925, Serial No. 74,858. Divided and this application filed Dec. 1, 1926. Serial No. 151,966. 7 Claims. (Cl. 251—132.)



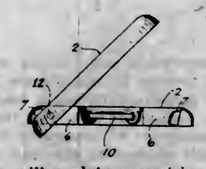
1. In a valve, the combination with a casing having a valve seat and a ball valve for cooperation with said seat, of a shaft having an enlarged inner head, a valve actuating crank arm projecting from said enlarged head, a counterbored passage in said casing for rotatably supporting said shaft, packing between the transverse wall of said passage and head, packing material in the outer counterbore of said passage, operating means secured to said shaft, and yielding means between said operating means and said packing material for compressing the latter.

1,675,980. SILENT DOOR CLOSER. HARRY J. LEBHERZ, Frederick, Md., assignor to The Everedy Company, Frederick, Md., a Corporation of Maryland. Filed Oct. 15, 1927. Serial No. 226,450. 4 Claims. (Cl. 16—66.)



1. In a pneumatic door check and closer a pneumatic cylinder, a reciprocatory piston operative therein, an end cap secured to said cylinder, a central portion on said end cap having internal screw threads therein and a screw threaded plug engaging the screw threads in said central portion of said end cap and having means for establishing a pivotal connection with a door at the end thereof.

1,675,981. GRAVER-SHARPENING AND FACET-CUTTING MACHINE. JOHN W. LEES, Los Angeles, Calif. Filed Aug. 9, 1926. Serial No. 128,123. 3 Claims. (Cl. 51—157.)

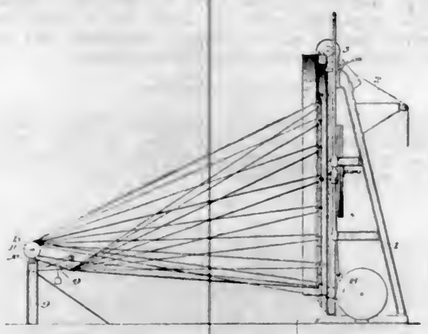


3. A device of the class described comprising a support, an abrasive element, a guide bar mounted upon said support, a work-holder comprising a block through which the guide bar slidably extends, an inverted U-shaped member arranged over the block having its parallel arms engaging the ends of the block and portions engageable upon the sides of the block, spring means urging said U-shaped member into clamping relation against the block, and pivoted members mounted upon the inverted U-shaped member engageable upon the guide bar to force the U-shaped member out of clamping engagement with the block against the action of said spring means.

1,675,982. CONTROL OR CHANGE-OVER VALVE MECHANISM. JOHN LYALL, Leith, Scotland. Filed Apr. 26, 1926, Serial No. 104,752, and in Great Britain Apr. 28, 1925. 6 Claims. (Cl. 121—138.)

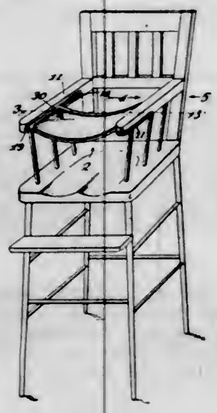
1. Control valve mechanism for actuating a plurality of valves, one or more of which require to be opened, whilst the remaining valve or valves remain closed, and wherein the positions of the valves require to be frequently reversed, comprising an operating lever connected to each valve, a series of closing-cam levers, each cooperating with one of the levers, a cam on each lever, an opposite cam on the corresponding closing-cam lever, and a rocker carrying rollers for cooperating with said cams.

1,675,983. FLOOR OR CEILING PLATE. WALTER MACRISTY, New Britain, Conn., assignor to Keeney Manufacturing Company, Newington, Conn., a Corporation of Connecticut. Filed Mar. 19, 1926. Serial No. 95,919. 15 Claims. (Cl. 126—317.)



1. A floor or ceiling plate comprising two semi-circular sections having detachable interlocking devices on the front ends thereof and a pivotal connection on the rear ends thereof, said devices and pivotal connection being so constructed and arranged as to prescribe relative movements of said sections in substantially parallel paths in planes perpendicular to the plate and the pivot axis.

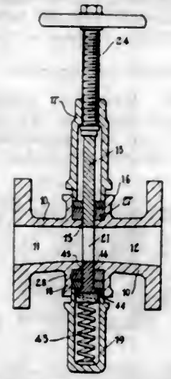
1,675,984. APPARATUS FOR REMOVING FABRIC STRIPS FROM CUTTING MACHINES. HARVEY F. MARANVILLE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 10, 1920. Serial No. 372,988. 8 Claims. (Cl. 164—34.)



1. In a device of the character set forth, the combination of a machine for cutting fabric on an angle and

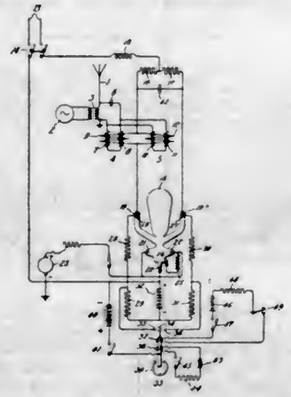
while in a vertical plane, of a conveyor to receive the fabric after it has been cut and to support the fabric in

a horizontal plane, the conveyor being so constructed as to bring said fabric gradually to a horizontal position.



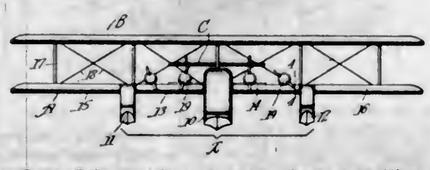
1,675,985. ADJUSTABLE TRAY FOR CHILD'S CHAIR. HAROLD W. MARTIN, San Bernardino, Calif. Filed Aug. 10, 1927. Serial No. 211,936. 11 Claims. (Cl. 155—127.)

1. In the art described, a chair having arm rests with guideways secured thereto, a tray slidable in said guideways, one of said guideways having a longitudinal slot, a latching means connected with the tray and interacting with the guideways to adjustably latch the tray, and a holding device secured to the tray and extending through the said slot, the said holding device permitting the disengagement of the tray from the guideways and being adapted to retain the tray connected to one of the arm rests.



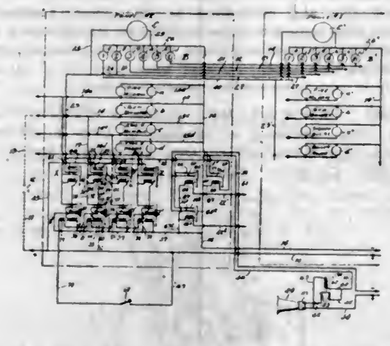
1,675,986. FULL-WAY OR GATE VALVE. HAROLD LYALL MASON, London, England. Filed Oct. 5, 1927, Serial No. 224,078, and in Great Britain June 7, 1926. 3 Claims. (Cl. 251—59.)

1. A valve of the class described, comprising a body having inlet and outlet bores thereto, a gate valve provided with a through passage registrable with said bores in the completely open position of the valve, a plurality of sections of packing arranged around said inlet and outlet bores of the body for preventing leakage, said packing being in sections which are separably compressible and enclosing extensions on said valve, and an independently movable follower for protecting the packing and movable between said extensions, with



yielding means interposed between said follower and a rigid member connected with the casing.

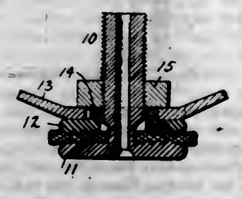
1,675,987. RADIOTELEGRAPHY. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 2, 1926. Serial No. 99,364. 9 Claims. (Cl. 250—19.)



1. The combination of an antenna, a source of high frequency current connected to said antenna, means connected to said antenna for controlling the energy transmitted between said source and said antenna, a vapor electric device provided with a cathode and, with a plurality of anodes one of which is connected to said control means, and means for causing current to be transferred to and fro between said anodes for controlling the impedance of said control means.

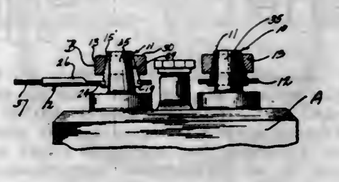
1,675,988. FLYING MACHINE. JOHN P. O'CONNOR, New York, N. Y. Filed May 22, 1928. Serial No. 279,627. 18 Claims. (Cl. 244—2.)

1. In a flying machine, a main plane comprising an integral medial section, a main hull disposed centrally of said medial section, a lateral hull at each end of said medial section, said medial section extending uninterruptedly across all of said hulls and the ends thereof terminating at the outer sides of said lateral hulls, all of said hulls being structurally merged with said medial section to form therewith a substantially integral sustaining unit and all of said hulls being normally adapted to afford simultaneously effective support when the machine is at rest, and a main wing section springing from each end of said medial section, said lateral hulls being nearer the main hull than to the outer ends of said wing sections.



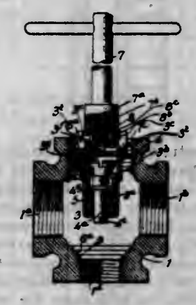
1,675,989. ANNUNCIATOR SYSTEM. LLOYD E. ONEAL, East Orange, N. J., assignor to Chas. Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1922. Serial No. 603,546. 5 Claims. (Cl. 177—311.)

1. An annunciator mechanism for power plants or the like comprising signalling means operative for indicating an abnormal condition in plant apparatus, designating means for designating the presence of an abnormal condition signal indication, and clearing means operative for clearing the designating means only if the abnormal condition persists, and for clearing both the signalling means and the designating means if the abnormal condition disappears.



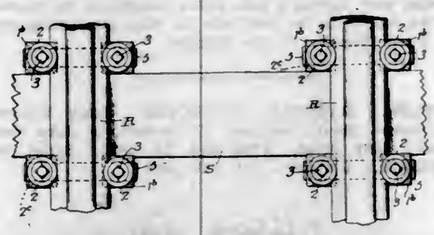
5. An annunciator unit for power plants or the like comprising signalling means, a normally open circuit therefor, a unit designating means, a normally open circuit therefor, a third normally open circuit including a relay, said relay controlling the opening and closing of said second circuit, means operated by an abnormal condition of plant apparatus for closing said first and third circuits and for energizing the relay to close the second circuit, and clearing means for deenergizing the relay to open the second circuit to clear the designating means.

1,675,990. TIRE VALVE. MARSHALL J. PAYNE, Staunton, Va., assignor to The Payne Valve Corporation, Staunton, Va. Filed Aug. 16, 1920. Serial No. 403,794. 3 Claims. (Cl. 152—12.)



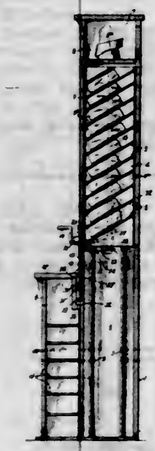
1. The combination of a valve stem, having a head within the tire, a washer on the stem outside the tire, the head and washer having complementary ridged and grooved, opposing surfaces, means to clamp the tire between such surfaces, means to maintain the alinement of the ridges and grooves of head and washer, a wing piece having a hole, and a thimble on the washer fitting loosely in the said hole the wing piece being free to move laterally of the thimble.

1,675,991. BATTERY CONNECTER. JOHN POLAND, Cascade, Mont., assignor of one-half to John Gorman, Belt, Mont. Filed Feb. 11, 1922. Serial No. 535,821. 1 Claim. (Cl. 173—259.)



In a battery connecter the combination of a pair of complementary concavo-convex sleeve segments each being about 180° externally screw threaded from the top edge thereof and each having a segmental laterally extending flange at the lower edge thereof, said sleeve segments each gradually increasing in thickness from the top edge thereof adjacent the respective flange thereof, and a supporting member including a plurality of yieldable arms in split ring formation secured to the flanges of said sleeve segments to support the sleeve segments in a complementary sleeve providing relation with spaces at diametrically opposed facing edges thereof aligning diametrically with the split of the split ring, said supporting member having a wire receiving connecting portion thereon.

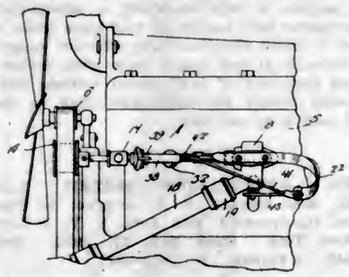
1,675,992. DRAIN VALVE FOR LAWN-SPRINKLING SYSTEMS. HOWARD B. SHERMAN, Battle Creek, Mich., assignor to H. B. Sherman Manufacturing Co., Battle Creek, Mich., a Corporation of Michigan. Filed Nov. 21, 1927. Serial No. 234,709. 6 Claims. (Cl. 137—34.1.)



4. In a lawn sprinkling apparatus; the combination of a unit comprising a hollow body provided with openings for connection with a water supply and a sprinkler head and a lower opening for the reception of a drain valve; with a removable drain valve casing in the lower opening of the body having slots in its upper end for the engagement of a tool or wrench, and an internal groove near its upper end adapted to be engaged by said tool for inserting and removing the drain valve when the unit is in position in the ground; said casing having a valve seat below the said slots; an inwardly opening valve in said casing; and a screen in the casing below the slots and above the valve.

1,675,993. RAILROAD-RAIL FASTENING. JOSEPH ASKIN SILVER, New York, N. Y. Filed Dec. 13, 1926. Serial No. 154,458. 14 Claims. (Cl. 238—314.)

1. In combination with a railway tie, a rail fastening comprising members adapted to fit under the tie at opposite sides of the rail, said members having sockets; opposed clamps adapted to engage opposite sides of the rail base; transverse links adapted to extend under the rail; nuts in the sockets; and bolts transfixing the clamps and links and engaging the nuts.

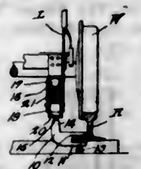


1,675,994. COIN-CONTROLLED VENDING MACHINE. GOODWIN B. SMITH, New York, N. Y. Filed Nov. 5, 1925. Serial No. 67,079. 10 Claims. (Cl. 312—95.)

1. In a coin controlled vending machine the combination of a cabinet having a door aperture and a door normally closing the same, a container having article receiving pockets, mounted for vertical reciprocation within said cabinet, means for vertically reciprocating said container to selectively align said compartments with said door aperture, means for moving said door to open position to discharge the contents of a selected compartment, and means controlled by said door for locking said container against movement while said door is in open position.

1,675,995. GOVERNOR-CONTROLLED MECHANISM FOR INTERNAL-COMBUSTION ENGINES. HENRY G. STEARNS, Arapahoe, Nebr. Filed Feb. 19, 1927. Serial No. 169,598. 4 Claims. (Cl. 123—195.)

1. A device of the class described including a water pump mechanism, a bracket arm extending forwardly from the water pump mechanism and terminating in a bearing sleeve, a propeller shaft for the water pump mechanism journaled in the bearing sleeve, a belt engaging pulley on the shaft, a speed responsive means controlled by the shaft and associated therewith, a bar mounted intermediate its ends on the water pump mechanism and having its rear end curved outwardly and forwardly, a bell crank lever pivoted in the extremity of the curved rear end of the bar, the forward end of the bar

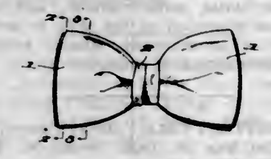


being twisted and bifurcated, a lever pivoted in the bifurcated end and controlled by the speed responsive means, a link structure between the two levers, and a rod associated with the bell-crank lever for controlling a throttle valve.

1,675,996. CABLE CLAMP. JAMES S. TAYLOR, Ponca City, Okla., assignor of one-half to Lory J. Mildren, Ponca City, Okla. Filed Oct. 22, 1926. Serial No. 143,690. 7 Claims. (Cl. 24—135.)

1. A cable clamp comprising a supporting body having spaced forwardly extending flanges, a pair of jaw constructions arranged on the body between said flanges, one of each of which bears on one of each of said flanges, said jaws and flanges being constructed to pivotally support the jaw constructions on definitely spaced axes, the jaws having the facing surfaces thereof provided with clamp receiving recesses, and means for moving said jaw constructions together or away from each other for clamping or releasing a cable with respect to said cable receiving recesses, the cable receiving recesses when in a cable clamping and receiving position having the center of said cable receiving recess disposed forwardly of a straight line drawn between the pivot axes of said jaw construction with the straight line eccentrically intersecting said cable receiving recess.

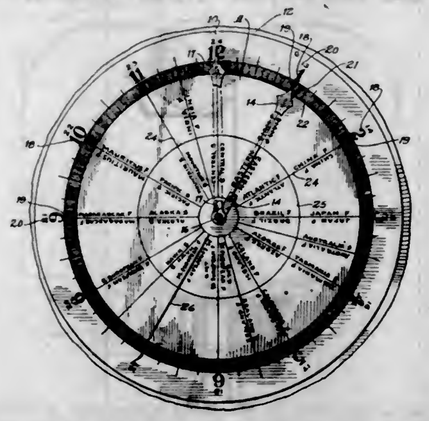
1,675,997. CROSSING SIGNAL. JOHN T. TULLIS, Dallas, Tex., assignor of one-half to James A. Plotner, El Dorado, Ark. Filed July 12, 1926. Serial No. 121,924. 2 Claims. (Cl. 191—32.)



1. In a crossing signal for railways, the combination with a track rail constituting a conductor, of forked brackets for straddling the base flange of the rail, means for insulating the brackets from the rail, means carried by the brackets for binding them to the rail, and a trolley wire carried by the brackets at one side of and at substantially the same level as the top of the head of the rail.

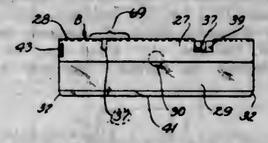
1,675,998. SEPARABLE FASTENER. ROLLO F. WALTERS, Detroit, Mich., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Original application filed July 24, 1924, Serial No. 727,960. Divided and this application filed Feb. 26, 1925. Serial No. 11,704. 11 Claims. (Cl. 24—213.)

1. A fastener unit comprising, in combination, an attaching part, means integral with said attaching part for securing it to a suitable support and a laterally shiftable snap fastener part loosely assembled with said attaching part, said snap fastener part being shiftable to a limited extent in any direction transverse to the axis of said casing.



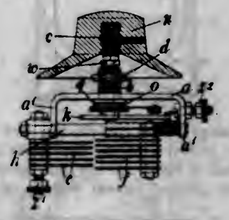
1,675,999. NECKTIE AND METHOD OF MAKING THE SAME. OTTO WEINSTEIN, Boston, Mass., assignor to Standard Neckwear Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1926. Serial No. 148,867. 9 Claims. (Cl. 2—151.)

1. In a bow necktie, a front facing piece across the front of the tie from end to end and continued around the opposite ends and at the rear of the tie and gathered together at the center and providing a bow tie with a plurality of walls on either side of the center, said tie being open from top to bottom between said double walls giving the appearance of a plurality of separate walls on either side of center, each end of the tie comprising a loop and the opposite ends being tucked inwardly away from the ends, and fastening means within the tie securing the tucked-in portion to prevent withdrawal of the same.



1,676,000. DIAL ATTACHMENT FOR CLOCKS. PHILIP L. WHITMAN, Halifax, Nova Scotia, Canada. Filed Jan. 29, 1926. Serial No. 84,724. 3 Claims. (Cl. 58—43.)

1. A dial attachment for clocks comprising, a fixed dial including the twelve hour delineations of a clock, and a dial coaxial and movable with respect to said fixed dial and having delineated thereon radial lines, a circular line dividing the movable dial into inner and outer sections, a diametrical heavy line to point to any of the delineations of the fixed dial and to indicate time and meridian for a certain selected standard, indicia in the inner section of the movable dial and associated with said radial lines to designate other standard times of localities that are on the half of the earth of which said meridian is the center, said indicia pertinent to the other standard times arranged relative to said heavy line so that those east of the said meridian are to one side of the heavy line and those west of the meridian are to the other side of said heavy line, indicia in the outer section of said movable dial and associated with said radial lines to indicate other standard times of localities that are on the opposite half from the first mentioned half of the earth, and markers associated with each of said indicia pertinent to other

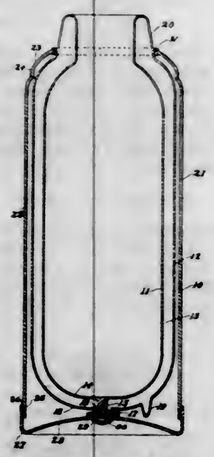


standard times to indicate whether the time is fast or slow relative to the selected standard.

1,676,001. BLADE. WILLIAM P. ARON, Dallas, Tex., assignor, by mesne assignments, to The Whisk Razor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 7, 1927. Serial No. 173,464. 9 Claims. (Cl. 30—12.)

1. The razor blade comprising an element sharpened on one edge and having two symmetrically located notches in the other edge, said element having a hole therein, a rib adapted to be pinched over said notched edge and partially into said hole, said rib having an opening unsymmetrically located therein adapted to expose only one of said notches on both sides of the blade.

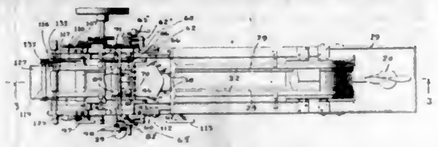
1,676,002. VARIABLE-CAPACITY ELECTRICAL CONDENSER. FRANK EDMUND BANCROFT, Longsight, Manchester, England, assignor to Ripaults, Limited, London, England. Filed Oct. 18, 1926, Serial No. 142,466, and in Great Britain Oct. 22, 1925. 8 Claims. (Cl. 175—41.5.)



1. A variable electrical condenser comprising a set of fixed plates of substantially rectangular shape and a set of movable plates slidably mounted upon supports parallel to one pair of sides of said fixed set of plates, a plurality of springs tending to move said second set of plates relatively to the fixed set, a rotatable spindle carrying a knob and a cam, said cam being adapted to control the movements of the second set of plates.

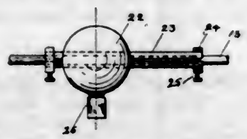
1,676,003. MANUFACTURE OF ARTIFICIAL SILK. HARRY P. BASSETT, Cynthiana, Ky. Filed Dec. 15, 1925. Serial No. 75,644. 2 Claims. (Cl. 18—54.)

1. The herein described process which comprises dissolving cellulose and copper hydroxid in ammonium hydroxid, precipitating the solution through a bath of caustic alkali of substantially 40° Baumé strength, washing the precipitating material in a bath of caustic alkali of from 15° to 20° Baumé strength, and then washing it in a bath of caustic alkali of less strength.



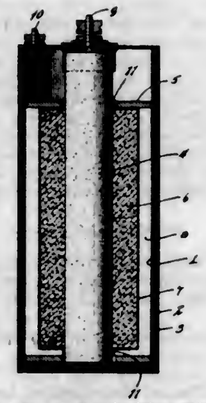
1,676,004. INSULATED VESSEL. CHARLES E. BULTMAN, Chicago, Ill.; Ida Mai Bultman, executrix of said Charles E. Bultman, deceased, assignor to Ernest D. MacDougall, Chicago, Ill. Filed Aug. 19, 1922. Serial No. 582,962. 32 Claims. (Cl. 215—13.)

1. An insulated vessel comprising two walls having a vacuum space between them, the walls being joined at the mouth, and a single means for centering said walls and permitting limited lateral motion of the inner wall.



1,676,005. GUMMING MACHINE. EUGENE CONTI, Cliffside Park, N. J., assignor to Alexander Herz, New Rochelle, N. Y. Filed Dec. 8, 1921. Serial No. 520,837. 12 Claims. (Cl. 271—29.)

1. In a machine of the class described, the combination with a hopper for a stack of sheets of fabricated material, of a conveyor, means for partly withdrawing sheets from said hopper, oscillatory means for depressing the partly withdrawn sheets into engagement with the conveyor

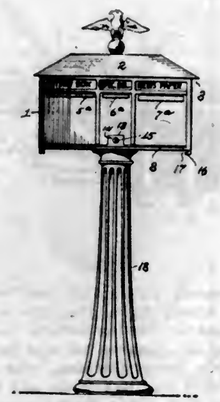


in overlapped relation, and means for moving the roller out of the path of movement of the sheet depressing means during its movement toward the conveyor.

1,676,006. ANTIOSCILLATING AND STRESS-REDUCING DEVICE FOR CABLES. LOUIS H. C. CROOK, Washington, D. C., assignor of one-half to Herman Jakobsson, Takoma Park, Md. Filed Oct. 18, 1926. Serial No. 142,302. 10 Claims. (Cl. 173—13.)

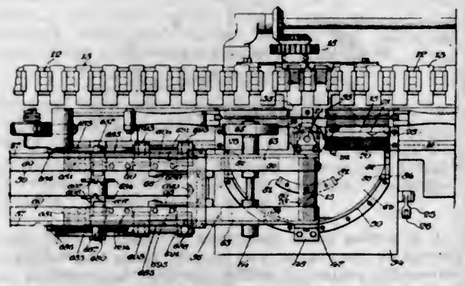
1. The combination with an aerial transmission line including a cable suspended to form a plurality of spans of an anti-oscillation device therefor; said device comprising a mass positioned on the cable to divide a span into sections of automatically variable lengths having incommensurable periods of oscillation.

1,676,007. BATTERY CELL. HENRY CSANYI, New York, N. Y. Filed May 26, 1926. Serial No. 111,682. 7 Claims. (Cl. 136—138.)



1. A dry cell having a depolarizing mixture including manganese hydroxide, and the chlorid of a tri-valent metal of a higher potential than the negative electrode of the cell.

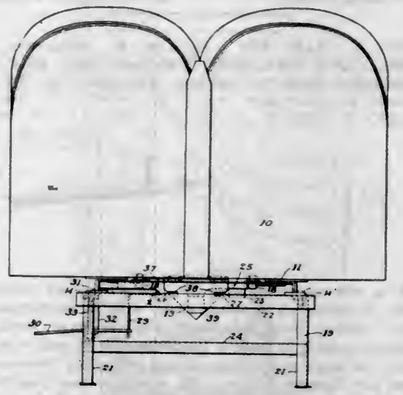
1,676,008. MAIL BOX. GEORGE DE MAZIROFF, New York, N. Y. Filed Feb. 14, 1927. Serial No. 168,211. 2 Claims. (Cl. 232—32.)



1. A mail box open on the lower side and provided with a slide bottom arranged to be drawn outwardly through one side of the box, said box having grooves in opposite walls in which the ends of said slide bottom are mounted and said slide bottom being provided at its rear

corners with pivot lugs which also operate in said grooves so that when said slide bottom is drawn out-

wardly to open the bottom of the box it may be then swung downwardly on said pivots to leave the bottom of the box entirely unobstructed.

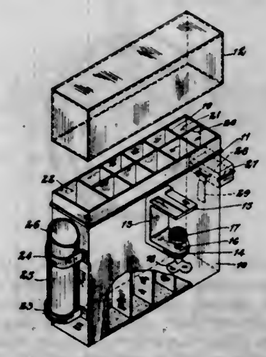


1,676,009. MACHINE FOR MAKING MATCH BOOKS. JOSEPH C. DONNELLY, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,384. 23 Claims. (Cl. 164—48.)

1. In a match-book machine having match strip cutting means, means for positioning match strips adjacent the cutting path, an oscillatory transfer element for moving match strips in flatwise condition through a horizontal arc to the positioning means, means for supplying match strips successively to said element, and means for operating said element in timed relation to the operation of the said positioning means.

1,676,010. CAR CHAIR. JAMES A. DUFFY, Fairmont, W. Va. Filed June 17, 1926. Serial No. 116,688. 4 Claims. (Cl. 155—96.)

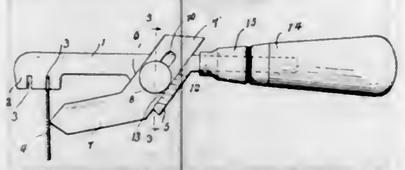
1. A car chair comprising in combination, a base member, a seat member rotatably secured to said base member, and means on said members for simultaneously tilting said seat member about a horizontal axis and im-



parting a translatory movement to said seat member relatively to said base member upon rotation of said seat member.

1,676,011. GLASS-CUTTING TABLE. ALBERT E. EVANS, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 9, 1926. Serial No. 114,738. 5 Claims. (Cl. 49—48.)

1. In combination with a glass cutting table, a plurality of roller units distributed over the area of the table and each comprising a lever, carrying two rollers with their axes of rotation at right angles to each other, and pivoted so that in one position of movement of the unit, one roller lies uppermost and in another position of movement, the other roller lies uppermost, and means for shifting the units.



1,676,012. ANTISEPTIC CONTAINER FOR BARBERS' TOOLS. MICHAEL FASCETTA, New York, N. Y. Filed Feb. 21, 1928. Serial No. 256,029. 5 Claims. (Cl. 132—79.)

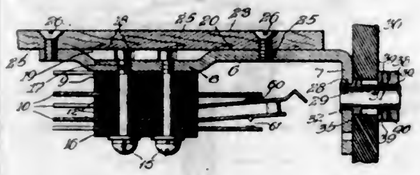
1. Container for barbers' tools comprising a casing, a means for securing the casing to a support, a plurality

of nested compartments formed in said casing, a means for allowing a sterilizing of said tools, and a means containing powder.

1,676,013. SAW SET. RICHARD R. FAULCONER and WILLIAM E. FAULCONER, Lewistown, Mo. Filed Nov. 22, 1926. Serial No. 150,028. 3 Claims. (Cl. 76—71.)

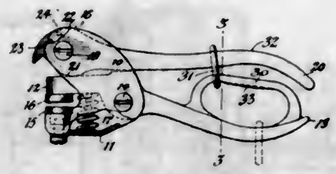
1. A saw-set comprising an elongated body having a head at its forward end formed with a tooth-receiving seat, leading from its lower edge, a gage having a forward portion extending longitudinally of said body beneath the same and a rear portion extending transversely from the forward portion and upwardly and rearwardly in diagonal crossed relation to the body, and means carried by said body to engage the last-mentioned portion of said gage an releasably hold the gage in a set position with the forward end thereof in desired spaced relation to the plane of said seat.

1,676,014. SAFETY LOCKING DEVICE. JACOB FECHER, Ludenscheid, Germany, assignor to Lüdenscheider Metallwerke Akt.-Ges. vorm. Jul. Fischer & Basse, Ludenscheid, Westphalia, Germany. Filed June 16, 1927, Serial No. 199,372, and in Germany Nov. 27, 1925. 1 Claim. (Cl. 292—318.)



A locking seal including a casing having openings in the respective ends thereof, a locking spring inserted through one of the openings into the casing, a locking strip inserted through the opposite opening in the casing and having an interlocked engagement with the spring and adapted to have the projecting end cut off so that the portion engaged by the spring may be removed from the casing with the spring through the opening in which the spring is inserted.

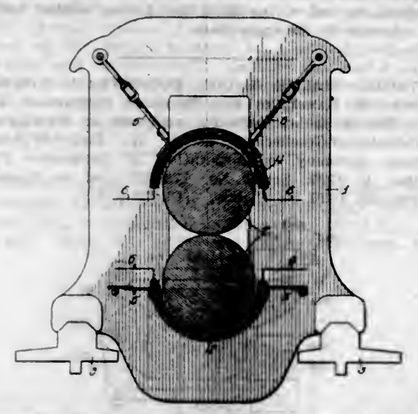
1,676,015. SPORTING APPARATUS. OTTO FEICK, Schonau-on-the-Brenz, Germany. Filed June 30, 1926, Serial No. 119,763, and in Germany Nov. 7, 1925. 12 Claims. (Cl. 272—57.)



1. A sporting apparatus, including a pair of hoop-like elements, ties connecting and maintaining the hoop-like elements in spaced relation, and means so arranged about the circumferece of the hoop-like elements for receiving the limbs of a person that the latter may maintain an upright standing position during rolling motion of the hoop-like element, said last mentioned means including a foot plate and holder.

1,676,016. JACK. HERBERT H. FROST, Chicago, Ill., assignor, by mesne assignments, to Chicago Telephone Supply Company, Elkhart, Ind., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,033. 3 Claims. (Cl. 179—96.)

3. In combination, an angular jack frame comprising a base and a thimble leg, a plug thimble secured at its inner end to said thimble leg, a flange integral with said thimble forming an abutment for said leg, the outer end of said thimble being threaded, said thimble being adapted to support said jack frame and panels of different thicknesses, said panels having openings therein to receive said thimble, and panel used abutting against said leg and said openings being of a diameter to snugly fit said thimble flange, washers adapted to fit over said thimble and engage with the panel, a nut adapted to be threaded on said thimble to secure said jack frame to said panel, said thimble flange being of less width than the length of the panel opening, whereby said jack frame may be secured to panels of different thicknesses, and jack springs secured to the jack frame base in alignment with said thimble.

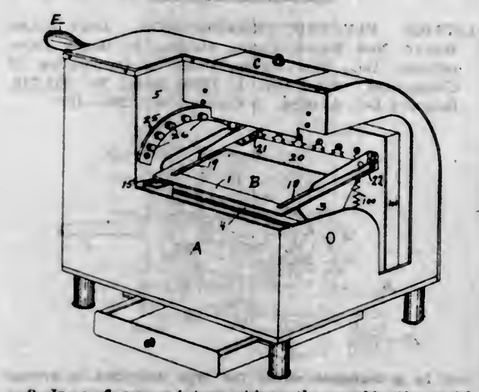


1,676,017. SEALING PRESS. CALDER C. GIBSON, Buffalo, N. Y. Filed Feb. 26, 1927. Serial No. 171,285. 5 Claims. (Cl. 89—91.)

1. A sealing press comprising a frame, a lower lever pivoted on the central part of said frame and having a rearwardly projecting handle, an upper lever pivoted on the upper part of the frame and having a cam engaging the lower lever and provided with a rearwardly projecting handle, cooperating dies arranged on the front part of said lower lever and the lower part of said frame, a longitudinal loop arranged on the inner side of the handle of said lower lever, and a retaining ring sliding with its lower part lengthwise on said loop and adapted to be slipped with its upper part lengthwise into and out of engagement with the outer side of the handle of said upper lever.

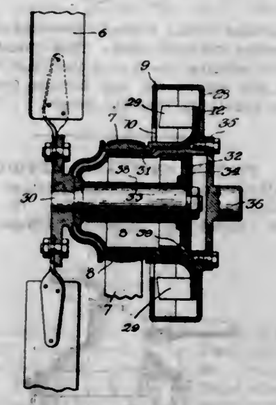
1,676,018. ROLL-HEATING MEANS. GORDON FOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed June 4, 1923. Serial No. 643,198. 4 Claims. (Cl. 80—41.)

4. In combination, a pair of rolls, means for rotatably supporting said rolls, a heater arranged in circumferential relationship with one of said rolls, but spaced therefrom, said heater being disposed out of obstructing relationship with the pass between said rolls, and means for



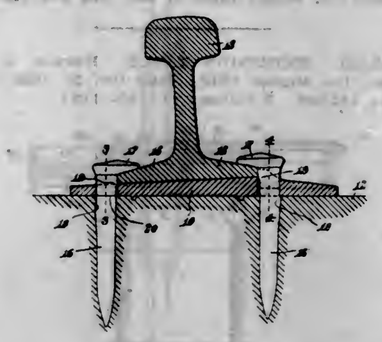
adjustably carrying said heater whereby the spaced relationship between said heater and its cooperating roll may be controlled.

1,676,019. SOOT-REMOVING DEVICE. ALEXANDER GIRTANNER, Bayside, N. Y., and JOSEPH J. MCNULTA, Summit, N. J., assignors to Girtanner Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 23, 1925. Serial No. 64,873. 8 Claims. (Cl. 110—165.)



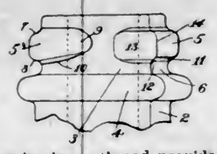
3. The combination with a dust collecting chamber having a limiting wall, of a tubular suction member provided with spaced inlets throughout its length, extending through said wall at the lower part thereof, caked dust breaking up means mounted upon and longitudinally extending above said suction member, and operating means therefor, external to said wall.

1,676,020. FINGERPRINT MACHINE. CHARLES F. GLASS and ALFRED CHARLES OTTO BOCK, Brooklyn, N. Y., and JOHN F. MILLIGAN, Ridgefield Park, N. J., assignors to Fingerprint Machine Corporation, a Corporation of New York. Filed Oct. 17, 1924. Serial No. 744,161. 13 Claims. (Cl. 41—4.)



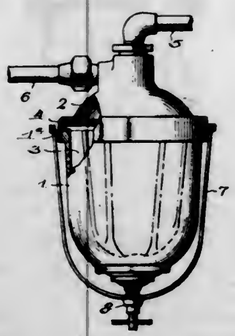
2. In a finger print machine, the combination with means for subjecting the paper to be impressed to a cycle of operations including pigmentizing of the print and fixing the pigment, of a motor operating said means throughout the entire cycle.

1,676,021. HEATER FOR MOTOR VEHICLES. JOHN H. GOULD, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Jan. 31, 1927. Serial No. 164,683. 3 Claims. (Cl. 230—241.)



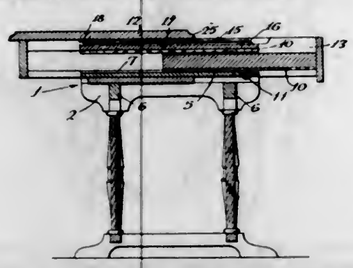
1. A combined fan and centrifugal blower assembly of the character described, comprising a blower casing, a rotor in said casing and having vanes with the air intake of the casing arranged concentric with said vanes and the air discharge of the casing being tangential to said vanes, said rotor having an integral portion extending outward therefrom through said air intake, a fan connected with said integral portion, and a driving pulley on said portion between the blower and the fan.

1,676,022. RAILWAY SPIKE. EDWARD B. GRIFFIN, Somerville, Mass. Filed Dec. 2, 1927. Serial No. 237,177. 3 Claims. (Cl. 238—295.)



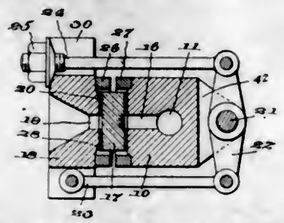
1. A railway spike formed with a head to engage the flange of a rail and having on two sides thereof shoulders perpendicular to each other and at different distances from said head, one shoulder being adapted to engage the under face of the thinnest part of a tie plate while the other shoulder is adapted to engage the under face of the thickest part of said plate.

1,676,023. GLASS THREAD CONTAINER. CHARLES HAMMER, Hollis Court Boulevard, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed May 5, 1927. Serial No. 188,908. 20 Claims. (Cl. 215—44.)



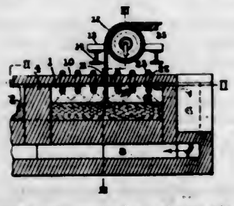
1. A container having a thread provided with a lengthwise extending inclined under face terminating in a straight face merging into a stop face, said thread having a tapered and curved top and bottom face, the latter having less angularity than the former.

1,676,024. FILTER UNIT AND METHOD OF MAKING SAME. AUGIE L. HANSEN, Chicago, Ill., assignor to Herbert S. Strausser, Chicago, Ill. Filed July 28, 1926. Serial No. 125,361. 8 Claims. (Cl. 210—169.



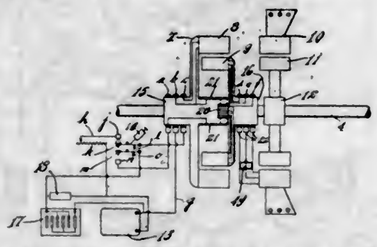
1. An article of manufacture for the purpose described, comprising a disc consisting of a ring and a circular plate having interfitting flanged edges, a skeleton frame member depending from said disc, and a covering of pliable material extending over said frame and having its marginal portion frictionally secured between the flanged edges of said ring and plate.

1,676,025. EXTENSION TABLE. HERMAN C. HANSON, Los Angeles, Calif. Filed Oct. 20, 1926. Serial No. 142,899. 5 Claims. (Cl. 45—113.)



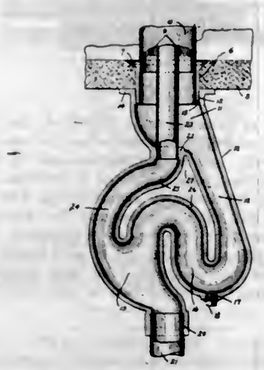
1. An extension table comprising in combination a plurality of guide beams, a supporting structure holding said beams fixed, a pair of slide bars connected to each beam to slide in opposite directions, a main table top connected to one of the slide bars, an open frame having a folding table leaf connected to the other slide bar, and means to slide the table top and open frame simultaneously in opposite directions, the folding leaf forming an end of the table and having sliding motion in reference to the open frame.

1,676,026. WATER GAUGE FOR STEAM BOILERS. OTTO H. HARTMANN AND HEINRICH PEPERKORN, Kassel-Wilhelmshohe, Germany, assignors to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Kassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Mar. 9, 1927, Serial No. 173,855, and in Germany Feb. 20, 1926. 6 Claims. (Cl. 73—54.)



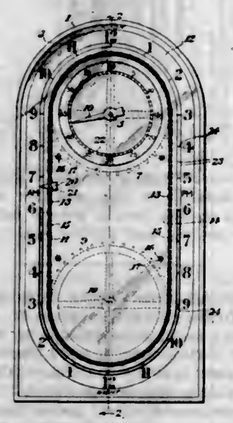
1. A water gauge for high pressure boilers, comprising a hollow member adapted to be connected to a boiler and having a longitudinally extending aperture, a glass fitted over said aperture, and a frame for retaining said glass in position, said frame consisting of members pivotally connected together end to end in series, with one of the intermediate frame members bearing on said hollow member.

1,676,027. PROCESS AND APPARATUS FOR DRAWING SHEET GLASS. GEORGE H. HARVEY, Rochester, Pa., assignor of one-half partnership interest to Edward A. Lawrence, Bellevue, Pa. Filed May 13, 1926. Serial No. 108,865. 15 Claims. (Cl. 49—17.)



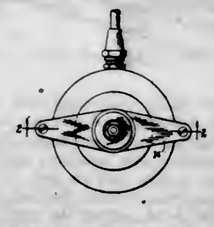
12. The process of producing sheet glass which comprises forming a film on a body of molten glass by applying a moisture spray to the top surface of the glass and then withdrawing said film in sheet formation.

1,676,028. ELECTRIC TRANSMISSION. JOHN ALLEN HEANY, New Haven, Conn., assignor to Heany Laboratories, Inc., New Haven, Conn., a Corporation of Connecticut. Filed Dec. 1, 1919, Serial No. 341,710. Renewed Dec. 6, 1926. 9 Claims. (Cl. 290—12.)



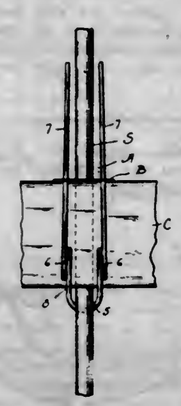
1. In a transmission of the type described, a driving member, a driven member, elements of a dynamo-electrical machine carried by said members and cooperating to transmit torque from one member to the other, a dynamo-electric unit arranged to apply torque to said driven member only at such times as the speed of the rotor thereof assumes a predetermined relation to the speed of the driven member, an electrical connection between said dynamo-electric machine and said dynamo-electric unit whereby electrical energy generated by the relative rotation of the elements of the dynamo-electric machine is supplied to said dynamo-electric unit.

1,676,029. TRAP. HERMAN E. HEINE, Milwaukee, Wis., assignor to Bradley Washfountain Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 29, 1927. Serial No. 187,595. 3 Claims. (Cl. 182—18.)



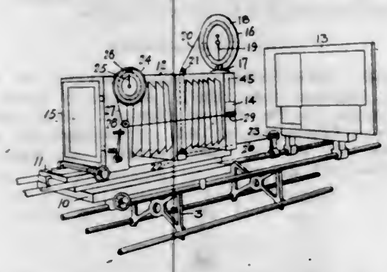
1. In a trap having its interior divided into a vent portion and a trapping portion, said trap also having an opening communicating with both portions, a vent pipe of less diameter than said opening and extending therethrough and connected with said vent portion.

1,676,030. TWENTY-FOUR-HOUR CLOCK. FRANCIS A. HELIN, Watertown, N. Y. Filed Sept. 17, 1926. Serial No. 136,113. 1 Claim. (Cl. 58—126.)



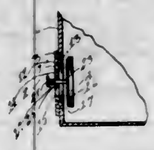
A clock of the type set forth comprising a clock movement including a continuously rotating hour arbor making one rotation in twelve hours; a driver wheel fixed to the arbor to rotate with it; an endless carrier trained around said wheel and guided in an elongated course, the length of said carrier being equal to twice the circumference of the wheel; an hour pointer attached to the carrier; and an hour dial marked with twenty-four hour graduations arranged in a continuous series extending around the course of the carrier and adapted to be traversed continuously by the hour pointer.

1,676,031. EXPANSION VALVE. CLARENCE M. HOLLEY, Highland Park, Mich., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Sept. 18, 1922, Serial No. 588,789. Renewed Nov. 30, 1925. 3 Claims. (Cl. 50—23.)



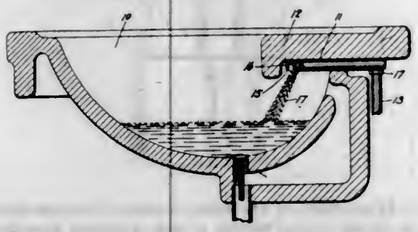
3. The combination with the high and low preasure lines of a valve device between the high and low pressure lines consisting of a body member having a chamber, one wall of which is flexible, a second chamber open to the first named chamber and into which both said high and low pressure lines open, a valve connected with the flexible member and movable thereby between the said openings to alternately open and close the same, means determining the pressure at which the valve may be moved to close the opening of the high pressure line to the chamber, and means determining the extent of reduction of pressure required to move the valve to close the opening of the low pressure line and open that of the high pressure line to the chamber.

1,676,032. HOLDER. JOSEPH O. HOWARD, Evanston, Ill. Filed June 1, 1926. Serial No. 112,778. 7 Claims. (Cl. 248—37.)



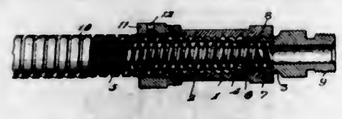
1. In a holder of the class described, the combination of a spring frame having a staff receiving passageway at its lower end and abutments intermediate its ends, and a tie plate having a staff receiving opening and having notches for detachably receiving the upper end of said spring frame.

1,676,033. APPARATUS FOR MAKING PHOTOGRAPHIC REPRODUCTIONS. EDWARD F. KINZLER, Pittsburgh, Pa., assignor of one-half to Robert Rawsthorne, jr., Pittsburgh, Pa. Filed June 6, 1925. Serial No. 35,321. 4 Claims. (Cl. 88—24.)



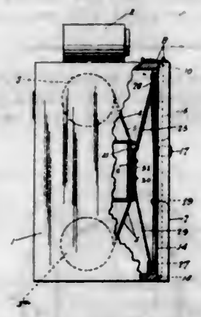
1. Photographic apparatus comprising a copy board, a camera having a lens frame movable relative to said copy board, a spring-tensioned drum on said camera frame, for indicating the relative positions of said frame and board, a wire having one end connected to said drum and partially wound thereon, and having its other end secured to an adjustable stop whose position may be varied with respect to the thickness of copy carried by said board.

1,676,034. VALVE. JOHN W. LANGDON, Walla Walla, Wash. Filed Oct. 5, 1925. Serial No. 60,387. 2 Claims. (Cl. 221—16.)



1. In a valve, the combination of a body portion, a ring raised in said body portion to form a valve seat and to provide a stiffener for said body portion, said body portion being provided with an influx and an efflux orifice contained within said ring, a closure positioned to register with said valve seat, and means to operate said closure.

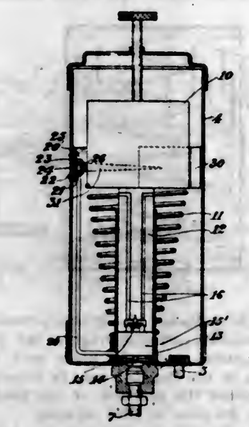
1,676,035. NOZZLE. HENRY W. A. LEHNERT, New York, N. Y. Filed Oct. 3, 1924. Serial No. 741,521. 3 Claims. (Cl. 299—121)



1. A fluid delivery nozzle comprising an elongated tubular member having one end closed by a stationary end wall, a discharge outlet in a side wall adjacent the closed end, a baffle spaced from the end wall and projecting from the side wall opposite the outlet and extending part way across the tubular member, the plane of the baffle intersecting the plane of the outlet on a line substantially removed from the inner edge of the outlet.

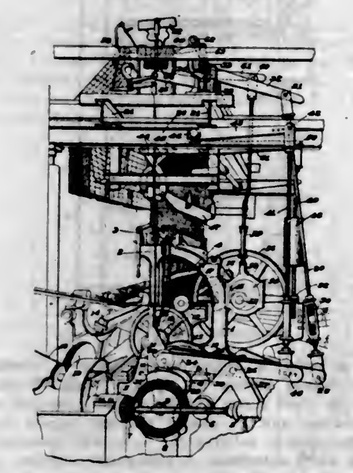
1,676,036. PIPE COUPLING. SAMUEL LEVITT, Brooklyn, N. Y., assignor to United Metal Hose Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 11, 1919. Serial No. 330,013. 5 Claims. (Cl. 285—72.)

1. In a device of the character described, the combination of a hose comprising a flexible metal tube enclosed in a flexible sheath, and a coupling secured to said hose comprising a coupling sleeve having a uniform internal thread extending continuously therethrough and screwed on said sheath but extending beyond the same, and a coupling plug member having an externally threaded portion screwed into the outer end of said sleeve between the same and the flexible metal tube, said member being recessed to receive the end portion of said flexible metal tube.



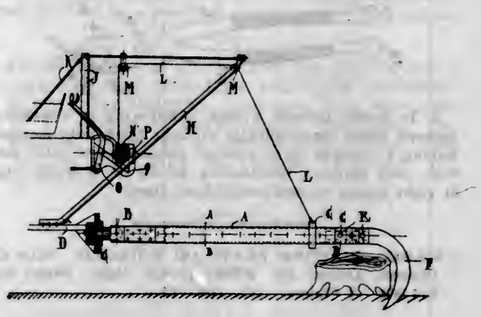
1,676,037. FILM-MOVING MECHANISM. GUNNE LOWKRANTZ, Binghamton, N. Y., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Feb. 18, 1927. Serial No. 169,376. 3 Claims. (Cl. 95—31.)

1. In combination with a camera, a back on said camera, a claw slidable on said back for moving a strip of film in said camera, and a presser pad on said back for engaging the film and guiding said claw.



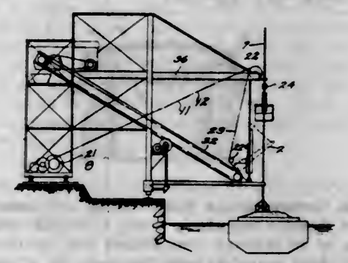
1,676,038. PUMP-MODIFYING MECHANISM FOR FUEL-FEEDING DEVICES. FRED B. MACLAREN, Jamaica, N. Y., assignor to Chester H. Braselton, New York, N. Y. Filed Apr. 1, 1922, Serial No. 548,867. Renewed June 16, 1927. 1 Claim. (Cl. 103—40.)

In a fuel supply system for internal combustion engines, the combination of a casing having an outlet port therein; pump mechanism within the casing, said pump mechanism including a cylinder; a piston movable within the cylinder; an inlet and outlet valves in the pump cylinder; a weighted mass attached to the pump piston adapted to operate the piston through movement of the casing; a valve attached to the casing wall within the casing; float operated means for opening and closing the valve; and a conduit intermediate the valve



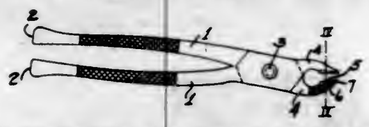
and pump cylinder, said valve being normally closed but adapted to be opened when the float is lifted by flow of liquid into the casing.

1,676,039. PILE-FABRIC LOOM. HOWARD MASON, Saxonville, Mass. Filed Dec. 16, 1926. Serial No. 155,286. 10 Claims. (Cl. 139—39.)



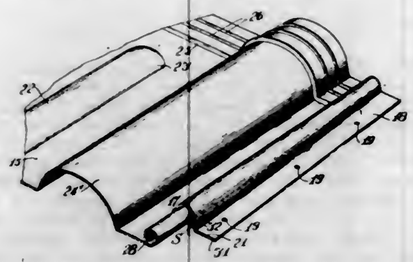
1. A loom for weaving figured pile fabrics having a multiplicity of figuring pile warp threads and ground warp threads, comprising, in combination, the lay, transverse pile wire mechanism, a jacquard having a griff for selectively controlling the pile warp threads, harness mechanism for controlling the ground warp threads, a cam for raising the griff and having a dwell portion for maintaining the griff raised and the lifted figuring pile warp threads under tension, and means for operating the lay to beat up the transverse pile wire and a weft thread simultaneously to the fell of the cloth during the dwell of the griff and consequent tension on the raised figuring pile warp threads.

1,676,040. TRACTOR-OPERATED STUMP-UPROOTING DEVICE. JULIEN MEUNIER, Troarn, Calvados, France. Filed Apr. 5, 1926, Serial No. 99,799, and in France May 20, 1925. 1 Claim. (Cl. 37—2.)



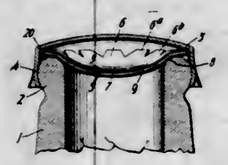
In a tractor-operated stump uprooting apparatus the combination with a tractor frame; of a shank pivotally connected at one end to said tractor frame for vertical movements relative thereto, a hook connected to the other end of said shank for engagement with a stump to be uprooted, a standard supported by said frame, a jib extending upwardly and rearwardly from said frame, a guy-rod extending from said standard and connected to the upper end of said jib, pulleys supported by said jib and rod, a flexible element engaged with said pulleys and having one end connected to said shank, a drum supported by said frame for receiving said flexible element, and means to operate said drum to wind said flexible element thereon and unwind the same therefrom to raise and lower said shank and hook.

1,676,041. UNLOADING MACHINE. SETURÔ NAGAO, Tokyo, Japan. Filed Dec. 16, 1925, Serial No. 75,705, and in Japan Dec. 17, 1924. 2 Claims. (Cl. 214—89.)



1. In an apparatus of the character described, the combination of a vertically movable grab, a pivoted chute adapted to swing into an inclined position intersecting the path of movement of the grab, a counterweight disposed above the grab and adapted to be moved thereby during its upward movement, means connecting said counterweight with said chute whereby the latter is normally retained in vertical position out of the path of the grab and is automatically released when the counterweight is raised, and cooperating means carried by said grab and counterweight for resiliently connecting them together whereby the grab will carry the counterweight with it during a portion of the downward movement of the grab.

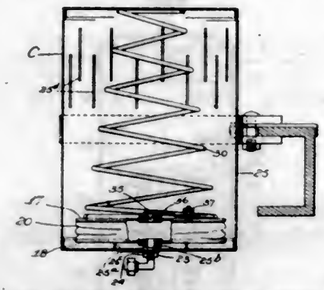
1,676,042. DENTIST'S FORCEPS. JOHN J. OGDEN, Memphis, Tenn. Filed July 29, 1926. Serial No. 125,699. 6 Claims. (Cl. 32—34.)



1. In dental forceps, a beak terminating in a member tapered along longitudinally straight lines, said member having a concave inner surface, and a convex outer surface, said surfaces terminating jointly in a knife edge at right angles to said longitudinal lines.

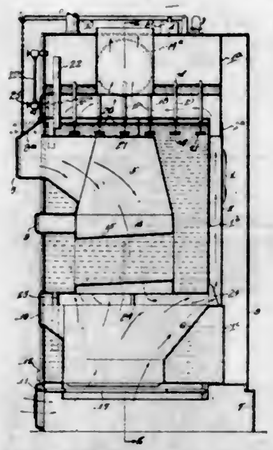
1,676,043. ROOFING PLATE OR SHINGLE. NILS G. OLSSON, Aurora, Ill. Filed Apr. 26, 1926. Serial No. 104,508. 3 Claims. (Cl. 108—17.)

2. A roofing shingle adapted for laying from the ridge down comprising a plate having a first interlocking bead formed along one vertical edge thereof, a second interlocking bead formed adjacent the opposite vertical edge thereof, an attaching flange extending laterally from said latter bead, and a tapering web portion joining said attaching flange to said latter bead.



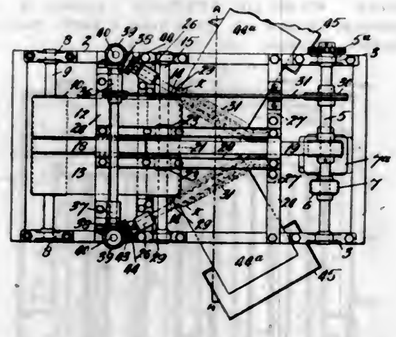
1,676,044. RECEPTACLE CLOSURE. HENRY OLT, New York, N. Y. Filed July 12, 1927. Serial No. 205,070. 4 Claims. (Cl. 215—38.)

1. In combination, a bottle having a rounded top, a closure therefor comprising a cap, a metallic gasket consisting of an inverted dome-shaped body portion having its periphery seated against the inner lip of the mouth of the bottle and a plurality of resilient fingers integral with the body portion and projecting radially therefrom, and cooperating with said cap to hold the body portion in its sealing position.



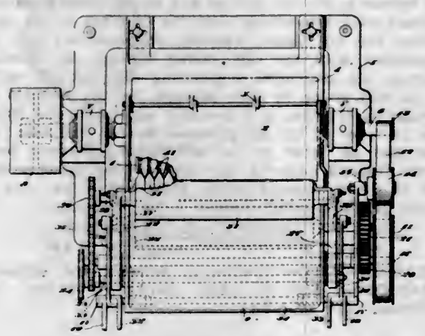
1,676,045. CONDENSER FOR AUTOMOBILE ENGINE RADIATORS. FRANK R. PERRY, Chicago, Ill. Filed Aug. 2, 1926. Serial No. 126,391. 10 Claims. (Cl. 257—25.)

1. In combination with the radiator of a circulatory cooling system of an internal combustion engine an expansible and reducible chamber mounted for fluid communication with the radiator cavity at the upper part of the latter, said chamber being yieldingly expansible by the pressure communicated from the radiator cavity upon heating and vaporizing of the circulatory fluid, said chamber having a port for liquid communication with the radiator at the lower part of said chamber and below the liquid level of the radiator, and being exposed to atmospheric cooling for condensing vapor which may pass



thereinto from the radiator, and pressure means for contracting the chamber corresponding to the pressure by which it is expanded; whereby upon such contraction liquid remaining in the chamber may be forced back into the radiator against the pressure of the head of liquid and the reduced pressure in said chamber.

1,676,046. STEAM AND HOT-AIR GENERATOR. BRACE A. PHILLIPS, East Lansdowne, Pa. Filed July 6, 1925. Serial No. 41,716. 9 Claims. (Cl. 122—218.)

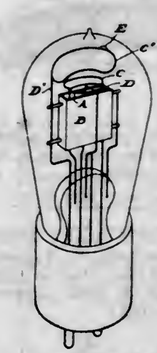


1. In a boiler, a water heating unit; a combustion chamber therein having an upward draft through its fuel bed; a lower steam generating unit mounted on the water heating unit in spaced relation thereto to provide a gas passage between the units and connected for receiving water therefrom; a combustion chamber in the steam generating unit having a downward draft through its fuel bed; an upper steam generating unit mounted above and spaced from the lower steam generating unit to provide a gas passage; conduits passing through said last named gas passage and connecting the upper steam generating unit with the lower steam generating unit; means on the conduits for causing the steam escaping through the conduits to atomize the water in the lower steam generating unit and carry it toward the upper steam generating unit, and a casing between the upper steam generating unit and the water heating unit, spaced from the lower steam generating unit to provide a passage for directing the gases coming from both chambers and through the first mentioned passage to the second mentioned passage.

1,676,047. MACHINE FOR CLEANING THE STEMS OF TOBACCO LEAVES. MORRIS GODFREY PHILIP PHILLIPS, London, England. Filed Nov. 11, 1927, Serial No. 232,591, and in Great Britain Apr. 30, 1927. 15 Claims. (Cl. 131—57.)

9. A machine for cleaning stems of tobacco leaves without disintegrating the stem or leaf comprising two belts, a third belt disposed between and in the plane of said first belts and extending beyond same, a belt cooperating with said third belt to grip the stems at or near the centre of their length, rotary brushes arranged in pairs upon each side of the line of travel of the stems, said brushes being inclined with respect to the belts in a manner such as to act upon the stems from the outer ends of the stems inwards, and said brushes being tapered at the end first engaging the stem, and rigid members pressing upon the belts at their point of engagement with the stems.

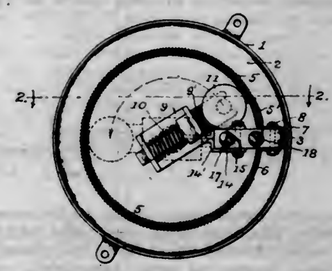
1,676,048. PAPER-PULP SHREDDER. FRANK B. PHILBRICK, deceased, Waterville, Me., by Herbert S. Philbrick, executor, Evanston, Ill., assignor to Waterville Iron Works, Waterville, Me., a Corporation of Maine. Filed Sept. 14, 1927. Serial No. 219,450. 14 Claims. (Cl. 92—20.)



1. As an article of manufacture, a removable knife for paper pulp shredders having a blunt end bounded by three rectangularly arranged edges, and two principal divergent cutting edges adjoining said blunt end.

3. In a paper pulp shredder, a rotary drum having a plurality of projecting knives thereon, and a plurality of relatively stationary knives removably and adjustably held adjacent to said drum and so located that portions of the knives of the drum pass between portions of the stationary knives on rotation of the drum, the adjusting means for the stationary knives being so arranged that some of the knives may be adjusted differently from the contiguous knives, whereby the machine is adapted to shred the paper pulp into zigzag strips of any desired length.

18. In a paper pulp shredder, means comprising the combination of movable and stationary knives for shredding the pulp by a combined shearing and tearing action.



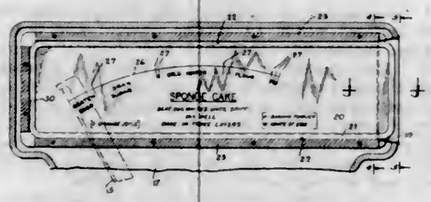
1,676,049. METHOD AND MEANS FOR INDUCTIVELY HEATING THE METALLIC PARTS OF INCLOSED ELECTRICAL DEVICES. ALEXANDER RAVA, New York, N. Y., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 29, 1924. Serial No. 716,632. 16 Claims. (Cl. 250—27.5.)

1. The method of removing gas from a conductive body inclosed within an envelop wherein said body is shielded by another conductive body from a magnetic field which consists in affixing to said first mentioned body a loop of conductive material forming a closed contour with said body and being insulated from other conductive bodies within said envelope heating said loop and said conductive body by a high frequency magnetic field to remove the gas therefrom removing said gas from said envelope and sealing said envelope.

16. In an electrical discharge device having electrodes inclosed within an envelope, one of the electrodes being shielded by another electrode from the influence of a magnetic flux, an exposed loop of conductive material attached to said shielded electrode and forming with said electrode a closed contour susceptible to the influence of a magnetic flux of a given direction, and a second loop of conductive material attached to one of the electrodes and exposed at an angle to said first mentioned loop, said second mentioned loop having a closed contour and being disposed so as to be susceptible to the influence of a second magnetic flux disposed at an angle to the first mentioned flux.

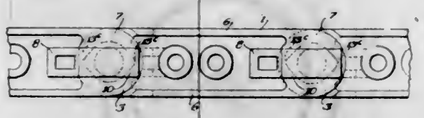
1,676,050. RHEOSTAT. THOMAS RHODUS, Chicago, Ill. Filed Dec. 18, 1925. Serial No. 76,141. 3 Claims. (Cl. 201—55.)

1. In a rheostat of the type described, the combination of an enclosing shell, an insulating member secured to said shell and located wholly in offset relation to the



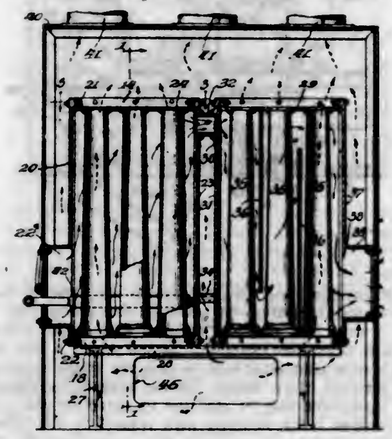
center of said shell, a curved resistance member secured to said insulating member, said insulating member extending from a point outside of to a point inside of the curve of said resistance member, a movable contact member adapted to make contact on said resistance member, and adjustment means for said contact member.

1,676,051. TENNIS RACKET. ROY H. ROBINSON, Chicago, Ill. Filed Dec. 15, 1923, Serial No. 680,956. Renewed Sept. 6, 1927. 36 Claims. (Cl. 273—73.)



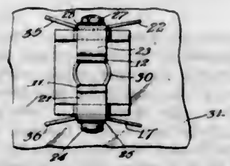
34. A tennis racket comprising a shell having stringing holes with turned-in edges and a filling material between said turned-in edges.

1,676,052. SCALE AND CHART THEREFOR. JOSEPH E. ROGERS, Mamaroneck, N. Y., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 8, 1925. Serial No. 21,576. 9 Claims. (Cl. 116—129.)



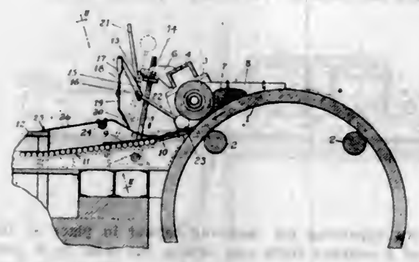
2. A weighing scale of the automatically counterbalanced type having a chart housing, a weight chart therein and a cooperating indicator and having in combination therewith a supplementary chart provided with progressive weight designating fields each field having associated therewith data instructive as to the kind of commodity or substance represented by a particular field, the aforesaid indicator being adapted to successively traverse the various fields of the supplementary chart and cooperate with the weight designation thereon.

1,676,053. CONVEYER-CHAIN LINK. CLAUDE RORABECK, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 27, 1924. Serial No. 745,987. 3 Claims. (Cl. 74—32.)



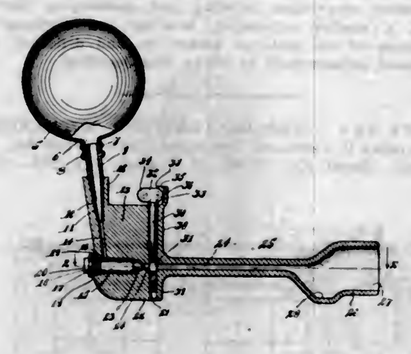
1. In conveyer chains, links having pintle connections at their ends; said links being constructed with pintle openings having bushings to receive the pintles; and bushings being constructed with characteristic sections extending throughout their lengths providing external surfaces of approximately continuous arcuate form but developed with curved sallents; and the link openings having a characteristic section which provides a plurality of re-entrant portions corresponding to the curvature of the salients on the bushings, whereby the bushings may be fixed in different positions in the links.

1,676,054. WARM-AIR FURNACE. ROBERT W. SATTERHOLM, Chicago, Ill. Filed June 4, 1927. Serial No. 196,448. 4 Claims. (Cl. 126—116.)



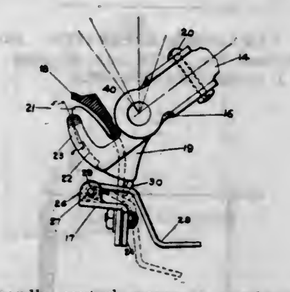
1. A warm air furnace embodying a casing having an air inlet and an outlet, a heating chamber within the casing and out of communication therewith, means supporting the chamber above the bottom of the casing, said heating chamber being spaced from the wall of the casing and embodying upright walls and top and bottom plates, said plates having alined openings therethrough, the openings in the upper plate being of a smaller diameter than the openings in the bottom plate, the side walls of the heating chamber diverging from the said bottom to the said top plate, vertical tubes arranged within the heating chamber, said tubes tapering from the bottom to the top thereof and having communication at their ends respectively with the openings in the said bottom and top plates, whereby communication will be established with the said casing through the heating chamber, the said tubes co-operating with the side walls of the said casing to form passages for the products of combustion tapering in a direction opposite to the direction of taper of the air passages through the flues, an inlet and an outlet to the said heating chamber both being disposed adjacent the base of the chamber but out of direct communication with each other, and a burner in the heating chamber.

1,676,055. JACK. NEWTON C. SCHELLENGER, Elkhart, Ind. Filed Dec. 30, 1925. Serial No. 78,284. 15 Claims. (Cl. 179—96.)



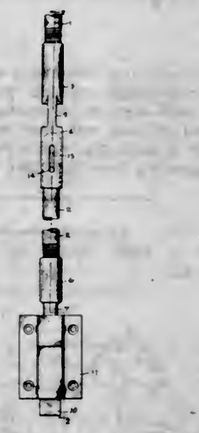
1. In combination, a jack having a generally U-shaped frame, and jack springs secured to said frame, said springs being normally in contact with each other adjacent the free ends of the legs of said frame.

1,676,056. PLATE-GLASS-ROLLING APPARATUS. LEE SHOWERS, Charlerol, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 29, 1927. Serial No. 164,483. 3 Claims. (Cl. 49—33.)



1. The combination with a pair of substantially horizontal glass sheet forming rolls and a runway in advance thereof and extending laterally, of means for guiding the advancing end of the glass sheet formed between the rolls onto the runway comprising, a plate in advance of the rolls, a support therefor to which the plate is hinged, and means for moving the plate up into the pass between the rolls with its lower side in contact with the lower roll, and for withdrawing the plate from said pass with the front end of the glass sheet which is formed supported on the plate.

1,676,057. MEDICAL INSTRUMENT. CARL WILSON SLUSSER, Chicago, Ill. Filed Apr. 21, 1927. Serial No. 185,372. 11 Claims. (Cl. 128—239.)



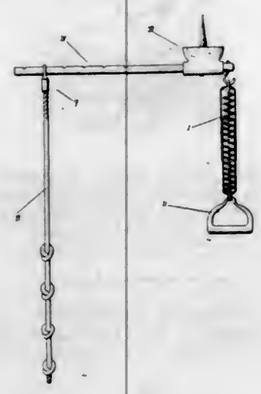
6. A device of the class described comprising a body member; a vaginal staff integral therewith; a cup on the end of said staff for receiving the cervix; means in one side of said cup into which secretions may flow; a passageway from said cup through said staff and body; valve means in said passageway for closing the same; said passageway adapted to have a vacuum produced therein; and means for introducing medicine through said passageway to said cup; a thumb hold on said valve for rotating the same; means for limiting the rotation of said valve; means for preventing said thumb hold coming in contact with the patient's body.

1,676,058. HANDLE CONTROL. DONALD G. SMELLIE, Maywood, Ill., assignor to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Aug. 29, 1924. Serial No. 734,830. 5 Claims. (Cl. 306—13.)

1. In a handle control means, a member having a handle pivotally connected thereto, cam elements lying side by side and secured to said handle, and a latch mounted on said member and arranged to selectively cooperate with either of said cam elements.

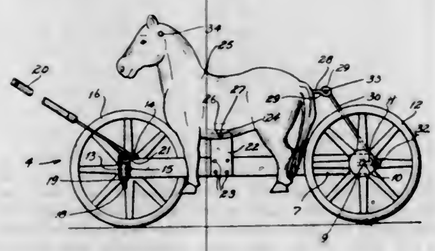
1,676,059. DOOR-LATCH MECHANISM. CHARLES R. SMITH, Maplewood, N. J. Filed Aug. 2, 1923. Serial No. 655,177. 7 Claims. (Cl. 292—92.)

1. The combination of a rod mounted to reciprocate vertically and lengthwise and to gravitate normally to a lower position, bolts operatively connected with the upper and lower portions respectively of said rod and mounted to be shot and drawn simultaneously by the reciprocation of said rod, and a loose connection between said rod and one of said bolts permitting said bolt to move in unlatching direction without moving the other bolt, one of said members having a portion arranged to actuate the said bolt toward locking position by gravity.



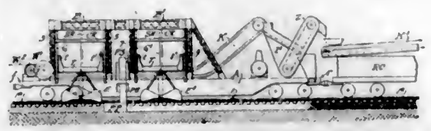
1,676,060. PRICE INDICATOR. BENJAMIN SPINELLI, Philadelphia, Pa. Filed May 2, 1927. Serial No. 188,256. 3 Claims. (Cl. 116—135.)

1. A price indicator comprising a scale including one set of indications representing dollars and another set of indications representing cents, a supporting member



at each end of the scale on the front face thereof, a wire mounted on the supports to provide two parallel strands, and a marker movably mounted on each wire strand for coaction with an adjacent set of indications.

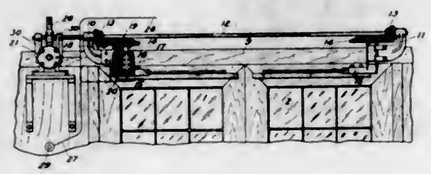
1,676,061. GYMNASIUM APPARATUS. ARTHUR C. E. STROM, Ortega, Fla. Filed Aug. 17, 1925. Serial No. 50,812. 1 Claim. (Cl. 272—57.)



A chinning apparatus comprising a baseblock having a horizontally extending opening therethrough, a rod mounted in said opening, a spring member depending from one end of said rod, said spring member being provided with a hand grip, and a flexible cable (or rope or chain) depending from the other end of said rod.

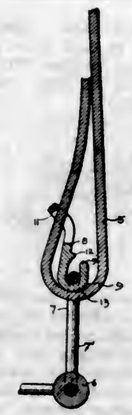
1,676,062. TOY. SWAN J. SWANSON, St. Louis, Mo. Filed Dec. 9, 1926. Serial No. 153,673. 1 Claim. (Cl. 208—42.)

In combination with a vehicle comprising a frame member bifurcated at one end and having tubes secured to each one of the prongs of the bifurcated end of said frame, an axle passing through said tubes, said axle having a crank formed at its center between the prongs of said bifurcated end of said frame member, one wheel secured to each end of said axle, a front frame member having axles secured thereto on which are rotatively secured wheels, said front frame member rotatively secured to said frame member, a frame projection, secured to said frame member, an animal rotatively secured to said frame projection, a projection formed at one end of said animal, a crank arm secured rotatively to said projection and rotatively to said crank.



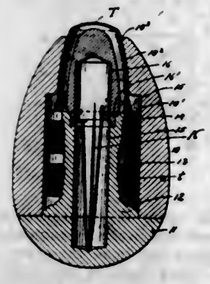
1,676,063. APPARATUS FOR REMOVING RAILROAD BALLAST. ERNEST W. TAYLOR, Cleveland Heights, Ohio, assignor, by mesne assignments, to Industrial Brownhoist Corporation, a Corporation of Ohio. Original application filed Feb. 21, 1927, Serial No. 169,967. Divided and this application filed June 22, 1927. Serial No. 200,672. 10 Claims. (Cl. 37—104.)

3. An apparatus for removing ballast in place at the side of a railroad track and raising the same to a platform, or car, on and adapted to traverse the track, comprising such platform, a trolley-track thereon pivotally fastened at one end to and above the floor of the same and leading over and downwardly along the side of the car to a predetermined distance above said material, a trolley on and adapted to traverse said trolley-track, an excavating bucket longitudinally pivoted to the trolley, means on the platform for raising and lowering the trolley along its tracks, and means thereon for operating the bucket through its designed uses and functions, substantially as shown and described.



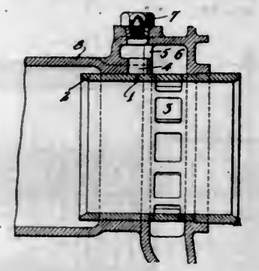
9. A method of removing ballast material in place between adjoining railroad tracks consisting in the separate and successive excavation of uniform and connected areas of a strip of said material along the side of one of said tracks, hoisting the material as so excavated to and upon a car movably mounted on said track and discharging the same at such point, alternately with such excavating, hoisting and discharging operations and without occupying clearance spaces for overhanging cars on the other of said tracks, breaking up and deflecting into the cavities left by said excavations the portion of said material in place between each successive cavity and said other ather track, and, simultaneously with each said successive excavating, hoisting and discharging operations, a similar excavating, hoisting and discharging operation of the material broken up and deflected, as aforesaid, substantially as shown and described.

1,676,064. CLOSURE-OPERATING MECHANISM. CHARLES E. VREELAND, Davenport, Iowa. Filed Apr. 1, 1925. Serial No. 19,982. 2 Claims. (Cl. 228—63.)



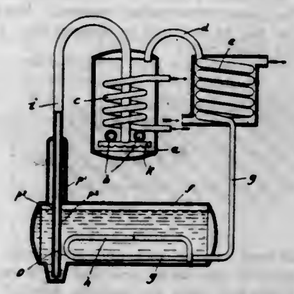
1. In apparatus of the character described, a reversible electric motor, a shaft rotated thereby, gears attached to the shaft and rotating therewith, gears driven by the aforesaid gears, shafts carrying the last named gears, arms operated by the last named shafts, tracks engaged and actuated by the arms, said tracks being connected to doors or the like, so that operation thereof will be caused by operation of the motor, a reversing switch for the motor, lugs on one of the last named gears adjacent the reversing switch and connecting the gear with the switch at predetermined positions for the stopping of the doors.

1,676,065. STRAP PROTECTOR. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 27, 1925. Serial No. 71,788. 2 Claims. (Cl. 24—183.)



1. A strap protector, comprising a hook-like member having an eyed shank with a hook portion, said eyed shank portion extending outwardly at an angle from the hook portion for loosely receiving a strap and a ring loosely and non-removably held in the hook portion.

1,676,066. KIT FOR SEWING OUTFITS OR THE LIKE. CONRAD WOGE, New York, N. Y. Filed Apr. 11, 1927. Serial No. 182,748. 2 Claims. (Cl. 223—14.)

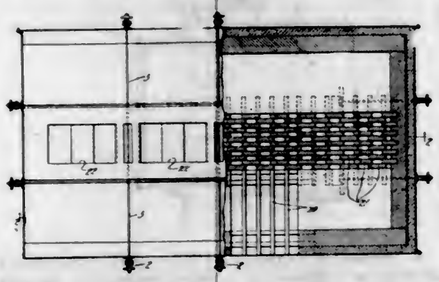


1. As an article of manufacture, a kit for a sewing or knitting outfit, comprising an open ended casing of rigid material, a lid frictionally engaging one of the open ends of said casing, a cylindrical extension in said lid formed with a hollow open at one end, said extension being adapted to project into said casing and having annular flanges to form spools for thread, the hollow of said extension serving as a receptacle for articles, such as needles or the like, a cap for closing the opening of said receptacle, and a socket at the open end of said casing conforming in shape and size with a thimble so that the latter can be inserted only from the inside of said casing and can be moved inwardly to open the lid.

1,676,067. LOCOMOTIVE AUXILIARY CYLINDER-PORT ARRANGEMENT. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed May 2, 1925. Serial No. 27,431. 3 Claims. (Cl. 121—142.)

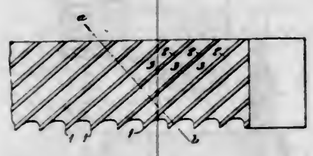
1. A locomotive auxiliary cylinder port arrangement comprising in combination a valve bushing, a starting port therein, an opening in the cylinder steam chest opposite said port through which said port may be cleaned, means for closing said opening and an oil receiving pocket between the starting port and the cleaning opening.

1,676,068. REFRIGERATING APPARATUS. GAUDENZ BAYER, Augsberg, Germany. Filed May 12, 1926, Serial No. 108,560, and in Germany May 22, 1925. 11 Claims. (Cl. 62—118.)



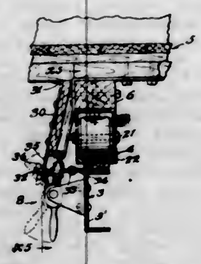
1. A refrigerating apparatus including a still-absorber, an evaporator, a condenser, and conduit means for delivering fluid from the evaporator to the still-absorber, said conduit means having a terminal portion at the lowest part of the evaporator and having a plurality of openings in the wall thereof, and at different elevations.

1,676,069. SEPARATING FROM FLUID HYDROCARBONS OTHER HYDROCARBONS WHICH PRECIPITATE AT LOW TEMPERATURE. NILS OLOF BACKLUND, Stockholm, Sweden, assignor to Bergedorfer Eisenwerk Aktiengesellschaft, Sande, near Bergedorf-Hamburg, Germany, a Corporation of Germany. Filed Jan. 28, 1927, Serial No. 164,377, and in Germany Aug. 16, 1926. 7 Claims. (Cl. 196—19.)



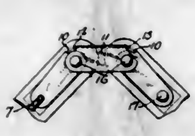
1. The process of separating from fluid hydrocarbons other hydrocarbons which on cooling, precipitate in solid form, which comprises adding to the mixture a liquid having a specific gravity higher than that of the heaviest of said other hydrocarbons and which is adapted to form a solution with said fluid hydrocarbons and is not adapted to form a solution to a substantial extent with said other hydrocarbons, such liquid being added in a sufficient proportion to form with said fluid hydrocarbons a solution having a specific gravity higher than that of said other hydrocarbons, and centrifugally separating the bulk of said solution from the bulk of said other hydrocarbons.

1,676,070. FURNACE FOR PRODUCING AND DILUTING PRODUCTS OF COMBUSTION. GUSTAVE BLUEMEL. Chicago, Ill., assignor of one-half to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed June 13, 1927. Serial No. 198,685. 7 Claims. (Cl. 34—18.)



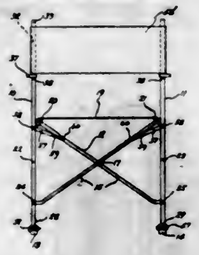
1. A furnace for the production of a heating medium, having a pair of chambers arranged side by side in parallel relation and having ports for providing communication therebetween located at the lower portions thereof, means for admitting fuel and air to one of said chambers for combustion therein and means for admitting air to the other of said chambers for diluting the products of combustion.

1,676,071. SAWING TOOL AND PLANE IRON. ERIC AUGUST BOLINDER, Stockholm, Sweden. Filed Dec. 24, 1925, Serial No. 77,650, and in Sweden Nov. 2, 1925. 1 Claim. (Cl. 143—133.)



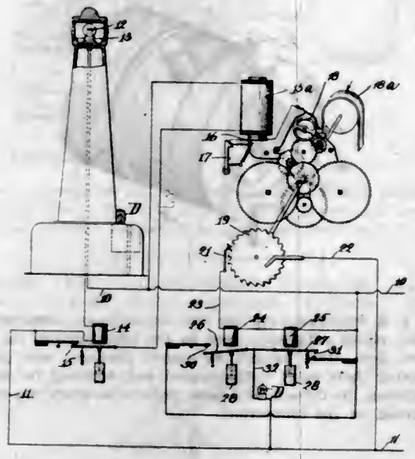
A blade-shaped sawing tool and plane-iron having at least one side of the blade provided with recesses and elevations extending from the cutting edge of the blade, the elevations having plane outer sides and coinciding with the cutting edge of the blade in such a manner as to form teeth the edges of which are perpendicular to the plane of the blade so that the teeth are adapted to cut like plane-irons or chisels.

1,676,072. DELIVERY APPARATUS. DON M. BROCKWAY, Los Angeles, Calif. Filed Dec. 12, 1924. Serial No. 755,416. 1 Claim. (Cl. 296—35.)



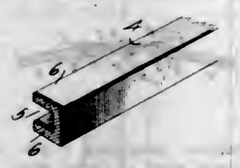
The delivery apparatus, comprising a wheel supported chassis, channel iron tracks on said chassis, a wheel supported body adapted to roll on said tracks, and onto said chassis, means to secure said body to said chassis, said means comprising quick grip shackles and shields, said shields being pivotally mounted on the underside of said body opposite the body wheels and depending therefrom to protect said shackle and wheels from the weather and means to secure in rigid position the free end of said shields.

1,676,073. COLLAPSIBLE BAR. NEWTON N. BROWN, Racine, Wis., assignor to Gold Metal Camp Furniture Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed July 28, 1924. Serial No. 728,544. 2 Claims. (Cl. 16—163.)



1. A hinge of the character described comprising a plurality of hinge plates adapted to be secured to the adjacent ends of the parts to be hinged together, said plates having their confronting end portions notched to provide opposed abutments, a pivot pin associated with each of said plates, and a hinge link plate mounted on said pins and extending between said hinge plate, said hinge link plate having a reduced lip along one edge thereof, said reduced lip having an inturned edge flange, the ends of which provide rigid shoulders engageable with the rigid abutments afforded by said notches.

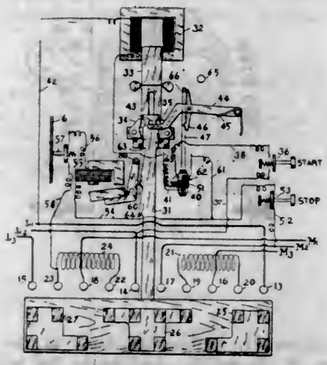
1,676,074. CHAIR. NEWTON N. BROWN, Racine, Wis., assignor to Gold Medal Camp Furniture Co., Racine, Wis., a Corporation of Wisconsin. Filed June 21, 1926. Serial No. 117,332. 2 Claims. (Cl. 155—140.)



1. In a foldable chair of the character described, a stool having crossed legs pivotally connected intermediate their ends for folding one upon the other, cross members connected to the upper ends of said legs and a flexible seat secured to the cross members, supporting side frames disposed on opposite sides of said stool and including vertical legs to which the lower ends of the stool legs are pivotally connected, the stool legs being provided at points above their pivotal connection with fixed pins, and links each pivotally connected at one end thereof to one of the frame legs, the other respective ends of said links being provided with slots receiving said pins, the outer ends of said slots engaging said pins upon unfolding of the stool and side frames to hold the latter against spreading beyond a predetermined amount, said pins having a sliding fit in said slots to permit of movement together of said frames and simultaneous folding of said stool therebetween, the cross members engaging the side frames to limit inward movement of the side frames when the chair is set up and in use.

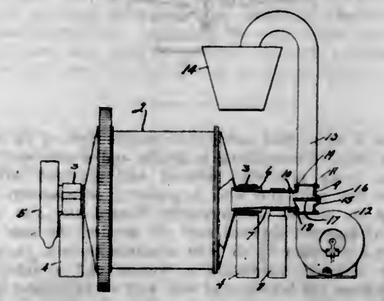
1,676,075. ALARM DEVICE FOR CLOCKS IN SIGNALING SYSTEMS. JAMES W. BRYCE, Bloomfield, N. J., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Nov. 20, 1924. Serial No. 751,059. 4 Claims. (Cl. 161—15.)

3. In a signal system having a clock-controlled telltale mechanism adapted to show the time of signal failures, a clock driven member, a contact element cooperating therewith to be operated thereby, a relay circuit including said element and member and controlled thereby, an alarm circuit, and delayed action relay means in said relay circuit with provisions for establishing said alarm circuit upon the stoppage or slowing down of the clock driven member.



1,676,076. WALL-BOARD JOINT-FILLER STRIP. MONTY J. BUCHANAN, Seattle, Wash. Filed July 12, 1927. Serial No. 205,197. 2 Claims. (Cl. 72—16.)

1. The process of securing wall board sections to a framework, consisting of securing the sections to the framework with their edges spaced apart from each other, depositing of shellac or the like within the space and the insertion of a strip into the space, having a ventilating channel throughout its length.

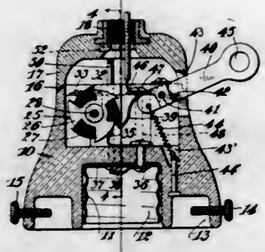


1,676,077. MOTOR-STARTING SWITCH. ARTHUR C. BUNKER, Montclair, N. J., assignor to Crocker-Wheeler Electric Manufacturing Company, Ampere, N. J., a Corporation of New Jersey. Filed Jan. 28, 1924. Serial No. 689,121. 2 Claims. (Cl. 172—288.)

1. In a motor starting switch, means for establishing motor starting connections, means for establishing motor running connections, an actuating magnet, a circuit therefor, a reciprocating armature therefor, means for coupling the reciprocating armature to the means for establishing motor starting connections, a pilot switch with delayed movement for opening and reclosing the circuit for the actuating magnet after motor starting connections are

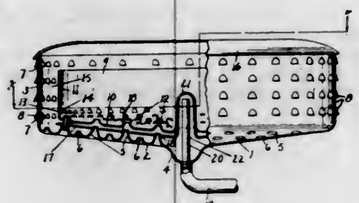
established to effect a second reciprocation of the actuating magnet, and means for coupling the reciprocating armature to the means for establishing motor running connections on the second reciprocation of the actuating magnet.

1,676,078. INDUCTION EXHAUSTER. CHARLES T. CABRERA, Philadelphia, Pa., assignor of one-fourth to Benjamin J. MacDonald, New York, N. Y., and one-tenth to Wilbur W. Williamson, Philadelphia, Pa. Filed Mar. 31, 1927. Serial No. 179,806. 2 Claims. (Cl. 302—21.)



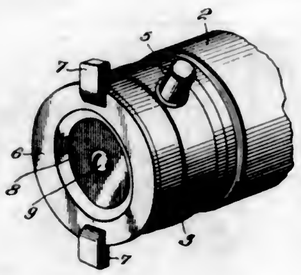
1. The herein described combination of a container, a passageway leading from said container, another passageway with which the first mentioned passageway communicates, an air circulating medium connected with one end of the second named passageway, and a baffle provided with a hole located across said second mentioned passageway at the point of communication with the first mentioned passageway and dividing said first mentioned passageway into subpassageways.

1,676,079. SWITCH SOCKET. GEORGE M. CONDIT, Waterville, Conn., assignor of one-half to W. W. Bowers, Waterbury, Conn. Filed Oct. 17, 1925. Serial No. 63,173. 7 Claims. (Cl. 173—354.)



1. In a switch socket, a body member of insulating material, a lamp socket, a ratchet having alternating sections of conducting and insulating material mounted

in the said body member, a contact bearing against the side of the said ratchet, a spring contact adapted to



bear successively against the faces of the segmental sections of the ratchet, and means for actuating the ratchet.

1,676,080. LIQUID-FUEL BURNER. HENRY A. DAVIS, Jeffersonville, Ind. Filed Oct. 26, 1927. Serial No. 228,837. 14 Claims. (Cl. 158—91.)

1. In a liquid fuel burner, the combination of an outer burner member comprising a bottom and a side wall, the bottom being inwardly inclined and provided with a central fuel well and with a plurality of upwardly projecting air nozzles and upwardly flanged air inlet openings interspersed between said air nozzles, the side wall having a plurality of air inlet openings therein, an inner burner member comprising a bottom and a side wall spaced from the bottom and side wall of said outer member, the bottom of the inner member having a central opening above said well and a plurality of upwardly projecting jets alined with said air nozzles, the wall of the inner member having a plurality of openings at the base thereof, the bottom of the outer member having a plurality of air inlets delivering between the side walls of said burner members, a baffle member arranged between said burner members in spaced relation to both and coacting with the bottom of the outer burner member providing a generating and distributing chamber, said baffle member having openings therein to receive said air nozzles, the openings being of a size providing annular ports surrounding the air nozzles, said baffle member having a tubular extension closed at its upper end projecting through the central opening in said inner member bottom, a fuel supply nozzle disposed centrally of said fuel well and projecting into said baffle member extension, and an annular top member extending inwardly from the upper edge of said outer burner member side wall and overhanging the side wall of said inner burner member.

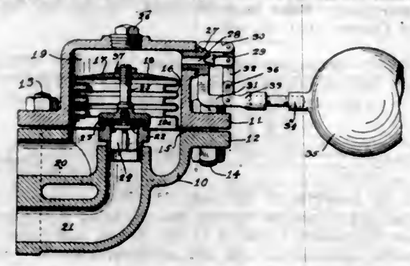
1,676,081. ADJUSTABLE HOSE CAP FOR FIRE-DEPARTMENT CONNECTIONS. OMER L. DOWNING, South Norwood, Ohio. Filed May 9, 1927. Serial No. 190,063. 2 Claims. (Cl. 137—13.)

1. A detachable cap for hose connections, comprising a disc, plates adjustably fixed on the inner face of the disc and held from lateral movement thereon, said plates having their outer ends rounded and designed for travel between the threads of a hose connection when the cap is turned on the connection.

1,676,082. SAUSAGE CASING. RALPH ETTLINGER, Kansas City, Mo. Filed Dec. 5, 1927. Serial No. 237,991. 5 Claims. (Cl. 17—45.)

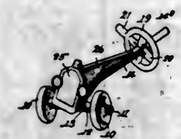
1. A process of treating fabric suitable for the manufacture of sausage casings which consists in coating it on one side with a substance containing gelatinized raw hogskins and then subjecting the fabric to the drying, setting and preservative action of wood smoke.

1,676,083. FASTENING DEVICE FOR BELTS. CHARLES EMILE FAURE, Ivry-sur-Seine, France, assignor to Société à Responsabilité Limitée Bonnart & Cie., Paris, France, a Limited Company of France. Filed Aug. 18, 1927, Serial No. 213,915, and in France Mar. 12, 1927. 2 Claims. (Cl. 24—33.)



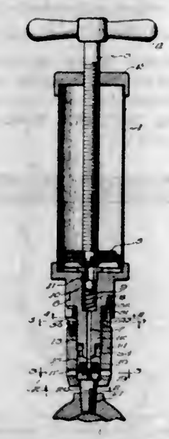
1. A belt fastener comprising a pair of plates each formed of a single piece of folded metal and having a plurality of spaced eyes on one edge, means for securing each of said plates to an end of the belt to be joined, a plurality of intermediate links hingedly connected together interconnecting said spaced eyes, said links being formed of a single piece of folded metal and liners, carried by the under surfaces of said links, of the same material and thickness of the belt to be joined.

1,676,084. COMBINATION FLOAT AND DIAPHRAGM VALVE. CHARLES N. FLAGO, Meriden, Conn. Filed May 9, 1927. Serial No. 189,808. 8 Claims. (Cl. 137—101.)



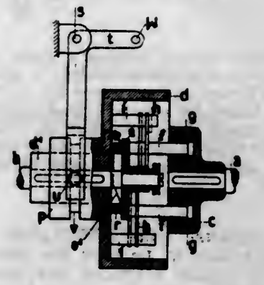
8. In an automatic feed-water regulator, a float chamber containing a float and communicating with a reservoir, a casing having an inlet and an outlet, a compact quick-acting bellows type diaphragm dividing said casing into a main chamber and a control chamber, a by-pass to

equalize the pressure between said chambers, a main valve connected to and enclosed by said diaphragm for closing said outlet, a float-operated relief valve connected



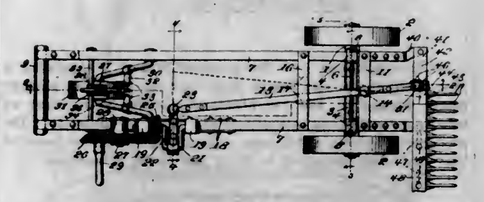
to said casing for reducing the pressure in said control chamber when the float falls to a predetermined level for causing said diaphragm to open said main valve.

1,676,085. TOY. LLOYD E. GERRISH, Kittery, Me. Filed Mar. 16, 1926. Serial No. 95,097. 5 Claims. (Cl. 272—85.)



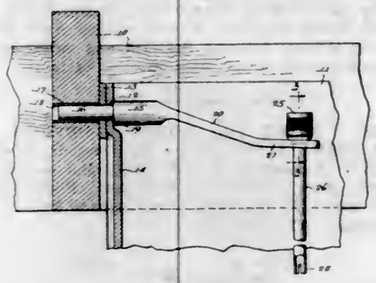
1. A toy including a pair of traction wheels and a stationary axle connecting the wheels, said axle having a flat surface portion adapted to be disposed in inclined position as the toy is rolled over the ground, and a steering bar pivotally connected to the axle and having camming engagement with the inclined face thereof, to effect steering of the traction wheels, said steering bar serving as the handle bar of the toy and adapted to be manually held and pushed by a child trundling the toy, said bar being angularly offset at its forward end to obtain the desired camming leverage on the axle without unduly elevating the rear end of the bar.

1,676,086. LUBRICATING MEANS. REMI J. GITS, Chicago, Ill., assignor of one-third to William E. Hann, Chicago, Ill. Filed Dec. 14, 1927. Serial No. 239,986. 9 Claims. (Cl. 285—176.)



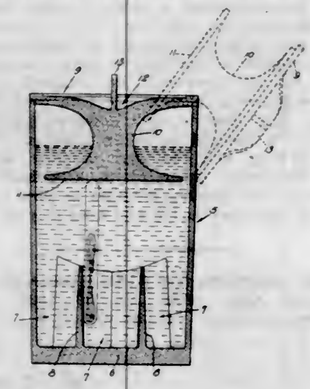
1. In a lubricating apparatus of the character described, connecting means comprising a lubricant ejection nozzle communicating with a source of lubricant under pressure, a lubricant receiver affixable to the object of lubrication, and a coupling connecting said nozzle and receiver, said receiver and coupling having endwise interfitting and limited turning swivel connection, and said coupling and nozzle having threaded connection for moving said nozzle relatively to said receiver when rotated relatively thereto, the said threaded and swivel connections being closed by the same direction of torque.

1,676,087. BRAKE FOR HOISTING DEVICES AND THE LIKE. LUDWIG HERBORN, Bierstadt, Germany, assignor of one-third to Willy Horn and one-third to August Horn, Wiesbaden, Germany. Filed Nov. 7, 1927, Serial No. 231,756, and in Germany Feb. 2, 1925. 4 Claims. (Cl. 192—12.)



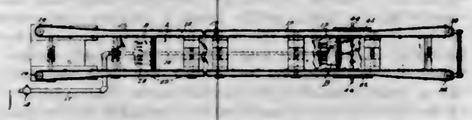
1. A braking device of the character described, comprising, in combination, a brake, a device for rendering said brake operative and inoperative, a driving shaft, a driven shaft, a coupling member on said driving shaft, a coupling member on said driven shaft, a second coupling member on said driven shaft and adapted to coact with said first coupling member, said both coupling members engaging each other in such a manner that thereby a dead play is inserted in either direction between said shafts carrying said respective coupling members, and means operatively connected to said brake operating device and said coupling members in such a manner as to become operative during said dead play of said shafts.

1,676,088. MOWING MACHINE. PEDRO HOLMES, Kansas City, Kans. Filed Apr. 30, 1926. Serial No. 105,804. 3 Claims. (Cl. 56—243.)



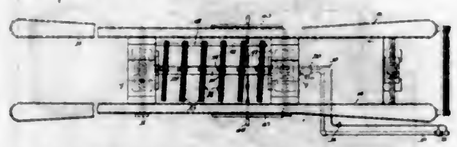
1. A mowing machine including a frame having side members, ground wheels, yokes on the axle for the ground wheels through which the side members of the frame are received, means for vertically adjusting and supporting the frame in the yokes, a cutting mechanism at the forward end of the frame said cutting mechanism including a cutter bar and a finger bar, hand operated means for reciprocating the cutter bar over the finger bar, a crank axle pivotally secured to the frame adjacent to the rear thereof, a caster wheel journaled on the crank axle, means for swingably adjusting the crank axle with respect to the frame and means for holding the crank axle so adjusted.

1,676,089. ICE-CAN BRACKET AND DROP TUBE. WILLIAM W. JOHNSON, Memphis, Tenn. Filed July 20, 1927. Serial No. 207,160. 4 Claims. (Cl. 62—159.)



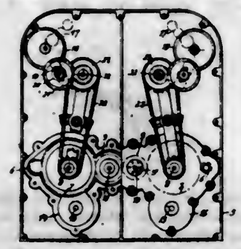
1. An ice can bracket including a shank, a reduced portion at one end of the shank adapted to pass through the opening in an ice can and enter an opening in a can supporting frame, the reduced extension defining a shoulder on the shank adapted to abut the inner face of an ice can, the opposite end of the shank being offset and having an opening therein adapted to receive a drop tube.

1,676,090. MEANS FOR STERILIZING LIGATURE TUBES. ROBERT W. JOHNSON, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Dec. 21, 1927. Serial No. 241,562. 3 Claims. (Cl. 167—3.)



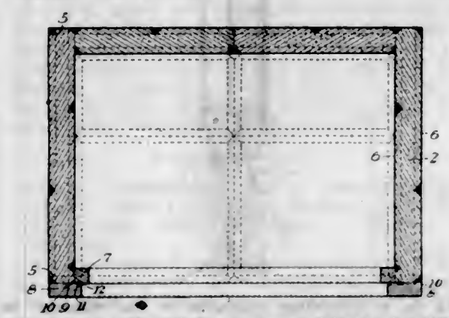
1. An appliance for the purpose stated, comprising a receptacle for a sterilizing fluid and for ligature storage tubes, means in the receptacle for endwise stowage of tubes according to classification, and a cover for the receptacle having a follower extending below the level of the fluid and operating to keep the tubes submerged.

1,676,091. DRYING APPARATUS. WILLIAM WALLACE KEMP, Baltimore, Md. Filed Mar. 16, 1925. Serial No. 15,968. 12 Claims. (Cl. 26—60.)



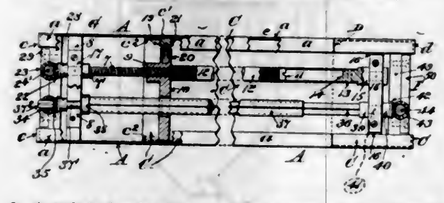
1. In a tentering machine having tentering chains carrying clamps, a pair of burners arranged upon opposite sides of the machine for heating said clamps.

1,676,092. DRYING APPARATUS. WILLIAM WALLACE KEMP, Baltimore, Md., assignor to The C. M. Kemp Manufacturing Co., Baltimore, Md., a Corporation of Maryland. Filed May 27, 1925. Serial No. 33,242. 26 Claims. (Cl. 26—60.)



1. In a device of the class described, a gaseous fuel burner bodily-movable to vary the operating width thereof upon the material treated by the device, said burner extending substantially the full width of material treated in said device.

1,676,093. SPINNING AND TWISTING MACHINE. JOHANN JACOB KEYSER, Aarau, Switzerland. Filed Apr. 7, 1927, Serial No. 181,776, and in Switzerland and Germany Apr. 16, 1926. 6 Claims. (Cl. 118—45.)

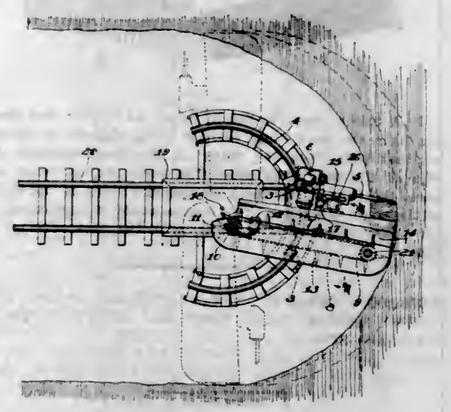


1. In an actuating mechanism for spinning and twisting machines a driving pinion gear, a mechanism to be driven, a chain gear between the said driving gear and the said mechanism and comprising a chain a driving sprocket arranged coaxial with and detachably coupled with a pinion of the said driving gear so as to be driven thereby and a driven sprocket located adjacent to and adapted to actuate the mechanism to be driven, means on either sprocket permitting to couple the same with the said pinion of the driving pinion gear, further means on either sprocket for detachably carrying a pinion adapted to mesh with a pinion of the mechanism to be driven, a support for the said chain gear constituting means for reversing the driving and driven relation of the two sprockets and a detachable pinion on the said driven sprocket for actuating the mechanism to be driven.

1,676,094. COMPOUND WALL STRUCTURE. LUTHER L. KNOX, Pittsburgh, Pa., assignor to Knox Products Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1926. Serial No. 131,654. 12 Claims. (Cl. 72—16.)

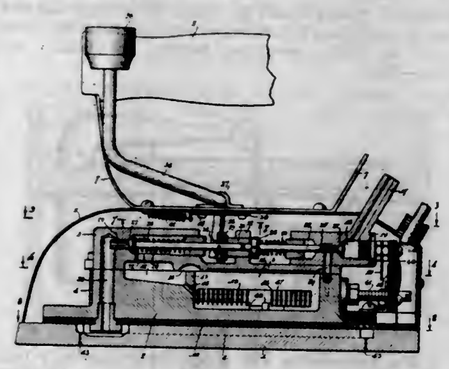
1. A compound wall structure comprising an insulating body and a covering body for certain parts of said insulating body, at least one of said bodies having portions recessed beyond the plane of the remainder thereof to provide zones for the reception of a filler.

1,676,095. PRINTER'S SHEET RECEPTACLE. CHARLES KORZENBORN, Cincinnati, Ohio. Filed Dec. 18, 1927. Serial No. 239,782. 2 Claims. (Cl. 271—86.)



1. A printer's sheet-receptacle comprising, in combination, a corresponding pair of right-angled sections adapted to be arranged into a hollow square or continuously-closed frame whose walls are composed of transversely and longitudinally intersliding flanged channel-members for reciprocal telescoping-movement or adjustment to suit the delivery of different dimensions of printed sheets in true vertically-aligned and cleanly condition, a screw-rod mounted, to turn, in each of the four outwardly-open frame members, a telescoping compensating two-part transmission-rod mounted, to turn, in each of the two extended legs or limbs of one of the said right-angled sections of the outwardly-open frame members, miter gears operatively-connecting the said screws with said compensating transmission-rods so that the said right-angled sections may be harmoniously moved to and from each other in expanded or in contracted relation to suit the delivery of different sized printed sheets from the fly to the jogger-board, means on said transmission-rods for the engagement of an operating-key, automatic stop-latch means in the said outwardly-open sided frame members for limiting the outward or expanded movement of the said sections to prevent parting of their telescoping channel-members at the extreme capacity of the sheet-receptacle and means for accurately detecting or visualizing the exact dimensions of the expanded or contracted relations of the severel right-angled sections for transverse or longitudinal adjustment of the sheet-receptacle in use in accommodating printed sheets of different sizes, substantially as shown and described.

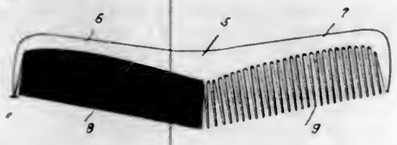
1,676,096. DOLL OR THE LIKE. ADOLF KWASNICKI, Brooklyn, N. Y. Filed Sept. 27, 1927. Serial No. 222,318. 1 Claim. (Cl. 46—40.)



A coupling means for the legs and arms of dolls and the like, including a socket member adapted to be secured in the body of the doll and comprising a plurality of converging tongues flared outwardly at their inner ends, said leg or arm at its end of a shape to fit and turn in the socket member and having a head thereon to be forced between the tongues and a restricted neck portion to receive the tongues, said parts when together having a surface contact throughout the inner surface of the socket member.

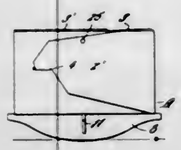
1,676,097. COAL DIGGING AND LOADING MACHINE. GEORGE R. LANG, Pittsburgh, Pa. Filed Apr. 29, 1925. Serial No. 26,620. 5 Claims. (Cl. 262—5.)

1. A coal digging and loading machine, comprising a digging tool and conveyor means, means for supporting and guiding the entire machine for swinging movements as a unit about an axis adjacent the discharge end of the machine, whereby the digging tool is adapted to be moved along a curved face of the mine bed while the discharge end of the machine is maintained at substantially the same location, and other supporting means for the digging tool for engaging the roof and floor of the mine, substantially as described.



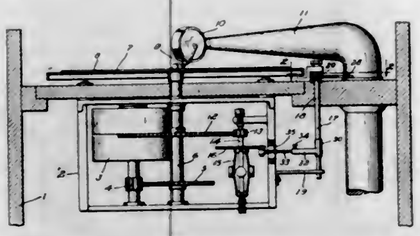
1,676,098. STEAMING IRON. RENÉ LEPRESTRE, New York, N. Y. Filed Mar. 15, 1928. Serial No. 261,870. 10 Claims. (Cl. 219—25.)

6. A steaming iron, including a sole plate, a body on the sole plate, an electric element heating the sole plate, a steam chamber in the body, an electric heating element in the steam chamber, said steam chamber connected with perforations in the sole plate for the passage of steam through the sole plate, valves controlling the supply of water to the steam chamber and steam from the steam chamber, an electric switch in circuit with the last



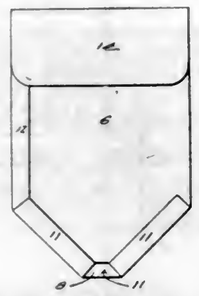
mentioned heating element, and a lever operatively connected to said valves and to said switch whereby the movement of the lever functions to simultaneously open both of the valves and close the switch.

1,676,099. COMB. EBBA LIND, New York, N. Y. Filed Apr. 16, 1927. Serial No. 184,314. 2 Claims. (Cl. 132—11.)



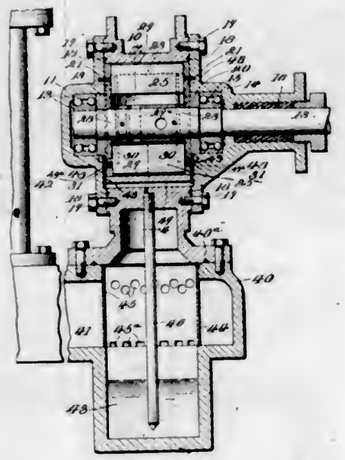
1. A toilet comb for use in finger waving or wet dressing hair the back edge thereof being shaped to diverge longitudinally from the center of the comb outward, the edge of the back from which the teeth project being concave, the ends of the teeth on opposite sides of the center of the comb diverging at an obtuse angle of approximately 10° to be substantially parallel with the back edge of the comb.

1,676,100. CRADLE. OSCAR J. LUND, Omaha, Nebr. Filed May 26, 1926. Serial No. 111,837. 2 Claims. (Cl. 46—37.)



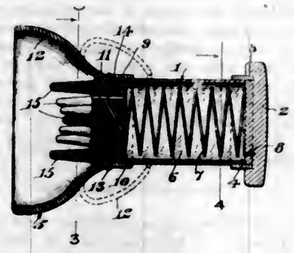
2. A combined receptacle and toy cradle, said receptacle having spaced pairs of slots in the bottom thereof, a pair of rockers, tongues projecting upwardly from each rocker and adapted to be removably received by one pair of said slots, a connecting bar arranged beneath said bottom and detachably connected with said rockers.

1,676,101. PHONOGRAPH. CECIL K. LYANS, Baldwin, N. Y., and ALBERT HATHORNE DUNN, Du Bois, Pa. Filed Oct. 29, 1926. Serial No. 145,021. 4 Claims. (Cl. 188—180.)



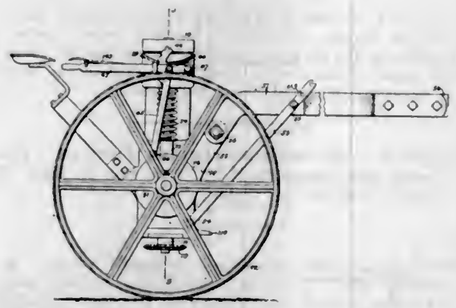
1. The combination with a phonograph having a turntable and a movable tone arm, of a governor operatively connected to the driving mechanism of the turntable, a controller shaft caused to turn by the movement of the tone arm, and means operated by the turning movement of the controller shaft to control the operation of the governor, said last-mentioned means including an arm having screw-threaded engagement with the shaft, and a disk on the governor engaged by the arm.

1,676,102. LEMON SQUEEZER. THORNTON LEWIS LYNAM, Dartmouth, Mass. Filed Sept. 13, 1927. Serial No. 219,268. 2 Claims. (Cl. 100—49.)



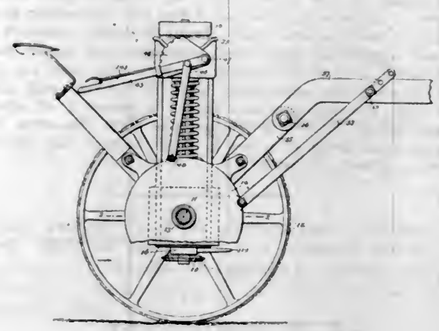
2. As a new article of manufacture, a lemon squeezer formed from a single sheet of flexible material cut to provide an oblong side a second oblong side integrally joined to one side edge of the first side, the first side having a tapered lower end formed with side flaps and the side edge of the first side being provided with a flap, the second side having a tapered lower end formed with a notch at its apex, said second side adapted to be folded over upon the first side and the flaps being adapted to be pasted to the second side, said first side having its upper end extended to provide a closure.

1,676,103. LUBRICATING AND SEALING SYSTEM FOR ROTARY COMPRESSORS. CHARLES T. MASON, Sumter, S. C., assignor of one-half to Henry L. Buck, Conway, S. C., and one-half to Robert Pierce Yates, Sumter, S. C. Filed Feb. 16, 1927. Serial No. 168,790. 4 Claims. (Cl. 230—207.)



1. In a lubricating and sealing system for a rotary compressor or pump or blower having a rotor, a casing and end plates for the casing; an oil sump exposed to the air pressure from the blower, and an oil conduit from said sump to a point on the rotor face of one of said end plates at which a lower pressure prevails during operation than appertains in said sump, said point being adjacent the periphery of the plate; said end plate having a spiral groove on the rotor face thereof, said grooves progressing inward so that the movement of said rotor assists the movement of oil therealong and toward the axis of the rotor.

1,676,104. MASSAGE APPLIANCE. ALOIS MERKE, Chicago, Ill. Filed Nov. 4, 1927. Serial No. 231,082. 1 Claim. (Cl. 128—300.)

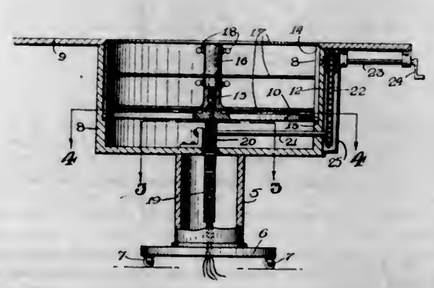


A massage device comprising a resilient cup element provided therein with massaging tips and further provided with ports arranged between the rear ends of and extending rearwardly from the tips, a resilient tubular handle element of uniform diameter having its forward end abutting the rear face of the cup element, an annular member secured to and surrounding said elements for connecting them together and providing an air tight joint, a closure having its inner face abutting the other end of and of greater diameter than the handle element, an annular member surrounding the handle element and extending into said closure, secured to the latter and handle element for connecting them together and providing an air tight joint, and a coiled spring positioned in the handle element and abutting the inner face of the closure and rear face of the cup element, said spring having one end anchored in the rear face of the cup element and its other end in the inner face of said closure.

1,676,105. STALK CUTTER. JOSEPH MICHALKA, FRANK A. MICHALKA, and RALPH A. MICHALKA, Cameron, Tex. Filed Jan. 9, 1925. Serial No. 1,438. 10 Claims. (Cl. 56—60.)

1. A stalk cutter including a wheeled frame, vertically disposed guide means on said frame, a knife frame vertically movable in said guide means, rotary chopper knives in said knife frame, shafts for said knives, vertical shafts at the outer sides of the knife frame, means to turn said second shafts with the turning of the wheels of the first frame, gear trains on said knife frame for effecting a driving connection between said second shafts and the shafts of the chopper knives, means to raise and lower said knife frame, and means to make and break the drive connection between said shafts and the initial elements of the drive trains with the raising and lowering of the knife frame.

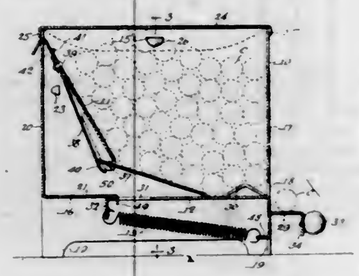
1,676,106. STALK CUTTER. JOSEPH MICHALKA, Jr., FRANK A. MICHALKA, and RALPH A. MICHALKA, Cameron, Tex. Filed Apr. 1, 1926. Serial No. 99,112. 4 Claims. (Cl. 56—60.)



1. A stalk cutter having running wheels whereby to travel over a field, coacting stalk chopping knives, shafts on which said knives are mounted, means to positively drive each shaft, a driven element fast on one shaft additional to the drive means thereof, an element loose on the other shaft and additional to the drive means of said shaft and meshing with said driven element fast on said one shaft, and means to turn said loose element with the turning of the shaft on which it is mounted.

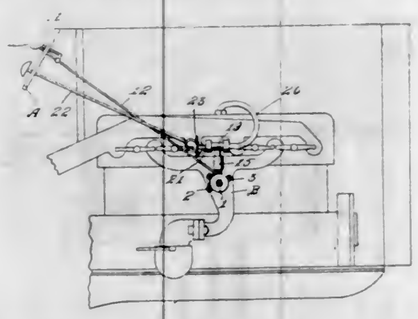
1,676,107. RAILWAY TIE. ALEXANDER NASBY, Gordon, W. Va. Filed Jan. 24, 1928. Serial No. 249,153. 3 Claims. (Cl. 238—31.)

1. A metallic tie comprising two similar bar-like sections having their inner ends furcated and the inner ends of the arms thus produced constructed to overlap one another in the assembled relation of the sections, means for securing the arms to one another, a turn buckle connecting the sections for adjusting the sections and means for securing a rail to each section.



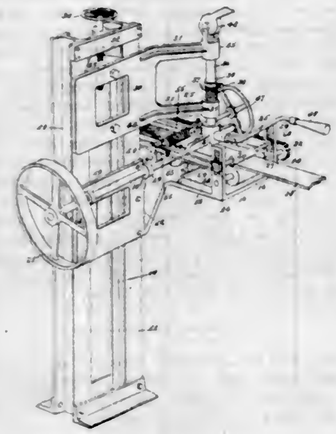
1,676,108. CONVERTIBLE TABLE. JAMES NOVAK, Cleveland, Ohio. Filed Jan. 4, 1927. Serial No. 158,871. 4 Claims. (Cl. 45—26.)

1. A convertible flat-top and self-waiting table including a supporting structure, an open-top receptacle rigidly mounted thereon, a border table top section rigidly



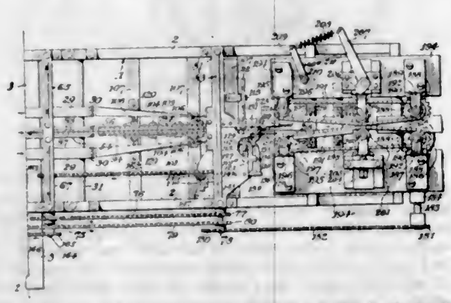
mounted on said receptacle and having a central opening registered with the open top of said receptacle, a supporting plate slidably fitted in the receptacle for vertical movement therein and adapted to close the opening of the border table top section when raised, means operable to raise and lower said supporting plate, and a multiple-shelf plate carrier rotatably mounted on said supporting plate and embodying an upper shelf adapted to close the opening of the border table top section when the supporting plate is lowered, said plate carrier embodying a hub having a plurality of spaced superposed shelves of similar size rigid therewith and each shelf being of a size to close the table top opening when alined therewith.

1,676,109. DISPENSING DEVICE. ERNEST OLDENBUSCH, Brooklyn, N. Y. Filed Oct. 20, 1926. Serial No. 142,927. 5 Claims. (Cl. 312—78.)



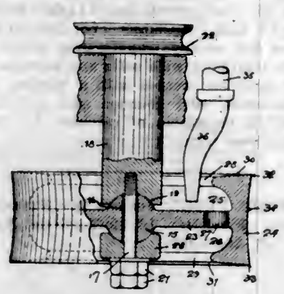
1. In a device for dispensing cigarettes or like article, a magazine including a rear wall, a bottom consisting of a fixed section and a slidable article delivery section, and a front wall having a discharge opening near the bottom; and a jointed skid connected to the top edge of the rear wall and resting on the bottom, said skid embodying means allowing it to assume a formation so as to lie in the entrance angle between the rear wall and bottom, said means constantly acting to straighten out the skid from its angular formation.

1,676,110. VAPOR MOISTENER. JOHN A. PETERSON, Kansas City, Mo., assignor to Clyde J. Turner and James H. Young, Kansas City, Mo. Filed Feb. 16, 1926. Serial No. 88,628. 1 Claim. (Cl. 123—25.)



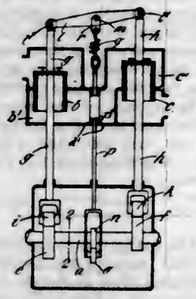
An attachment for internal combustion engines, comprising a cylinder, a partition therein and being formed with a valve seat, a spring controlled valve engaging the seat, said cylinder having air ports formed in the cylindrical portion thereof to the rear of the valve, a spring actuated cover for the ports, a nipple formed with said cylinder at the inner end thereof for connecting the cylinder with the inlet manifold of an internal combustion engine of a vehicle and being provided with air passages extending therethrough and the inner end of the cylinder respectively, an L-shaped member having its inner end formed with the inner end of the cylinder and its other end portion passing through the cylindrical wall thereof, said L-shaped member having a passage therein in communication with said nipple, a casing in communication with said member and the water jacket of the internal combustion engine, means for controlling said communication arranged in said casing, means for operating the last mentioned means and for opening the spring actuated cover from the dash of the vehicle.

1,676,111. SURFACING MACHINE. EDWIN H. REIBER, West Webster, N. Y. Filed Nov. 6, 1925, Serial No. 67,361. Renewed May 15, 1928. 9 Claims. (Cl. 41—5.5.)



1. In a machine for effecting a burnt surface decoration on lengths of material, a head roller having a pattern on the periphery thereof, and means for varying the speed of rotation to obtain variations in the nature of the decoration imparted to the material.

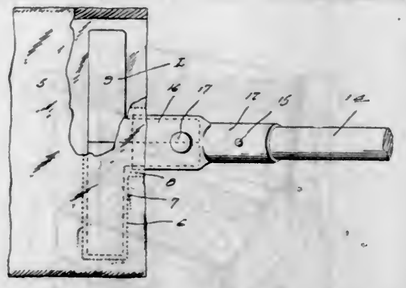
1,676,112. BLANK-BOOK-MAKING MACHINE. FREDERICK RENZ, Brooklyn, N. Y. Filed Feb. 16, 1927. Serial No. 168,753. 14 Claims. (Cl. 11—1.)



1. The combination with a carrier for the book stacks and their covers, of a sewing device, means for holding the wings of the books in a flat condition when passing said device, means for applying a wet adhesive binding strip to the underside of the covers along the median line thereof, yielding presser means to seal the binding strip to the cover, a crimping mechanism comprising vertically aligned chains to engage and bend the books along the center line, a cutter for severing the binding strip and sewing threads, trip mechanism for the cutter controlled by the passing books, squeezing mechanism including companion chains to engage and set the folded edges of the books and means for imparting rapid step feed movements to the conveying parts.

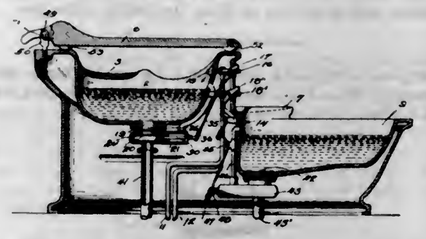
1,676,113. NEBULIZER. CHAMPLAIN L. RILEY, North Plainfield, N. J., assignor to Industrial Associates, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1925. Serial No. 70,532. 7 Claims. (Cl. 299—63.)

1. In a centrifugal atomizer, a driving spindle and a nebulizer unit suspended therefrom and having a frictional flexible joint drive engagement therewith.



1,676,114. PUMP FOR LIQUIDS OR HYDRAULIC MOTOR. WILLIAM JOSEPH RUSDELL, Wolverhampton, England. Filed Sept. 11, 1925, Serial No. 55,776, and in Great Britain Oct. 3, 1924. 24 Claims. (Cl. 103—205.)

1. A pump for liquids or a motor operated by liquid under pressure comprising a number of pump chambers connected in series, a piston in each chamber adapted to reciprocate, rotating cam mechanism adapted to move each piston through its stroke in one direction, a member actuated by each piston during its stroke in the said direction to move another piston through its return stroke and a cam acting on said member to impart to it a movement whereby the movement of each piston through its return stroke is assisted.



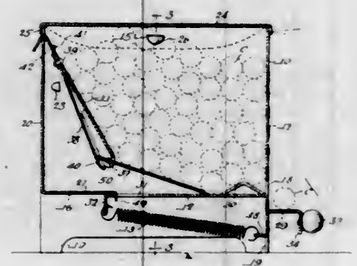
1,676,115. MOP. ROLAND S. SCHWARZ, Sr., Huntington, W. Va. Filed Feb. 7, 1928. Serial No. 252,480. 1 Claim. (Cl. 15—228.)

A mop holder of the class described comprising a ferrule provided with a flat hollow extension, a set screw threaded therethrough, a pair of flat L-shaped members including arms receivable in the extension and arms extending in alinement with each other and in opposite directions from each other, said first mentioned arms being provided with recesses in which the set screw

is adapted to be received, said first mentioned arms being disposed in a plane oblique to the plane of the second mentioned arms.

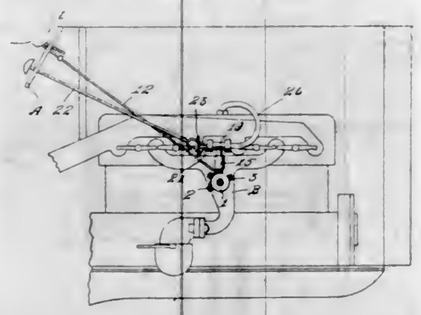
1,676,116. LAVATORY FIXTURE. ERRETT G. SMITH, Washington, D. C. Filed Jan. 24, 1928. Serial No. 249,043. 4 Claims. (Cl. 4—7.)

1. A lavatory fixture comprising a basin provided with a surrounding seat concaved to the contour of the thighs of a user when seated thereon, and foot rests located in front of and below the plane of said seat.



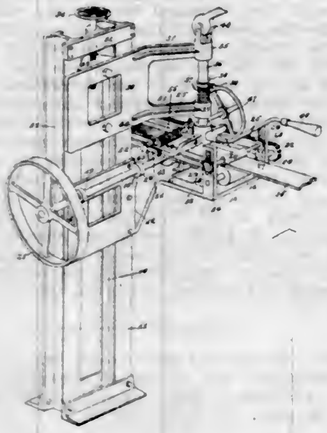
1,676,117. INTERMITTENT-MOVEMENT MECHANISM. VICTOR R. STENGER, Chicago, Ill. Filed Jan. 11, 1926. Serial No. 80,394. 4 Claims. (Cl. 74—41.)

2. An intermittent movement mechanism comprising a radially-slotted driven wheel, means for imparting to said wheel a step-by-step rotation embodying a pin adapted to enter each of said slots in succession, an oscillating arm carrying said pin, gearing on said arm for bodily rotating said pin, and devices for periodically imparting to said arm while the pin is thus bodily rotating a translatory relative movement with reference to said driven wheel in the plane of the rotation of said driven wheel between positions in which said pin engages in one of the slots of said driven wheel in its body movement and in which said pin misses engagement with said driven wheel.



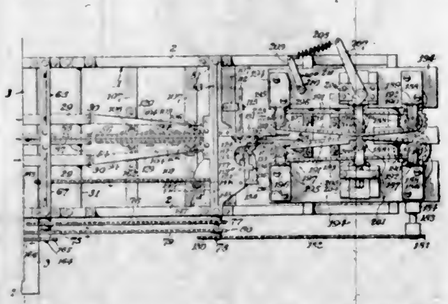
mounted on said receptacle and having a central opening registered with the open top of said receptacle, a supporting plate slidably fitted in the receptacle for vertical movement therein and adapted to close the opening of the border table top section when raised, means operable to raise and lower said supporting plate, and a multiple-shelf plate carrier rotatably mounted on said supporting plate and embodying an upper shelf adapted to close the opening of the border table top section when the supporting plate is lowered, said plate carrier embodying a hub having a plurality of spaced superposed shelves of similar size rigid therewith and each shelf being of a size to close the table top opening when alined therewith.

1,676,109. DISPENSING DEVICE. ERNEST OLDENBUSCH, Brooklyn, N. Y. Filed Oct. 20, 1926. Serial No. 142,927. 5 Claims. (Cl. 312—78.)



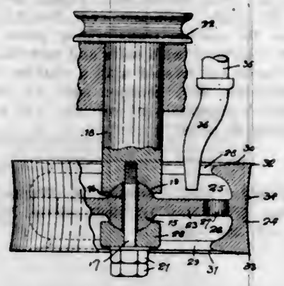
1. In a device for dispensing cigarettes or like article, a magazine including a rear wall, a bottom consisting of a fixed section and a slidable article delivery section, and a front wall having a discharge opening near the bottom; and a jointed skid connected to the top edge of the rear wall and resting on the bottom, said skid embodying means allowing it to assume a formation so as to lie in the entrance angle between the rear wall and bottom, said means constantly acting to straighten out the skid from its angular formation.

1,676,110. VAPOR MOISTENER. JOHN A. PETERSON, Kansas City, Mo., assignor to Clyde J. Turner and James H. Young, Kansas City, Mo. Filed Feb. 16, 1926. Serial No. 88,628. 1 Claim. (Cl. 123—25.)



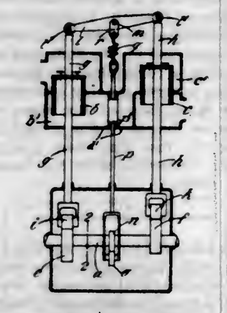
An attachment for internal combustion engines, comprising a cylinder, a partition therein and being formed with a valve seat, a spring controlled valve engaging the seat, said cylinder having air ports formed in the cylindrical portion thereof to the rear of the valve, a spring actuated cover for the ports, a nipple formed with said cylinder at the inner end thereof for connecting the cylinder with the inlet manifold of an internal combustion engine of a vehicle and being provided with air passages extending therethrough and the inner end of the cylinder respectively, an L-shaped member having its inner end formed with the inner end of the cylinder and its other end portion passing through the cylindrical wall thereof, said L-shaped member having a passage therein in communication with said nipple, a casing in communication with said member and the water jacket of the internal combustion engine, means for controlling said communication arranged in said casing, means for operating the last mentioned means and for opening the spring actuated cover from the dash of the vehicle.

1,676,111. SURFACING MACHINE. EDWIN H. REIBER, West Webster, N. Y. Filed Nov. 6, 1925, Serial No. 67,361. Renewed May 15, 1928. 9 Claims. (Cl. 41—5.5.)



1. In a machine for effecting a burnt surface decoration on lengths of material, a head roller having a pattern on the periphery thereof, and means for varying the speed of rotation to obtain variations in the nature of the decoration imparted to the material.

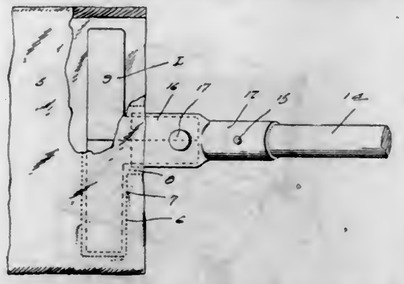
1,676,112. BLANK-BOOK-MAKING MACHINE. FREDERICK RENZ, Brooklyn, N. Y. Filed Feb. 16, 1927. Serial No. 168,753. 14 Claims. (Cl. 11—1.)



1. The combination with a carrier for the book stacks and their covers, of a sewing device, means for holding the wings of the books in a flat condition when passing said device, means for applying a wet adhesive binding strip to the underside of the covers along the median line thereof, yielding presser means to seal the binding strip to the cover, a crimping mechanism comprising vertically aligned chains to engage and bend the books along the center line, a cutter for severing the binding strip and sewing threads, trip mechanism for the cutter controlled by the passing books, squeezing mechanism including companion chains to engage and set the folded edges of the books and means for imparting rapid step feed movements to the conveying parts.

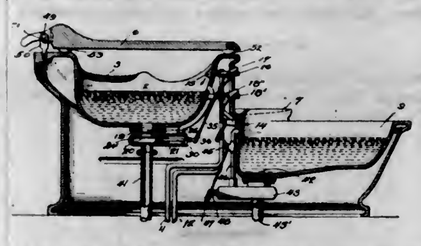
1,676,113. NEBULIZER. CHAMPLAIN L. RILEY, North Plainfield, N. J., assignor to Industrial Associates, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1925. Serial No. 70,532. 7 Claims. (Cl. 299—63.)

1. In a centrifugal atomizer, a driving spindle and a nebulizer unit suspended therefrom and having a frictional flexible joint drive engagement therewith.



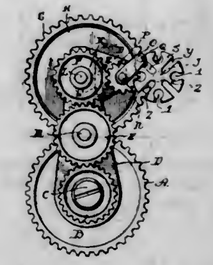
1,676,114. PUMP FOR LIQUIDS OR HYDRAULIC MOTOR. WILLIAM JOSEPH RUSDELL, Wolverhampton, England. Filed Sept. 11, 1925, Serial No. 55,776, and in Great Britain Oct. 3, 1924. 24 Claims. (Cl. 103—205.)

1. A pump for liquids or a motor operated by liquid under pressure comprising a number of pump chambers connected in series, a piston in each chamber adapted to reciprocate, rotating cam mechanism adapted to move each piston through its stroke in one direction, a member actuated by each piston during its stroke in the said direction to move another piston through its return stroke and a cam acting on said member to impart to it a movement whereby the movement of each piston through its return stroke is assisted.



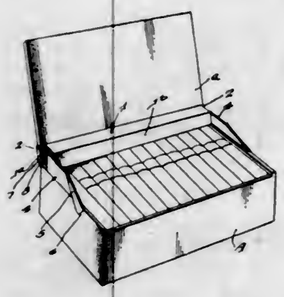
1,676,115. MOP. ROLAND S. SCHWARZ, Sr., Huntington, W. Va. Filed Feb. 7, 1928. Serial No. 252,480. 1 Claim. (Cl. 15—228.)

A mop holder of the class described comprising a ferrule provided with a flat hollow extension, a set screw threaded therethrough, a pair of flat L-shaped members including arms receivable in the extension and arms extending in alinement with each other and in opposite directions from each other, said first mentioned arms being provided with recesses in which the set screw



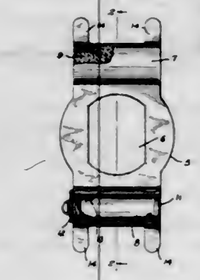
is adapted to be received, said first mentioned arms being disposed in a plane oblique to the plane of the second mentioned arms.

1,676,116. LAVATORY FIXTURE. EBBETT G. SMITH, Washington, D. C. Filed Jan. 24, 1928. Serial No. 249,043. 4 Claims. (Cl. 4—7.)



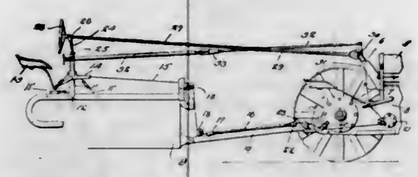
1. A lavatory fixture comprising a basin provided with a surrounding seat concaved to the contour of the thighs of a user when seated thereon, and foot rests located in front of and below the plane of said seat.

1,676,117. INTERMITTENT-MOVEMENT MECHANISM. VICTOR R. STENGER, Chicago, Ill. Filed Jan. 11, 1926. Serial No. 80,394. 4 Claims. (Cl. 74—41.)



2. An intermittent movement mechanism comprising a radially-slotted driven wheel, means for imparting to said wheel a step-by-step rotation embodying a pin adapted to enter each of said slots in succession, an oscillating arm carrying said pin, gearing on said arm for bodily rotating said pin, and devices for periodically imparting to said arm while the pin is thus bodily rotating a translatory relative movement with reference to said driven wheel in the plane of the rotation of said driven wheel between positions in which said pin engages in one of the slots of said driven wheel in its body movement and in which said pin misses engagement with said driven wheel.

1,676,118. COMBINATION CIGAR-BOX MOISTENER AND COVER HOLDER. PHILIP SUKERT, Chicago, Ill. Filed Dec. 24, 1925. Serial No. 77,665. 5 Claims. (Cl. 131—30.)



1. In a device of the character described, a casing adapted for reception of absorbent material and provided with an outlet opening, means for attaching the casing to the cover of a cigar box with said cover in open position, and means for securing the casing to the box.

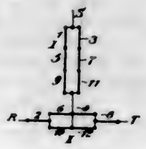
1,676,119. FISHLINE HOLDER. FRANK M. TIPIL, Milwaukee, Wis. Filed May 26, 1927. Serial No. 194,366. 4 Claims. (Cl. 43—31.)

1. A fish line holder consisting of a frame having a pair of opposed spool-like end portions of substantially greater thickness than the other portions of said frame and about which a line may be wound, and an insert within one of the end portions for the insertion of a hook point.

1,676,120. TRACTOR DEVICE, JOHN VIBBER, Breckenridge, Mich. Filed Sept. 28, 1925. Serial No. 59,141. 1 Claim. (Cl. 180—77.)

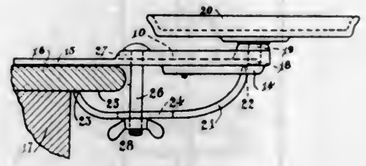
1. A steering mechanism for steering a tractor from a point adjacent to a machine drawn by the tractor, comprising a steering rod embodying telescoping sections, means for securing one of the sections to the steering post of the tractor, a vertical arm secured to the machine drawn by the tractor, said arm having an enlarged opening formed in the upper portion thereof, a rod having pivotal connection with the steering rod, extended into the opening of the vertical arm, an adjustable collar mounted on the last mentioned rod, and resting on the upper end of the vertical arm, means for securing the collar rod in various positions of adjustment, and a wheel forming a part of the steering mechanism.

1,676,121. PROCESS OF TRANSFORMING PIECES OF CURDS INTO CHEESE BY TREATMENT WITH SALTS. RICHARD VON DER HEIDE, Schwiebus, Germany. Filed May 25, 1926. Serial No. 111,623, and in Germany May 12, 1925. 3 Claims. (Cl. 99—11.)



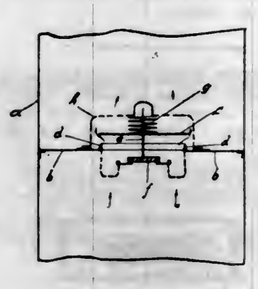
3. A process for quickly transforming pieces of curds into cheese by treatment with salts and bacteria in which the pieces of curds are treated with a mixture consisting of 50% amino-acids, 40% common salt, 4% chloride of magnesia, 4% of phosphate of calcium, 1% iron salts, and 1% manganese salts.

1,676,122. FUSE PLUG. JOSEPH N. WEIBELER, Belle Plaine, Minn. Filed Mar. 16, 1927. Serial No. 175,802. 1 Claim. (Cl. 200—121.)



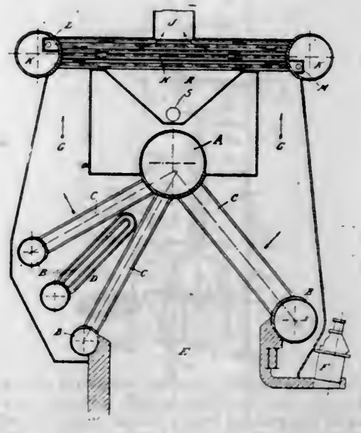
A fuse plug comprising a hollow porcelain body having a metal screw sleeve thereon, a removable fuse link in the body, and extending through the closed end thereof, a head on the outer end of the link and an eye on the inner end of the link, a cover hingedly secured to the body and having a mica covered opening therethrough, a metal member on the inner face of the cover hingedly connected to the sleeve and having a hooked end to engage with the eye of the fuse link, and a spring influenced insulator member contacting with the hook member, for the purpose set forth.

1,676,123. ARRANGEMENT OF 6N-POLE WINDINGS. HELMUTH WEINERT, Dresden-Kotzschenbroda, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, Germany, a Corporation of Germany. Filed July 9, 1926, Serial No. 121,480, and in Germany Feb. 2, 1925. 3 Claims. (Cl. 172—274.)



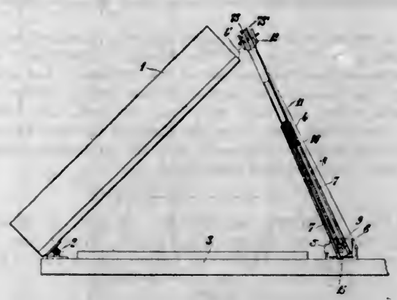
3. In a dynamo electric machine connected to a three phase line, a primary winding on the machine containing the winding elements of an 8*n*-pole three phase winding, said elements being connected so that the spacially successive even and odd numbered elements respectively form the horizontal and vertical phase of a 6*n*-pole T-winding, the winding elements in the vertical phase comprising two parallel-connected groups of series-connected elements, the winding elements in the horizontl phase comprising two parallel connected element groups, of which one group contains in series-connection two thirds of the number of elements contained in the horizontal phase, and the other group contains in series-connection one third of that number of elements, the elements of the smaller group having twice as many windings in series than the elements in the larger group, and connections between the outer ends of the T-winding and the three phase line.

1,676,124. FLOWERPOT HOLDER. LORNE ARTHUR WILKIE, Windsor, Ontario, Canada. Filed May 18, 1927. Serial No. 192,276. 2 Claims. (Cl. 248—20.)



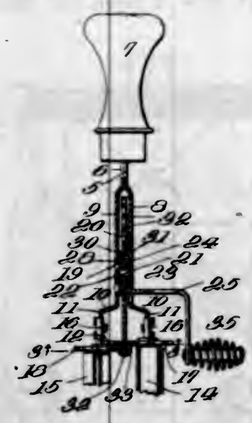
1. A flower pot holder comprising a main plate adapted to be supported on a sill at one end and its other end forming supporting means for a turntable, said main plate having at its outer end and on its under side guide members, and a resilient bar having a slot therein and flanges at each end adapted to engage with said guide members at one end and adapted to engage on the under side of the sill at the other end, and a bolt and locking means passing through the elongated slot of said resilient bar and engaging through a bolt hole of said main plate and adapted to be secured.

1,676,125. DEVICE FOR INDICATING ADMIXTURES TO GASES AND LIQUIDS. KARL WOLLIN, Berlin-Charlottenburg, and EDUARD SMOLCZYK, Biesdorf-Sud, near Berlin, Germany. Filed Dec. 4, 1926, Serial No. 152,684, and in Germany June 27, 1925. 8 Claims. (Cl. 256—144.)



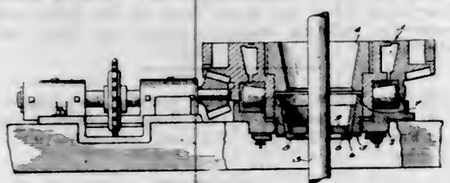
1. A device of the class described, comprising a body having a passage for a fluid, a substantially rigid normally stationary member exposed to contact with the fluid flowing through said passage and constructed of a material affected by predetermined foreign admixtures accompanying such fluid, a movable device held stationary and inactive as long as said member remains in its initial condition but arranged to be released when the condition of said member is altered by contact with such foreign admixtures, and a device operated by the movement of said movable device when the latter is released.

1,676,126. ECONOMIZER FOR WATER-TUBE BOILERS. HAROLD EDGAR YARROW, Glasgow, Scotland. Filed May 2, 1925, Serial No. 27,546, and in Great Britain Nov. 7, 1924. 2 Claims. (Cl. 122—379.)



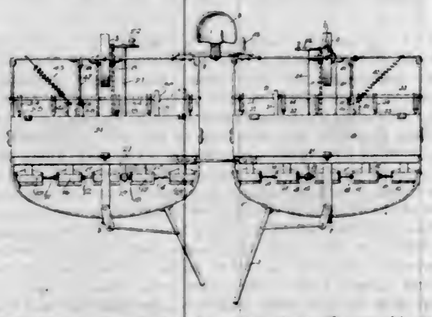
1. An economizer for water tube boilers, comprising headers arranged above and on opposite sides of the steam drum of the boiler, horizontal water tubes extending between and having their ends connected with said headers, a soot collector having walls inclined toward their lower ends arranged under said tubes and immediately above the steam drum of the boiler, and means for removing the accumulated soot from said collector.

1,676,127. TIP WAGON. HENRI BERNIER, Levallois-Perret, France. Filed Oct. 5, 1923, Serial No. 666,825, and in France Oct. 11, 1922. 2 Claims. (Cl. 298—19.)



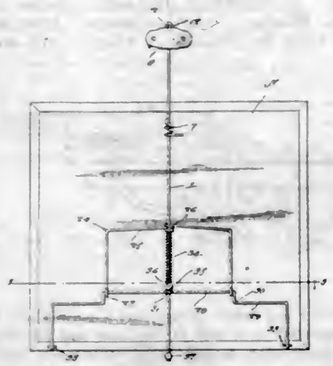
1. A tip wagon comprising a chassis, a truck body pivoted on the chassis, a hoisting mechanism for the truck body including a movable cross arm, a pair of pulleys mounted in each end of said cross arm, a cable having one end connected to the truck body at one side and extending upwardly and over one of the pair of pulleys at one side of the cross arm, thence extending along the cross arm to one of the pulleys at the opposite side of the cross arm, and thence downwardly to the opposite side of the chassis to which same is affixed, a second cable attached at one end to the truck body at the side opposite to which the first cable is attached, said cable extending upwardly and over the other pulley of the pair at the second named side of the cross arm, thence along the cross arm to the other pulley of the pair at the first named end of the cross arm and downwardly to the chassis to which the other end of this second cable is affixed.

1,676,128. BEATER. LAVERN BORDWELL, New York, N. Y. Filed Apr. 18, 1924. Serial No. 707,365. 12 Claims. (Cl. 259—131.)



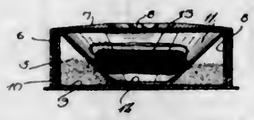
1. A beater comprising a frame consisting of separated parallel legs, an operating wheel pivotally connected with one of the parallel legs, a handle connected with the said wheel, the other parallel leg passing around the said handle and pivot, for the purpose described.

1,676,129. DRILLING MACHINE. HARRY C. BREWSTER, Shreveport, La. Filed Feb. 15, 1926. Serial No. 88,476. 2 Claims. (Cl. 255—23.)



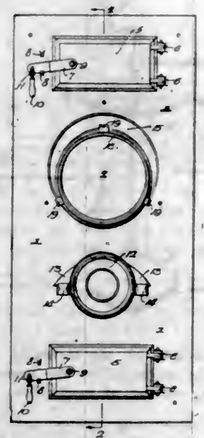
2. A rotary having the usual slip ring mounted on the rotating part thereof and also having a stationary bed, an inturned shelf supported on the stationary bed and a safety ring mounted on said shelf and having an opening through which the drill stem and its couplings loosely pass, the safety ring being designed to prevent obstructions from falling or dropping into the well when drilling or when removing the drill stem.

1,676,130. SEEDING MACHINE. CHARLES E. BROWER and CALVIN N. HINES, Yuma, Colo. Filed Dec. 10, 1925. Serial No. 74,559. 2 Claims. (Cl. 111—54.)



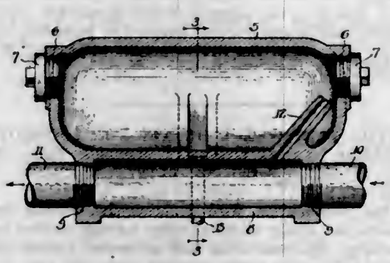
1. In a device of the class described, the combination with a frame and shaft therefor, said shaft being provided with a plurality of reversely situated screw threads, stirrups having interior cooperating screw threads mounted on said shaft, planting devices being operatively connected with said stirrups, and means for rotating said shaft to thereby cause a longitudinal movement of the stirrups and the planting devices to uniformly vary the space between the planting devices.

1,676,131. PICTURE HANGER. ADOLFO CAMPOS, Philadelphia, Pa. Filed Oct. 10, 1927. Serial No. 225,143. 2 Claims. (Cl. 40—145.2.)



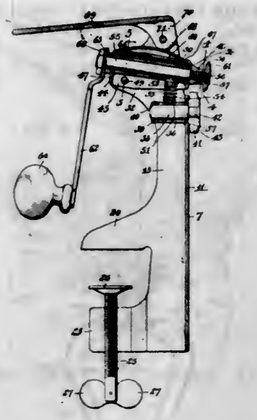
1. In a picture hanger of the class described, a vertically disposed member adapted to be secured to a wall, a forwardly extending arm on the upper end of said member, a manually operable pulley supported on the outer end portion of said arm, a flexible suspension member secured at one end to the pulley and adapted to be wound therearound, the free end of said flexible member adapted for attachment to the upper portion of a picture, means arranged on the lower portion of said vertical member for attachment to the lower edge portion of the picture, said last mentioned means comprising a vertically adjustable unit, and a hook and eye connection between the unit and the picture at its lower edge to afford a pivotal connection for the lower edge portion of the picture.

1,676,132. POWDER BOX. JAMES A. CLARKE, Yonkers, N. Y., assignor to Calkins & Holden, New York, N. Y., a Corporation of New York. Filed Nov. 5, 1927. Serial No. 231,274. 1 Claim. (Cl. 132—82.)



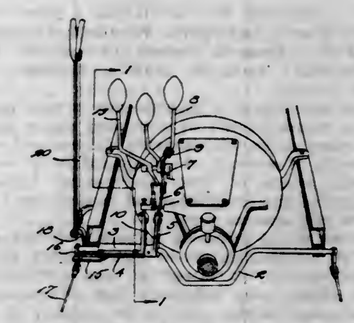
A powder box comprising a main box body having a removable cover, and a refill element removably fitted in said body, said refill element including a hollow body having a centrally apertured downwardly and inwardly tapering top wall extending to a point above and in close proximity to the central portion of the bottom of said hollow body, the hollow body and its top wall being relatively stiff, and a paper closure for the bottom of said hollow body.

1,676,133. MEANS FOR ATTACHING FLUE PIPES IN CHIMNEYS. RICHARD P. COLLINS, Norwood, Pa. Filed Oct. 4, 1926. Serial No. 139,510. 3 Claims. (Cl. 126—280.)



1. Means for attaching a flue pipe in a chimney comprising a plate adapted to be secured in an opening in the chimney, said plate having an opening for the reception of a flue, clean-out openings at the respective ends of the plate and on opposite sides of said flue opening, a closure element for each of said clean-out openings, and locking means for said closures effective in either one of the two alternate positions of the plate and the one in which the respective clean-out openings are respectively at top and bottom.

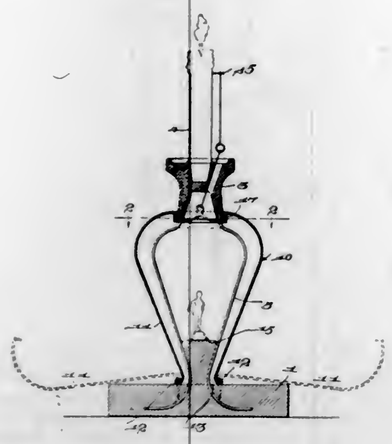
1,676,134. APPARATUS FOR TREATING BOILERS AND BOILER-FEED WATER. ROBERT E. COUGHLAN, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 9,390. 2 Claims. (Cl. 210—36.)



1. In a device of the character described, the combination with a feed water pipe, of a tank to contain material for feed water or boiler treatment provided with a normally closed filling opening, said tank formed on its lower side with an integral hollow elongated member adapted to be interposed in, and form a part of, said feed water pipe, and a nipple extending from said hollow member upwardly into said tank and inclined toward said opening, to facilitate the cleaning of said nipple through said opening.

1,676,135. CAN OPENER. FREDERICK A. CUYLER, Rochester, N. Y., assignor to Otto W. Cuyler, Model City, N. Y. Filed June 26, 1925. Serial No. 39,693. 8 Claims. (Cl. 30—3.)

1. In a can opener, two co-acting rotatable members, one rigidly supported and the other movable toward and from said rigidly supported member, manually-operated means to move one of said members toward the other, automatic means for separating said members, and means serving to allow limited separation of said members when one is moved toward the other.



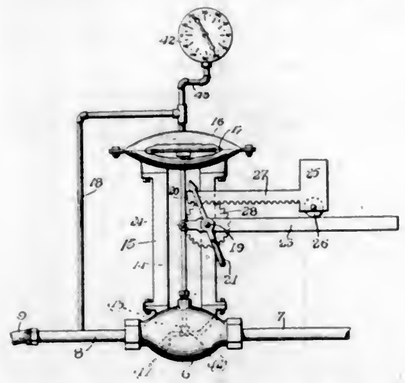
1,676,136. BRAKE ATTACHMENT FOR MOTOR VEHICLES. JAMES LEWIS DAVIS, Adrian, Mo. Filed June 10, 1927. Serial No. 197,933. 1 Claim. (Cl. 74—39.)

In a motor vehicle including a controller shaft, arms connected with the shaft, brake rods connected with the arms, a brake pedal, a clutch pedal and a hand lever, an arm connected with the controller shaft, a bar clamped to the brake pedal, a link connecting the bar with the last mentioned arm so that the depression of the pedal will rock the shaft to apply the wheel brakes, a rotatable member on the controller shaft, a cam or speed lever carried thereby for engaging the clutch pedal operating means to release the clutch when the member is rotated, an arm on said rotary member extending in rear of one of the brake rod arms on the controller shaft to rock the shaft when the member is rotated to apply

the wheel brakes, a second arm attached to the arm on the rotary member and a clamp on the second arm for engaging the hand lever which is separated from the controller shaft.

1,676,137. FAVOR DISTRIBUTOR. WILLIAM E. DODGE, Shawnee, Okla. Filed July 17, 1926. Serial No. 123,138. 8 Claims. (Cl. 240—2.)

1. A favor distributor comprising a base, a receptacle made up of a plurality of sections having their lower ends connected to the base, means to receive and cooperate with the upper ends of the sections for holding them in position for forming a closed receptacle, and a release for said means.



1,676,138. PROCESS OF PROVIDING A NEW FOOD PRODUCT AND IMPROVED PRODUCT PRODUCED THEREBY. ALBERT K. EPSTEIN, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,576. 8 Claims. (Cl. 99—11.)

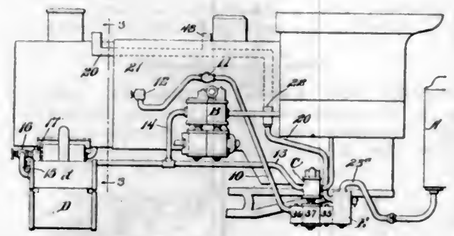
4. As a new article of manufacture, a food product comprising proportionately approximately eighty pounds of wet pressed casein, approximately eighteen and seven-tenths pounds of cocoanut oil and approximately one and three-tenths pounds of edible hydrogenated cottonseed oil comminuted and commingled and molded into a relatively firm homogeneous mass.

5. The method of producing an article of food which consists of commingling casein and cocoanut oil and edible hydrogenated cottonseed oil, said cottonseed oil having a melting point sufficiently high to substantially raise the normal melting point of the cocoanut oil, cooling the mixture to a temperature above freezing until the mass becomes a hard rigid body, and then comminuting the mixture into a macerated state.

1,676,139. TIRE-INFLATING APPARATUS. OLIN F. FLUMERFELT, Hamburg, N. Y. Filed Sept. 24, 1926. Serial No. 137,616. 2 Claims. (Cl. 50—4.)

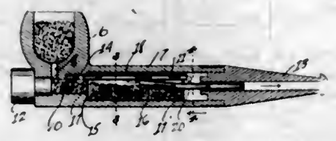
1. An automatic tire inflating apparatus comprising a shut-off valve having an inlet adapted for connection with a source of supply of air under pressure and an outlet adapted for connection with a tire inflation hose, a weighted lever normally acting to open said valve, means including a pressure responsive device subjected to the air pressure at the outlet side of said valve for closing the latter against the action of said weighted lever, and means including a manually adjustable pressure indicator rotatable about the pivotal axis of said weighted lever

for shifting the weight of the latter to vary the pressure required to be subjected to the pressure responsive device for effecting closing of said valve.



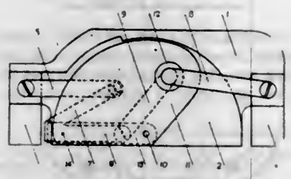
1,676,140. PEEPHOLE FOR DOORS. WILLIAM FRANKEL, Astoria, N. Y. Filed Nov. 30, 1926. Serial No. 151,698. 1 Claim. (Cl. 20—39.)

A peephole device for doors, comprising an annular rim having spaced inwardly extending means providing an annular groove within the rim, said rim having an outwardly extending flange for engagement against the side of a door about an opening therein to support the rim in the opening, a mirror having an opaque coating on its rear side mounted in the groove between the inwardly extending means of the rim and facing outwardly therethrough, a protective transparent disc mounted in said groove against said opaque coating, a portion of said coating of the mirror being removed to provide a sight, and an opaque cover pivoted to the device for covering the inner side of the rim and adapted to be swung on its pivot to one side of the rim to permit inspection of outside objects through the device.



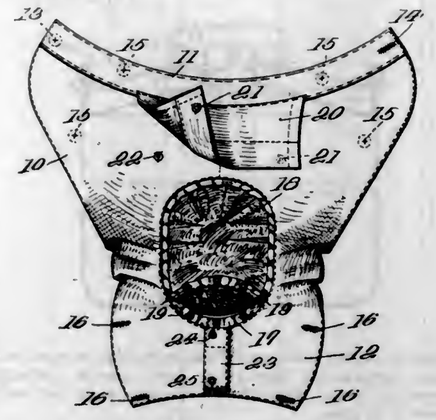
1,676,141. FEED-WATER HEATER FOR LOCOMOTIVE BOILERS. LEE O. GARRAWAY, Memphis, Tenn. Filed Oct. 8, 1925. Serial No. 61,297. 3 Claims. (Cl. 122—442.)

1. The combination with a locomotive having engine cylinders and steam chests therefor having exhaust ports, a discharge pipe connecting said ports and leading therefrom, a feed water pump disposed upon one side of the engine and having a water outlet connected to the boiler of the engine, and an air pump disposed on one side of the engine and having an exhaust port, of a feed water heater connected on one side to a source of water supply and on the other side to said water pump, an oil separator, an exhaust pipe leading longitudinally along the engine from the exhaust of said water pump, a pipe leading the exhaust from said port of the air pump to said longitudinally extending pipe, said longitudinally extending pipe being operatively connected through said discharge pipe to said oil separator, a pipe leading from the oil separator and passing upward and around the boiler of the engine, then extending longitudinally beneath the lagging of the boiler rearward and then downward and



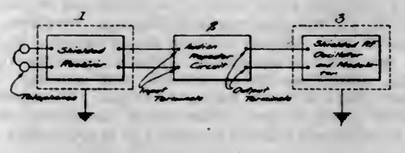
then extending out from beneath said lagging and then entering the heater for supplying exhaust steam from said sources for heating feed water in said heater.

1,676,142. TOBACCO PIPE. SKÚLI GUNNLAUGSSON, Rio Vista, Calif. Filed Sept. 10, 1927. Serial No. 218,712. 1 Claim. (Cl. 131—12.)



In a tobacco pipe, a bowl, a barrel formed integral with said bowl and having a chamber formed therein, a passage extending between said bowl and said chamber, a centrally bored stem detachably secured in one end of said barrel, an absorbent holding container positioned in said chamber, said absorbent holder having end pieces of the same diameter as the bore in said barrel, one of said end pieces having an opening therein, said absorbent holder being of less length than the chamber in said barrel, a tube extending through said absorbent holder and projecting beyond the ends of said absorbent holder, a second tube extending through one end of said absorbent holder in such a manner that one end of the tube passes into said absorbent holder and has its opposite end positioned in said bored stem for the purpose specified.

1,676,143. CIRCUIT BREAKER. MARK STAVELEY HOBAN, London, England. Filed Sept. 20, 1926, Serial No. 136,484, and in Great Britain Oct. 12, 1925. 2 Claims. (Cl. 200—151.)

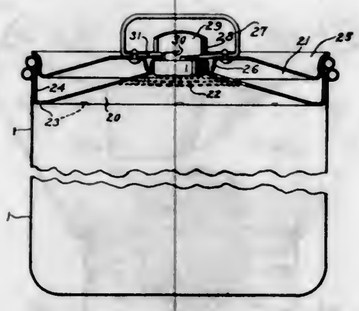


1. A circuit breaker for an electric circuit comprising a pair of contacts, a member of insulating material carrying a conducting stud and movable in relation to said contacts to bring the stud into engagement therewith or to move it therefrom, spring means to move said member, a detent to hold up said movement, and a V-shaped bimetallic strip member electrically connected in the circuit of the pair of contacts and bent at its apex to co-operate with the detent and release the movable member on the strip becoming heated.

1,676,144. DIAPER. ELI M. HOUSEKNECHT, Thurmond, W. Va. Filed Sept. 23, 1925. Serial No. 58,051. 1 Claim. (Cl. 128—284.)

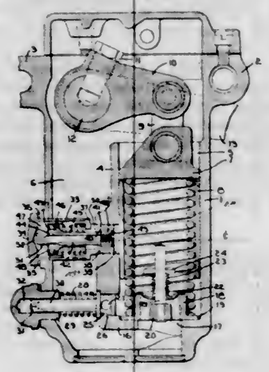
A garment comprising a body portion made in two longitudinal sections, and means connecting the inner edges of the sections together for forming a waist portion and an extension, said body having an opening formed therein between the waist portion and the extension and adapted to receive a sack, the inner edges of the sections of the extension being cut on an angle with respect to the inner edges of the sections of the waist portion for producing a fullness in the garment when attached together between the waist portion and the extension, said extension being laid upon the waist portion and attached thereto and causing the inner edges of the sections through the center of the garment to be drawn inwardly for taking up the fullness and producing an inverted V-shaped crotch below the waist portion of the garment.

1,676,145. METHOD OF AND MEANS FOR ADJUSTING AUDION CIRCUITS. LEWIS M. HULL, Boonton, N. J., assignor to Radio Frequency Laboratories, Incorporated, Boonton, N. J., a Corporation of New Jersey. Filed July 14, 1925. Serial No. 43,633. 14 Claims. (Cl. 179—171.)



1. In the process of adjusting an audion repeater circuit to limit interaction between the input and output branches of said circuit, the steps which comprise impressing an oscillatory voltage upon the output branch of said circuit and receiving resulting currents in the input branch of said circuit.

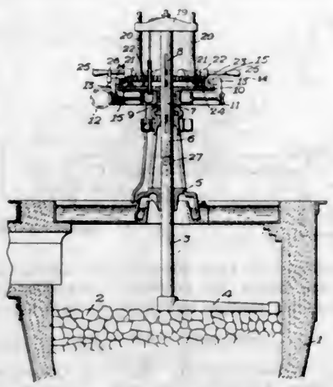
1,676,146. SAFETY COVER FOR COOKING VESSELS. BRUNO A. KRAFFT, San Francisco, Calif. Filed Nov. 14, 1923. Serial No. 674,767. 4 Claims. (Cl. 53—1.)



1. A covering for a cooking vessel comprising spaced apart inner and outer cover members each extending over substantially the entire interior of the vessel, said inner

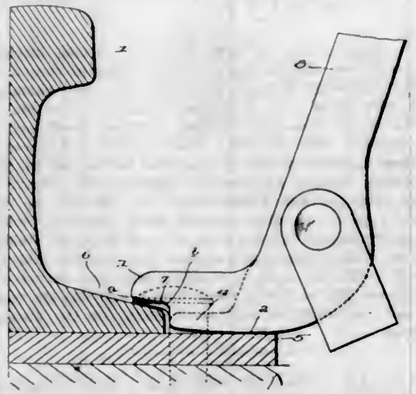
cover having openings therethrough near the center thereof to permit the boiling material to escape, said outer cover having a large opening through its middle portion, and an upwardly extending handle member

mounted on the inner cover and extending through said large opening and having its upper portion normally accessible to the hand of the operator while the outer cover is in place.



1,676,147. SHOCK ABSORBER. RALPH M. LOVEJOY, Boston, Mass. Filed May 29, 1926. Serial No. 112,433. 15 Claims. (Cl. 267—8.)

1. A hydraulic shock absorber for cushioning the movement of two relatively movable members, comprising a compound valve having yieldable means operable to relieve the initial resistance of the shock absorber to a sudden relative movement between said members and pressure operable means acting to produce, for a predetermined period of time, progressively increasing resistance to continued relative movement of said members.



1,676,148. GAS PRODUCER. CHARLES W. LUMMIS, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 27, 1919. Serial No. 307,136. 2 Claims. (Cl. 48—85.2.)

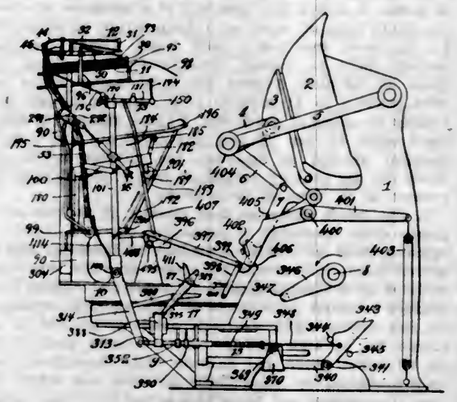
1. In a gas producer, an agitating member for the fuel bed in said producer, continuously rotating actuating means adapted normally to impart rotation to said agitating member at a predetermined fuel level in the producer, means for rendering said actuating means wholly inoperative for the rotation of said agitating member in the event of undue resistance to said rotation at said predetermined fuel level, means for applying the rotation of said actuating means to the elevation of said agitating member while said undue resistance prevails, and means periodically operative during the elevation of

said agitating member for applying pressure against said resistance through the continued rotation of said actuating means.

1,676,149. CLAW BAR. THOMAS MANEY, Louisville, Ky. Filed June 10, 1927. Serial No. 197,884. 3 Claims. (Cl. 254—25.)

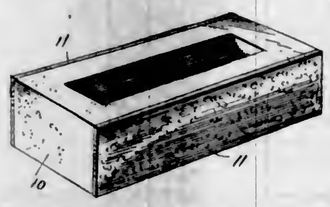
1. A claw bar having a claw carried thereby, and provided with offset claw points.

1,676,150. PNEUMATICALLY-DRIVEN SHIP. JOHN HENRY MAWBY, West Midland, Western Australia, Australia. Filed Jan. 15, 1927, Serial No. 161,386, and in Australia Oct. 25, 1926. 2 Claims. (Cl. 115—15.)



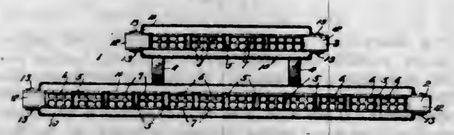
1. The combination with a hull and a fluid compressor therein, of a propelling and steering device for the hull comprising an open tube flared at both ends, a grate fitted across each end of said tube, oppositely directed nozzles mounted centrally of the tube, said nozzles being in communication with the compressor, and steering means mounted in the walls of said tube and in the path of the fluid projected from one of the nozzles.

1,676,151. FILTERING MATERIAL AND PROCESS OF FILTERING. RALPH H. MCKEE, New York, N. Y. Filed Sept. 16, 1924. Serial No. 738,106. 4 Claims. (Cl. 210—203.)



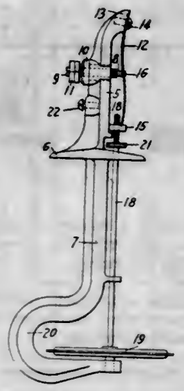
1. A material for use in purifying water consisting of the untreated residue obtained in the distillation of oil shale.

1,676,152. AUTOMATIC FEEDER FOR PRINTING PRESSES. LEWIS E. MORRISON, Newark, N. J., assignor to American Type Founders Company, a Corporation of New Jersey. Filed Apr. 9, 1925. Serial No. 21,777. 47 Claims. (Cl. 101—287.)



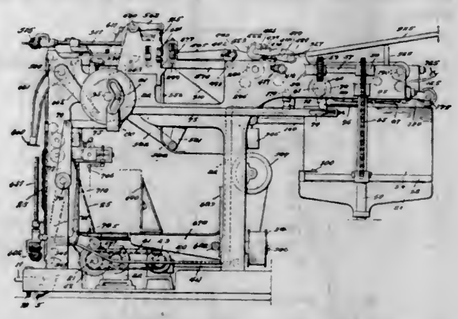
1. The combination of an automatic paper feeding mechanism for feeding paper to printing position in a printing machine, pneumatic paper separators therein, pneumatically actuated means for operating said mechanism and an air pump for driving said pneumatically actuated means and for applying suction to the said paper separators.

1,676,153. CONCRETE BUILDING BLOCK AND METHOD OF MAKING SAME. HARMON S. PALMER, Washington, D. C. Filed Mar. 22, 1927. Serial No. 177,412. 7 Claims. (Cl. 25—155.)



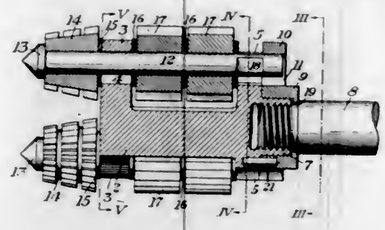
I. A concrete building block having a lamination of sugar cane fibre joined thereto by the cement of the block the lamination having an adherent nature.

1,676,154. ACCOMPANIMENT HARMONICA. SAMUEL A. PERRY, New York, N. Y. Filed Nov. 6, 1926. Serial No. 146,614. 4 Claims. (Cl. 84—377.)



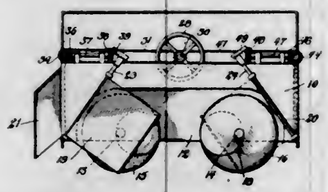
1. A harmonica with a series of mouth openings divided into groups separated by a spacer of substantially a mouth opening in width.

1,676,155. CIRCUIT BREAKER AND CLOSER. FERDINAND A. PFEIFER, Springfield, Ohio, assignor of forty-nine per cent to Ellsworth Craig, Springfield, Ohio. Filed Mar. 16, 1927. Serial No. 175,684. 12 Claims. (Cl. 200—140.)



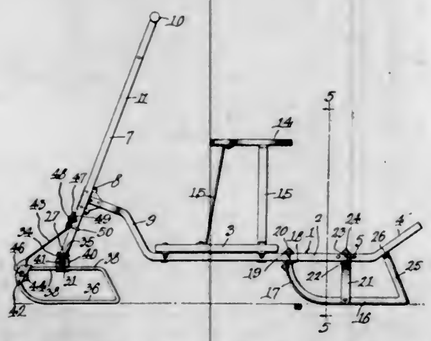
1. In a device of the character described, an elongated resilient member, supports for the respective ends of said resilient member, one of said supports being movable toward the other support, said supports being arranged normally to impart a double curve to said resilient member which will tend to move an intermediate portion thereof in a direction transverse to its length, and means for actuating said movable support to so modify the curvature of said resilient member that said intermediate portion thereof will be moved in a direction opposite to the first mentioned movement.

1,676,156. WIRE-STITCHING FOLDING MACHINE. EARL D. RADER, Bedford, N. Y., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,742. 67 Claims. (Cl. 270—37.)



1. A bindery finishing unit, comprising folding mechanism, conveying mechanism carrying sheets to said folding mechanism, a plurality of superposed means from which sheets are fed to said folding mechanism by said conveying mechanism, said means including an automatically controlled pile elevating mechanism, and a frame supporting all of said mechanisms, whereby said frame and the mechanisms supported thereon may be moved together from place to place as desired.

1,676,157. TUBE CLEANER. JAMES P. RODGERS, Pittsburgh, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1924. Serial No. 705,209. 9 Claims. (Cl. 15—104.14.)

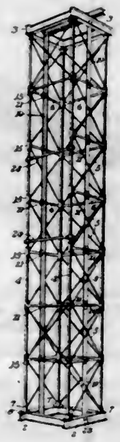


1. In a tube cleaner, a head, a cleaning element, means on the head for supporting the element to be bodily movable outwardly therefrom, the element having a recess in at least one side thereof, and means on the head for cooperating with such recess for holding the element against movement axially of the head while in any operating position thereon.

1,676,158. PROPELLING AND STEERING MEANS FOR POWER SPEED BOATS. WILLIAM J. ROE, Newburgh, N. Y. Filed Sept. 30, 1926. Serial No. 138,750. 5 Claims. (Cl. 115—37.)

1. The combination with a boat having propelling means consisting of a pair of oppositely driven oppositely spiralled blades, of a steering mechanism including a pair of rudder blades each mounted upon a laterally angular fulcrum in rear of each of the propellers, each of said blades normally swung to an inactive position above the water and swingable to an active position in the water.

1,676,159. SLED. JOSEPH W. ROTH, New Brunswick, N. J. Filed Aug. 13, 1927. Serial No. 212,732. 6 Claims. (Cl. 280—16.)



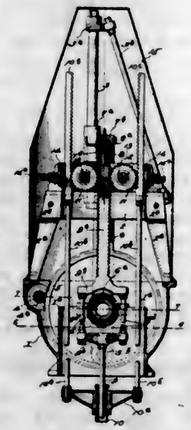
2. In a device of the class described, a body, means for supporting the rear end of the body, a steering standard pivoted on the forward end of the body, an axle mounted on the standard, angle brackets comprising bodies and depending arms, means for securing the bodies of the angle brackets to the ends of the axle, runners, and means for securing the runners to the arms of the angle brackets.

1,676,160. FOOD PRODUCT AND PROCESS OF MAKING THE SAME. MEYER F. RUFFNER, Washington, D. C., assignor to Potato Waffles Inc., New York, N. Y., a Corporation of Delaware. Filed June 8, 1925. Serial No. 35,763. 7 Claims. (Cl. 99—11.)

5. The process of preparing a food product of the character described comprising immersing perforated slices of potato of lattice like form and of a thickness of about one-eighth inch in water at a temperature of about 62° F., for about two and a half hours, drying the thus treated slices at normal atmospheric temperature for about 30 minutes, cooking the thus treated slices for from about 8 to 11 minutes at a temperature not materially in excess of about 400° F. in a mixture of about equal parts of corn oil and cottonseed oil free from a material amount of stearine, the mixture containing about one per cent by volume of tallow, and drying the product at an elevated temperature.

7. The herein described food product of the nature of potato chips consisting of perforated slices of potato of approximately one-eighth of an inch in thickness and of lattice like form, wherein the starch granules have been modified by prolonged soaking in water and cooking in a mixture of about equal parts of corn oil and cottonseed oil and containing a relatively small proportion of an animal fat of high stearine content, such product being of a distinctive and uniform taste throughout, not readily affected by atmospheric moisture and which retains its crispness and flavor unimpaired for a long period of time.

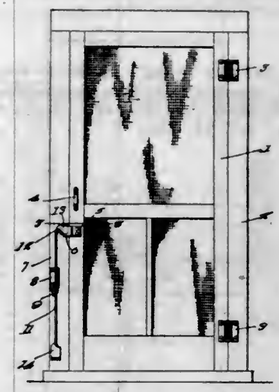
1,676,161. TOWER. MORGAN B. SCHILLER and OLIVER J. HALLER, Pittsburgh, Pa., assignors, by mesne assignments, to American Tubular Elevator Company, a Corporation of Pennsylvania. Filed Mar. 26, 1924. Serial No. 701,952. 1 Claim. (Cl. 189—13.)



A knockdown elevator tower comprised of sectional corner posts, a base structure in which the corner posts are removably set, connectors uniting the sections between the corner posts, diagonal and horizontal girts on two sides of the tower having their ends bolted to connectors, sectional elevator guides secured to some of the girts on said two sides of the tower, and horizontal girts on another side of the tower clamped to the leg sections thereof between the connectors.

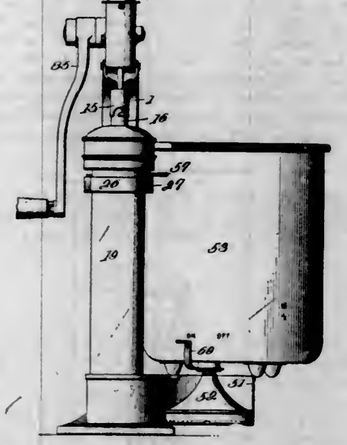
1,676,162. ARCH SUPPORT. RUDOLF SCHILLER, Brooklyn, N. Y. Filed Aug. 20, 1925. Serial No. 51,409. 1 Claim. (Cl. 36—71.)

An arch supporter insertible in a shoe, comprising upper and lower sheets of flexible material extending the length of the shoe, said sheets being unattached from the ball portion rearwardly to the heel, an inflatable pad adapted to be inserted between said sheets under the arch, said pad containing a core of sponge rubber, and means for detachably securing the sheets at their rear end, said means also detachably securing the supporter to the shoe to prevent displacement thereof.



1,676,163. DOUBLE-STROKE WORKING HEAD. HENRY SCHLACHTER, Beatrice, Nebr., assignor to Dempster Mill Manufacturing Company, Beatrice, Nebr., a Corporation of Nebraska. Filed May 18, 1926. Serial No. 109,948. 20 Claims. (Cl. 103—200.)

1. In combination, in a double stroke working head, pump rods, a supporting gear case, twin crank wheels mounted in said case, an elevated vertically reciprocatory cross head, twin pitmen for reciprocating said elevated cross head from said wheels, and rack and pinion means connecting the pump rods for simultaneously and oppositely reciprocating the pump rods, said rack and pinion means being coupled to and actuated by said cross head.



1,676,164. DOOR-OPERATING DEVICE. DANIEL H. SCHLAEGEL, Wadena, Minn. Filed Nov. 27, 1925. Serial No. 71,727. 1 Claim. (Cl. 268—36.)

Means for opening a door hinged in a casing by the pressure of the foot of a person approaching the door comprising an angle keeper secured to the one hinged side of the door and projecting therebeyond, an angle bracket fixed on the door casing below the keeper, a bar pivotally secured to the outer arm or angle bracket, said bar being bent in its upper extension at mid-point and at the pivotal point and the bends being opposite, the extremity of the upper extension having its end formed with a lateral flange providing a finger which is disposed to be at all

times contracted by the keeper on the door, and the opposite lower end of the bar having a flat angularly disposed projection providing a foot pedal.

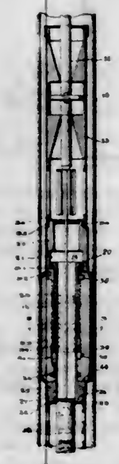
1,676,165. CREAM SEPARATOR. PHILIP M. SHARPLES and DAVID TOWNSEND SHARPLES, West Chester, Pa., assignors to Sharples Separator Company, West Chester, Pa., a Corporation of Pennsylvania. Filed Aug. 2, 1922. Serial No. 579,200. 11 Claims. (Cl. 233—21.)

1. In a device of the class described, the combination of a rotatable bowl, a drag bush surrounding the free end thereof and a bowl barrel surrounding the rotatable bowl, and contacting with said bush so as to act as a drag weight for said bush.

1,676,166. FOOD-PRODUCING PROCESS AND IMPROVED PRODUCT PRODUCED THEREBY. LOUIS SOKOLSKY, Chicago, Ill., assignor to Albert K. Epstein, Chicago, Ill. Filed Dec. 29, 1924. Serial No. 758,578. 5 Claims. (Cl. 99—11.)

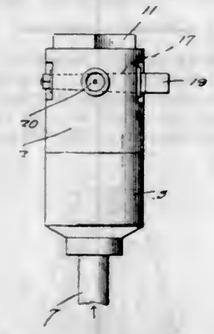
1. As a new article of manufacture, a food product comprising chilled wet casein of skim milk and cocoanut oil comminuted and commingled and pressed into a homogeneous self-sustaining rigid mass.

2. The method of producing an article of food which consists in commingling wet casein and cocoanut oil by



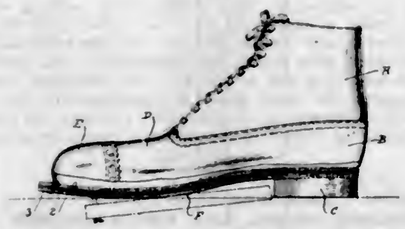
mixing the casein and oil while the latter is in a fluid state, then reducing the mixture while chilled to a comminuted state, and then solidifying the comminuted material into a self-sustaining form.

1,676,167. SAFETY HOOK. JOSEPH E. SPRAIN, Smackover, Ark., assignor to Vickers Machine Works, Smackover, Ark. Filed July 21, 1927. Serial No. 207,471. 3 Claims. (Cl. 24—241.)



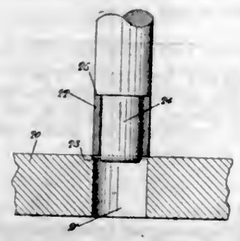
1. A snap hook comprising a shank, a bill at one end of said shank, a collar carried by said shank, a sleeve rotatable upon said shank and slidable thereon towards and away from the collar, an arm extending from said sleeve to engage the free end of said bill, the sleeve and collar having adjacent ends provided one with a lug and the other with circumferentially spaced seats to receive said lug and releasably secure the sleeve in a set position, and resilient means yieldably retaining said sleeve in a normal position with its arm engaged with said bill.

1,676,168. PACKING FOR OIL WELLS. CHARLES STARYSKY, Marysville, Tex. Filed Jan. 13, 1927. Serial No. 160,990. 1 Claim. (Cl. 166—10.)



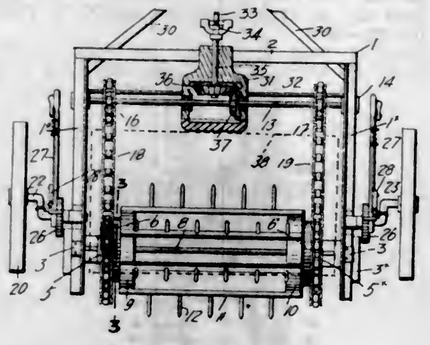
A packing comprising a cylindrical member having an enlarged portion provided with a chamber, a second cylindrical member received within the first member and having a stop ring movable in said chamber for limiting the movement of the first mentioned member relative to the second member, each of said members has cooperating corrugations and ribs for locking the members together when the first mentioned member is moved relative to the second member, the first member having spring fingers carrying said ribs for facilitating the locking of the sections together; a shoulder carried by each member and an expansible and contractible sleeve embracing the members and having an end in engagement with a shoulder of the member, said spring fingers being located between the opposite ends of the sleeve, said sleeve being adapted to be compressed when the members are moved into locking relation with each other, the opposite ends of the expansible and contractible sleeve being provided with an annular groove and a rib on each cylindrical member adapted to be received within a groove of the sleeve.

1,676,169. PRESSURE-RETAINING VALVE. CHARLES TRANSUE, Mount Jewett, Pa. Filed Jan. 5, 1927. Serial No. 159,147. 2 Claims. (Cl. 303—77.)



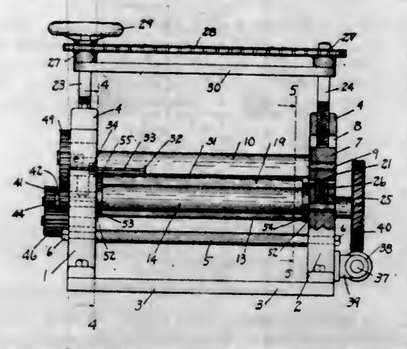
1. A pressure retaining valve of the class described comprising a body composed of upper and lower detachably connected sections formed with a passage extending entirely therethrough, a reciprocatory valve located in said passage for closing one end of the passage, a spring for normally moving said valve to one position, the valve being adapted to be moved to its other position under the action of the air pressure, and a rotary ported manually actuated valve carried by said body and cooperative with said air passage.

1,676,170. PROTECTIVE ARMOR. ARTHUR E. TROIEL, Berkeley, Calif. Filed Mar. 23, 1927. Serial No. 177,565. 5 Claims. (Cl. 36—73.)



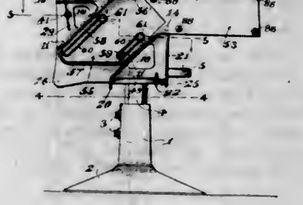
1. A flexible protective armor consisting of a plurality of superposed layers of metallic plates, said plates being laid side by side in each layer with the plates in one layer staggered with relation to the plates in an adjacent layer and means whereby the plates in the respective layers are secured against displacement with relation to each other.

1,676,171. METHOD OF INSERTING BEARINGS IN BEARING RECESSES. ALBERT H. VALENTINE, Dayton, Ohio, assignor to Moraine Products Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 15, 1925. Serial No. 75,580. 3 Claims. (Cl. 29—149.5.)



1. The method of providing the cylindrical recess of a bearing support with a lining of bearing material, which consists in forming a tubular porous metal bearing having an outside diameter greater than the diameter of the recess for receiving the bearing and having an inside diameter greater than is necessary for proper running clearance for the shaft journal which is to be received by the bearing; in assembling the bearing tube upon a mandrel having a diameter substantially equal to the diameter of the required shaft journal; and in producing relative movement between the bearing support and the assembled bearing tube and mandrel in order to press fit the tube within the recess of the bearing support and to reduce the diameter of the bearing tube to that of the mandrel.

1,676,172. CULTIVATOR AND WEED DESTROYER. DANIEL WEBSTER WARNER, near Edmonton, Alberta, Canada. Filed Oct. 17, 1927. Serial No. 226,752. 1 Claim. Cl. 97—40.)

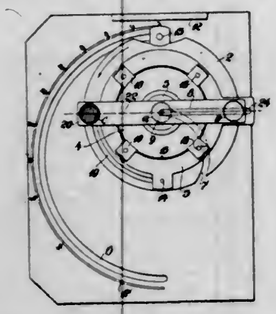


A cultivator and weed destroyer comprising a horizontally set U-shaped frame, a spiked cylinder revolvably mounted between the side bars of the frame, a sprocket gear at each end of the cylinder, a pawl and ratchet connection between each sprocket and cylinder, a main drive shaft extending longitudinally of the machine, a transverse supplemental drive shaft, a driving connection between the main drive shaft and transverse shaft, a sprocket drive between the transverse shaft and each of the aforesaid sprocket gears, and carrier wheels for the frame.

1,676,173. BENDING MACHINE. FREDERICK J. WERMES, Norwood, Ohio, assignor to S & W Machine Company, Cincinnati, Ohio, a Partnership composed of Frederick J. Wermes and Robert H. Steltenpohl. Filed Dec. 26, 1925. Serial No. 77,760. 6 Claims. (Cl. 153—54.)

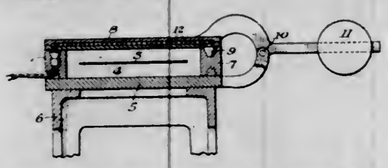
1. A metal bending machine, including a frame, supporting rollers journaled in said frame, floating rollers carried by the supporting rollers, means for driving the supporting rollers all in the same direction, and a bending roller journaled in the frame and spaced from the floating rollers.

1,676,174. ARTICLE OF FURNITURE. WILLIAM J. BARGEN, Missoula, Mont. Filed July 1, 1926. Serial No. 119,870. 11 Claims. (Cl. 155—128.)



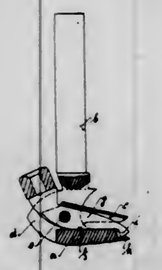
1. An article of furniture for the purpose set forth comprising a vertically adjustable chair, a supporting pedestal for the chair and including a base providing a sole means for anchoring the pedestal in a stationary position, said chair including a seat having one side thereof free of a side rail and its other side provided with a side rail in the form of an upstanding plate, a study support arranged forwardly of the seat, and said study support and side rail having coacting means for detachably connecting the study support to the said side rail and further to provide for the bodily shifting throughout of the study support upwardly and forwardly from the seat simultaneously and downwardly and rearwardly towards the seat simultaneously to adjust the study support with respect to the seat.

1,676,175. CENTERING DEVICE FOR USE IN MACHINING CRANK SHAFTS, ECCENTRICS, OR THE LIKE. JOHANNES BENZ, Dusseldorf, Germany. Filed Dec. 31, 1927, Serial No. 243,897, and in Germany May 30, 1925. 10 Claims. (Cl. 82—9.)



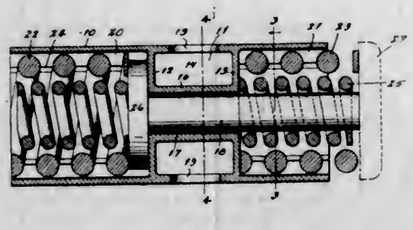
1. A centering device for use in machining crankshafts, eccentrics and the like on lathes, grinders and other machines, comprising a faceplate adapted to be mounted

in the machine, a rockable carrier pivoted on the faceplate, an auxiliary faceplate rotatable on the rockable carrier about an axis other than the pivotal axis of the latter, means for centering and clamping the work on



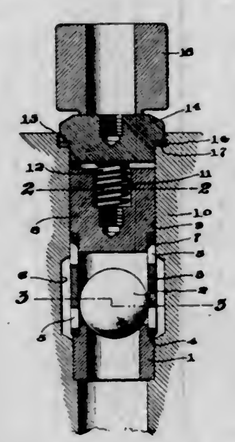
the auxiliary faceplate, and means whereby swinging movement imparted to the rockable carrier simultaneously and automatically turns the auxiliary faceplate about its own axis so that a predetermined radius continuously intersects the axis of the machine.

1,676,176. STRIP MILL. FLORENCE C. BIGGRAT, Jr., Crafton, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 16, 1922. Serial No. 607,454. 9 Claims. (Cl. 80—2.)



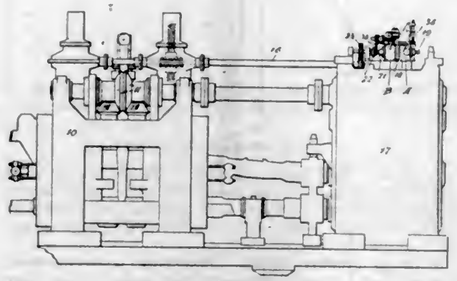
9. In a mill, material receiving means adapted to normally substantially surround the material being operated upon and having a wall thereof movable away from the material upon transverse movement of the material, such movable wall having connected thereto heating means for heating the material and being adapted to return to its normal position when not held outwardly.

1,676,177. KNOTTER FOR BINDING MOWERS AND STRAW BINDERS. AUGUST CLAAS, Harsewinkel, Germany. Filed Sept. 15, 1924, Serial No. 737,802, and in Germany Sept. 20, 1923. 1 Claim. (Cl. 289—11.)



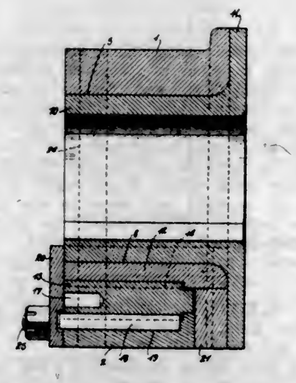
In a knotter for binding-mowers and straw-binders, the combination with the knotter foot, of a cup at the lower end of the latter, a stationary base member having a recessed front end and integral with said knotter foot and forming the bottom part of said cup, an upper member pivotally mounted in said cup, an abutment on said upper member limiting the downward movement thereof, a hand-operated tongue pivotally mounted within and on the same pivot as said upper member and adapted to be opened together with the latter but having still a free play of movement in downward direction when said upper member is stopped in its downward movement by said abutment, and a hook at the front end of said tongue adapted to engage more or less deeply in the recessed front end of said base member during the downward movement of said tongue.

1,676,178. DRAFT RIGGING. PERCY R. DRENNING, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Jan. 21, 1925. Serial No. 3,844. 5 Claims. (Cl. 213—48.)



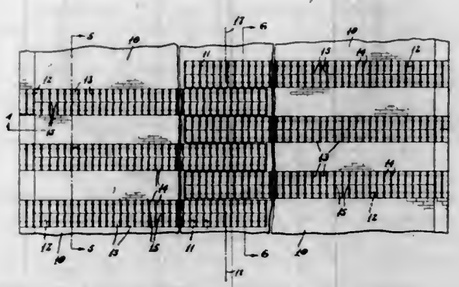
1. A draft gear having springs arranged in tandem, followers at a corresponding end of each of said springs, means connecting the followers and extending axially through one spring, and integral combined spacing and abutment means located between and engaging the follower of one spring and the adjacent end of the other spring and serving to direct the connecting means independently of the adjacent follower, whereby the combined length of both springs, both followers and the combined spacing and abutment means will correspond to the length of the cushion receiving pocket of a standard draft gear.

1,676,179. VALVE. WILLS M. FLEMING, Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Apr. 30, 1927. Serial No. 187,755. 3 Claims. (Cl. 251—121.)



1. In a valve mechanism, a combination with a carrying body, of a valve seat, a valve cage, a pressure member engaging said cage, the fluid passages in said valve mechanism being confined to said body, valve seat and valve cage, whereby no fluid will pass through said pressure member, said valve cage having only frictional engagement with said valve seat and said valve seat, cage and pressure member having only frictional engagement with said body, whereby said seat and cage and said seat, cage and pressure member will be free to move under expansion and contraction.

1,676,180. REMOTE CONTROL FOR ROLLING-MILL SCREW DOWNS. DANIEL R. FRANCIS, Waterbury, Conn., assignor to The Waterbury Tool Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 21, 1927. Serial No. 200,356. 6 Claims. (Cl. 80—56.)



1. The combination with a rolling mill having cooperating rolls and adjusting screws to vary the gap between said rolls, of a variable speed transmission gear including a pump and motor, the latter having a rotatable driving shaft, gearing connecting said shaft and said screws, said pump having adjustable means to reverse or vary the output thereof and thereby cause the speed or direction of rotation of said motor to be varied, an electric motor for actuating said adjustable means, and means driven by said rotatable driving shaft to cause said adjustable means automatically to be moved in a direction opposite to that produced by said electric motor.

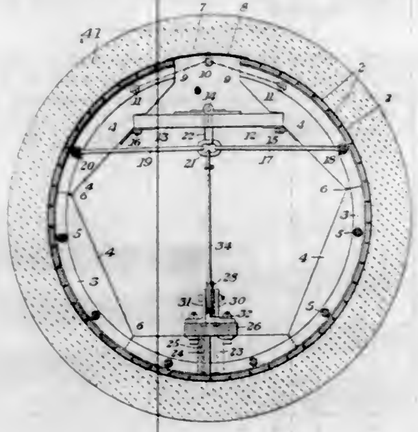
1,676,181. BEARING. FRANKLIN W. FRITCHEY, Cumberland, Md. Filed Apr. 16, 1927. Serial No. 184,270. 7 Claims. (Cl. 308—66.)

7. In a locomotive driving box, a box having an inner circular supporting surface, a sectional annular bushing within said circular supporting surface and of smaller outside diameter than the same, and circular wedges between said supporting surface and said bushing, the sections of said bushing being of such circumferential length as to form a closed cylinder around the journal of the driving wheel.

1,676,182. KILN BOTTOM AND METHOD OF BUILDING KILNS. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1928. Serial No. 249,277. 5 Claims. (Cl. 25—132.)

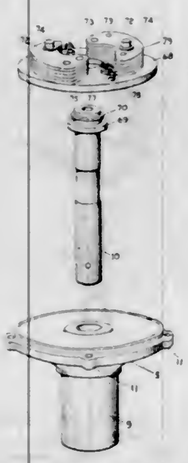
1. In a structure of the kind described, the combination of a plurality of arches each of less length than the width of the structure and extending inwardly from either side thereof.

1,676,183. ATTACHMENT FOR RAZORS. JACOB N. GARFUNKLE, Cincinnati, Ohio. Filed May 3, 1927. Serial No. 188,585. 7 Claims. (Cl. 240—2.)



1. An attachment for a razor comprising a rectangular frame having an orifice therein, a reflector pivotally mounted in said frame, a lamp secured to said frame, in combination with a safety razor adapted to detachably receive said frame between the blade and clamping members on one side and the handle on the other side whereby the free end of the pivoted reflector will engage the convex surface of the outer razor clamp.

1,676,184. FORM FOR CONCRETE AND THE LIKE. ELMER J. GASS and DAVID W. THURSTON, Detroit, Mich. Filed May 31, 1922. Serial No. 564,806. 9 Claims. (Cl. 25—131.5.)

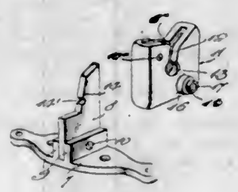


1. A form for concrete and the like, having a plurality of sets of toggles for holding the form in its expanded

position, a set of links for each set of toggles connected to opposite sides of the form and the toggles, and means

for operating all of said sets of links to break the toggles and to contract the form throughout its length, substantially as described.

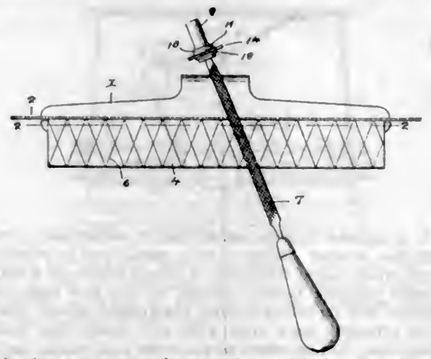
1,676,185. COMBINED TIMER AND DISTRIBUTOR. CLARENCE F. GILCHRIST and HARRY R. PATTERSON, Toledo, Ohio, assignors, by mesne assignments, to The Electric Auto-Lite Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 24, 1921. Serial No. 439,521. Renewed Aug. 15, 1925. 25 Claims. (Cl. 200—22.)



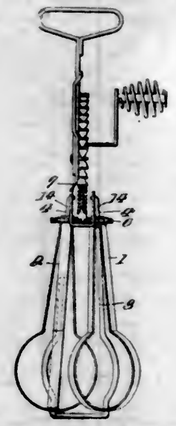
4. In a centrifugal device for an ignition timer, a rotatable supporting member, a weight having opposite substantially parallel faces, means whereby said weight may be pivotally mounted on said support with either the one or the other of said faces adjacent said support depending upon the direction of rotation, a restraining member for said weight extending parallel therewith, and means for attaching said restraining member at said weight at a point substantially midway its two faces whereby the effect of said restraining member is substantially the same with the weight mounted in either manner.

1,676,186. VALVE CONTROL FOR PLUNGER PUMPS. ROE C. HAWKINS, Long Beach, Calif., assignor of one-third to Frank E. Abbott, Long Beach, Calif. Filed Aug. 15, 1927. Serial No. 212,970. 9 Claims. (Cl. 103—221.)

1. In a plunger pump comprising a reciprocating plunger, and a standing valve, a ball check in said valve, a control rod, adapted to engage and seat said ball, and resilient means positioned between said rod and plunger whereby the rod is yieldingly urged against the ball by the plunger.



1,676,187. THREAD CLEANER. HARRY J. HUFFORD, Scranton, Pa. Filed May 13, 1927. Serial No. 191,149. 3 Claims. (Cl. 28—70.)

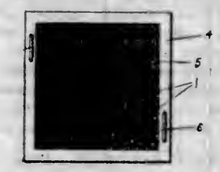


1. A thread cleaner comprising a blade and means for fixedly securing the same to a support, a sleeve slidably surrounding said blade and having thread-receiving throats in its opposite sides, said blade having a thread scraping edge disposed at one side of said throats, a second thread scraping blade having a scraping edge disposed at the opposite side of said throats, the two scraping edges being oblique to the length of the sleeve, and means for securing said sleeve to said first named blade after relative sliding thereof to disposed said scraping edges the desired distance apart.

1,676,188. SAW-FILING GUIDE. JAMES A. HUGUS, Fort Scott, Kans. Filed May 16, 1927. Serial No. 191,875. 2 Claims. (Cl. 76—31.)

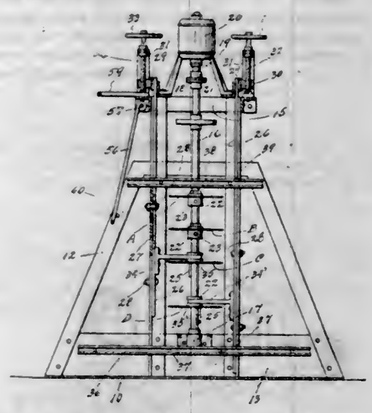
1. A saw filing means including a clamp in which a saw to be sharpened is secured, an angle gauge plate having its vertical flange contacting with one of the faces of the saw and secured in the clamp, said plate having its horizontal flange inscribed with cross angle lines, to indicate the angle at which a file is to be directed during the saw sharpening operation, a member to which the outer end of the file is connected, a pointer on the member, and a gauge plate revoluble on the member having an outer pointed end and friction means for holding the graduated plate and member from free turning one on the other.

1,676,189. BEATER - BLADE SUPPORT. ERNEST N. HUMPHREY, New Britain, Conn., assignor to United Royalties Corporation, New York, N. Y. Filed May 6, 1926. Serial No. 107,216. 8 Claims. (Cl. 259—131.)



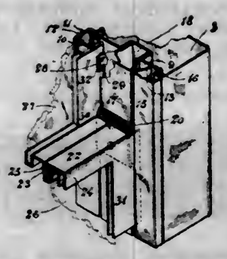
8. A beater comprising a frame having its lower end U-shaped, beaters below the said U-shaped end, a U-shaped supporting wire supporting said beaters, the parallel portion of the supporting frame having the horizontal openings above the lower end of the frame, the upper ends of the supporting frame extending along the parallel portions and its extremities bent in opposite directions and passing through the said openings, and means connecting the upper ends of the wire to the parallel portions, said means located between the bent ends of the rods and the lower end of the U-shaped frame.

1,676,190. RUBBER-BONDED ABRASIVE WHEEL AND METHOD OF MAKING SAME. PEHR JOHANSON and DUANE E. WEBSTER, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1925. Serial No. 51,042. 4 Claims. (Cl. 51—280.)



1. The improvement in the manufacture of rubber bonded abrasive articles, such as grinding wheels, which comprises incorporating in the rubber bond a wax in an amount sufficient to modify the properties of the vulcanized rubber bond and decrease the hardness of the bonded article.

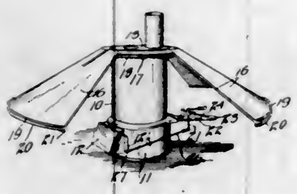
1,676,191. FILTER MEDIUM FOR AIR FILTERS. ANDERS JORDAHL, New York, N. Y. Filed Aug. 20, 1924. Serial No. 733,151. 7 Claims. (Cl. 183—69.)



2. An air and gas filtration medium consisting of a plurality of layers of knitted fabric, each layer consisting of ribbon-like twisted metal strands which are adapted to be irregularly arranged relative to the strands of the other layers so that the loops and side portions of each strand form baffles for the reception and retention of dust particles and the irregularly arranged strands provide an interrupted path for the air current.

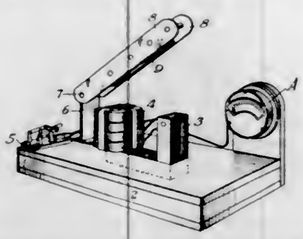
1,676,192. ICE-SCORING MACHINE. AUBREY M. LEE, Dallas, Tex., assignor to Simplex Ice and Manufacturing Company, Dallas, Tex., a Corporation of Texas. Filed May 25, 1927. Serial No. 193,452. 15 Claims. (Cl. 125—13.)

1. In an ice scoring machine, a frame, a vertical saw shafts mounted on said frame, circular saws carried by said shafts, one saw on each shaft being adjustable vertically thereon, and a hanger carried by the frame and connected with said adjustable saws for adjusting the same.



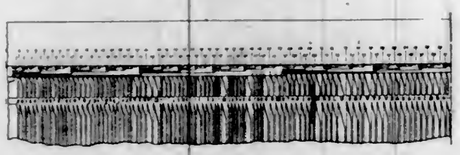
1,676,193. METALLIC WINDOW FRAME AND SASH. ROBERT E. LEE, Cincinnati, Ohio. Filed July 6, 1925. Serial No. 41,840. 12 Claims. (Cl. 189—75.)

1. In a metallic window construction having a frame and sashes, a jamb comprising a part of said frame and having on its outer side an inwardly turned flange posi-



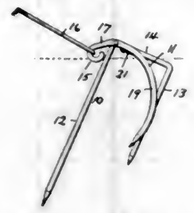
tioned intermediate the sides of said jamb, an angular member on the outer side of said jamb having an inclined flange, a jamb cover piece having a hooked edge adapted to engage said inclined flange and adapted to be in fitted fixed relation with said angular number, an upper and a lower sash having side rails, a parting strip secured to said jamb cover piece, and a block fixed to the outer side of said parting strip and adapted to close the openings between said jamb and said sashes when said sashes are in closed position.

1,676,194. FURNACE BROODER. FRED W. LORD, Tipton, Ind., assignor to the Oakes Manufacturing Company, Tipton, Ind. Filed Mar. 12, 1927. Serial No. 174,813. 8 Claims. (Cl. 119—32.)



1. A brooder comprising a central upstanding supporting element, an overhanging depending annular canopy supported from the upper end of said supporting element said canopy comprising a plurality of slidably mounted sections slidable one over the other to afford access to the supporting element, substantially as set forth.

1,676,195. APPARATUS FOR TESTING COILS. JAMES F. MACWILLIAMS, Cresson, Pa. Filed Oct. 28, 1924. Serial No. 746,339. 1 Claim. (Cl. 175—183.)



An apparatus for testing coils, comprising a core having a primary coil thereon and adapted to receive as a secondary the coil to be tested, and means for indicating the current flow through the primary coil, said primary coil comprising a plurality of units adapted to be connected in different relationship for use with circuits of different voltages.

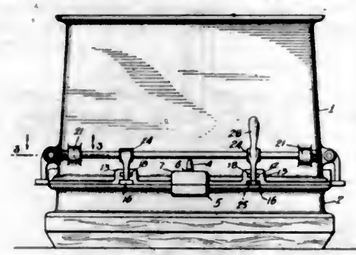
1,676,196. TYPOGRAPHICAL DISTRIBUTING BAR. GEORGE E. MARLATT, Pasadena, Calif. Filed Nov. 13, 1926. Serial No. 148,301. 11 Claims. (Cl. 199—33.)

1. A single typographical distributing bar having distributing combinations in duplicate, the first of each duplicated combination being narrow and the duplication thereof relatively wider, for the purpose specified.

1,676,197. GROUND ANCHOR. JOHN MARRINAN, Washington, D. C. Filed May 4, 1926. Serial No. 106,628. 7 Claims. (Cl. 189—90.)

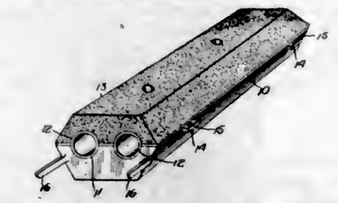
1. A ground anchor comprising a staple-like ground engaging member having a long prong and a relatively short prong spaced therefrom, a second relatively movable ground engaging member carried by the first mentioned member and including ground penetrating prongs and a cable attaching hook rigid with said prongs and means associating said members to force the penetrating prongs of the second mentioned member into the earth under tension of an attached cable.

1,676,198. RECORDING AND SALES-CHECK MECHANISM FOR FLUID-DISPENSING PUMPS. ARTHUR R. MASON and OTTO C. FAILING, Medford, Oreg., assignors to Accurate Gasoline Recording Company, a Corporation of Oregon. Filed Aug. 16, 1926. Serial No. 129,614. 6 Claims. (Cl. 164—65.)



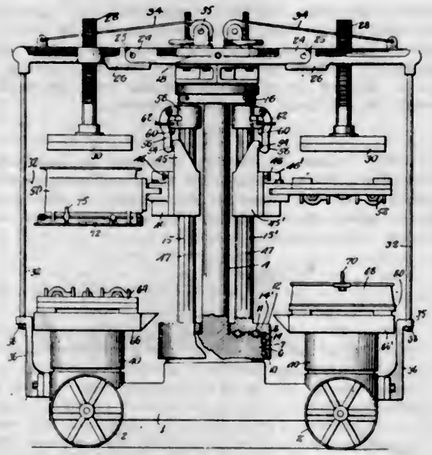
4. In a recording and sales check mechanism for fluid dispensing pumps, the combination of a casing having a discharge slot for the sales check strip, mechanism within the casing coupled to the pump operating mechanism to be actuated thereby and including means for feeding the strip through the said discharge slot, guide members exterior to the casing in line with the discharge slot thereof to receive between them the projecting end of the strip, and independent pressure means for bringing the guide members together to clamp the projecting end of the strip to facilitate the severing thereof.

1,676,199. MOLD SHELL. JOHN R. WOOD, Hatboro, Pa., assignor to New Process Multi-Castings Company, Newark, N. J., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 33,605. 2 Claims. (Cl. 22—111.)



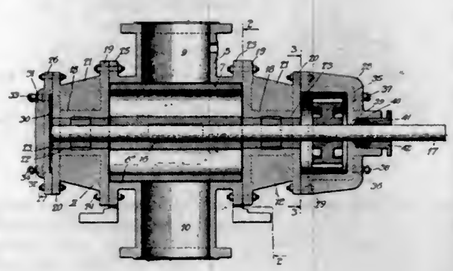
1. In combination, a mold cope having a longitudinal shoulder extending along the bottom of each of opposed inner faces and having openings extending outwardly through the cope wall from each of said shoulders, said openings having upwardly facing surfaces, disengageable mold retaining means comprising a slide extending inward'y from under each of said shoul'ders and movable

completely thereunder, means for holding said slides in operative position on said cope comprising members attached to the said slides and riding on said upwardly



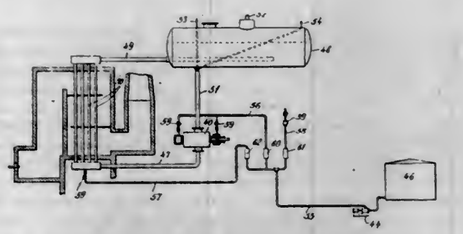
facing surfaces, and means for moving said slide into and out of the retaining and releasing positions comprising members attached to said slides and extending through to the outside of the cope.

1,676,200. POURING SHELL FOR PIPE MOLDS. JOHN R. WOOD, Hatboro, Pa., assignor to New Process Multi-Castings Company, Newark, N. J., a Corporation of New Jersey. Filed May 29, 1925. Serial No. 33,607. 2 Claims. (Cl. 22—192.)



1. A shell for pipe cope molds comprising a longitudinal box open at its top and bottom, having flanges along the top edges of the shell having longitudinal slots therein adapted to adjustably receive braces across the top, and having pipe-core engaging recesses formed at its ends.

1,676,201. MOLDING MACHINE. JOHN R. WOOD, Hatboro, Pa., assignor to The New Process Multi-Castings Company, Incorporated, Newark, N. J., a Corporation of New Jersey. Filed Nov. 3, 1925. Serial No. 66,472. 5 Claims. (Cl. 22—25.)

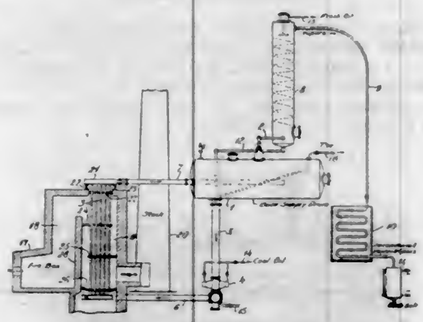


1. In a mold making machine, in combination, a plurality of sub-machines each comprising a support for a flask or pattern part permitting vertical movement of the part and movement thereof about a horizontal axis, means for moving a part mounted on said moving means, and means for bringing the part supported on one sub-machine above the moving means of another sub-machine.

1,676,202. CIRCULATORY CRACKING STILL AND PUMP THEREFOR. EDWARD W. ISOM, Winnetka, Ill., and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed May 12, 1921. Serial No. 469,036. 6 Claims. (Cl. 103—126.)

2. In a circulatory oil cracking still having a still proper, heating pipes in a furnace and connections between said still and heating pipes, a circulatory pump arranged to circulate hot oil from said still to and through said heating pipes and back to the still, said pump having loosely fitting bearings and means for forcing relatively cool oil through said bearings into said pump and circulatory system.

1,676,203. OPERATION OF PRESSURE STILLS. EDWARD W. ISOM, Winnetka, Ill., and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 19, 1924. Serial No. 707,579. 8 Claims. (Cl. 196—59.)



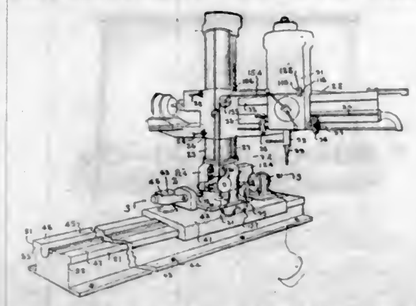
4. A method of cracking oil, which comprises circulating the oil from and to a bulk supply tank through a heater maintained at a cracking temperature by and through a circulating pump having a drive shaft in loosely fitting bearings while maintaining the oil under superatmospheric pressure, feeding fresh oil to the still and forcing a substantial part of this fresh oil through the pump bearings into the hot circulating oil.

1,676,204. OIL STILL. EDWARD W. ISOM, Scarsdale, N. Y., and ARNOLD CHARLES VOBACH, Whiting, Ind., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 12, 1927. Serial No. 167,680. 1 Claim. (Cl. 196—108.)

In tubular oil cracking pressure stills, a bulk supply drum, a battery of heating tubes connected in multiple, and means for circulating heating gases thereover, con-

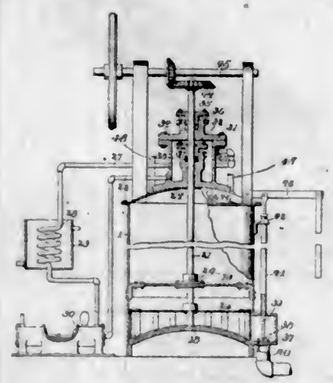
nections between the bulk supply drum and the battery of heating tubes including a forcing means whereby oil may be circulated from and to the bulk supply drum through the battery of heating tubes in a direction generally countercurrent to the flow of heating gases there-

over, the upper ends of the battery of heating tubes being below the usual liquid level in the bulk supply drum, said heating tubes having stationary solid cores formed of twisted rods arranged in and extending centrally therethrough leaving a continuous annular oil passage through said heating tubes.



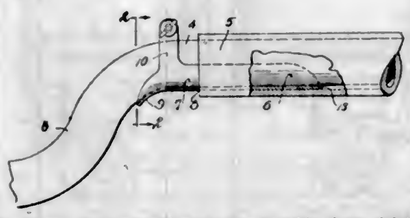
1,676,205. METHOD OF CONSTRUCTING SPINNING-RING TRAVELERS. CHARLES F. MERRILL, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 25, 1926. Serial No. 97,242. 2 Claims. (Cl. 153—32.)

1. The method of constructing a spinning ring traveler which consists in forming a mandrel having a central segment of its surface with its elements parallel to the axis and in right cross section corresponding to the shape of the central bow section of the traveler and having similar complementary side segments of its surface helicoidal and each generated by a line bounding a radial cross section of the ring upon which the traveler bears when this line is maintained at an angle to the helicoidal axis corresponding to the normal angle of inclination of the traveler when running, and in then bending a strip of traveler metal of uniform cross section having a flat inner bearing surface into conformity with the mandrel surface with that portion engaging the central segment of the mandrel surface lying at right angles to the mandrel axis.



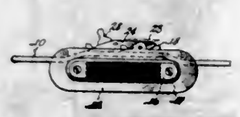
1,676,206. TRAVELING DRILLING MACHINE. STANLEY M. RATLIFF, Norwood, Ohio, assignor to The American Tool Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 18, 1926. Serial No. 130,055. 3 Claims. (Cl. 77—28).

3. In a traveling drilling machine, the combination of a track, a carriage movable therealong, a base fixed to said carriage, a post extending rigidly upwardly from said base, a rotatable column about said post above said base, a drill-arm adjustable to elevation on said column and arranged to be adjusted to radial positions about said post, a drill-slide slidable laterally on said drill-arm toward and from said column, a shaft extending through said base below said rotatable column, a motor at one side of said base connecting with one end of said shaft, a worm and worm-wheel at the opposite side of said base



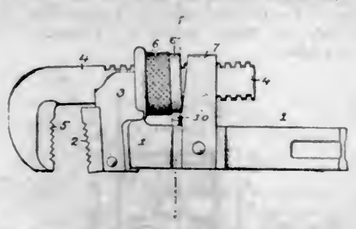
connecting with the other end of said shaft, said worm and worm-wheel having operative connection with said track for moving said carriage lengthwise of said track.

1,676,207. CRACKING OILS. GEORGE L. PRICHARD, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed June 22, 1915. Serial No. 35,617. 10 Claims. (Cl. 196—68.)



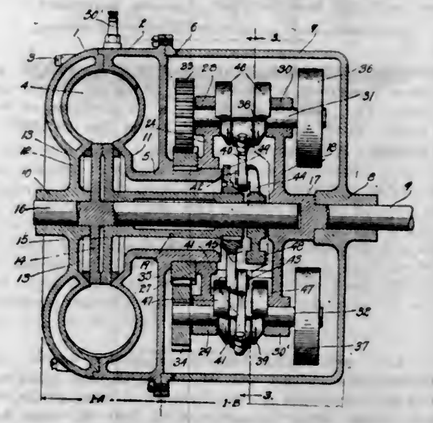
1. The process of cracking petroleum hydrocarbons which comprises maintaining in a still a body of such hydrocarbons under cracking temperature and pressure while withdrawing and condensing vapors of cracked products, agitating the oil by a stirring device in the still operated by a shaft passing outside the still through a packing enclosed in a closed housing and circulating through the housing a fluid under pressure.

1,676,208. CABLE SUPPORT. DELBERT E. REPLOGLE, Watertown, Mass., assignor to Engineering Specialties Company, Boston, Mass., a Partnership of Massachusetts. Filed Dec. 2, 1926. Serial No. 152,178. 6 Claims. (Cl. 247—4.)



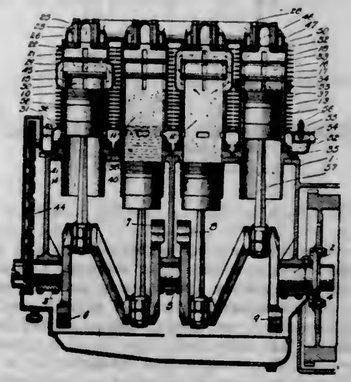
5. Means for protecting a power cable from frictional wear due to the longitudinal movement of the cable over a support, comprising a substantially semi-cylindrical sleeve and means for securing said sleeve from movement relative to said cable whereby any frictional wear due to the longitudinal movement of the cable over said support will take place between said sleeve and said support.

1,676,209. RAZOR-BLADE SHARPENER. WALTER W. UPINGTON, Tacoma, Wash. Filed Apr. 2, 1926. Serial No. 99,385. 7 Claims. (Cl. 51—153.)



1. In a sharpener of the class described, stropping means and blade holder supporting means movable relative to each other, a tilting blade holder on the supporting means disposed at an angle to the transverse axis of the stropping means, means operable upon relative movement of the stropping means and blade holder supporting means, to swing one edge of a blade in the holder against the stropping means, whereby the desired drawing off sharpening action is had, and means compelling reverse tilting of the blade holder when the direction of relative movement of the blade holder supporting means and stropping means is reversed, the reverse tilting means including a cam plate slidably mounted in the blade holder supporting means and shiftable by its frictional engagement with the stropping means.

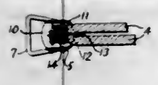
1,676,210. PIPE WRENCH. PAUL ARMSTRONG, Chicago, Ill., assignor to Armstrong Bros. Tool Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1926. Serial No. 151,401. 1 Claim. (Cl. 81—101.)



A pipe wrench comprising, a handle carrying a wrench jaw at one end, cheek plates secured to said handle in spaced relation to said jaw, and having a hook form providing a rearwardly open pivot socket, a confining yoke secured to said handle in spaced relation to said cheek plates, a companion wrench jaw having a screw threaded shank adapted for movement between said cheek plates and through said confining yoke, an operating sleeve nut arranged between the sleeve plates and yoke and having at one end an annular bead adapted to effect pivotal engagement between the nut and cheek plates and hold said nut from lateral displacement, said nut having a reduced peripheral portion remote from the annular bead aforesaid, a plunger formed with an enlarged end portion adapted for bearing contact with the reduced peripheral portion of the sleeve nut to hold said nut in its pivoted engagement with the aforesaid cheek plates and prevent detachment of the nut when the movable wrench member is removed for repair and the like, said plunger having a reduced end portion in aligned relation to said enlarged portion, the handle having a socket or recess formed with enlarged and reduced portions complementary to the plunger and adapted to slidingly receive the same, and a compression spring arranged in the enlarged portion of said recess and having bearing engagement with the enlarged portion of the plunger.

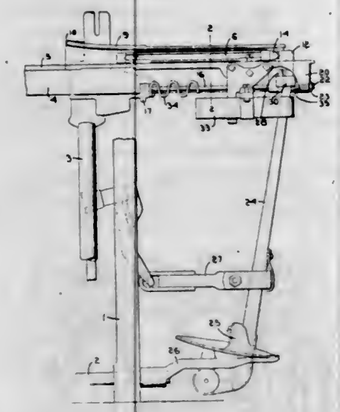
1,676,211. TRANSMISSION FOR ROTARY ENGINES. FRANK A. BULLINGTON, Kansas City, Mo., assignor to Bullington Motors, Kansas City, Mo., a Common Law Trust consisting of Solomon Stoddard, Ernest E. Howard, and Frank A. Bullington. Filed June 2, 1923. Serial No. 643,095. 1 Claim. (Cl. 123—11.)

In a rotary combustion motor, a fixed annular cylinder casing, and a fixed crank case at one side of the cylinder in axial alignment with the cylinder, pairs of pistons in the cylinder rotatable about a common axis, the pistons of one pair opposed to those of the other pair, to form working chambers between them and having relative movement to compress fuel charges to combustible pressures, means for igniting the compressed charges, two piston shafts, one concentric with the other, piston arms carried by the piston shafts, oppositely disposed single pin crank shafts, one for each pair of pistons, a crank shaft carrier mounted to rotate in the crank case and having the crank shafts rotatably mounted therein diametrically opposite to each other, piston arms on the piston shafts, connecting rods between the piston arms and the crank pins, the crank pins being so disposed that when they are on dead center positions they are at equal angular distances on one side of a plane passing through the axes of the crank shafts and of the piston shafts, with one crank pin a greater distance from the axes of the piston shafts than the other, the connecting rods on dead center positions and parallel one to the other.



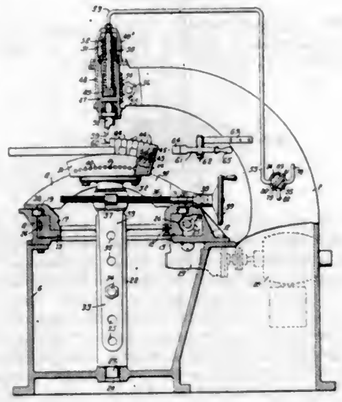
1,676,212. INTERNAL-COMBUSTION ENGINE. FRANK A. BULLINGTON, Kansas City, Mo. Filed July 12, 1923. Serial No. 651,043. 18 Claims. (Cl. 123—190.)

1. A four cycle reciprocatory internal combustion engine comprising a cylinder provided with a working



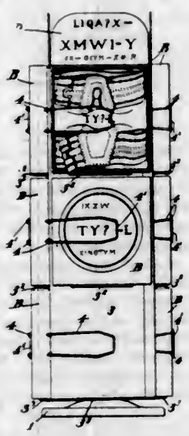
chamber having means for combusting fuel introduced into said chamber, means for admitting fuel into and exhausting burnt gases from the cylinder and a reciprocatory piston in the cylinder having expansion movement greater than its effective compression movement and an effective fuel intake movement equal to the compression movement and less than the expansion movement.

1,676,213. WRIST-WATCH BRACELET. ADOLPH BULOVA, New York, N. Y., assignor to Bulova Watch Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 17, 1928. Serial No. 247,285. 2 Claims. (Cl. 24—123.)



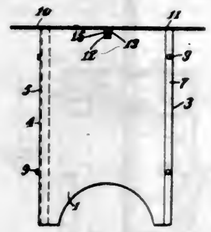
1. In a wrist-watch bracelet comprising double cords extending from either side of the watch, end parts each of which comprises a cup carrying a clasp device, the construction being characterized in that the cups have open ends which are disposed outwardly and are substantially unobstructed, and that the inner portions of the cups are provided with retainers, the two cord ends passing into each cup at opposite sides of said retainer and being connected together within the cup in a manner permitting the length of the bracelet to be readily altered.

1,676,214. PICKER MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 18, 1927. Serial No. 234,114. 6 Claims. (Cl. 139—146.)



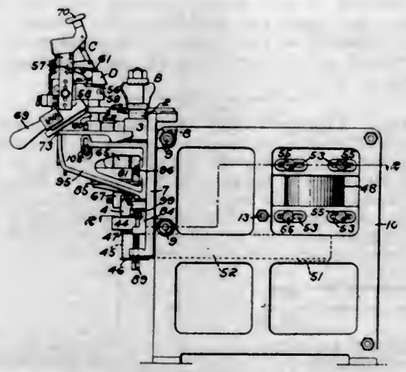
1. A loom comprising a lay having a raceway, a shuttle box on the lay at the end of the raceway, a picker extending above and below the raceway and mounted on the lay to slide longitudinally thereof with its head moving parallel to the raceway and midway of and parallel to the shuttle box walls, and a picker stick located entirely beneath the raceway and swinging in a plane parallel to and immediately adjacent to the picker and loosely connected at its upper end to the picker to impart longitudinal movement thereto.

1,676,215. BENDING MACHINE. HERMAN E. FRENTZEL, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 23, 1926. Serial No. 89,890. 18 Claims. (Cl. 153—40.)



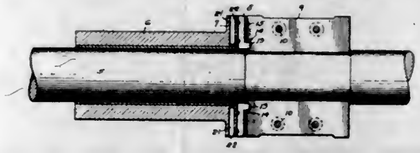
16. In a bending machine the combination of a head having an arcuate series of openings therein, a series of mandrels adapted to be placed in said openings successively, and means for rotating said head to bend the work about each mandrel successively applied thereto.

1,676,216. DISPLAY STAND. FRANCIS W. GIBSON, West Roxbury, Mass., assignor to The H. D. Beach Company, Coshocton, Ohio, a Corporation of Ohio. Filed July 21, 1926. Serial No. 123,868. 3 Claims. (Cl. 211—50.)



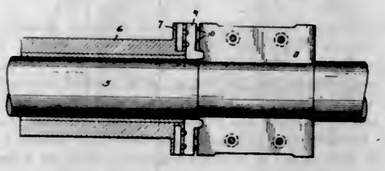
1. In a display structure a spindle member and multi-faced rack rotatably mounted thereon and comprising a plurality of face plates each having angularly bent marginal flanges interengaged with the flanges of the adjacent plates to form the corners, and each having a plurality of spaced bracket lips struck out therefrom, and resilient clip members anchored in said corners and having their free ends disposed in retaining rotation above said bracket lips.

1,676,217. TABLE. FRANCIS W. GIBSON, West Roxbury, Mass., assignor to The H. D. Beach Company, Coshocton, Ohio, a Corporation of Ohio. Filed July 21, 1926. Serial No. 123,869. 3 Claims. (Cl. 45—31.)



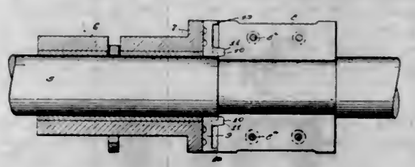
1. A table comprising side portions of the same size and form, each side having a bent edge adapted to overlie and connect with an adjacent side, a two part top, each part being of similar form and having a turned edge portion adapted to form a central rib when the turned edge portion of each of the top parts are abutted against each other, the turned edge portion of each top part having a plurality of notches extending part way across said turned edge portion, the opposite sides of said table also having notches in the upper edge thereof adapted to receive the turned edge of each of the top portions, the notches in the side portions being of a depth less than the width of the turned edge portion of the top, said notches in the sides being of a width equal to at least twice the thickness of the turned edge of the top portion.

1,676,218. MACHINE FOR TURNING HEELS. NICHOLAS L. GULLIFORD, Peabody, Mass., assignor to Gregory & Read Company, Lynn, Mass., a Corporation of Massachusetts. Filed Dec. 24, 1925. Serial No. 77,600. 12 Claims. (Cl. 12—87.)



1. In a heel turning machine at least one work member arranged to rotate about a vertical axis, a work holder arranged to swing about vertical and horizontal axes into operative relation with said work member to effect the shaping of the work, a rider carried, by said work holder, a curved track member for supporting said rider in varying angular positions as said work holder swings about its vertical axis, a supporting bracket member for said track, a tongue in one of said members and a plurality of angularly spaced grooves respectively to receive said tongue and maintain said track in a predetermined angular position with respect to said work member for guiding said work holder in swinging about its horizontal axis.

1,676,219. THRUST BEARING. JULIUS H. SEYMOUR and THOMAS S. SPEAR, Bartow, Fla.; said Seymour, assignor to said Spear. Filed July 3, 1926. Serial No. 120,422. 1 Claim. (Cl. 308—168.)

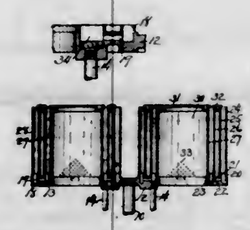


The combination with a rotative shaft of a fixed bearing member in which said shaft rotates, there being peripheral recesses formed in said bearing member, and oil ducts leading from said recesses to the working face of said member, an abutment carried by the shaft, a rotative wear plate secured to the abutment and held in spaced relation thereto, to provide a space between the wear plate and the abutment, there being oil ducts leading from said space through the plate to the working face of the plate.

1,676,220. THRUST BEARING. JULIUS H. SEYMOUR and THOMAS S. SPEAR, Bartow, Fla.; said Seymour assignor to said Spear. Filed July 29, 1926. Serial No. 125,693. 3 Claims. (Cl. 308—168.)

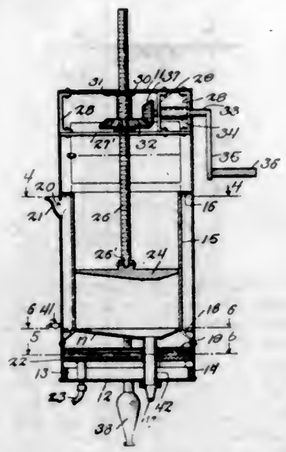
1. In combination a horizontal shaft and a thrust bearing for the same, comprising an abutment carried by the shaft and rotating therewith, a vertical wear plate spaced from said abutment but connected thereto and rotating therewith and having ports formed therethrough from the rear to the front face thereof and fins carried by said plate at the mouths of the respective ports projecting outwardly beyond the vertical face of the plate to thereby direct oil moving under the influence of centrifugal force into said ports, to cause said oil to travel laterally through the wear plate.

1,676,221. THRUST BEARING. JULIUS H. SEYMOUR and THOMAS S. SPEAR, Bartow, Fla.; said Seymour assignor to said Spear. Filed July 18, 1927. Serial No. 206,617. 4 Claims. (Cl. 308—168.)



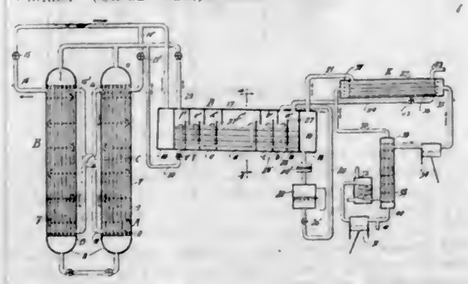
1. A thrust bearing, a rotative shaft and abutment carried thereby, a wear-plate secured to, and rotating with, the abutment, means for spacing the wear-plate from the abutment, shrouds for closing the space between the wear-plate and the abutment at both the inner and outer edges of said wear-plate, pick-up projections disposed at an angle to pick up oil during the rotation of the wear-plate and abutment, and means for conducting oil from said pick-up projections to the space between the wear-plate and abutment, said wear-plate having ports formed therethrough from its rear to its front face.

1,676,222. PROCESS OF MAKING SHEET-METAL FRAMES. WILLIAM O. SHELDON, Lakewood, Ohio, assignor to The Yoder Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 23, 1925. Serial No. 39,077. 3 Claims. (Cl. 113—116.)



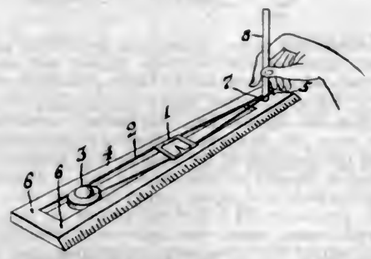
1. The herein disclosed process of making frames for panels, sheets and the like, which consists in first forming a sheet metal strip into sections of predetermined length each section having pairs of V-shaped notches in its side edges spaced from each other and from the ends of the strip to form the sides and ends of the frame, then in forming longitudinally of the strip midway between its side edges a V-shaped groove, then in forming along its longitudinal side edges end walls, then in bending the side walls between said groove and said end walls toward each other along the lateral edges of said V-shaped groove, then in straightening the walls of the V-shaped groove to form the outer end walls of the frame and moving the side walls toward each other to position the inner end walls, then in bending the strip on transverse lines coincident with the apexes of the V-shaped notches, and finally associating a panel or sheet between the inner end walls and connecting the end of the strip together.

1,676,223. VAPOR BURNER. RALLSTON M. SHERMAN, Glastonbury, Conn., assignor to Silent Glow Oil Burner Corporation, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 25, 1926. Serial No. 131,397. 3 Claims. (Cl. 158—87.)



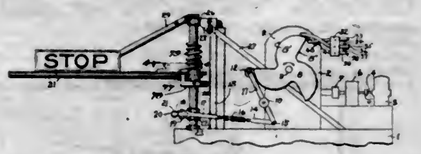
1. A burner including a burner base having therein a fuel groove, a vapor groove to receive for ignition therein vapor from said fuel groove, a duct communicating with both of said grooves and located above the bottom of the fuel groove to effect flow of vapor only to the vapor groove under normal operation of the burner, a combustion chamber opening from each of said grooves, and means for supplying fuel to the fuel groove.

1,676,224. DISPENSING CONTAINER. ASSIMAKIS SPILIOTAKARAS and FRANK L. TAYLOR, Mobridge, S. Dak. Filed Mar. 29, 1926. Serial No. 97,398. 1 Claim. (Cl. 221—79.)



A dispensing apparatus comprising a casing having an opening formed adjacent its upper end for filling purposes, a closure for the opening, a container within the casing spaced from the wall thereof and provided with a flange at its upper end seating against the inner side of the wall of the casing circumferentially below the said opening, a partition wall in the casing near the bottom thereof closing the lower portion of the casing below the bottom of the container, the casing having an opening below the plane of the flange at the upper end of the container, the wall adjacent said opening being bulged outwardly to form a hopper, a removable bottom for the lower end of the casing, an electric heating unit supported upon the said bottom between the same and the partition to heat water introduced into the space between the casing and container, and a follower vertically adjustable in the container, the container having a discharge at its bottom for the material contained therein.

1,676,225. LIQUEFACTION APPARATUS. RICHARD C. TOLMAN, Washington, D. C.; WILLIAM L. DE BAUFRE, Lincoln, Nebr.; JOHN W. DAVIS, Washington, D. C.; and MONTAGUE H. ROBERTS, Englewood, N. J., assignors to Samuel G. Allen, trustee. Original application filed Sept. 16, 1922, Serial No. 588,530. Divided and this application filed Dec. 29, 1923. Serial No. 683,276. 2 Claims. (Cl. 62—122.)

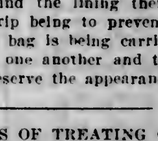


1. A liquefying apparatus comprising, in combination, interchangers for cooling the gaseous mixture, a substantially horizontally disposed liquefier for the liquefaction of the major portion of the undesired constituents of the gas, appropriate connections between the interchangers and the liquefier, a chamber communicating with the liquefier and receiving the vapor and condensate discharged from the liquefier for separation, means whereby the condensate is utilized in counter-flow in the liquefier and interchangers, a purifier to which the uncondensed vapor is led from said chamber, a connection for so leading said vapor, and an external cycle of refrigeration for the purifier.

1,676,226. DRAWING DEVICE. WILLIAM JOHN WITKUS, Maspeth, N. Y. Filed Jan. 28, 1928. Serial No. 250,197. 2 Claims. (Cl. 33—23.)

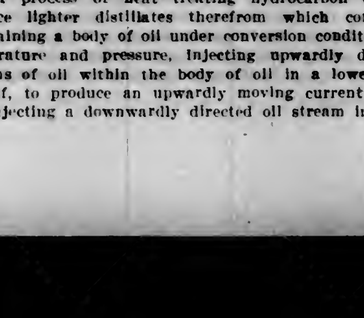
2. A drawing device comprising a part having a longitudinal slot therethrough and being adapted for ruling and measuring, securing means on said part adjacent one end of said slot there being a scriber-receiving hole adjacent said means, a pivot tack adapted to be received in said slot whereby the part may pivot and slide relative thereto, a spring element having one end secured to said securing means and the other to said pivot tack, and a drawing guide releasably connected to said spring element.

1,676,227. AUTOMATIC RAILWAY GATE. JOHN R. BURRESS, Arlington, Tex., assignor, by direct and mesne assignments, to W. A. Cease and W. A. Davis, Tulsa, Okla. Filed July 9, 1924. Serial No. 724,946. 5 Claims. (Cl. 39—7.)



2. An automatic railway gate comprising a movable body which is arranged to be swung laterally across a highway, a movable cam having gradual lifts and abrupt drops, means operable over one of the cam lifting portions for closing the gate body, means for retaining said first mentioned means on the lifting portion for closing the gate body, resiliently tensioned means for urging the gate body to open position, and means for moving the cam lift portion from under said first means to permit the same to fall into one of the abrupt drops.

5. An automatic railway gate comprising a laterally movable gate body, means for causing said gate body to open, a movable cam lift and drop portions for respectively closing and releasing the gate body, a motor for moving said cam, a switch for starting the motor to close the gate, a cam-controlled switch for starting the motor, a cam-controlled switch for insuring maintenance of the motor circuit, said cam switches being adapted to be opened by the cam when the gate is closed, and a second switch for starting the motor for permitting the gate to open when the circuit to the first switch is opened.

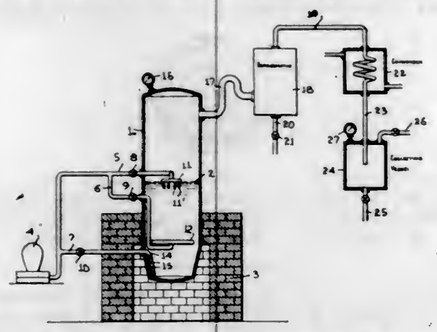


1,676,228. CEILING PLATE. WILLIAM GRIMSHAW, Chicago, Ill. Filed Aug. 2, 1926. Serial No. 126,705. 4 Claims. (Cl. 126—317.)

1. A wall or ceiling plate for the purpose specified, comprising a plurality of spring segments connected together at their outer ends, said plate being dished and the edges of the inner ends of the segments thereof defining a hole in said plate adapted to receive a member in association with which said plate is designed to be used and which is normally smaller than said member,

and the inner ends of different segments comprising opposed portions, the relation being such that when a plate is applied to a member the edges of the inner ends of said segments will directly engage said member.

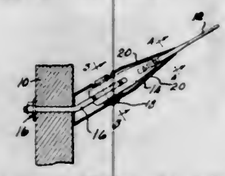
1,676,229. HAND HAT BAG. MOLLIE L. GROSSMAN and JOSEPH N. LOWE, New York, N. Y. Filed Jan. 2, 1923. Serial No. 610,118. 3 Claims. (Cl. 206—8.)



1. A hand-bag of the character described comprising a peripheral band of flexible fabric, disk sides of flexible fabric applied to opposite edges of said band, one of said disk sides being secured along its entire edge to one entire edge of said band and the other disk side being secured at a portion of the edge thereof to a portion of the other edge of said band and at its other edge portion being provided with fastening means for detachable connection with the other portion of said other edge of the band, which portion is provided with fastening means to coact with the said fastening means, carried by the disk side, a handle by means of which the bag may be carried by hand, a lining of fabric extending entirely around the inner surface of said band and secured at its opposite edges, and a stiffening strip of pasteboard or the like of about the width of said band and extending along the inner surface of the band and being concealed behind the lining thereof, the purpose of said stiffening strip being to prevent the collapse of said band while the bag is being carried and when the bags are piled upon one another and to thereby protect the contents and preserve the appearance of the bag.

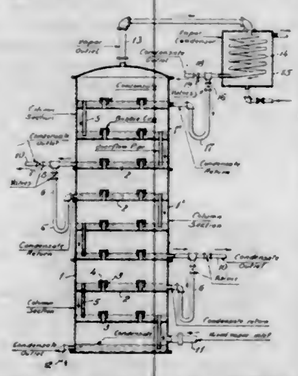
1,676,230. PROCESS OF TREATING OILS. HENRY C. KIRK, Baltimore, Md. Filed Dec. 8, 1927. Serial No. 238,649. 15 Claims. (Cl. 196—68.)

2. A process of heat treating hydrocarbon oils to produce lighter distillates therefrom which comprises injecting oppositely directed non-planar oil streams within a body of oil under conversion conditions of temperature and pressure, to produce circulation within the body of oil of character and velocity sufficient to prevent formation of hard carbon.



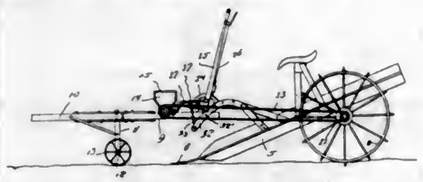
4. A process of heat treating hydrocarbon oils to produce lighter distillates therefrom which comprises maintaining a body of oil under conversion conditions of temperature and pressure, injecting upwardly directed streams of oil within the body of oil in a lower zone thereof, to produce an upwardly moving current of oil and injecting a downwardly directed oil stream into the

body of oil in an upper zone thereof to produce a downwardly moving oil current in said body of oil said downwardly directed oil stream, supplementing said upwardly



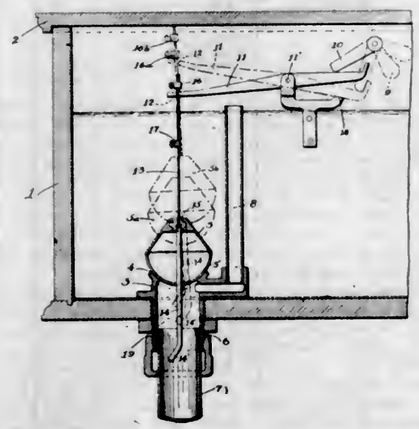
moving oil current, whereby circulatory currents are set up throughout the body of oil, and the deposition of hard carbon is substantially eliminated.

1,676,231. AIRPLANE CONSTRUCTION. CLARENCE HENRY POWELL, Detroit, Mich., assignor of one-half to Ralph J. Burton, Detroit, Mich. Filed July 30, 1926. Serial No. 125,839. 22 Claims. (Cl. 244—31.)



1. A housing for the fitting of an aircraft, comprising a pair of complementary clamshells provided with interlocking edges secured together by a pin extending transversely therethrough and having a head at each end seated within a recess formed in said shells.

1,676,232. FRACTIONAL CONDENSATION OF MIXED VAPORS. LOUIS WEISBERG, Grantwood, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 29, 1921. Serial No. 518,544. Renewed Mar. 23, 1927. 13 Claims. (Cl. 196—94.)



4. In the art of fractionally distilling a composite liquid involving interchange between rising vapors and descending refluxing liquid, the method which comprises dividing the total liquid reflux at a predetermined point in its descent into streams bearing a fixed ratio to each other, and utilizing one of said streams as reflux in its further descent in fractionating relation to rising vapors.

1,676,233. COMBINED PLANTER AND POTATO DIGGER. JOHN DOROSKI, Calverton, N. Y. Filed Feb. 18, 1927. Serial No. 169,303. 1 Claim. (Cl. 111—1.)

In a combined potato digger and grain seed planter, a wheel supported axle, a potato digging unit mounted upon the axle and adapted for vertical swinging movement, a wheel supported frame arranged forwardly of and above the digging unit, a planting mechanism arranged upon the frame and including driven means for causing the discharge of the grain seed in advance of the uplifting of the soil by said digging unit, a driving connection between said driven means and the wheel axle, a lever pivoted at its lower end portion on said wheel supported frame, means for operatively connecting the pivoted end of the lever with the digging unit at the forward end thereof for raising and lowering the digging unit, and additional means for operatively connecting the lever with the aforesaid driven means to effect a simultaneous operation of said driven means with the actuation of the raising and lowering of the digging unit, said first mentioned means comprising a pair of converging goose necks secured at their lower diverging ends to the digging unit, a U-shaped hanger connected to the converging ends of the goose necks, and a laterally extending arm formed on the lower end of the lever and to which the crown portion of said U-shaped hanger is attached.

1,676,234. PENDULUM OR SWINGING FLUSH VALVE FOR WATER-CLOSETS. EDWARD H. GOVE, Biddeford, Me.; Everard J. Gove executor of said Edward H. Gove, deceased. Filed Sept. 13, 1926. Serial No. 135,135. 3 Claims. (Cl. 4—57.)

3. In a device of the character described comprising in combination with a valve, a one-piece valve-lifting spindle and a water-way spindle having a relatively large permissible movement, laterally, when said valve is off its seat, of a valve-lifting lever having a vertically disposed hole near its free end through which said valve-lifting spindle may reciprocate, and means on said valve-lifting spindle, superjacent said valve-lifting lever, whereby said valve may be raised.

Patents Nos. 1,676,235 to No. 1,677,122.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 372—No. 2. TUESDAY, JULY 10, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimers.

1,215,569.—*William Mitchell*, Milwaukee, Wis. GUARD FOR STALLS. Patent dated February 13, 1917. Disclaimer filed June 16, 1928, by the assignee, *Mitchell Mfg. Co.*

Therefore disclaims any interpretation being given to such of the claims of said patent as are referred to in the decision of said circuit court of appeals which would be in conflict with said decision, and that such claims be limited as provided for in the decision, but without waiving any right of petitioner to the application of the doctrine of mechanical equivalency in the interpretation of such claims.

1,581,188.—*Colin G. Fink*, New York, N. Y. PROCESS OF ELECTRODEPOSITING CHROMIUM AND OF PREPARING BATHS THEREFOR. Patent dated April 20, 1926. Disclaimer filed June 20, 1928, by *United Chromium, Incorporated*, assignee by mesne assignments.

Hereby disclaims:

(a) From claims 1, 2, 4, 11, and 12 any method of electrodepositing chromium in which regulating a radical component of the bath (other than or in addition to the chromic acid radical) is not practiced in maintaining the efficiency thereof;

(b) From claims 5, 6, 10, 13, and 15 any method of electrodepositing chromium in which regulating within the limits specified a radical component of the bath (other than or in addition to the chromic acid radical) is not practiced in maintaining the efficiency thereof.

1,639,414.—*John M. Miller*, Philadelphia, Pa. RADIO RECEIVING SYSTEM. Patent dated August 16, 1927. Disclaimer filed June 18, 1928, by the assignee, *Atwater Kent Manufacturing Company*, and *John M. Miller*, patentee.

Hereby jointly and severally disclaim any radio receiving system and method of tuning cascaded circuits throughout a frequency range covered by claims 1, 2, 3, 5, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, and 17 excepting radio receiving systems characterised by the fact that the anode circuit of the three-electrode vacuum tube or amplifier interposed between or coupling the first of the tuned circuits and the absorption structure is substantially devoid of fluctuating or alternating current except current of radio frequency, and excepting methods of tuning cascaded circuits throughout a frequency range characterized by the fact that in and throughout the transfer from the absorption structure to the first of the tuned circuits the radio frequency current is dissociated from current of audio or other frequency.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,489,675, W. R. Schlage, Door lock, decided December 8, 1927, claims 1, 2, 4, 5, 9, and 18.

Pat. 1,605,457, C. J. Muend, Valve control, decided May 8, 1928, claims 1 and 2.

Pat. 1,644,443, P. B. Parks, Thermally-operated circuit breaker, decided June 2, 1928, claims 1 and 8.

Adjudicated Patents.

(D. C. N. Y.) Coolidge patent, No. 1,089,907, for electrical make-and-break contacts of tungsten, *Held* valid and infringed. *Elkon Works* v. *Welworth Automotive Corporation*, 25 F. (2d) 968.

(C. C. A. III.) Fox patent No. 1,410,668, for desk accessory, *Held* invalid. *Fox* v. *The Fair*, 25 F. (2d) 966.

(D. C. Mass.) Redmond patent, No. 1,488,407, for improvement in infants' bands, claim 1, if valid, *Held* not infringed. *William Carter Co.* v. *Barnshaw Knitting Co.*, 25 F. (2d) 981.

(D. C. Mass.) Redmond patent, No. 1,495,134, for improvement in infants' bands, claims 1, 2 and 3, *Held* invalid for want of invention and anticipated. *Id.*

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE RICHARDS.

No. 1,995. Decided February 6, 1928.

PATENTABILITY—SIDE BEARINGS FOR CARS.

Claims for a side bearing which define a construction in which an upper housing is given a greater depth than the lower housing in order that the rocker may be kept in place therebetween when the car body swings, *Held* to state only a difference of degree and not an invention.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Joshua R. H. Potts, Mr. Brayton G. Richards, and *Mr. T. B. Humphreys* for Richards.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB, Associate Justice, and SMITH, Judge of the United States Court of Customs Appeals.

MARTIN, *C. J.:*

This is an appeal from a decision of the Commissioner of Patents rejecting claims 1, 2, 3, 4, 8, and 9 of appellant's application for a patent.

The invention in question relates to the side bearings for railroad cars, which are interposed between the bolster on the truck and the body bolster to which the car body is affixed. At each end of the truck bolster is a lower housing substantially in box form having a rocker member mounted therein; cooperating with each rocker is an upper bearing housing secured to the underside of the corresponding body bolster and engaging and embracing the upper portion of the rocker. The entire load is carried by the side bearings or rockers. The special utility claimed for the construction is that the upper housing is made of sufficient depth, so that the rocker will not fall out of place if the car swings or lifts when turning a curve.

There are 9 claims, of which claims 1 and 9 are copied as illustrative:

1. The combination with a truck and a body mounted thereon, to have both pivotal and tilting movement relatively thereto, of upper and lower bearing housings mounted on said body and truck respectively; and a rocker in said housings, the upper housing being of sufficient depth to permit swinging and lifting thereof without disengagement from said rocker, substantially as described.

9. The combination with a truck and body mounted thereon to have both pivotal and tilting movement relatively thereto, of upper and lower opposed bearing housings mounted on said body and truck respectively; and a rocker snugly fitting said housings, the ends of the said rocker being indented and the upper housing being of sufficient depth to permit swinging and lifting thereof without disengagement from said rocker, whereby displacement of said rocker is prevented under all conditions of use, substantially as described.

The references cited by the Examiner are Jessen, June 6, 1923; Lindenthal, September 12, 1905; Lindenthal, February 12, 1907; Amberg, June 29, 1915; Laughlin, November 8, 1921.

The Examiner rejected the appealed claims as not being patentable over any of the patents to Laughlin, Amberg, and Jessen, holding that there was no invention in altering the depth of the housing flanges, that such alteration would be only a matter of degree, and that the Lindenthal patents showed flanges of different depths. Upon appeal the Examiners in Chief affirmed the decision of the Examiner, with a statement that the claims lacked invention over the prior art as cited and applied by the Examiner. An appeal was then taken to the Commissioner of Patents, who affirmed the preceding decisions upon the grounds therein set out. The present appeal was then taken.

An examination of the references discloses that the general features of the present construction are old, and that the only novelty presented by the application consists in giving the upper housing greater depth than the corresponding lower housing, in order that the rocker may be kept in place between the two housings when the car body swings and tilts. This change of construction is only a difference of degree and does not constitute invention. Moreover differences in the depth of the housings are disclosed in Lindenthal's patents. These alterations do not show such invention as will sustain a patent. *Roberts* v. *Ryer*, 10 O. G. 204. 91 U. S. 150; *Belding Mfg. Co.* v. *Challenge Corn Planter Co.*, 67 O. G. 141, 152 U. S. 100; *Market Street Railway Co.* v. *Rowley*, 70 O. G. 632, 155 U. S. 621, 629; *The Railroad Supply Co.* v. *Elyria Iron and Steel Co.*, 239 O. G. 656, 244 U. S. 285.

We are satisfied that the concurrent decisions of the Patent Office tribunals are correct; and the decision appealed from is affirmed.

Court of Appeals of the District of Columbia.

CONOVER AND GIBBS *v.* WOHL.

No. 2,047 Decided May 7, 1928.

INTERFERENCE—PRIORITY.

Priority *Held* properly awarded to W., since the invention is disclosed in his German application, which was filed prior to the earliest date of invention alleged by C. and G.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. A. J. Decker for Conover and Gibbs.

Mr. Wm. E. Warland for Wohl.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

This is an appeal from the decision of the Commissioner of Patents in an interference proceeding awarding priority of invention to the junior party, Wohl.

The invention is described in the opinion of the Commissioner as follows:

The invention relates to catalytic oxidation of organic compounds and specifically to the production of anthraquinone by the oxidation of anthracene in the presence of an oxid of vanadium as a catalyst.

The issue is stated in two counts reading as follows:

1. The method of oxidizing anthracene, which comprises subjecting anthracene in the vapor phase to oxidation by oxygen in the presence of an oxid of vanadium as a catalyzer, at a temperature of about 300° C. to 500° C.

2. The method of oxidizing anthracene, which comprises passing a mixture of anthracene in the vapor phase, and an oxygen containing gas into contact with an oxid of vanadium as a catalyzer heated to a temperature of about 300° C. to 500° C. whereby anthraquinone is produced.

Appellants Conover and Gibbs are patentees. The Wohl application was pending, however, at the time the patent to appellants was issued; hence the rule as to burden of proof is not affected by the issue of the patent.

The junior party, Wohl, relies for constructive reduction to practice on the filing of an application in Germany on June 22, 1916. The earliest date alleged by the senior parties, Conover and Gibbs, was October 15, 1916. It follows, therefore, that if appellee is entitled to the date of the German patent, he is entitled to an award of priority. His application was filed in this country August 11, 1921. Being a citizen of the Free City of Danzig, he is entitled to the privileges afforded by the Nolan Act of March 3, 1921, 41 Stat. 1313.

Conover and Gibbs urge that the German application does not disclose a process within the terms required by the counts. This contention has been overruled by all three tribunals of the Patent Office; and as the invention is a highly technical one we are disposed to conform to their opinion. A careful examination of their analysis justifies this conclusion; and since the party Wohl is entitled to his German filing date for constructive reduction to practice, he is entitled to the award of priority

The decision of the Commissioner is affirmed.

Extension of Patents for World War Veterans.

[PUBLIC—No. 622—70TH CONGRESS.]

An Act Providing for the extension of the time limitations under which patents were issued in the case of persons who served in the military or naval forces of the United States during the World War.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any person who served honorably in the military or naval forces of the United States at any time between April 6, 1917, and November 11, 1918, both dates inclusive, and was subsequently honorably discharged, may within six months after the enactment of this Act, upon payment of a fee of $20, make application to the Commissioner of Patents, comprising a verified statement, accompanied by supporting evidence of the following facts:

(A) That he is the inventor or discoverer of an invention or discovery for which a specified patent was granted prior to the 11th day of November, 1918, the original term of which remains unexpired at the time of the filing of the application.

(B) That between April 6, 1917, and November 11, 1918, and also at the time of the passage of this Act, he held, by ownership or contract, a right in said invention or under said patent or to income by way of royalty or otherwise therefrom, whereby an extension of the term of said patent would benefit him.

(C) That between April 6, 1917, and July 2, 1921, he was not receiving from said patent an income, or that his income therefrom was reduced by his said service.

(D) That at the time of his induction into the service he was making diligent effort to exploit the invention covered by his patent.

(E) The names of all persons, firms, or corporations, if any, holding at the time of the passage of this Act, by grant, transfer, license, or contract from him, any right or interest in the invention or discovery or under the patent, and their consent to the extension for which application is made, which shall be supported by an instrument, or instruments, executed by all such persons, firms, and corporations, evidencing their consent to such extension.

(F) The period of extension of the patent from the expiration of the original term thereof, for which he applies, which shall in no case exceed a further term of three times the length of his said service in the military or naval forces of the United States between the dates of April 6, 1917, and July 2, 1921, but exclusive of any reenlistment subsequent to November 11, 1918.

(G) That the licensee of a patent affected by this Act shall automatically be granted an extension of said license for the period of the extension on the same terms and conditions as contained in said existing license, thereby creating an equitable adjustment of the benefits of this Act.

(H) That such extension shall in no way impair the right of anyone who before the passage of this Act was bona fide in possession of any rights in patents or applications for patents conflicting with the rights in any patents extended under this Act, nor shall any extension granted under this Act impair the right of anyone who was lawfully manufacturing before the passage of this Act the invention covered by the extended patent.

SEC. 2. In the case of a veteran, as described in paragraph 1 of this Act, who dies, or has died, or who becomes insane or unable to act, which veteran owned an interest as described in this Act in said patent at the time of his death or at the time he was declared mentally incompetent or became unable to act before said extension is granted, such application may be filed or proceeded with by his legal representatives substantially as provided in section 4896 of the Revised Statutes of the United States (United States Code, title 35, section 46), as amended, with respect to proceedings in such cases for obtaining a patent.

SEC. 3. On the filing of such application the Commissioner of Patents shall cause an examination thereof to be made, and if, on such examination, it shall appear that such application conforms, or by amendment or supplement is made to conform, to the requirements of section 1 of this Act, the Commissioner shall cause notice of such application to be published at least once in the OFFICIAL GAZETTE. Any person who believes that he would be injured by such extension may within forty-five days from such publication oppose the same on the ground that any of the statements of the application for extension required by section 1 of this Act is not true in fact, which said notice of opposition shall be verified before an officer authorized by the laws of any State or Territory or the District of Columbia to administer oaths. In all cases where notice of opposition is filed the Commissioner of Patents shall notify the applicant for extension thereof and set a day of hearing. If after such hearing the Commissioner of Patents is of the opinion that such extension should not be granted, he may deny the application therefor, stating in writing his reasons for such denial. Where an extension is refused the applicant therefor shall have the same remedy by appeal from the decision of the Commissioner as is now provided by law where an application for patent is refused. If no opposition to the grant of the extension is filed, or if, after opposition is filed, it shall be decided that the applicant is entitled to the extension asked for, the Commissioner of Patents shall issue a certificate that the term of said patent is extended for the additional period for which application has been made as aforesaid, and shall cause notice of such extension to be published in the OFFICIAL GAZETTE and marked upon copies of the patent for sale by the Patent Office, in such manner as the Commissioner may determine.

SEC. 4. Thereupon said patent shall have the same force and effect in law as though it had been originally granted for seventeen years plus the term of such extension: *Provided, however*, That in any action, at law or in equity, for infringement after the expiration of seventeen years from the grant of the patent and during the period of such extension, the defendant may plead the general issue, and having given notice in writing to the plaintiff or his attorney thirty days before, may prove on trial that any of the statements of the application for extension required by section 1 of this Act is not true in fact; and if any one or more of such statements shall be found untrue in fact, judgment shall be rendered for the defendant, with costs: *Provided further*, That no person whose patent shall be extended under the provisions of this Act shall be permitted to make any claim for damages against the United States for the period of the extension, and the rights of the United States shall remain in all respects as if these patents had not been extended.

Approved, May 31, 1928.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, June 23, 1928.*

The Apex Coal Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Masteller Coal Company, of Keyser, W. Va., to effect the cancellation of the trade-mark registration of The Apex Coal Company, of Fort Smith, Ark., No. 160,128, dated October 17, 1922, and the notice of such proceeding sent by registered mail to the said The Apex Coal Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Apex Coal Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, June 23, 1928.*

Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, take notice:

An application was filed in this Office by Lysol, Incorporated, of Bloomfield, N. J., for cancellation of trade-mark registration No. 35,104, issued September 18, 1900, to Caroline W. Patrick, of 22 East Main Street, Norwalk, Ohio. The assignment records of this Office show a transfer of title of this registration to Alma Wooster, H. W. Patrick, and A. G. Palmer. Since the Office has been unable to obtain the post-office address of Alma Wooster, H. W. Patrick, and A. G. Palmer, the proceeding can not be instituted. Therefore notice is hereby given that unless said Alma Wooster, H. W. Patrick, and A. G. Palmer, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 10, 1928.

[VOL. 372. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

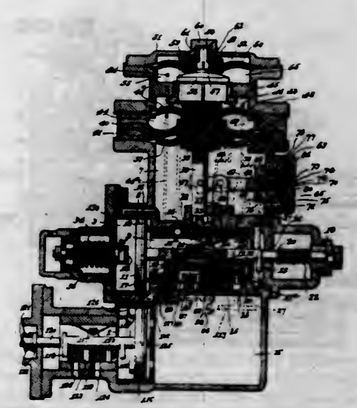
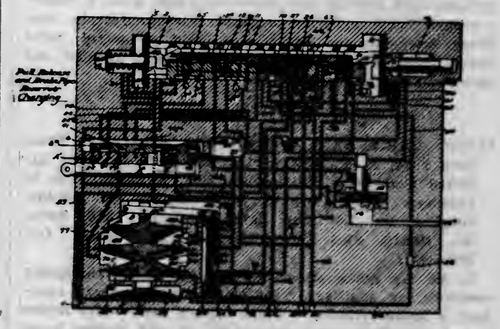
REISSUES

JULY 10, 1928.



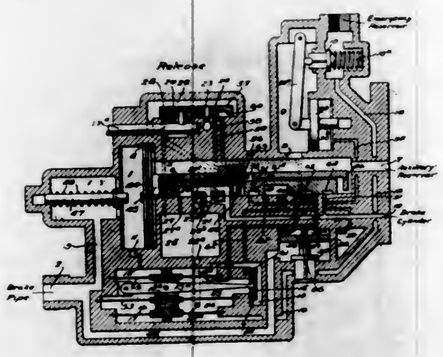
17,025. SCOOP ATTACHMENT FOR TRACTION ENGINES. ALEXANDER LAURIE, Chicago, Ill., assignor to Herbert F. Lessmann, Des Moines, Iowa. Filed Dec. 10, 1925. Serial No. 74,641. Original No. 1,477,136, dated Dec. 11, 1923, Serial No. 503,645, filed Sept. 27, 1921. 8 Claims. (Cl. 214—140.)



1. The combination of a tractor having supporting axles and a drive member, with a scoop, arms pivoted to the rear axles and also pivoted centrally beneath the said scoop, a frame pivoted to the forward end of said tractor at a point considerably above the said scoop, said frame being provided with a pivot member overhanging the central portion of said scoop, links pivoted to said overhanging pivot member and with said scoop, means driven by said drive member for swinging said frame to elevate and lower said overhanging pivot member, the said links being designed to rest substantially in a perpendicular position when either elevated or lowered, means for dumping said scoop and means for returning the scoop to its closed position.

17,026. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed May 7, 1927. Serial No. 189,732. Original application filed Sept. 18, 1918, Serial No. 254,553. Renewed Mar. 3, 1922, Serial No. 540,919. Original No. 1,434,746, dated Nov. 7, 1922. 51 Claims. (Cl. 303—27.)

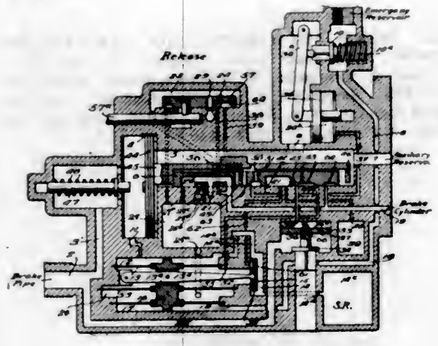
1. An air brake apparatus comprising an emergency reservoir, a brake pipe reservoir, a brake cylinder, a brake pipe and a triple valve, means in said triple valve subject to brake pipe pressure and brake pipe reservoir pressure and operating upon a reduction in brake pipe pressure to open communication between the brake pipe reservoir and the brake cylinder, said communication being closed upon an equalization of pressures in the brake pipe and the brake pipe reservoir and means in said triple valve operated by emergency reservoir pressure upon a reduction of brake pipe pressure to place the brake pipe in communication with the brake cylinder, said means closing said communication when the brake cylinder pressure and the reduced brake pipe pressure dominate the emergency reservoir pressure.



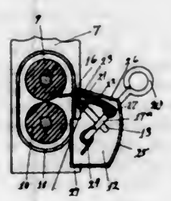
17,027. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, and WILLIAM ASTLE, Brooklyn, N. Y., and EDWARD P. WILSON, East Orange, N. J., assignors to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 3, 1927. Serial No. 210,440. Original application filed Oct. 9, 1924, Serial No. 742,560. Renewed July 13, 1926. Original No. 1,601,578, dated Sept. 28, 1926. 66 Claims. (Cl. 303—27.)

3. A triple valve in accordance with claim 1, combined with means whereby the main slide valve in emergency position connects the brake pipe reservoir and the

emergency reservoir to the brake cylinder and cuts off brake pipe reservoir from the brake pipe, and means whereby the main and supplemental slide valves in release position connect the emergency reservoir to the brake pipe for a quick release of the brakes.



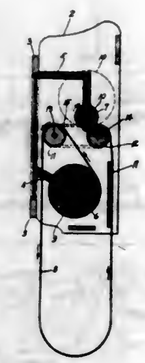
17,028. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y.; assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 3, 1927. Serial No. 210,441. Original No. 1,601,582, dated Sept. 28, 1926, Serial No. 9,789, filed Feb. 17, 1925. 56 Claims. (Cl. 303—74.)



5. An air brake apparatus comprising an emergency reservoir, an auxiliary reservoir, a brake cylinder, a brake pipe, a main valve device and a secondary valve device both of said devices being operated by a reduction of brake pipe pressure, the main valve device closing communication between the brake pipe and auxiliary reservoir and placing the auxiliary reservoir in communication with a brake cylinder and closing said brake cylinder communication upon an equalization of brake pipe and auxiliary reservoir pressures, whereby a certain volume of air will be discharged from the auxiliary reservoir into the brake cylinder for a given brake pipe reduction, said main valve device also operable upon a sudden reduction of brake pipe pressure to place the emergency reservoir and auxiliary reservoir in communication with the brake cylinder for an emergency application of the brakes, the secondary valve device placing the brake pipe in communication with the brake cylinder and closing said communication when a predetermined brake cylinder pressure is secured from auxiliary reservoir and brake pipe, said secondary valve device being controlled by brake pipe, brake cylinder and emergency reservoir pressures.

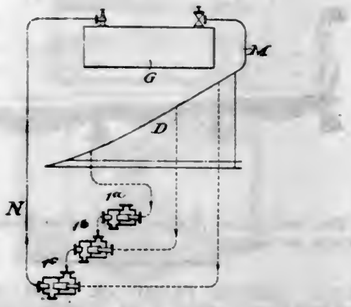
17,029. AIR-BRAKE APPARATUS. SPENCER G. NEAL, New York, N. Y., assignor to Automatic Straight Air Brake Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 3, 1927. Serial No. 210,442. Original No. 1,601,583, dated Sept. 28, 1926, Serial No. 10,816, filed Feb. 21, 1925. 28 Claims. (Cl. 303—46.)

5. An air brake apparatus comprising an emergency reservoir, an auxiliary reservoir, a supplementary reservoir, a brake cylinder, a brake pipe, a main valve device and a secondary valve devic both of said devices being operated by a reduction of brake pipe pressure, the main valve device closing communication between the brake pipe and auxiliary reservoir and placing the auxiliary reservoir in communication with the brake cylinder and closing said brake cylinder communication upon an equalization of brake pipe and auxiliary reservoir pressures, whereby a certain volume of air will be discharged from the auxiliary reservoir into the brake cylinder for a given brake pipe reduction, said main valve device also operable upon a sudden reduction of brake pipe pressure to place the emergency reservoir and auxiliary reservoir in communication with the brake cylinder for an emergency application of the brakes, the secondary valve device placing the supplementary reservoir in communication with the brake cylinder and closing said communication when a predetermined brake cylinder pressure is secured from auxiliary reservoir and supplementary reservoir, said secondary valve device being controlled by brake pipe, brake cylinder and emergency reservoir pressures.



17,030. SAFETY DEVICE FOR CLOTHES WRINGERS. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed Mar. 20, 1926. Serial No. 96,365. Original No. 1,518,919, dated Dec. 9, 1924, Serial No. 664,337, filed Sept. 24, 1923. 15 Claims. (Cl. 68—32.)

1. A feeding device for wringers including a vertically arranged guard plate, and an arcuately movable feed plate associated therewith and adapted to be rocked toward and away from the wringer to which the device is attached, said device being adapted to normally lie adjacent the guard plate when it is in inoperative position.



17,031. TOWEL CABINET. GEORGE ADOLPH STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Jan. 30, 1928. Serial No. 250,647. Original No. 1,596,125, dated Aug. 17, 1926, Serial No. 526,574, filed Jan. 3, 1922. 10 Claims. (Cl. 312—38.)

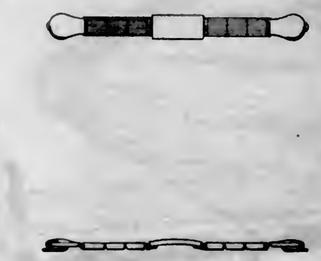
10. A towel cabinet having mechanism therein for keeping separated the front clean portion of a towel web from the rear soiled portion, comprising a support for a towel supply and a soiled towel take up roll, two feed rolls geared together to move in unison, one feed roll approximately on a level with and back of the other in the cabinet, the rear feed roll being in contact with and supporting the take up roll the front feed roll being in the front portion of the cabinet and in contact with

the clean portion of the towel so that the web of toweling may hang down therefrom and the clean portion thereof be removed from the soiled portion of the towel web a maximum distance in said cabinet.

17,032. METHOD AND MEANS FOR DELIVERING PREHEATED FEED WATER. JOHANN STUMPF, Berlin, Germany. Filed Aug. 25, 1927. Serial No. 215,489. Original No. 1,616,239, dated Feb. 1, 1927, Serial No. 33,092, filed May 27, 1925, and in Germany May 31, 1924. 20 Claims. (Cl. 103—265.)

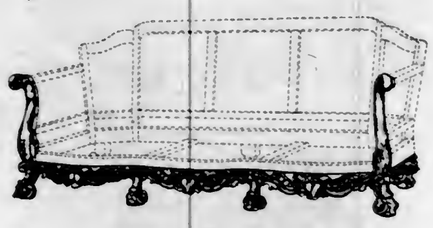
1. The method of delivering preheated feedwater, which consists in utilizing the injection action of exhaust steam operating for different stages, the said exhaust steam being of different pressures for the different stages.

DESIGNS



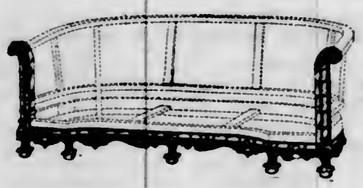
JULY 10, 1928.

75,709. DECORATIVE PANEL FOR METAL WORK. OSCAR B. BACH, New York, N. Y. Filed Nov. 10, 1927. Serial No. 24,073. Term of patent 3½ years.



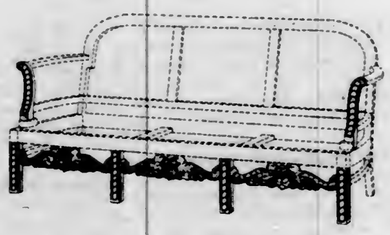
The ornamental design for a decorative panel for metal work, as shown.

75,710. SHOE STRAP. FREDERICK A. BALLOU, Nayatt, and ROGERS T. STAFFORD, East Providence, R. I., assignors to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed May 7, 1927. Serial No. 21,884. Term of patent 14 years.



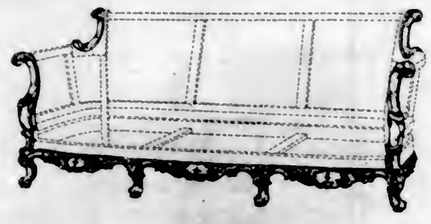
The ornamental design for a shoe strap, substantially as shown and described.

75,711. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1928. Serial No. 26,769. Term of patent 3½ years.



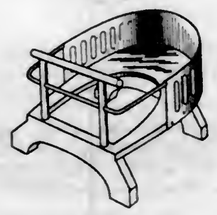
The ornamental design for a settee frame or similar article as shown.

75,712. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1928. Serial No. 26,669. Term of patent 3½ years.



The ornamental design for a settee frame or similar article, as shown.

75,713. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1928. Serial No. 26,770. Term of patent 3½ years.



The ornamental design for a settee frame, or similar article as shown.

75,714. SETTEE FRAME OR SIMILAR ARTICLE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1928. Serial No. 26,671. Term of patent 3½ years.

The ornamental design for a settee frame, or similar article as shown.

75,715. BABY WALKER. EDWARD BOEHM, Duluth, Minn. Filed Jan. 26, 1928. Serial No. 25,042. Term of patent 7 years.

The ornamental design for a baby walker, as shown.

75,716. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill. Filed Mar. 5, 1928. Serial No. 25,667. Term of patent 7 years.

The ornamental design for a curtain and portière rod, as shown.

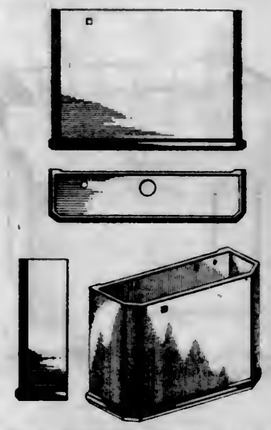
75,717. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill. Filed Mar. 5, 1928. Serial No. 25,669. Term of patent 7 years.

The ornamental design for a curtain and portière rod, as shown.

75,718. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYE, Chicago, Ill. Filed Mar. 5, 1928. Serial No. 25,670. Term of patent 7 years.

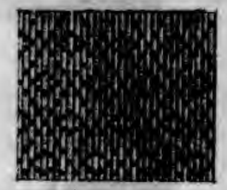
The ornamental design for a curtain and portière rod, as shown.

75,719. LAPEL PIN OR THE LIKE. JOHN RALPH COLGAN, Kansas City, Mo. Filed Feb. 9, 1928. Serial No. 25,296. Term of patent 14 years.



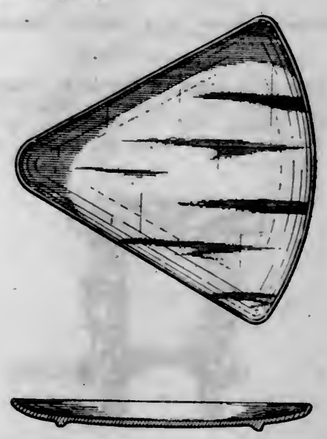
The ornamental design for a lapel pin or the like, as shown.

75,720. JUICE EXTRACTOR. THOMAS F. COONEY, West Haven, Conn. Filed May 1, 1928. Serial No. 26,523. Term of patent 14 years.



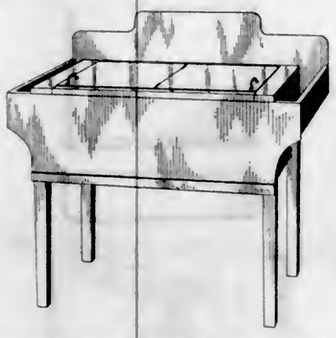
The ornamental design for a juice extractor, substantially as shown.

75,721. CLOSET TANK. JOHN B. COXON, Kokomo, Ind., assignor to Kokomo Sanitary Pottery Company, Kokomo, Ind. Filed Sept. 21, 1926. Serial No. 19,137. Term of patent 14 years.



The ornamental design for a closet tank, as shown and described.

75,722. PILE FABRIC. HUGO PAUL DICK, Lowell, Mass., assignor to Merrimack Manufacturing Company, Lowell, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1926. Serial No. 19,966. Term of patent 3½ years.



The ornamental design for a pile fabric as shown.

75,723. PIE PLATE. PHILIP C. ENGEL, Minneapolis, Minn. Filed Nov. 13, 1926. Serial No. 19,717. Term of patent 7 years.

The ornamental design for a pie plate, as shown.

75,724. DISPENSING CABINET FOR BOTTLED BEVERAGES. LEONARD G. GRAY, Decatur, Ill. Filed Feb. 24, 1927. Serial No. 20,873. Term of patent 14 years.

The ornamental design for a dispensing cabinet for bottled beverages, as shown.

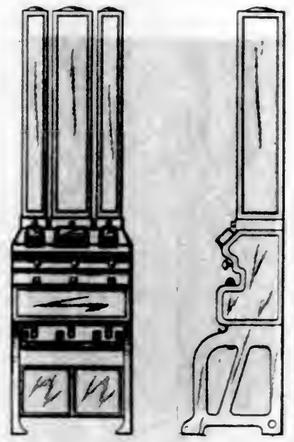
75,725. UMBRELLA STAND. EMIL HAUSER, New York, N. Y. Filed Feb. 27, 1928. Serial No. 25,600. Term of patent 3½ years.

The ornamental design for an umbrella stand as shown.

75,726. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 13, 1928. Serial No. 26,308. Term of patent 3½ years.

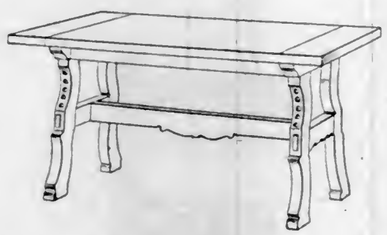
The ornamental design for a table or similar article as shown.

75,727. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1928. Serial No. 26,399. Term of patent 3½ years.



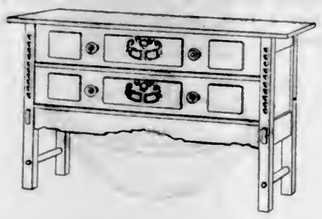
The ornamental design for a table or similar article as shown.

75,728. TABLE OR SIMILAR ARTICLE. JOSEPH JOHN HEYMAN, Chicago, Ill., assignor to Milano Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1928. Serial No. 26,400. Term of patent 3½ years.



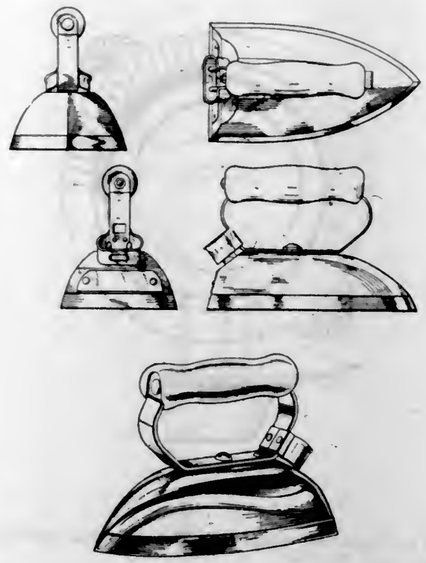
The ornamental design for a table or similar article as shown.

75,729. VENDING-MACHINE CASING. SHERWOOD HINDS, Galesburg, Mich. Filed Oct. 16, 1925. Serial No. 15,146. Term of patent 8½ years.



The ornamental design for a vending machine casing substantially as shown.

75,730. TABLE. GEOFFREY HOLT, Los Angeles, Calif. Filed Apr. 7, 1928. Serial No. 26,166. Term of patent 7 years.

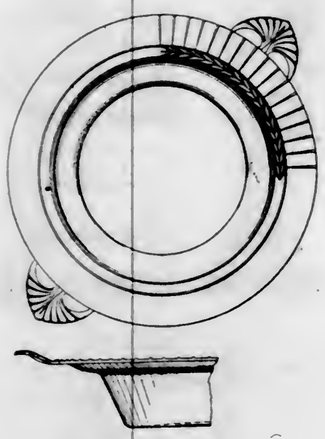


The ornamental design for a table as shown.

75,731. BUFFET. GEOFFREY HOLT, Los Angeles, Calif. Filed Apr. 7, 1928. Serial No. 26,167. Term of patent 7 years.

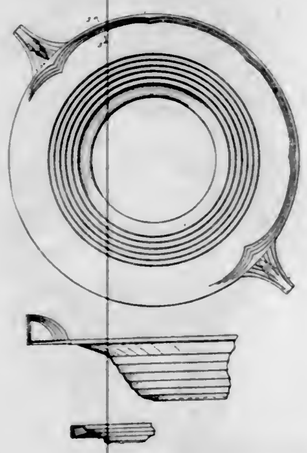
The ornamental design for a buffet as shown.

75,732. ELECTRIC SMOOTHING IRON. CHARLES T. JOHNSON-VEA, Dover, Ohio, assignor to The Dover Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed June 19, 1926. Serial No. 18,095. Term of patent 14 years.



The ornamental design for an electric smoothing iron as shown and described.

75,733. DISH OR SIMILAR ARTICLE. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Apr. 28, 1928. Serial No. 26,496. Term of patent 7 years.



The ornamental design for a dish or similar article, as shown and described

75,734. DISH OR SIMILAR ARTICLE. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Apr. 28, 1928. Serial No. 26,497. Term of patent 7 years.

The ornamental design for a dish or similar article, as shown and described.

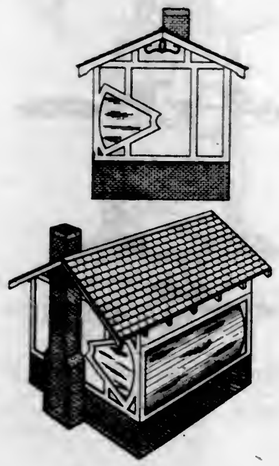
75,735. DISH OR SIMILAR ARTICLE. ALFRED G. KINTZ, Wallingford, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed Apr. 28, 1928. Serial No. 26,498. Term of patent 7 years.

The ornamental design for a dish or similar article, as shown and described.

75,736. TEXTILE FABRIC. ERNEST KIRCHHOFF, Great Kills, N. Y., assignor to Rousmaniere, Williams & Co., Boston, Mass., a Partnership consisting of Frank H. Gage, George G. Allen, George A. Lapham, and Richard A. Harrington. Filed Feb. 23, 1928. Serial No. 25,532. Term of patent 7 years.

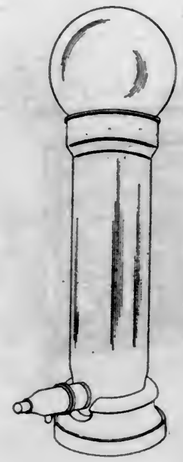
The ornamental design for a textile fabric, as shown.

75,737. STOCKING. WILLIAM LAUBER, Meadowbrook, Pa. Filed July 12, 1927. Serial No. 22,734. Term of patent 14 years.



The ornamental design for a stocking, as shown.

75,738. SOUP BOWL. KARL LICKHARD, New York N. Y. Filed Nov. 4, 1927. Serial No. 24,001. Term of patent 3½ years.

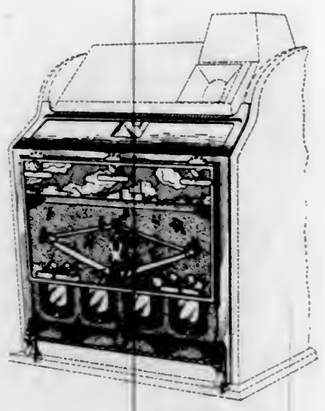


The ornamental design for a soup bowl, as shown.

75,739. CASING FOR ADVERTISING DEVICE. EDWIN O. LITTLE, Aledo, Ill. Filed Feb. 23, 1928. Serial No. 25,541. Term of patent 14 years.

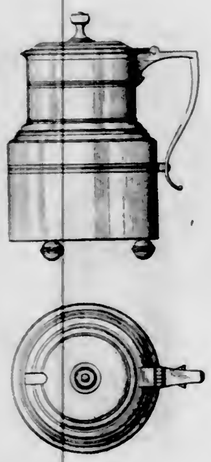
The ornamental design for a casing for advertising device as shown.

75,740. BEVERAGE COOLER. FRANK L. LOOK, Lamanda Park, Calif. Filed Feb. 8, 1928. Serial No. 25,280. Term of patent 3½ years.



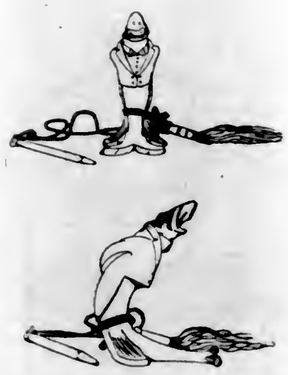
The ornamental design for a beverage cooler as shown.

75,741. BOTTLE. GEORGE N. MAS, Washington, D. C., assignor to American Ornamental Bottle Corporation, Lynchburg, Va., a Corporation of Virginia. Filed Dec. 29, 1926. Serial No. 20,220. Term of patent 3½ years.



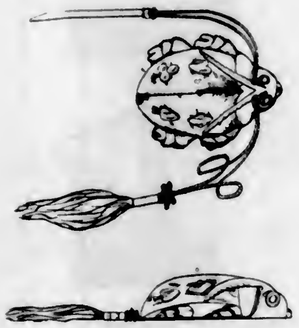
The ornamental design for a bottle, as shown.

75,742. FRONT PLATE FOR A VENDING-MACHINE CABINET. FRED L. MILLS, Oak Park, Ill., assignor to Milk Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 25, 1927. Serial No. 22,865. Term of patent 14 years.



The ornamental design for a front plate for a vending machine cabinet, as shown.

75,743. TANKARD. HENRY W. MOORE, Hingham, Mass., assignor to Dudley M. Baker, doing business as Cape Cod Shop, New York, N. Y. Filed Mar. 29, 1928. Serial No. 26,071. Term of patent 14 years.

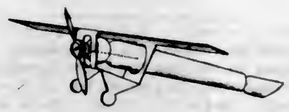


The ornamental design for a tankard as shown.

75,744. PENCIL HOLDER. FRANCIS L. MORGAN, Burlingame, Calif. Filed July 20, 1927. Serial No. 22,817. Term of patent 3½ years.

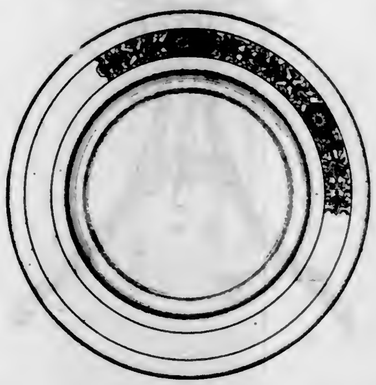
The ornamental design for a pencil holder, as shown.

75,745. PENCIL HOLDER. FRANCIS L. MORGAN, Burlingame, Calif. Filed July 20, 1927. Serial No. 22,819. Term of patent 3½ years.



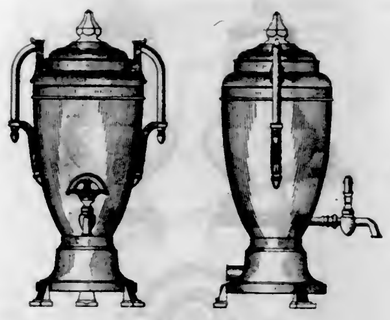
The ornamental design for a pencil holder, as shown.

75,746. READING LAMP. HENRY M. PETERS, Chicago, Ill., assignor to Faries Manufacturing Company, Decatur, Ill. Filed Dec. 10, 1927. Serial No. 24,442. Term of patent 3½ years.



The ornamental design for a reading lamp, as shown.

75,747. PERFUME BOTTLE OR SIMILAR CONTAINER. JOHN POPPER, Montreal, Quebec, Canada. Filed Jan. 21, 1928. Serial No. 24,977. Term of patent 7 years.

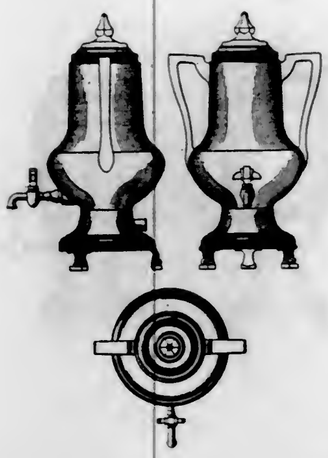


The ornamental design for a perfume bottle or similar container, as shown.

75,748. PLATE OR SIMILAR ARTICLE. HEINRICH RAMPFEL, Lakewood, N. J., assignor to Nathan Straus & Sons, Inc., New York, N. Y., a Corporation of New York. Filed May 10, 1928. Serial No. 26,623. Term of patent 14 years.

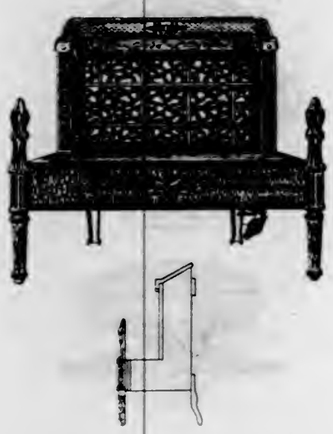
The ornamental design for a plate or similar article substantially as shown and described.

75,749. COFFEE PERCOLATOR. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 26,038. Term of patent 7 years.



The ornamental design for a coffee percolator, as shown.

75,750. WAFFLE IRON. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 26,039. Term of patent 7 years.

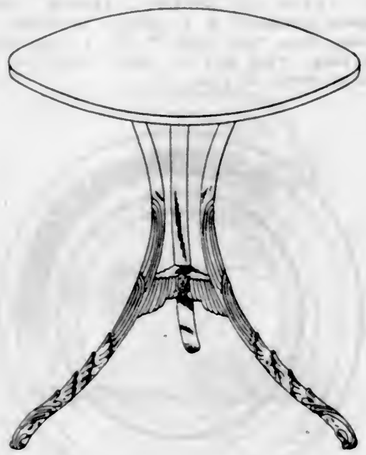


The ornamental design for a waffle iron, as shown.

75,751. COFFEE PERCOLATOR. HOWARD H. SCHOTT, Rochester, N. Y., assignor to Robeson-Rochester Corporation, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1928. Serial No. 26,041. Term of patent 7 years.

The ornamental design for a coffee percolator as shown.

75,752. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Company, Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 8, 1928. Serial No. 25,764. Term of patent 7 years.

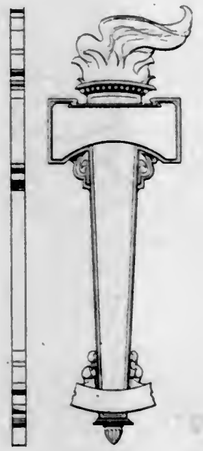


The ornamental design for a gas heater, as shown.

75,753. BOOK END. HARRY L. STEBB, Rock Island, Ill. Filed June 30, 1927. Serial No. 22,622. Term of patent 3½ years.

The ornamental design for a book end as shown.

75,754. TABLE. LEWIS E. WACKERLE, Waukegan, Ill., assignor to Chicago Hardware Foundry Company, North Chicago, Ill., a Corporation of Illinois. Filed May 3, 1927. Serial No. 21,848. Term of patent 14 years.



The ornamental design for a table, as shown.

75,755. ELECTRIC TABLE LAMP. JOHN P. WEISS, South Bend, Ind. Filed Mar. 15, 1928. Serial No. 25,871. Term of patent 7 years.

The ornamental design for an electric table lamp as shown.

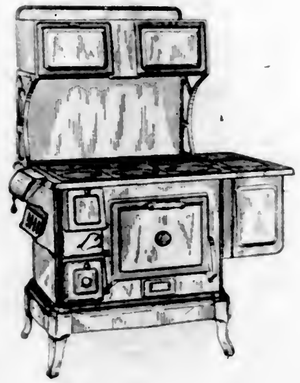
75,756. ADVERTISING SIGN. JOSEPH A. WESLEY, Chicago, Ill., assignor to Lu-Mi-Nus Signs, Inc., Chicago, Ill., a Corporation of Illinois. Filed Dec. 7, 1927. Serial No. 24,403. Term of patent 7 years.

The ornamental design for an advertising sign, as shown.

75,757. BOUDOIR SLIPPER. HERMAN WILHELM, New York, N. Y. Filed Mar. 15, 1928. Serial No. 25,868. Term of patent 7 years.

The ornamental design for a boudoir slipper, substantially as shown.

75,758. CARPET. NOBLE W. WILLIAMS, Philadelphia, Pa., assignor to Hardwick & Magee Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1928. Serial No. 26,413. Term of patent 3½ years.

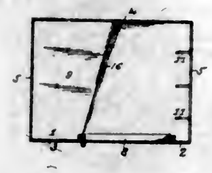


The ornamental design for a carpet, substantially as shown.

75,759. PLATE OR SIMILAR ARTICLE. WALTER STANLEY WOODMAN, Macclesfield, England, assignor to Meakin & Ridgway, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 5, 1928. Serial No. 26,139. Term of patent 14 years.

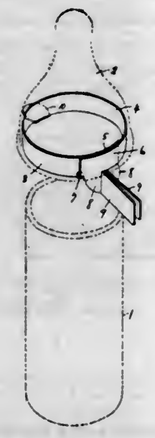
The ornamental design for a plate or similar article as shown and described.

75,760. RANGE. HENRY F. ZARTH, Shakopee, Minn., assignor to American Range Corporation, Shakopee, Minn. Filed Feb. 11, 1927. Serial No. 20,715. Term of patent 7 years.



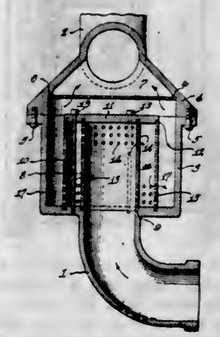
The ornamental design for a range, as shown and described.

PATENTS



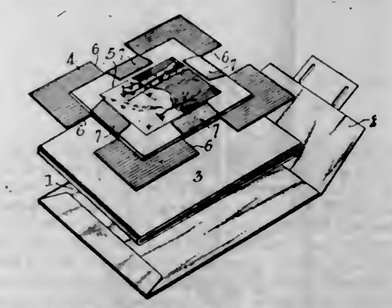
GRANTED JULY 10, 1928.

1,676,235. CABINET AND LOCKER. FRANK ALBACH, St. Louis, Mo., assignor to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 20, 1927. Serial No. 199,964. 3 Claims. Cl. 312—106.)



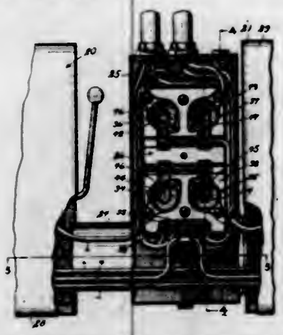
1. In a locker of the type described, the combination of a rectangular enclosing casing comprising a front wall, side walls, a rear wall and top and bottom walls, the front wall having a doorway arranged to one side of the wall to provide a narrow vertical jamb at one side of the doorway and a wide vertical jamb at the other side, and a plurality of shelves having a trapezoidal form, with the forward and narrow end of each shelf having a width approximating the width of the aforesaid wide jamb and attached to the inner face of same, one side edge and a rear edge of each shelf having attachment to a side and rear wall of the locker casing, and the other edge of each shelf having an oblique position in said casing, the combination providing a clear vertical storage space between the plurality of shelves and a remote side wall of the casing of a maximum capacity in a minimum width of the casing.

1,676,236. NIPPLE APPLICATOR. FREDRICK A. ARMSTRONG, Kirksville, Mo. Filed Mar. 14, 1927. Serial No. 175,230. 2 Claims. (Cl. 215—11.)



1. A nipple applicator and expander of the class described, comprising a flat expansible metal band of split form having its ends disposed in slidable overlapping relation, handles carried by said overlapping ends, connecting means between the overlapping ends, and means on one side of the band to facilitate extraction from the nipple after it is in position on the bottle.

1,676,237. MIXING DEVICE. JOHN H. BAKER, Royal Oak, Mich. Filed Nov. 18, 1926. Serial No. 149,056. 1 Claim. (Cl. 48—180.)

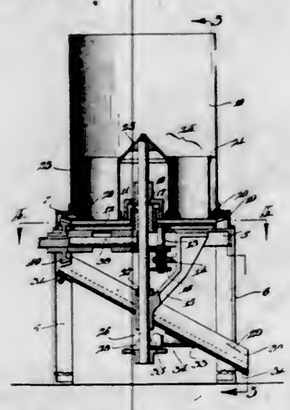


A mixing device of the character described comprising a pipe having an enlarged upper end forming a casing providing a chamber, a manifold formed with a cap for said casing to close the upper open end thereof, said cap being formed with an interior annular seat, a perforate disk member seated upon and secured to said seat, an inner tube concentric with the opening of said pipe into said chamber and forming an upward extension of the pipe axially of the chamber, a second tube of greater diameter than the first tube and of lesser diameter than the casing arranged axially of the center tube, said tubes being seated upon the bottom of said casing, and a disk secured upon the upper ends of said tubes to close the same and clamp said tubes in concentric relation between said disk and bottom of said casing, said inner tube being formed with openings adjacent said disk affording communication between the interior thereof and the annular space between the tubes, and said outer tube being formed with openings near its lower end to afford communication between the lower end of the annular space between the tubes and the annular space between said outer tube and casing wall.

1,676,238. PACKAGE FOR PHOTOGRAPHIC MOUNTS. HAROLD LEWIS BATTY, West Croydon, England, assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 29, 1926, Serial No. 98,323, and in Great Britain Jan. 12, 1926. 4 Claims. (Cl. 229—87.)

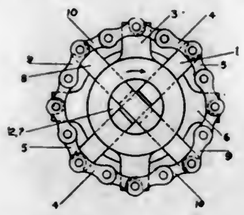
1. As an article of manufacture, a stiff, rectangular flat container, a sheet separate from said container and fitting snugly within said container and having tabs adapted to be bent over the central part of the sheet to hold a card in position thereon.

1,676,239. HOUSING CONSTRUCTION. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1923. Serial No. 644,564. 9 Claims. (Cl. 247—2.)



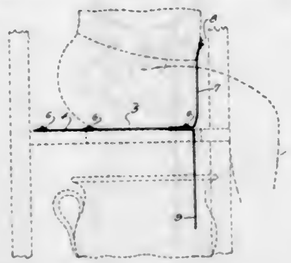
1. The combination with a pair of sealed service boxes, of a housing comprising a passageway for the passage of the line wires from one box to the other and comprising also a box opening into the side of said passageway for the branch overload protective devices having an unsealed closure.

1,676,240. RADIO SIGNALING SYSTEM. HERMAN A. AFFEL, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 31, 1922. Serial No. 585,435. 7 Claims. (Cl. 250—33.)



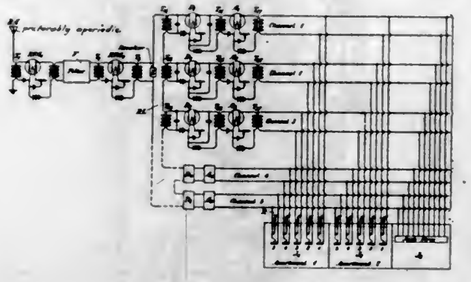
1. An antenna having inductances connected serially therein at predetermined points, the distance between successive inductances diminishing in the direction away from the point of a connection of terminal apparatus with the said antenna.

1,676,241. VEGETABLE SLICER. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J., a Corporation of New Jersey. Filed Feb. 12, 1927. Serial No. 167,658. 3 Claims. (Cl. 146—167.)



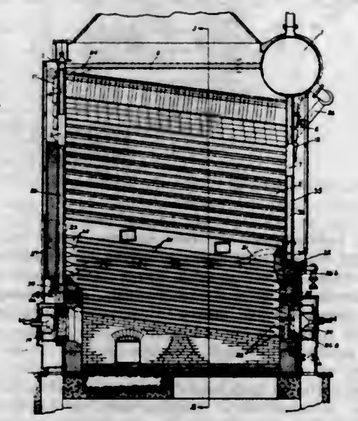
2. A slicing machine including a base plate, legs supporting the base plate, a knife mounted on the base plate, a hub formed on the base plate, a hopper carried by the hub, a vertical shaft fixed to the hopper, a cam track carried by the shaft, a screen hinged to the legs, a roller carried by the screen and engaging the cam track, and means to rotate the hopper.

1,676,242. FLEXIBLE SHAFT COUPLING. GEORGE M. BARTLETT, Indianapolis, Ind. Filed Aug. 25, 1925. Serial No. 52,439. 2 Claims. (Cl. 64—95.)



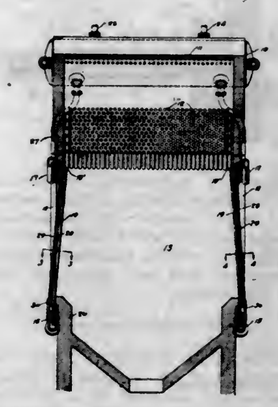
1. In a flexible shaft coupling, the combination of two shaft ends in general alinement, two intermediate members, two pairs of chain sections connecting one shaft end to the two intermediate members respectively, and two pairs of chain sections connecting the other shaft end to the two intermediate members respectively; the two chain sections of each pair being on opposite sides of the general axis of the coupling and extending circumferentially in the same direction from the intermediate member, the chain sections of one pair associated with each shaft end extending in the opposite circumferential direction from the chain sections of the other pair connected with that shaft end, so that one pair of the chain sections for each shaft end is always in tension regardless of the direction of torque between the two shaft ends; and the line joining the middle points of the chain sections of one pair connected to an intermediate member being circumferentially displaced from the line joining the middle points of the links of the other pair connected to that intermediate member, no two consecutive chain sections being in alinement, and the ends of the chain sections being flexibly connected with the shaft ends in such a manner as to permit motion in the direction of the shaft axis.

1,676,243. SEAT COVER FOR INFANTS' TOILETS. GERTRUDE M. BERENTSEN, Wauwatosa, Wis. Filed July 15, 1927. Serial No. 206,073. 1 Claim. (Cl. 4—243.)



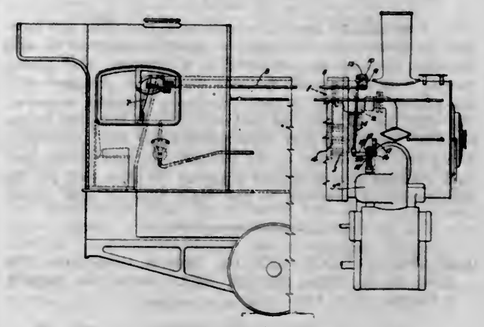
A seat cover for toilets of a flexible, waterproof material, which yieldingly sags within the opening of the toilet seat to cushion the user, comprising a main seat portion having a central opening considerably smaller than the opening of the toilet seat, and having a front upper flap, means on the main seat portion for securing it to the toilet seat, means on the upper flap for securing it to a garment of a user, and a front lower flap attached at its inner end to the main seat portion and adapted to extend vertically toward the toilet receptcle.

1,676,244. MULTIPLE-CHANNEL RADIORECEIVER. OTTO B. BLACKWELL, Plandome, N. Y., and DE LOSS K. MARTIN, West Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1924. Serial No. 755,278. 5 Claims. (Cl. 250—9.)



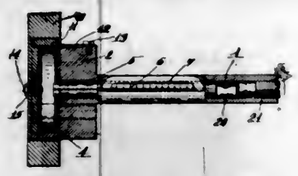
1. A multiple channel radio receiver comprising an antenna common to the channels and substantially aperiodic over the frequency range employed by the channels, a radio frequency amplifier common to the channels, apparatus for selecting the channels and detecting signals from the channels for transmission to listeners, and means for restricting the range of frequencies to be selected by said apparatus comprising a filter common to all of the channels designed to substantially suppress all frequencies above a preassigned upper limit.

1,676,245. WATER SCREEN. CARL A. BRANDT, Great Neck, N. Y. Filed Oct. 24, 1925. Serial No. 64,623. 9 Claims. (Cl. 122—235.)



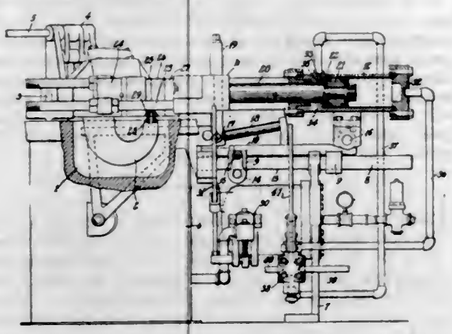
1. A water screen comprising a plurality of water tubes circular in cross section and arranged in closely spaced parallel relation to form a substantially unbroken water wall, said tubes being divided into groups with the tubes of each group integrally joined at their ends to form units having single tubular end portions, the width of the tube group of each unit being greater than the diameter of either end portion of the unit and the internal cross-sectional area of each end portion being not less than the total internal cross-sectional area of the corresponding tube group, and means forming part of a water circulating system to which the end portions of said units are connected.

1,676,246. FURNACE-WALL CONSTRUCTION. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed June 30, 1925. Serial No. 40,605. 8 Claims. (Cl. 122—235.)



1. In combination a boiler, setting walls enclosing the boiler and extending therebelow to enclose a combustion chamber, there being an aperture in one of said walls, a screen arranged within said aperture, said screen comprising a plurality of heat absorbing tubes rising at an inclination to the vertical toward the combustion chamber, and an outer wall of refractory material resting upon said tubes, maintaining contact therewith by gravity, and closing said aperture.

1,676,247. STEAM LOCOMOTIVE. CHARLES E. BROOKS, Montreal, Canada, and CARL A. BRANDT, Great Neck, N. Y.; said Brandt assignor to The Superheater Company, New York, N. Y. Filed Apr. 13, 1923. Serial No. 631,944. 4 Claims. (Cl. 105—48.)



1. In a locomotive, the combination of a pair of flue sheets, flues connecting them, a smoke-box into which the flues open at one end, a bi-chambered superheater header extending across the upper portion of the smoke-box adjacent to the flue sheet, tubular superheater elements extending into the flues and having their ends respectively secured to the two header chambers, a dry-pipe connecting one of the chambers to the boiler steam space, a pair of main distribution valve chests, a throttle adjacent to each outside of the smoke-box, and arranged and adapted normally to control and regulate the steam supply to it, a steam pipe from the second header chamber to each throttle, and mechanism to actuate said throttles from the cab.

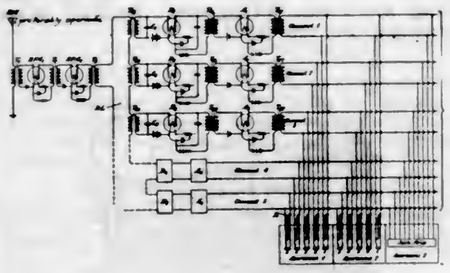
1,676,248. MICROMETER GAUGE. WILLIAM L. BRYANT, Springfield, Vt. Filed Nov. 18, 1922. Serial No. 601,731. 5 Claims. (Cl. 33—178.)

1. In a measuring instrument, elements engageable with an object to be measured, a liquid column, and a flexible walled liquid reservoir in communication with said column and against which each of said elements engages, whereby the relative positions of said elements when in engagement with said object are indicated by the length of said column.

1,676,249. HYDRAULIC CONSTRUCTION. GEORGE W. BUNGAY, Plainfield, N. J., assignor to Aluminum Die-Casting Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Jan. 22, 1926. Serial No. 82,910. 2 Claims. (Cl. 138—10.)

1. A die-casting machine comprising two dies, one movable in respect to the other, a piston connected to said movable die and reciprocating in a cylinder, said piston having a head in said cylinder forming a shoulder with the piston rod, said cylinder having a shoulder cooperating with the shoulder on said piston, said shoulder in the cylinder having a port therethrough for the application of hydraulic pressure to the shoulder on said piston, and said cylinder having a port adjacent its other end for the application of pressure to the other face of said piston.

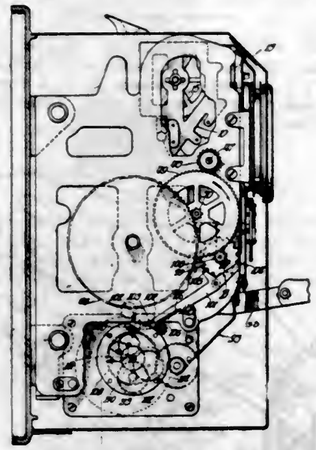
1,676,250. CLUTCH PENCIL. EDWIN CALDWELL, New York, N. Y. Filed Dec. 22, 1922. Serial No. 608,435. 7 Claims. (Cl. 120—14.)



3. A clutch pencil comprising a pencil form having at one end means for gripping leads passing endwise therethrough from the interior of the form, and a magazine, insertable into and removable from the interior of the form, containing a plurality of leads, and having an end wall which opens outwardly when pressure is applied endwise thereto, the interior of the form at the end with the gripping means having an abutment cooperating with the said end wall to open it when pressure is created between the means and magazine, whereby the leads will be fed successively from the magazine into the gripping means.

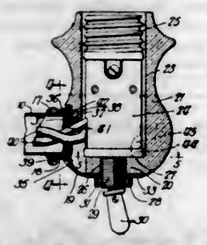
1,676,251. WINDOW VENTILATOR. MARSHALL F. CLAY, Canton, Ohio. Filed May 12, 1924. Serial No. 712,653. 3 Claims. (Cl. 98—99.)

1. A ventilator comprising a metal plate having louvers formed therein and provided with channel guides at its upper and lower edges, angle strips at each end of the louvers, a fabric filter mounted in the channel guides, and comprising a removable frame provided with a detachable covering of filtering material.



1,676,252. MULTIPLE-CHANNEL RADIORECEIVER. HARRY B. COXHEAD, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 11, 1924. Serial No. 755,317. 6 Claims. (Cl. 250—9.)

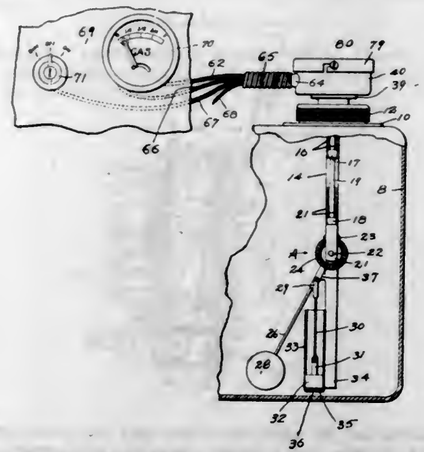
6. In a broadcast receiving system, means at a central point for simultaneously receiving a plurality of message carrying radio frequency waves, means to select said waves to physically separate channels, one corresponding to each message wave, means in each channel to translate to audio frequency the message carried by the selected wave, means to extend separate circuits from all of plurality of said channels to each of a plurality of subscribers' stations, and means at each subscriber's station whereby a subscriber's receiver may be connected exclusively to any one of the circuits leading to the channels.



1,676,253. TIME-CONTROLLED MECHANISM. CHARLES M. CROOK and ALBERT E. LONG, Chicago, Ill., assignors to Stromberg Electric Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 3, 1925. Serial No. 6,538. 6 Claims. (Cl. 185—40.)

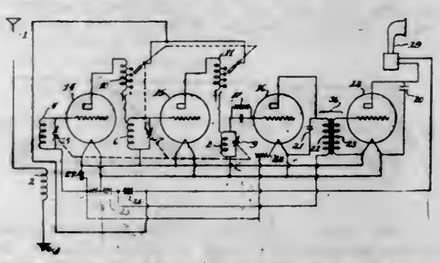
1. A power device, an escapement for controlling the movement of said power device, a second power device and means whereby said second power device controls said escapement, said escapement comprising an oscillatable member and said controlling means comprising a rotatable member having a plurality of detents which successively detain and release said oscillatable member, said escapement and controlling means having provisions whereby the oscillatable member will make substantially

a complete oscillation back and forth between the time it is released by one detent and detained by the following detent.



1,676,254. HUSK OR SOCKET HOUSING. VICTOR R. DESPARD, Valparaiso, Ind., assignor to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Mar. 7, 1924. Serial No. 697,680. 12 Claims. (Cl. 173—346.)

1. In a device of the character described, switch mechanism and an enclosure member for said switch mechanism having a longitudinal bore open at one end thereof, a reduced bore extending to the opposite end of said member and communicating with said longitudinal bore and an opening extending through the side wall of said member and communicating with said longitudinal bore, the outer surface of said member being recessed around said reduced bore.

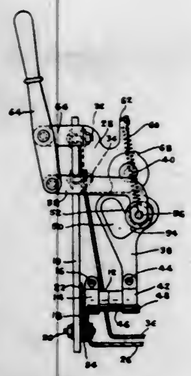


1,676,255. LIQUID-QUANTITY-INDICATING DEVICE. ALPHONS DITTLINGER, EMIL V. DITTLINGER, Jr., and NICHOLAS DITTLINGER, St. Louis, Mo. Filed May 5, 1924. Serial No. 711,161. 3 Claims. (Cl. 201—48.)

1. A quantity indicating device for liquid containers comprising a plate carried by said container, a support carried by said plate and extending into said container, a float pivotally carried by said support, a shaft rotatably mounted in said support and extending through said plate, said shaft adapted to be rotated by the rise and fall of said float, a housing mounted on said plate above the container, a shaft of insulating material carried by said first mentioned shaft and extending into said housing, a potentiometer mounted in said housing, a contact finger carried by said insulating shaft and contacting with said potentiometer, a cylinder located in said liquid container and open at its top having a perforate closure at its lower end carried by said support and adapted to have liquid ingress and egress therethrough, a piston located in said cylinder, and a rod pivotally connected to

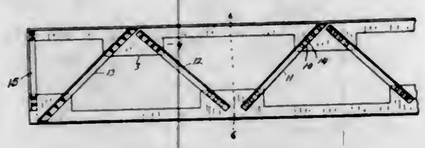
said piston and float whereby the rapidity of rise and fall of the float is controlled by the rate of passage of liquid to and from the container through the perforate bottom of the cylinder.

1,676,256. STABILIZING MEANS FOR RADIO RECEIVING SYSTEMS. PHILIP E. EDELMAN, Chicago, Ill. Filed Nov. 17, 1924. Serial No. 750,377. 5 Claims. (Cl. 250—20.)



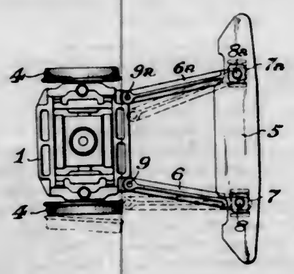
1. In a radio receiver, a plurality of three element tubes for radio frequency amplification, said tubes having grid circuits and plate circuits, a tapped primary transformer coil included in each of said plate circuits, a secondary transformer coil in each of said grid circuits and interlinked with the primary coil of the preceding plate circuit, a variable condenser in each of said grid circuits, and mechanically interconnected means for simultaneously varying the number of turns of said primary coils in the plate circuits and varying said condensers for the purpose described.

1,676,257. ELECTRIC SWITCH. THOMAS C. FORBES, Hopkins, Minn., assignor to Waters-Genter Company, Minneapolis, Minn. Filed May 19, 1926. Serial No. 110,121. 1 Claim. (Cl. 200—68.)



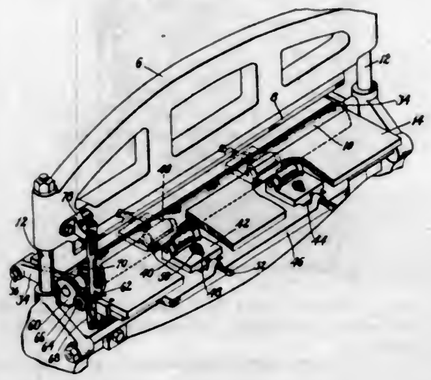
An electric switch comprising a support, a fixed contact insulatively carried by said support, a bracket insulatively secured to said support and having a circular marginal portion, a switch arm having a circular end portion, a pivot passing centrally through said circular portions, a stop lug extending transversely from the periphery of the circular portion of said arm and adapted to engage said bracket when said arm is in open position, said arm having an intermediate enlarged portion provided with a V-shaped slot therein forming a shoulder, a

contact carried by the other end of said arm and adapted to engage said fixed contact, a fiber roller positioned in said slot, a bar on one end of which said roller is mounted, a lever to which the other end of said bar is



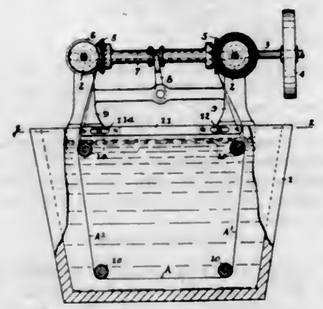
pivoted and by which said roller may be moved across said shoulder, and a spring connecting said bracket and said bar which causes said roller to exert a sudden thrust on said switch arm when said roller passes over said shoulder in either direction.

1,676,258. METHOD OF MAKING TRUSSED STRUCTURES. CHARLES H. FORK, Detroit, Mich., assignor of one-half to William J. Rush, Dearborn, Mich. Original application filed July 3, 1922, Serial No. 572,694. Divided and this application filed Feb. 11, 1924. Serial No. 692,108. 3 Claims. (Cl. 29—155.)



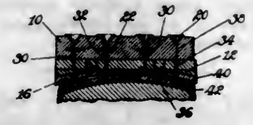
1. The method of forming trussed structures comprising the splitting of a blank to provide separate chord members having spaced integral gusset plates, spacing the chord members a substantial uniform distance apart, and securing web members to said plates.

1,676,259. TRUCK RADIUS BAR FOR LOCOMOTIVES. CHARLES K. GETCHELL, Schenectady, N. Y. Filed Apr. 27, 1926. Serial No. 104,981. 2 Claims. (Cl. 105—174.)



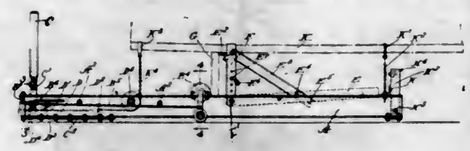
1. In a locomotive, the combination of a locomotive frame; a bumper beam thereon; a wheeled truck frame, movable about a centre pin on the locomotive frame; and radius bars, coupling the ends of the truck frame to the bumper beam.

1,676,260. CUTTING MACHINE. HARVEY L. GLIDDEN, Needham Heights, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 10, 1922. Serial No. 573,775. 15 Claims. (Cl. 164—58.)



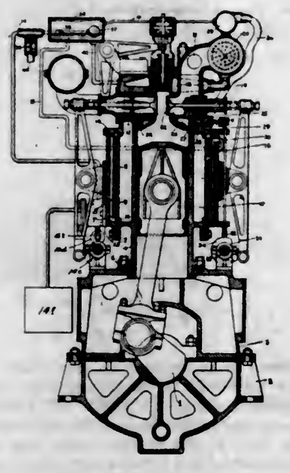
1. In a machine of the character described, means for cutting sheet material comprising a cutter, a cutting block for co-operation with the cutter, means for moving the block to present new cutting surfaces to the cutter, means for adjusting the cutting block and its moving means toward and from the cutter, and means for maintaining the block and its moving means in engagement in adjusted positions.

1,676,261. JIGGER. HENRY GRASSEY, Glen Rock, N. J. Filed Nov. 5, 1927. Serial No. 231,177. 2 Claims. (Cl. 8—19.)



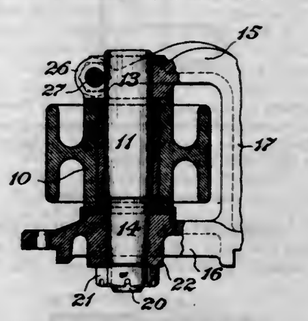
1. In combination, with supporting means, means to draw a fabric lengthwise under tension first in one direction and then in the other comprising two beams on first one and then the other of which the fabric is adapted to be wound, means to maintain a bend in the fabric between the two beams, and a device arranged between, and freely shiftable on the supporting means back and forth from one toward the other of, the stretches of the fabric at opposite sides of said bend and maintaining a bend in each such stretch and also having the surface thereof in contact with one stretch curved in a plane extending transversely of the fabric.

1,676,262. HEEL. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed July 25, 1921, Serial No. 487,314, Patent No. 1,617,049, dated Feb. 8, 1927. Divided and this application filed Dec. 4, 1922. Serial No. 604,761. 6 Claims. (Cl. 36—35.)



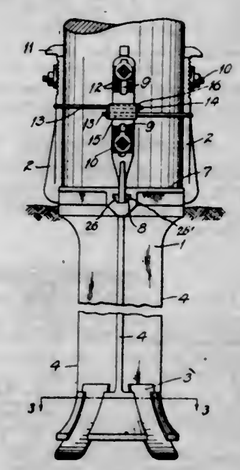
6. An unattached cementless, composite heel consisting of a rigid base section having a flat, outer face and a rubber top section having a curved inner face, said sections being secured together in registered relation by one or more nails.

1,676,263. AUTOMOBILE FRAME STRAIGHTENER. PERCY O. HAWKINS, Hammond, Ind. Filed Oct. 22, 1924. Serial No. 745,055. 27 Claims. (Cl. 153—38.)



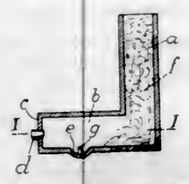
1. In an automobile frame straightener, a horizontal body member, a jack element pivoted thereto intermediate its ends, a lever mounted on said body member, means for connecting said lever with the automobile frame, comprising a toothed bar slidable along said body member, a flexible member extending from said toothed bar, and means for securing it to the automobile frame.

1,676,264. INTERNAL-COMBUSTION ENGINE. MYRON F. HILL, New York, N. Y. Refiled for abandoned application Serial No. 318,461, filed Aug. 19, 1919. This application filed June 21, 1926. Serial No. 117,652. 14 Claims. (Cl. 123—25.)



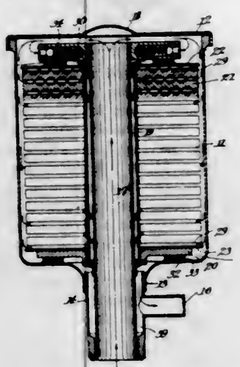
1. In an internal combustion engine, a combustion chamber, a pressure chamber for water around it, subject to heat radiating from combustion in said combustion chamber, to create steam under pressure from said radiated heat, and passageways and guiding means to direct said steam into said combustion chamber in the form of an envelope surrounding the combustion gases.

1,676,265. LOCOMOTIVE VALVE GEAR. JOSHUA J. JONES, Schenectady, N. Y. Filed Dec. 15, 1926. Serial No. 154,883. 3 Claims. (Cl. 308—21.)



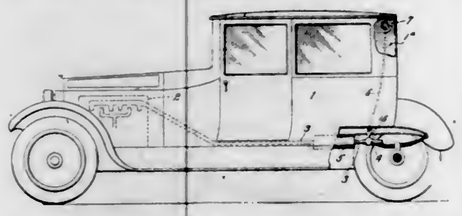
1. In a valve gear for locomotives, the combination of a yoke, having two spaced arms, each formed with a bore, one of the bores being tapered, one of the arms having spaced portions separated by a split extending into the bore, each of the spaced portions having a bolt opening; a member, having a bore disposed between the arms of the yoke; a pivot pin extending into the three bores, the portion of the pin extending into the tapered bore being tapered in correspondence therewith, said pin having a transverse recess; a bolt passing through the openings in the spaced portions of the split arm; and projecting into the recess in the pivot pin; and a nut threaded on the bolt, whereby the spaced portions of the split arm may be drawn toward one another to contract the bore thereof around the pin.

1,676,266. POLE BUTT. JAMES R. KEARNEY, Kansas City, Mo. Filed Sept. 6, 1922. Serial No. 586,451. 10 Claims. (Cl. 189—28.)



1. In a pole butt, a base, adjustable means on said base adapted for gripping a pole above said base and selectively positioning the pole relative to the base, and vertically adjustable means adapted for distantly positioning the pole relative to the base.

1,676,267. PROCESS OF MAKING GLASS IN A SHAFT FURNACE. KURT KÜNZEL, Uhsmannsdorf, Germany. Filed Mar. 18, 1927. Serial No. 176,398, and in Germany Feb. 10, 1925. 2 Claims. (Cl. 49—54.)

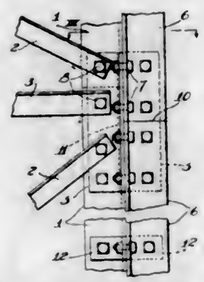


1. A process of making glass in a shaft furnace, which consists in maintaining a charge of crude glass material in said furnace and carrying a flame upwardly through said shaft and the charge therein.

1,676,268. PRESSURE AND VACUUM FILTER. GASTON JOEL LIPSCOMB, Montclair, N. J. Filed May 23, 1927. Serial No 193,712. 5 Claims. (Cl. 210—178.)

1. In a pressure filter, in combination, a casing, a plurality of layers of filtering material assembled upon a perforated hollow carrier within said casing, a smaller imperforate tube within said carrier, means secured to said smaller tube to secure said carrier and said layers within said casing, said smaller tube being adapted to convey liquid to one side of each of said layers and said hollow carrier being adapted to convey liquid away from the opposite side of each of said layers.

1,676,269. SUCTION ELEMENT AND SUCTION VENTILATOR FOR AUTOMOBILES. JULIUS H. LUTZ, New York, N. Y. Filed Oct. 26, 1923. Serial No. 670,895. 1 Claim. (Cl. 98—2.)



The combination with an automobile having an engine from which leads an exhaust conduit, and a body compartment independent of and removed from the engine, of a suction element having a suction channel communicating with the exhaust conduit whereby the moving exhaust gases induce a suction of air through said suction element, a ventilating element mounted in the wall lining of said body compartment and having variable openings communicating with the interior of said body compartment, a conduit connecting said suction element with said ventilating element and a valve interposed between said suction element and said ventilating element, said valve being normally retained in closed position but operable to open said induced air suction to ventilate the body compartment.

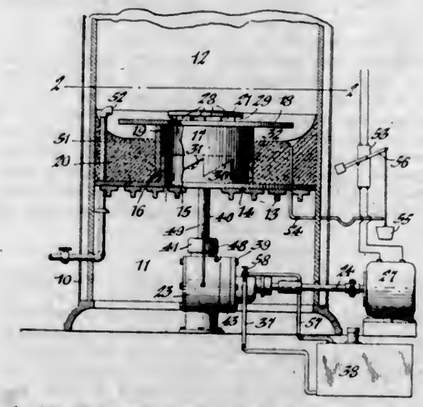
1,676,270. GOLF CLUB. NORMAN D. MATTISON, Montclair, N. J. Filed June 11, 1927. Serial No. 198,015. 13 Claims. (Cl. 273—80.)

1. A golf club comprising a shaft, a plurality of stops carried by the shaft, and weights slidable along the shaft into audible engagement with the stops in the course of the swing of the club, thereby to indicate the character of the swing.

1,676,271. DERRICK. JOHN D. MCEWEN, Pittsburgh, Pa., assignor to Lee C. Moore & Company, Incorporated, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1926. Serial No. 102,899. 6 Claims. (Cl. 189—13.)

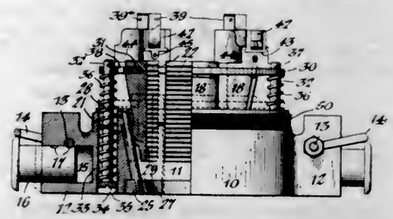
1. A derrick having corner columns and struts and cross-bracing connected to the columns to form panels, each column comprising an angle bar positioned with its back facing outwardly of and its legs parallel to the sides of the derrick, and bracket angle bars attached to the backs of said column-forming angle bars at the panel points, the outstanding legs of said bracket angle bars being perforated for removably attaching to them column-reenforcing angle bars to strengthen the derrick for heavy duty.

1,676,272. DERRICK. JOHN D. MCEWEN, Pittsburgh, Pa., assignor to Lee C. Moore & Company, Incorporated, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1926. Serial No. 102,900. 4 Claims. (Cl. 189—13.)



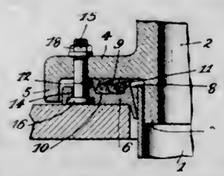
1. In a derrick structure comprising columns formed by two angle bars placed back to back and spaced apart in parallel relation, means for connecting the angle bars comprising a block adapted to be positioned between the angle bars and having opposite grooves for receiving the corners of the bars and having a bolt hole positioned transversely to the plane of said grooves, a pair of clamps each adapted to engage the adjacent outer edges of the two bars, and a bolt adapted to hold the clamps against the bars and against the block, whereby to rigidly position and hold the angle bars in proper relation.

1,676,273. SIGNAL DEVICE. EDGAR A. MILLER and CLEVELAND A. JAMES, Philadelphia, Pa. Filed Jan 4, 1924. Serial No. 684,311. 7 Claims. (Cl. 88—1.)



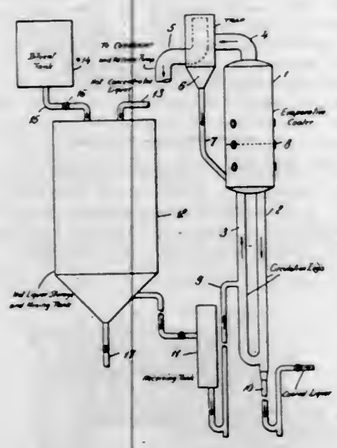
1. A signal device which is illuminated by light from another and distant source and reflects said light back to the source in modified condition, consisting of a reflector composed of a plurality of concentric reflecting surfaces arranged in pairs respectively inclined at an angle to each other to form an annular V shaped reflecting groove, and an annular rib extending outwardly from the bottom of each of the V reflector grooves to substantially divide said grooves into two annular reflecting parts and said annular ribs being of colored translucent material adapted to receive and permit the passage of part of the reflected light from each of the reflecting surfaces immediately disposed on opposite sides of the annular ribs.

1,676,274. OIL BURNER. WILLIAM F. MILLER, Buffalo, N. Y. Filed Aug. 4, 1927. Serial No. 210,569. 2 Claims. (Cl. 158—77.)



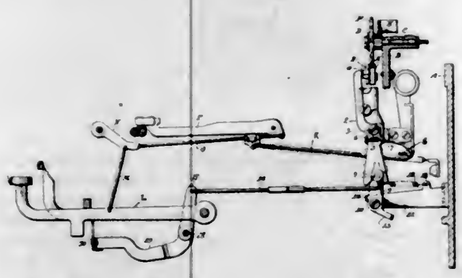
1. An oil burner, comprising a base member adapted to be supported on the grates of a furnace and having an opening for the passage of air and a rim bounding said opening, a casing disposed below said base plate, a hollow, upright shaft journaled in said casing and extending through the opening in said base member, an atomizing disk carrying fan blades on its underside applied to the upper end of said shaft, the top surface of said disk being slightly convex and unflanged, means for rotating the shaft, means for forcing oil upwardly through said shaft on to said atomizing disk, and a sleeve applied to said base rim and provided at its upper end and below the atomizing disk with a ring, said sleeve being vertically adjustable toward and from said disk to vary the air space between it and the sleeve-ring, and the atomizing disk extending outwardly beyond the ring-opening and the fan blades thereof extending into said ring-opening.

1,676,275. COMBINED CASING SPIDER AND ELEVATOR. GUSTAVUS A. MONTGOMERY, Titusville, Pa., assignor to Titusville Forge Company, Titusville, Pa., a Corporation of Maryland. Filed Nov. 8, 1924. Serial No. 748,587. 8 Claims. (Cl. 24—263.)



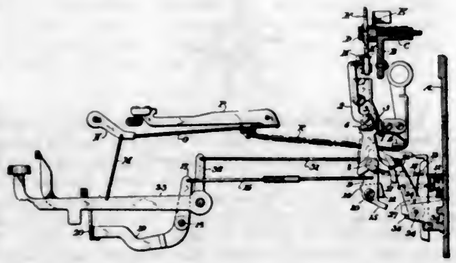
1. A device of the character described, comprising a supporting member having a tapered opening, fixed guide posts arranged in said opening, a plurality of vertically movable slips in said opening and engaging said guides, and a suspension element guided on and surmounting said supporting member and engaging said slips.

1,676,276. SEAL. CHARLES W. MOORE, New York, N. Y., assignor to The Moore Flange Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1924. Serial No. 752,923. 3 Claims. (Cl. 285—33.)



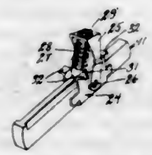
1. A seal for preventing leakage at the juncture of two conduits, said seal comprising a flange having therein a continuous channel, said flange constructed to be firmly affixed to one of said conduits, a soft material placed in said channel and extending above the flange, said second conduit adapted to engage the full width of said material and when drawn toward the first conduit to put all of said material under compression and to force substantially all of the air out of the same, and two flexible coatings, one on each side of said material and in contact therewith and extending substantially vertically between said flange and said second conduit thereby to form a self maintaining seal that resists disassembly as said coatings are impervious to the passage of air into said material and between said flange and said material and between said second conduit and said material.

1,676,277. COOLING APPARATUS. RUSSELL W. MUMFORD, Trona, Calif., assignor, by mesne assignments, to American Potash & Chemical Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 14, 1925. Serial No. 56,122. 2 Claims. (Cl. 23—273.)



1. An apparatus for cooling liquors containing constituents susceptible of evaporation, comprising a chamber adapted to be maintained under reduced pressure, a vapor outlet above the normal liquid level therein, a pair of depending circulation legs opening into the said chamber below the normal liquid level therein and communicating at their lower ends, the circulation legs forming with with the said chamber a closed circulatory system, a connection for withdrawing liquor from the system, and a connection for supplying liquor to one of said legs at an intermediate point.

1,676,278. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 18, 1927. Serial No. 226,952. 7 Claims. (Cl. 197—84.)

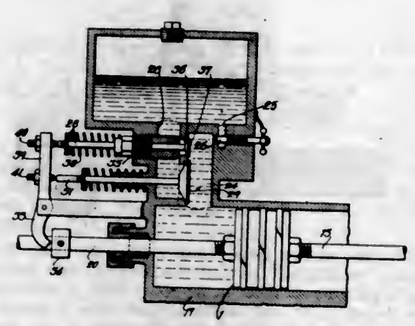


1. In a typewriting machine having a shift frame and an escapement mechanism including a stepping dog, a stop permitting normal double space movement of said dog, an auxiliary stop, and means for moving said auxiliary stop into position to limit said dog to a single space movement, said means including connections which are disabled when the shift frame is moved to upper case position.

1,676,279. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 17, 1927. Serial No. 240,749. 8 Claims. (Cl. 197—84.)

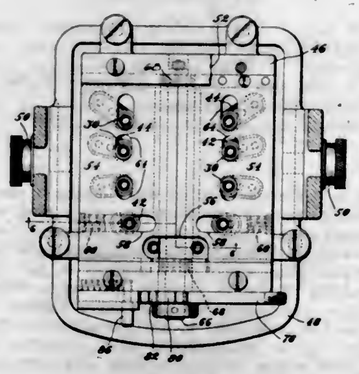
1. In a typewriting machine having a shift frame and an escapement mechanism including a stepping dog: a stop permitting normal double space movement of said dog, an auxiliary stop, means for moving the auxiliary stop into position to limit said dog to a single space movement, said means including connections which are disabled when the shift frame is moved to upper case position, and other means for moving the auxiliary stop into operative position at this time.

1,676,280. SWITCH SOCKET. GEORGE F. NIEMANN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 30, 1924. Serial No. 729,011. 5 Claims. (Cl. 173—355.)



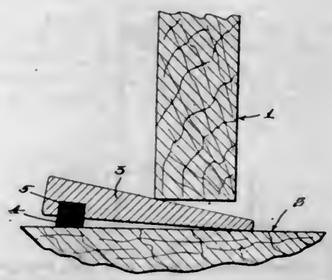
1. A switch socket comprising an insulating base, receptacle contacts, wiring terminals and switch mechanism mounted on said base, said base with the contacts and wiring terminals being insertable and removable with respect to a casing as a sub-assembly, said switch mechanism comprising (1) a push bar extending transversely through said sub-assembly and serving to hold said sub-assembly in said casing and being removable laterally from said casing to release said sub-assembly for removal from said casing, (2) an oscillatable switch arm, (3) a spring shiftable back and forth to cause said oscillation of said switch arm, and (4) a spring-carrying member extending between said push bar and switch arm, and means whereby when said push bar is withdrawn from said sub-assembly, said spring-carrying member will be held in position to come into operative relation with said push bar when it is again inserted.

1,676,281. PROCESS FOR MAKING POWDERED VITREOUS POLYMERIZED STYROL AND ITS HOMOLOGUES, TO THE POWDER SO PRODUCED, AND ARTICLES INCLUDING SUCH MATERIAL. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 7, 1924. Serial No. 711,586. 14 Claims. (Cl. 260—2.)



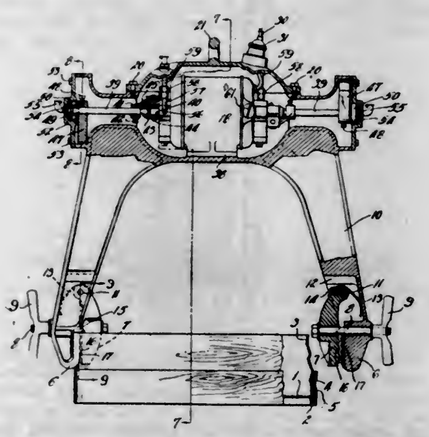
1. The process for making powdered vitreous polymerized $ArCH:CH_2$ where Ar represents aryl which comprises polymerizing $ArCH:CH_2$ in an emulsion, to form vitreous polymerized $ArCH:CH_2$, and precipitating the polymerized $ArCH:CH_2$ as a powdery mass.

1,676,282. ELECTRIC WELDING. GEORGE H. PHELPS, Warehouse Point, Conn., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Mar. 5, 1927. Serial No. 172,963. 8 Claims. (Cl. 219—4.)



1. The combination with the movable head of an electric welding machine of a magnetic device for moving said head and means for limiting the speed by absorbing a part of the pressure of said device during an early part of the movement and releasing the full pressure during a later part, said device being designed to exert at all times substantially the maximum pressure required so that upon said release there is a sudden application of maximum pressure.

1,676,283. ATTACHING MACHINE. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 4, 1922. Serial No. 604,751. 13 Claims. (Cl. 1—39.)

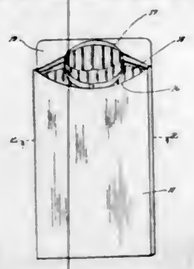


6. In an attaching machine, a plurality of groups of fastener-conduits, each conduit having a terminal-portion, a mounting member provided with openings to receive the terminal-portions, and a movable adjusting member for each group of conduits, each adjusting member having openings co-operating with the terminal-portions belonging to its group, which terminal-portions are disposed in the corresponding openings of the mounting member.

1,676,284. DOORCHECK. GEORGE A. POWELL, Forest Hills Gardens, N. Y. Filed Dec. 16, 1927. Serial No. 240,507. 1 Claim. (Cl. 292—343.)

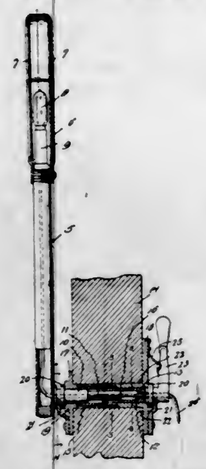
A door check comprising a wedge shaped member of fibrous material for coacting between the bottom of a door and the floor, the thick end of said wedge being provided on the lower face thereof with a rectangular shaped opening extending into said wedge and a member of flexible material fixed in said opening and extending beyond said lower face for frictionally engaging said floor.

1,676,285. RIDDLE. HENRY PRELL, Chicago, Ill. Filed Dec. 31, 1923. Serial No. 683,658. 5 Claims. (Cl. 74—14.)



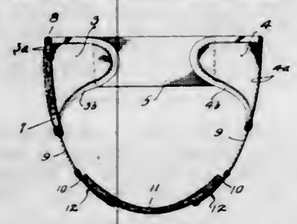
1. Apparatus of the character described, comprising a casing, a motor centrally disposed therein and having a horizontal shaft, auxiliary shafts on either end of said motor shaft in substantially aligned driven relation therewith and having bearings in said casing, a weight carried by each of said auxiliary shafts and unbalanced therefrom, depending arms on said casing adapted to support an element to be vibrated in unison with said casing, and means for suspending said casing.

1,676,286. SHIRT ENVELOPE. ARTHUR RATCLIFF, Milwaukee, Wis., assignor to Hummel & Downing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 5, 1923. Serial No. 622,990. 1 Claim. (Cl. 229—87.)



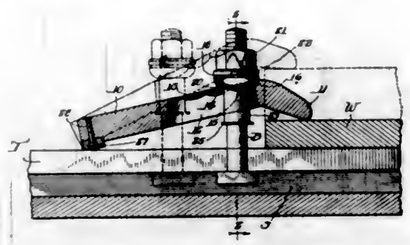
An envelope for shirts comprising a semi-rigid open-ended container formed from a blank of paper board scored and folded to provide an imperforate front wall, side walls, and a pair of overlapping flaps connected

together to form an imperforate back wall, said front wall being cut away at one end to accommodate the neckband portion of the shirt, and said back wall flaps



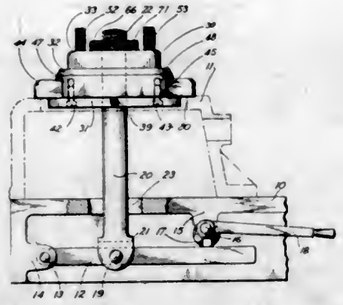
projecting substantially beyond said cut way portion to support said neckband portion, all of said walls being flexibly connected together whereby said container may be collapsed to a flat condition for storing and shipping.

1,676,287. AUTOMOBILE SIGNAL. HARLEIGH E. SANDERSON, Alva, Okla. Filed July 21, 1927. Serial No. 207,445. 4 Claims. (Cl. 116—52.)



1. An automobile signal including a signal arm having a rigid lateral supporting shaft at one end adjustable in length and provided with an operating crank handle at one end, and a bearing sleeve for the shaft correspondingly adjustable in length and provided with end clamping plates.

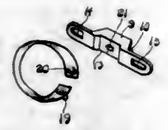
1,676,288. SANITARY BELT. ELIZABETH M. SCHLOSSER, Minneapolis, Minn. Filed Sept. 21, 1927. Serial No. 220,922. 3 Claims. (Cl. 128—291.)



1. A sanitary belt adapted to fit about the waist of a wearer and having means at both front and rear thereof to which the ends of a pad of absorbent material are adapted to be secured, and also having a pocket formed in the front thereof within which an extra pad of absorbent material is adapted to be carried.

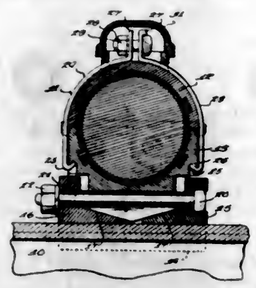
1,676,289. MACHINIST'S WORK CLAMP. ALBANO SCHMALZ, Chicago, Ill. Filed Jan. 12, 1927. Serial No. 160,757. 2 Claims. (Cl. 90—59.)

1. A machinist's work clamp, comprising a bar formed with a longitudinal vertical slot therein, said slot having a plurality of seats in its upper edge, a saddle member shaped to fit and swivel in said seats, a clamp bolt extending through said slot and saddle, a nut on the upper end of said bolt, and means secured to said saddle member and locked in said slot serving to retain said saddle member engaged with said bar when said bolt is withdrawn.



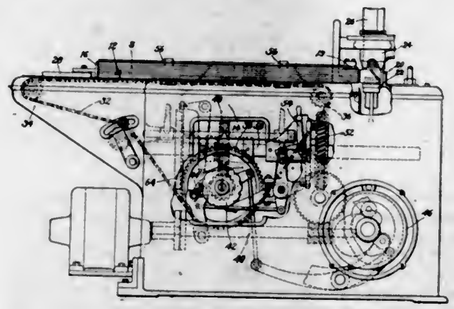
1,676,290. WORK HOLDER. CHRISTY SCHRON, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1927. Serial No. 194,599. 9 Claims. (Cl. 90—59.)

1. In a device for holding work during a machining operation thereon, the combination with a work supporting frame, of an expansible head, adjustable mounting means for the head, said head comprising a pair of reciprocable bolts, and means mounted in the head for reciprocating the bolts towards and away from each other into engagement with an upper surface of the work to hold the same in the frame, said adjustable mounting means comprising a post supported on the frame, and means for reciprocating said post to effect movement of the head.



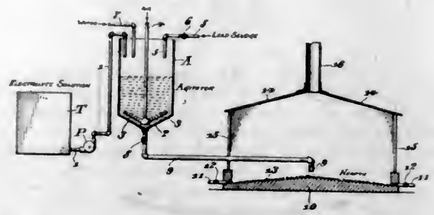
1,676,291. TIE. EDWARD J. SCHULTZ, Covington, Ky. Filed Apr. 6, 1927. Serial No. 181,508. 2 Claims. (Cl. 2—151.)

1. A bow tie comprising a flanged base with a depression in the base bottom terminating in eyeleted ends, a strip of material folded to produce a bow, said bow being centrally inserted between the flanges, a strap to encircle the flanged portion and the centrally positioned portion of the folds of the bow enclosed between the flanges, a snap fastener for the strap, and means for



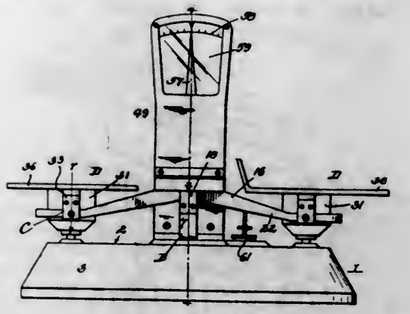
detachable attachment to the eyeleted ends of the base to encircle the neck of the wearer, whereby the tie may be secured in position.

1,676,292. BEARING. WILLIAM SCHWEMLEIN, Parkersburg, W. Va., assignor to The Parkersburg Rig and Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed July 1, 1927. Serial No. 202,952. 7 Claims. (Cl. 308—59.)



1. A bearing comprising an upper segment and a lower segment, arms extending from the lower segment and adapted to engage a bearing support, and wedges inserted between said support and said bottom segment.

1,676,293. FEEDING MECHANISM. RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Nov. 9, 1922, Serial No. 599,925. Divided and this application filed Jan. 3, 1927. Serial No. 158,745. 15 Claims. (Cl. 271—44.)

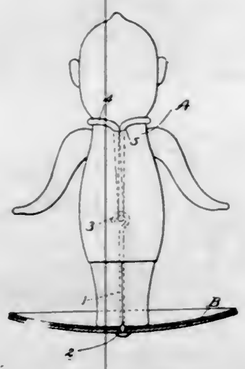


1. In a machine of the character described, a magazine for sheets of material to be operated upon, means for feeding sheets from the bottom of the pile in the magazine, and means for preventing initiation of machine operations when the pile of sheets sinks below a predetermined level in the magazine.

1,676,294. SLUDGE TREATMENT. LLOYD B. SMITH and GEORGE W. JAMISON, Philadelphia, Pa., assignors to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 9, 1925. Serial No. 67,835. 3 Claims. (Cl. 75—15.)

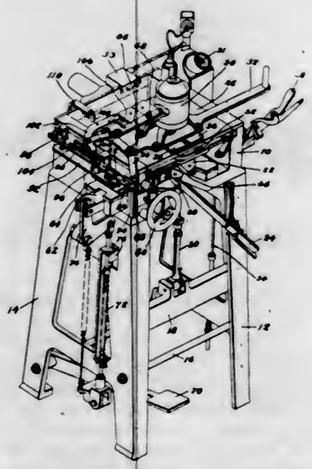
1. A method for recovering lead from sludge resulting from the treatment of petroleum oil with a compound of lead, which comprises treating the sludge with a substance to break the emulsion of oil and water, removing the water which separates, and igniting the remainder, whereby the oil content thereof is burned leaving a solid having a relatively high lead content.

1,676,295. SCALE. WALTER S. SMITH, Columbus, Ohio. Filed May 12, 1926. Serial No. 108,671. 10 Claims. (Cl. 265—58.)



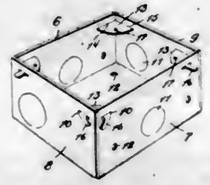
1. A scale comprising a pivoted beam, a check rod movable in parallelism with said beam, a torsion strip cooperative with said check rod to maintain said beam normally in neutral position, an indicator tower arranged above said beam, a rotatable member mounted in said tower, a yoke rigidly carried by the central portion of said beam and including spaced arms arranged on opposite sides of said member, a flexible member having its ends connected with said arm and its central portion operatively engaging said rotatable member, and an indicator hand movable with said member and having its outer end arranged to travel adjacent to a graduated surface.

1,676,296. FIGURE TOY. JOHN A. SPENCER, Revere, Mass., assignor to Spencer Thermostat Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 23, 1924. Serial No. 745,410. 5 Claims. (Cl. 46—40.)



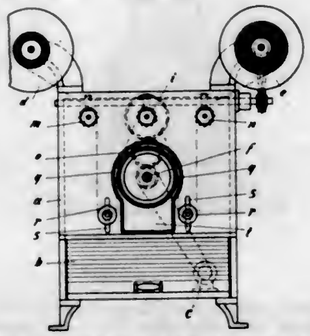
1. A toy comprising the combination with a fanciful figure of a thermostatic member connected to said figure, said thermostatic member comprising a sheet consisting

of a plurality of united components having different coefficients of expansion, a portion of said components being normally cupped but tending to flatten in response to temperature change in one sense, thereby setting up



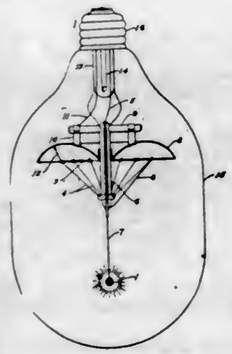
stresses which oppose said tendency until a predetermined temperature is reached, the stresses then abruptly changing the shape of the cupped portion thereby to create sufficient force to impel said member and figure from a position of rest.

1,676,297. HEEL-SEAT-FITTING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 25, 1924. Serial No. 745,892. 25 Claims. (Cl. 12—17.)



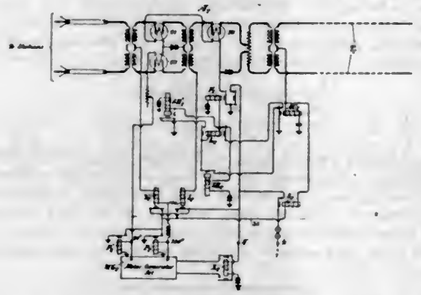
1. A heel-seat fitting machine having, in combination, a work support, a cutter, said work support and cutter being arranged for relative movement to cause the cutter to trim surplus material from the periphery of the heel-seat portion of the sole of a shoe carried by the support, and means for controlling the trimming comprising a measuring device having a member arranged for engagement with the heel or a heel like the heel which is to be attached to the shoe and means for moving said member into engagement with said heel as the cutter and the shoe upon the work support are brought toward operative relation.

1,676,298. OUTLET BOX. HENRY M. STIEGLITZ, St. Louis, Mo., assignor to Frank Adam Electric Co., St. Louis, Mo., a Corporation. Filed Mar. 21, 1925. Serial No. 17,317. 10 Claims. (Cl. 220—62.)



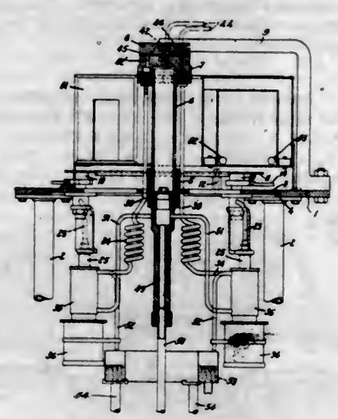
1. As a new article of manufacture, a box-wall securing device comprising a body having a pair of relatively angularly disposed margins and a lug extending from each of the said margins at an angle other than a right angle.

1,676,299. DEVICE FOR CLEANING AND SMOOTHING FILMS AND THE LIKE. JOHANN JACOB FRIEDRICH STOCK, Munich, Germany. Filed June 17, 1926, Serial No. 116,677, and in Germany Mar. 30, 1926. 4 Claims. (Cl. 15—100.)



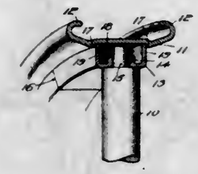
1. A device for cleaning and smoothing worn films and the like, comprising a machine stand, a metallic wire brush rotatably arranged upon the machine stand, means to move the film past and in contact with the said wire brush, and means to exert a constant co-operative pressure between the film and the said brush.

1,676,300. INCANDESCENT ELECTRIC LAMP. ALEXANDER STED, New York, N. Y. Filed Feb. 21, 1927. Serial No. 169,842. 11 Claims. (Cl. 176—1.)



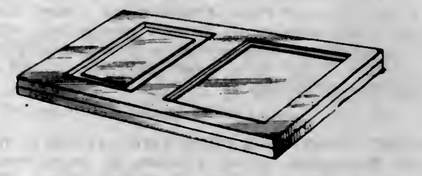
1. An incandescent electric lamp comprising a sealed bulb; a highly polished metal reflector, formed by revolving a bifocal segment about an axis at an angle to a line passing through the two foci, the said axis passing through one of the foci; a refractory metal filament placed exactly into and shaped to conform with the configuration of the focal path of the reflector; and a mass of refractory substance of proper dimensions placed at the common focus of the said reflector.

1,676,301. PROGRAM-TRANSMISSION SYSTEM FOR APARTMENT HOUSES. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 20, 1924. Serial No. 738,923. 16 Claims. (Cl. 179—171.)



2. In a signaling system, a trunk, a normally disabled amplifier associated with said trunk, means responsive to the momentary transmission of alternating current over said trunk, to render said amplifier operative, and means responsive to the subsequent transmission of alternating current over said trunk to disable said amplifier.

1,676,302. EXHAUST MACHINE. JOHANNES MARINUS VAN DER POEL, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1926, Serial No. 100,708, and in the Netherlands June 2, 1925. 6 Claims. (Cl. 176—2.)

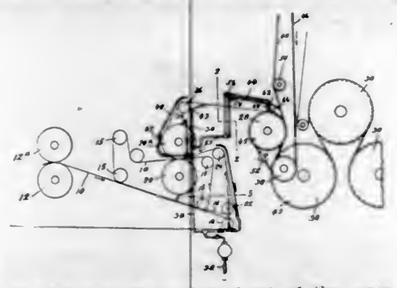


1. An exhaust machine comprising an intermittently rotatable carrier having a plurality of exhaust heads, an equal number of final pumps mounted on and movable with said carrier and each directly connected to a corresponding exhaust head, a rough pump to act as a backer for said final pumps, backer pipes on the outlets of said final pumps, and means for connecting each backer pipe in succession to said rough pump and then sealing said pipe from said rough pump at a point remote from said final pump whereby each final pump discharges into an evacuated reservoir formed by said sealed backer pipe.

1,676,303. VEHICLE WHEEL. JAMES H. WAGENHORST, Jackson, Mich. Original application filed Feb. 24, 1919, Serial No. 278,640. Divided and this application filed Dec. 3, 1925. Serial No. 72,920. 1 Claim. (Cl. 301—96.)

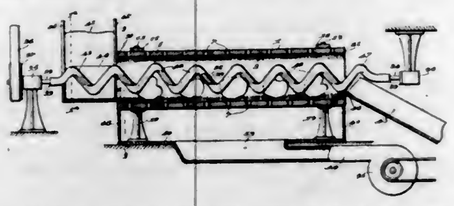
In a wheel, the combination of a sheet metal felly of channel cross-section having front and rear legs, and a continuous, tire-carrying rim having a rim base provided with parallel inwardly extending beads, said felly being transversely split and the ends thereof being disconnected except through said rim, and said rim being contracted upon the felly to bring the rim base into seating engagement with the edges of said felly legs, whereby said beads engage the felly to prevent lateral displacement and circumferential shifting of the rim with respect thereto and the split felly is contracted to anchor the wheel spokes more firmly.

1,676,304. METHOD OF PACKING DOORS, FRAMES, AND THE LIKE. HARRISON B. WALTER, Chicago, Ill., assignor, by mesne assiguments, to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed July 26, 1926. Serial No. 124,998. 2 Claims. (Cl. 93—2.)



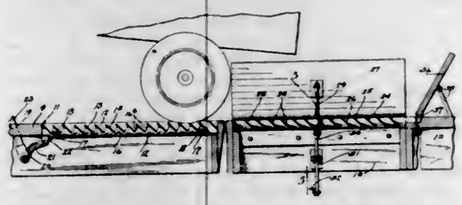
1. The method of packing doors, and the like, which consists in providing two main blanks, each of a length approximating the length of the doors to be included in a package and of a width exceeding the combined width of the widest door of a series and the depth of a package to contain the maximum number of doors of that series to be included, in creasing each blank to provide a plurality of panels running the length of the blank, one panel of the width of the doors to be included in a package, one, of the depth of the package, and a third panel to close one margin of the package, in wrapping said blanks about the package of doors in overlapped relation, in then closing each end of the package by a strip which is wrapped about the said end and overlapped upon itself, said strip being overlapped on one side on the end of the main blanks and on the other side extending beyond the end of the package, and in then slitting said strip beyond the doors, folding the severed parts of said strip into overlapping relation against the ends of the doors and securing them in such overlapped relation against the ends of the package of doors.

1,676,305. PAPER MAKING. ROY VICTOR WELDON, Millinocket, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed June 10, 1927. Serial No. 197,955. 15 Claims. (Cl. 34—48.)



1. The method of guiding the paper web of a paper machine into the carrier ropes of the drying rolls which

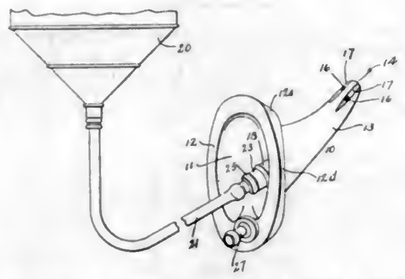
consists in directing the web to move toward the ropes and mainly at one side thereof, and deflecting the web in front of the ropes laterally toward the ropes by a blast of



air directed onto the web in front of the ropes at an angle to the path of movement thereof and toward the ropes.

1,676,306. FRUIT-CLEANING APPARATUS. EDWARD A. WHITE, Lewiston, Idaho. Filed Oct. 15, 1926. Serial No. 141,746. 3 Claims. (Cl. 146—202.)

1. A fruit cleaning machine, comprising, a shell having an interior fruit cleaning surface, and a spiral feeder therein having peripherally disposed convolutions axially open to permit the fruit entities to project radially into the interior of said spiral feeder while the entities are being advanced thereby.



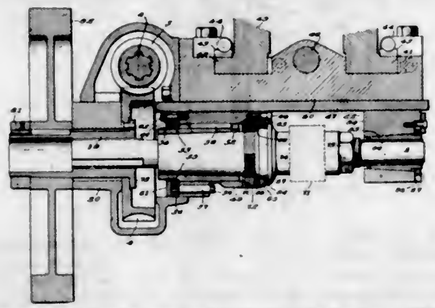
1,676,307. GRATE FOR DUMP PITS. AUGUST P. WINTER, Minneapolis, Minn., assignor, by mesne assignments, to Samuel C. Clow, Minneapolis, Minn. Filed Mar. 8, 1926. Serial No. 93,048. 6 Claims. (Cl. 214—49.)

1. The combination with a dumping platform having a pit opening, of a grate mounted in said opening and including grate slats mounted in said opening and movable from substantially horizontal positions in which they close said opening into oblique positions in which they open the same, said slats having pivot-forming trunnions located at the extreme edges thereof that are uppermost when said slats are in oblique positions.

1,676,308. SANITARY SYRINGE NOZZLE. SIDNEY C. WOOD, Brooklyn, N. Y., assignor of one-half to Wallace E. J. Collins, Huntington, Long Island, N. Y. Filed Apr. 22, 1926. Serial No. 103,776. 2 Claims. (Cl. 128—241.)

1. The herein described douche comprising a nozzle, and means including a base flange projecting from and surrounding said nozzle, the flange being arranged to seal an organ into which the nozzle is inserted, the flange being provided for this purpose with an annular channel on that side of the flange nearest the nozzle, the outer edge of the channel constituting an annular sealing lip projecting generally toward the nozzle for effective sealing

of the organ as aforesaid, said flange being of relatively considerable thickness for the sake of requisite stiffness, and having an edge surface of substantially frusto-conical form, the smaller base whereof is on that side of the flange nearest the nozzle, the face of the flange remote from said nozzzle providing an acuate angle sealing edge.

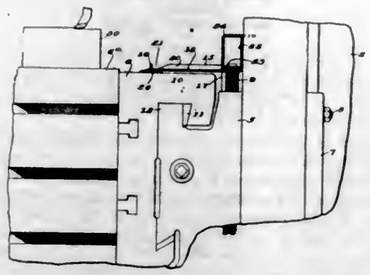


1,676,309. ANTISEPTIC PREPARATION. JOHN H. WRIGHT, Larchmont, N. Y., assignor to Zonite Products Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 19, 1926. Serial No. 89,291. 11 Claims. (Cl. 167—9.)

1. A stable preparation including water, a chlorine-yielding substance, a stearate, and a substantial excess of stearic acid.

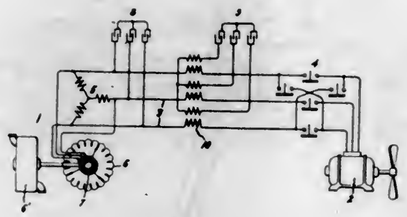
9. A stable ointment including water, an organic chlorine-yielding substance, a salt of a saturated fatty acid, an excess of a fatty acid which is nearly insoluble in water, and an aromatic substance inert with respect to the chlorine-yielding substance.

10. A substantially stable chlorine composition of the character described comprising an active chlorine-yielding material and cineol in a form adapted to mask the chlorine odor thereof.



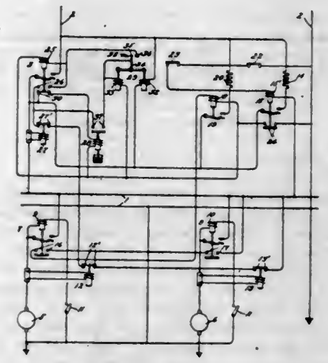
1,676,310. ADJUSTABLE SPINDLE BEARING FOR HOBBING MACHINES. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Mar. 13, 1925. Serial No. 15,218. 28 Claims. (Cl. 90—4.)

1. In a hobbing machine, the combination comprising a cutter spindle having a cutter mounted thereon; a bearing for said cutter spindle; a manual control for translating said bearing; a work spindle rotated in timed relation to the rotation of said cutter spindle; a bearing for supporting said work spindle; adjustable means for restricting the end play of the cutter spindle for preventing longitudinal movement thereof with respect to the bearing for the cutter spindle; means other than said adjustable means for varying the diametral fit of the bearing with the cutter spindle; and other means for varying the fit of the work spindle bearing with the work spindle.



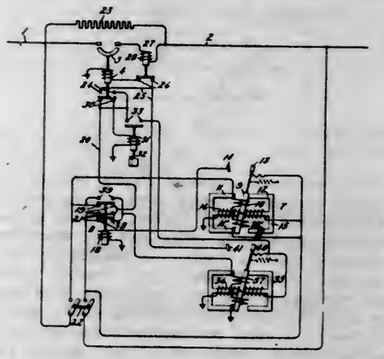
16. A machine-tool combining a cutter spindle having a cutter mounted thereon; a work spindle rotated in timed relation to the rotation of said cutter spindle; a bearing for said work spindle; said bearing having a non-rotatable bushing provided with a conical surface for engaging the work spindle; means comprising an annular member threadedly connected to said bushing for translating it to regulate the diametral fit of the bearing with the work spindle; and means comprising a second annular member threadably connected to the work spindle and secured to the bearing for limiting the longitudinal movement of the work spindle with respect to its bearing.

1,676,311. CROSS-RAIL GUARD. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Mar. 27, 1925. Serial No. 18,785. 9 Claims. (Cl. 90—58.)



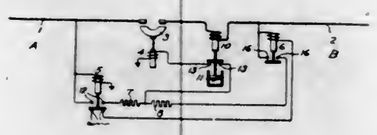
1. In a shaping machine having a cross head mounted on the main frame and a table saddle movable along the cross head, the combination comprising a guard member, located above the cross head; a raised flange formed on the rear edge of the guard member, said flange being positioned adjacent to the machine frame; and a leather strip secured to the front lower surface of the guard member and engaging the top of the table saddle.

1,676,312. SYSTEM OF ELECTRIC SHIP PROPULSION. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 16, 1922. Serial No. 594,754. 5 Claims. (Cl. 172—8.)



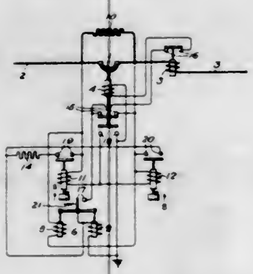
1. An electric ship propulsion system comprising a double synchronous generator, static condensers designed to excite said generator and connected in series therewith, and a motor arranged to drive a propeller.

1,676,313. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 27, 1922. Serial No. 571,183. 22 Claims. (Cl. 175—294.)



1. In an automatic reclosing circuit breaker system, a supply circuit, a load circuit, a circuit breaker for connecting said circuits together, closing means for said circuit breaker, means for connecting said circuits together when said circuit breaker is open, and a ratio balance relay operative in response to a predetermined ratio between the voltage of said supply circuit and the current supplied to said load circuit from said supply circuit when said circuit breaker is open to effect the operation of said closing means.

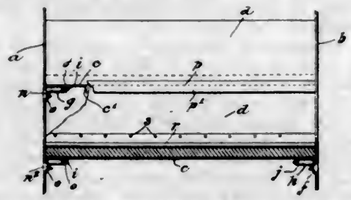
1,676,314. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 23, 1922, Serial No. 602,691. Renewed May 26, 1928. 12 Claims. (Cl. 175—294.)



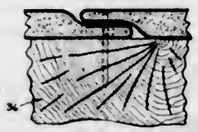
1. In an automatic reclosing circuit breaker system in which two sections of an electric system are arranged to be connected together by means of a circuit breaker, the combination of a coil adapted when energized to effect the closing of said circuit breaker, two circuits for said coil, means arranged to be operated in accordance with the relative voltages across said sections when said circuit breaker is open for selectively controlling said circuits, and reclosing means responsive to a predetermined load condition of the section having the lower voltage for controlling the circuits of said coil.

1,676,315. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 3, 1923, Serial No. 666,421. Renewed May 26, 1928. 14 Claims. (Cl. 175—294.)

1. In an automatic reclosing circuit breaker system, two electric circuits adapted to be energized independently of each other, a circuit breaker arranged to connect said circuits together, a closing coil for said circuit breaker, means responsive to a predetermined voltage across one of said electric circuits for completing an energizing circuit for said closing coil across said one of said electric circuits, another energizing circuit for said closing coil arranged to be completed across the other of said electric circuits, and a current limiting device in one of the circuits of said closing coil arranged to be connected in a shunt circuit around said circuit breaker to limit the flow of current between said electric circuits only when both of said energizing circuits are simultaneously completed.



1,676,316. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 25, 1924, Serial No. 733,918. Renewed Feb. 8, 1927. 14 Claims. (Cl. 175—294.)



1. In an automatic reclosing circuit breaker system, two electric circuits, a circuit breaker arranged to connect said circuits together, current limiting means arranged to be connected in series with said circuits when said circuit breaker is open, a reclosing relay for controlling the closing of said circuit breaker having a voltage winding, means for connecting said winding to one point on said current limiting means while said circuit breaker is open, and means responsive to a predetermined voltage across one of said electric circuits for connecting said winding to another point on said current limiting means while said circuit breaker is open.

1,676,317. METALLIC STAIRWAY. GEORGE L. BENNETT, Cleveland, Ohio. Filed Feb. 1, 1926. Serial No. 85,105. 8 Claims. (Cl. 189—43.)

1. A metallic stairway embodying therein metallic stringers, a sequence of step units, each unit being of sheet metal so formed as to include a tread section and a riser section integral therewith, each tread section having a downwardly presented channel adapted to span the edge of the riser section of an adjoining unit, means adapted to receive a bolt, carried by and located inwardly of said stringers and upon the lower face of the tread section of each unit respectively and bolts engaging said means respectively, whereby said step units are supported from said stringers, and said stringers and said units may be drawn tightly together.

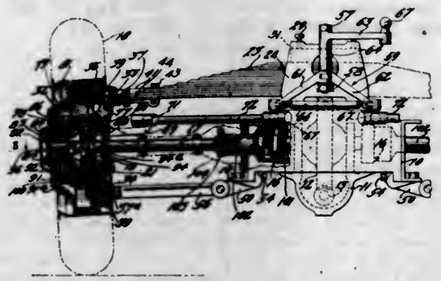
1,676,318. APPARATUS FOR MAKING LAP-EDGED PLASTER SHEATHING BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 20, 1922. Serial No. 545,231. 3 Claims. (Cl. 154—1.)

1. In a machine for producing lap edged plaster board comprising the combination of means for advancing a cover sheet with means for turning up the edges thereof, means depositing a plastic material thereon between the turned up edges, means for folding in the turned up edges upon the plastic material and depressing the folded in portions approximately one half the normal thickness of the finished board, means for applying a second cover sheet, and means for applying pressure thereon to bond the cover sheets and plastic material.

1,676,319. DOVETAILED STAVE FOR BARRELS AND CASKS. ERIK AUGUST BOLINDER, Stockholm, Sweden. Filed Aug. 21, 1925, Serial No. 51,715, and in Sweden Aug. 21, 1924. 1 Claim. (Cl. 217—88.)

A dove-tailed stave for producing barrels and casks, characterized by the fact that the parts of the stave joints decrease in width along the stave, from the one end of the stave toward the other, for the purpose of facilitating the sliding of the parts of the joint together.

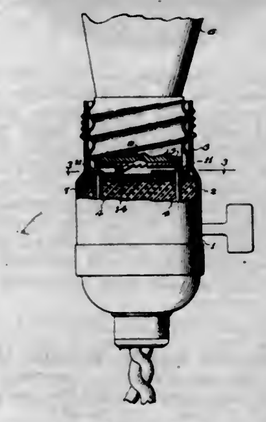
1,676,320. BOILER BOTTOM. WILLIAM JAMES BURROUGHES, London, England, assignor of one-third to Frank A. Roden and one-third to Charles Taylor, Santa Monica, Calif. Filed Apr. 4, 1927. Serial No. 180,887. 1 Claim. (Cl. 53—9.)



A utensil for heating liquids and the like comprising in combination a body portion and a bottom therefor, said bottom being formed of a single sheet of metal having a depending apron surrounding the same, and provided with a plurality of apertures located a substantial distance from said bottom, whereby a heat retarding zone is formed by said bottom and said apron above said apertures, an annular flange and shoulder adjacent the upper edge of the apron for the seating of the lower edge of the body portion, said bottom having a plurality of downwardly extending cup shaped portions provided with inclined side walls and flat bottoms, said flat bottoms being spaced above a plane passing through the lower edge of said apron.

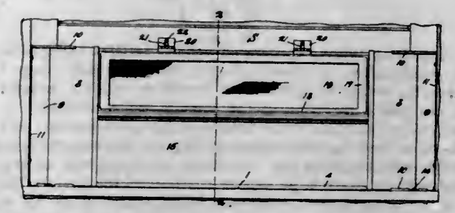
1,676,321. SECRECY SIGNALING SYSTEM. ALLEN CARPE, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 12, 1926. Serial No. 128,790. 13 Claims. (Cl. 178—22.)

1. In a signaling system the method of obtaining secrecy, which comprises breaking the signal into elements, displacing alternate elements into one frequency band, displacing the remaining elements into another frequency band, superposing these on a transmission channel, receiving and separating the two portions, and restoring the elements to their normal frequency and normal time relation.



1,676,322. DRIVING MECHANISM. ROLAND CHILTON, Keyport, N. J., assignor, by mesne assignments, to Healey-Aeromarine Bus Company, Inc., a Corporation of New York. Filed Jan. 2, 1925. Serial No. 181. 20 Claims. (Cl. 180—48.)

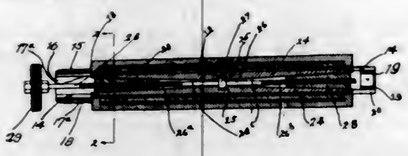
1. In a vehicle having pivotally mounted wheels for steering so organized that when negotiating a curve the inner wheel is turned through a greater angle than the outer wheel, the combination of universal joint driving means for each wheel, and a lateral drive shaft for each wheel normally so disposed in plan aspect as to normally be midway between the extreme steered positions of the associated wheel axis.



6. A universal joint comprising, a drive shaft, cross pins thereon affording a first axis or orientation, an intermediate member pivoted on the cross pins, aligned trunnions on the intermediate member affording a second axis of orientation normal to the first said axis, blocks on said trunnions, a driven member provided with slots to permit of oscillation of said blocks and affording a third axis of orientation coaxial with the first.

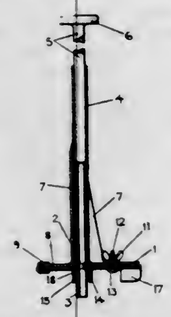
1,676,323. ELECTRIC-LAMP LOCK. SELMER A. CLEMETSON and OLUF H. RASMUSSEN, Iron Mountain, Mich. Filed May 21, 1927. Serial No. 193,331. 3 Claims. (Cl. 176—31.)

1. The combination with a lamp socket including the usual shell, the insulating body therein, a threaded collar, and screws connecting the threaded collar to the body, of a flat split ring lock member placed against the bottom of the said collar and having portions cut away at diametrically opposite points to receive the said screws, and oblong washers mounted upon the headed ends of the screws and confined between the heads of the screws and the said lock member and serving to reinforce the latter at the cut away portions receiving the said screws.



1,676,324. VENTILATOR. JAMES M. COUGHLIN, Wilkes-Barre, Pa. Filed Jan. 10, 1927. Serial No. 160,213. 1 Claim. (Cl. 98—99.)

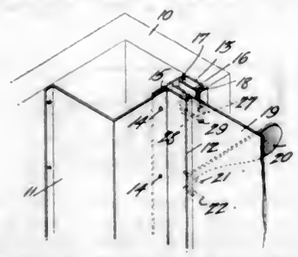
The combination with a window screen and a window sash, of means exposed entirely outside of the path of the sash for controlling the flow of air under the sash when open, said means including a base plate mounted on the window sill of the frame, parallel walls upstanding from the base plate, adjustable means extending laterally beyond the walls for attachment to the sides of the window frame, a plate detachably and hingedly connected to the base plate and having its sides in sliding engagement with the upstanding walls, a frame hingedly connected to the hinged plate and having its



sides slidably engaging the upstanding walls, a screen fabric carried by the frame, and means hinged to the frame for attachment to the bottom rail of the sash, said sash being adapted to close onto the sill and to move along the outer edges of the upstanding walls to open and to closed position, said plate and frame being adapted to fold and unfold during the closing and opening of the sash.

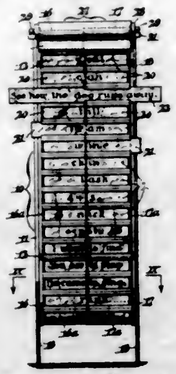
1,676,325. MANDREL. WILLIAM S. DOLL, Akron, Ohio. Filed Aug. 16, 1922. Serial No. 582,170. 3 Claims. (Cl. 18—45.)

1. In a mandrel of the class described, like side members each corresponding to a longitudinally extending portion of a cylinder, said side members being oppositely positioned with the opposing edges thereof in parallel spaced relation, a cylindrical collar, the similar ends of said side members being positioned in said collar and being loosely retained therein, means to loosely retain the opposite ends of said members in assembled relation, wedge members positioned between the opposing edges of said side members, said wedge members comprising longitudinally extending portions of the same cylinder, and means to simultaneously move said wedge members radially of the mandrel.



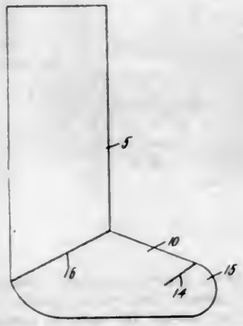
1,676,326. TOOL FOR JOINING WOODEN ARTICLES. AXEL CARL GUNNAR DREILICK, Sundsvall, Sweden. Filed Sept. 17, 1926, Serial No. 136,155, and in Sweden May 4, 1926. 1 Claim. (Cl. 1—47.)

A tool for joining corners of wooden articles comprising in combination a sleeve shaped to guide bar shaped fastening members provided to be driven into the corners in the length direction of the joint, a set reciprocable in said sleeve to force said fastening members out of said sleeve, a base for said sleeve having an aperture through which said members can be driven out from said sleeve, and lugs to control the proper position of the tool in the corner to be joined, said lugs being shiftable so as to make the tool suit left hand corners as well as right hand corners.



1,676,327. DEVICE FOR PORCH CURTAINS. NORVAL MERRITT FAULDS, Clearwater, Fla. Filed July 21, 1927. Serial No. 207,449. 1 Claim. (Cl. 156—26.)

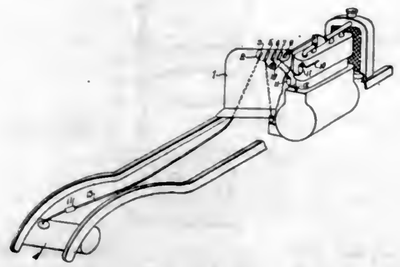
In a porch curtain or other curtain, a plate having a portion adapted to coact with a clamping element, the said portion having a curtain engaging flange, a clamping element movable with relation to the said flange, the said clamping element comprising a plate having side flanges with apertures and recesses, means for moving the said clamping element comprising stationary pivots, pivots on the clamping element arranged in pairs, and rigid



elements applied to the pivots and operative to swingingly support the clamping element, including means for imparting motion to said clamping element.

1,676,328. EDUCATIONAL CHART. EDNA F. FELTY, Philadelphia, Pa. Filed June 30, 1925, Serial No. 40,506. Renewed Nov. 30, 1927. 11 Claims. (Cl. 35—9.)

1. An educational chart comprising a number of independently-shiftable juxtapositioned display belts with their contiguous edges overlapping to avoid visibly-prominent breaks in the continuity of the joint display surface afforded by said belts.

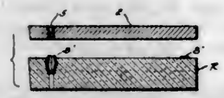


1,676,329. LINING FOR RUBBER BOOTS AND METHOD OF MANUFACTURING. ALFRED A. GLIDDEN, Watertown, and FRANK R. MCKENZIE, Brighton, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 26, 1927. Serial No. 208,567. 4 Claims. (Cl. 36—55.)

1. A fabric lining for rubber boots comprising a tubular leg section, and a tapered foot section closed at one end

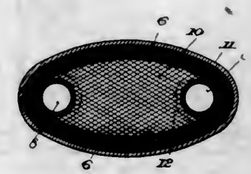
to form a toe by an inclined seam extending partly across the foot section on the upper side thereof, the foot section being sewed at its rear end to the lower end of said leg section.

1,676,330. VALVE. REUBEN HILL, West Hartford, Conn., assignor to The Grolan Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 14, 1925. Serial No. 69,186. 2 Claims. (Cl. 137—111.)



1. In a valve, a two-part valve chamber, each part of said chamber having a passageway, a valve member adapted to alternately seal said passageways and means for guiding said valve member in its movement from one position to the other, said guiding means consisting of a tubular member fitting closely within one of said passageways, the close fit of said tubular member being such as to practically seal one passageway from the other, preventing the entrance of the contents of one passageway into the other passageway.

1,676,331. HEAT RESISTANT BOROSILICATE GLASS. LUDWIG HOCHSTEIN, Wandsbek, Germany, assignor to E. T. Brown, Thomaston, Me. Filed Apr. 10, 1925, Serial No. 22,196, and in Germany Mar. 15, 1925. 10 Claims. (Cl. 106—36.)

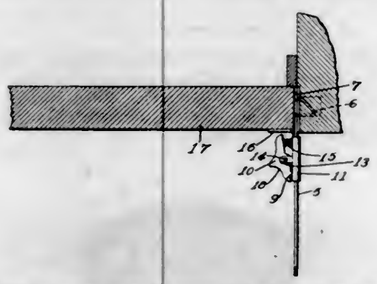


2. A glass composed of silica, boron oxide, alumina, and zirconia, whose coefficient of expansion is approximately 0.0000017.

1,676,332. RUBBER HEEL. EDWARD HOFFMAN, St. Louis, Mo. Filed Oct. 13, 1926. Serial No. 141,259. 1 Claim. (Cl. 36—36.)

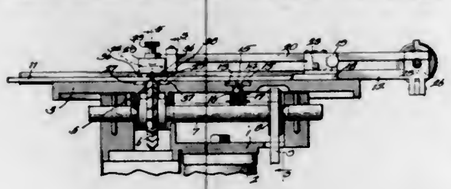
In combination, a leather lift adapted to be affixed to a shoe and provided with apertures extending therethrough, pins insertable through said apertures from the upper side before said lift is affixed to the shoe, said pins having a head end terminating within the apertures above the bottom surface of the lift, a rubber heel having expansible washers therein and projecting above the heel, said washers being reduced in radial cross-section toward both ends so as to securely anchor them against vertical movement in both directions, and the lower ends of said washers terminating above the tread surface of said heel, whereby when the heel is pressed against said lift, said washers will be received within said apertures of the lift to receive the heads of said pins, and thereby pull said heel up tightly against said lift, the major portion of the washers forming a part of the tread surface of the heel after a predetermined amount of wear of the latter, so that the entire heel can be worn down adjacent the washer without exposing the head of the pin to wear.

1,676,333. RESILIENT INTERMEDIATE MEMBER FOR JOINTED COUPLINGS AND THE LIKE. HANS KATTWINKEL, Coswig, Germany. Filed Nov. 3, 1924, Serial No. 747,680, and in Germany Nov. 3, 1923. 9 Claims. (Cl. 64—96.)



1. A resilient tensile force transmitting member, more particularly for the universal joints in automobiles and the like, comprising a body capable of yielding resiliently to pressure, the said body having a bulging outline at least on two opposite sides, a tensile member enclosing said body at least on two bulged sides and means in bearing contact with said tensile member for attaching external connecting means to said tensile member.

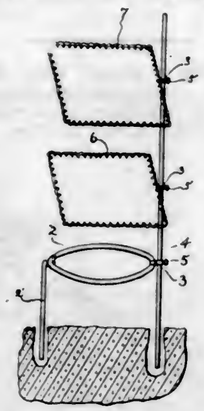
1,676,334. SPINNING APPARATUS. HUBERT KEMPF, Barmen, Germany, assignor, by mesne assignments, to American Bemberg Corporation, a Corporation of Delaware. Filed Feb. 6, 1925, Serial No. 7,368, and in Germany Feb. 18, 1924. 3 Claims. (Cl. 18—8.)



1. In a spinning apparatus for the manufacture of artificial silk by the stretch spinning process, the combination of a cylindrical vessel; a nozzle discharging into the upper end thereof; a spinning funnel arranged within the vessel, the upper edge whereof terminates in approximate alignment with the nozzle with the wall of the funnel spaced from that of the vessel; and means for admitting precipitating liquid to the vessel outside of the spinning funnel and below the level of its upper end and for causing the entire stream of precipitating liquid to pass through said funnel, whereby the liquid flowing inwardly over the upper edge of the funnel will follow, in the main, the inner face of the funnel as it passes downwardly leaving a relatively slow downwardly moving body of the liquid directly below and in line with the discharge of the nozzle.

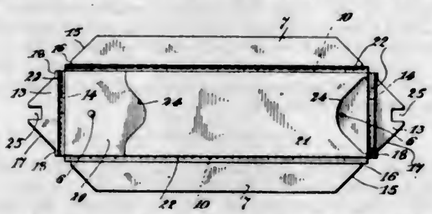
1,676,335. DOOR FASTENER. JAMES M. KNIGHT, San Antonio, Tex. Filed Nov. 8, 1921, Serial No. 513,756. Renewed Feb. 21, 1928. 1 Claim. (Cl. 292—296.)

A door securing device including a body portion formed of a length of sheet metal, said body portion having an offset portion adjacent to one end thereof and having a flange at its end adjacent to the offset portion, said offset portion adapted to be positioned within the keeper of a latch, the flange adapted to engage the door frame adjacent to the keeper opening, said body portion having a plurality of spaced openings, a movable section slidable on the body portion and having a flange at one end thereof and disposed at right angles with respect to the body portion and adapted to engage a door, ears stamped from the movable section, said movable section having an opening, a latch member pivotally supported between the ears and having a pin adapted to extend through the opening of the movable member and into an opening of the body portion to lock the movable member against movement.



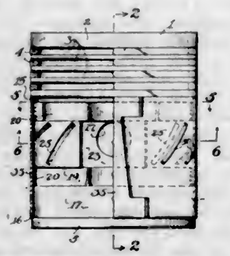
1,676,336. BEVELING MACHINE. WILLIAM J. KNOLL, Chicago, Ill., assignor to H. B. Rouse & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1926. Serial No. 126,561. 1 Claim. (Cl. 29—69.)

The combination with a work table having a groove in its top side; of a cutting wheel having symmetrically related beveling faces sloping from the crown thereof and projecting through the bottom of said groove; a work positioning carriage movable along said groove; a gauge stop upon said carriage; two clamping jaws upon the carriage and received in said groove, the tops of these jaws supporting the work and being substantially flush with the top of the work table, said jaws being spaced apart to receive the wheel therebetween, the opposed surfaces of these jaws converging toward a line that lies in a plane that is substantially midway between the zones of the beveling faces of said wheel; and two adjustable clamping jaws also upon the carriage and respectively complemental to the aforesaid jaws and disposed above the same.



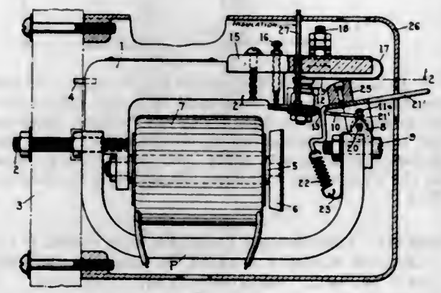
1,676,337. CARNATION-PLANT HOLDER. FREDERICK E. KRUSE, Binghamton, N. Y. Filed June 30, 1923. Serial No. 648,768. 1 Claim. (Cl. 47—47.)

In a plant support an open frame adapted to be disposed in a substantially horizontal plane and provided with a downwardly bent portion penetrating the ground, an eye on the frame, a standard passing through the eye and adapted to be supported in the ground, an additional frame provided with a sleeve to receive the standard, means for adjustably securing the sleeve on the standard and a swivel connection between the said additional



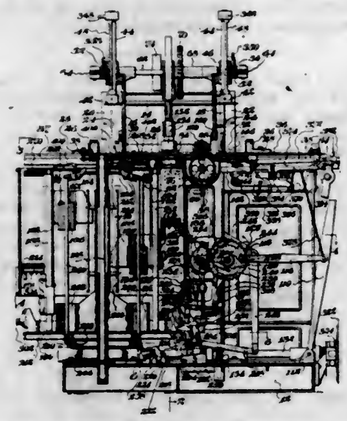
frame and the sleeve to permit said additional frame to assume various angles with respect to the open horizontal frame.

1,676,338. ASSEMBLING DEVICE FOR CARDCASES. CHARLES L'ENFANT, New York, N. Y. Filed June 17, 1927. Serial No. 199,621. 3 Claims. (Cl. 154—41.)



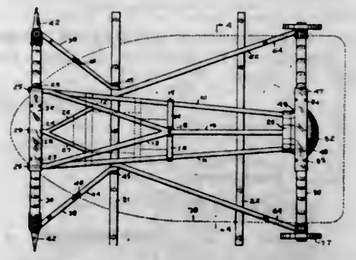
1. An assembling device of the character described comprising a base member upon the upper surface of which superimposed flexible elements are adapted to be arranged, with the marginal edge portions of the lower flexible element projecting beyond the marginal edges of the other flexible element, and manually adjustable presser members hingedly connected to the marginal edges of said base and adapted to be moved inwardly and downwardly into parallel relation with the upper surface of the base to thereby fold said projecting marginal edge portions of the lower flexible element inwardly upon the marginal edges of the other flexible element, said presser members initially having their work engaging surfaces in the plane of the upper surface of the base member.

1,676,339. PISTON. THOMAS J. LEVEY, Baltimore, Md. Filed Apr. 13, 1926. Serial No. 101,757. 5 Claims (74—108.)



1. In a reciprocating engine the combination of a hollow cylinder adapted to receive a lubricant on the inner wall thereof from a source of supply; a piston provided with a head, a main body portion and a wrist-pin bore disposed in said cylinder; means associated with said piston adapted to circumferentially contact with said cylinder; relatively spaced means between said contact means and said piston to space the same during its reciprocations from said cylinder; and means in said contact means to transmit said lubricant to said wrist-pin bore and said spacing means, while spreading the same over the surfaces of said contact means and said cylinder wall.

1,676,340. RELAY. JOHN C. LINDNER, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Apr. 30, 1923. Serial No. 635,666. 7 Claims. (Cl. 200—93.)

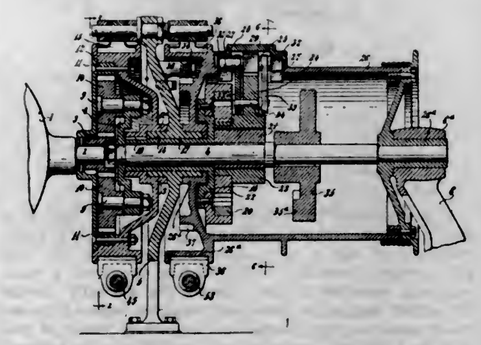


1. A protective device for safeguarding electric interlocking systems comprising, an armature, a contact fastened to said armature, a stationary contact normally in contact with said first mentioned contact, electro-magnetic means for controlling said armature, and manually operable means for restoring said armature to its normal position, said restoring means when operated to move the armature to its normal position acting to keep the contacts open, whereby the contacts are not reclosed to circuit closing position until the restoring means is moved from its restoring position.

1,676,341. BLANK-ASSEMBLING MACHINE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 19, 1920. Serial No. 425,161. 13 Claims. (Cl. 12—20.)

1. A blank assembling machine comprising, in combination, power operated mechanism for assembling pieces of material into blanks, and a plurality of holders each constructed and arranged to receive directly from said assembling mechanism a plurality of said blanks piled one upon another.

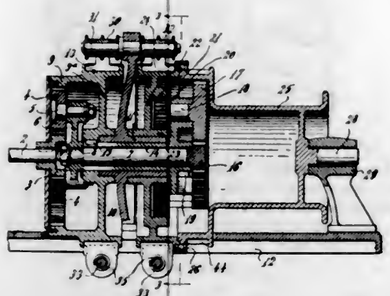
1,676,342. VEHICLE FRAME. DONALD GORDON MACKENZIE, Montreal, Quebec, Canada. Filed Feb. 8, 1926. Serial No. 86,703. 12 Claims. (Cl. 280—106.)



1. In a vehicle frame, a pyramidical frame work, body stringers extending transversely under and beyond said frame work and rigidly secured thereto, front and rear supports for said farme work and torque rods secured to said stringers adjacent to said frame and extending therefrom to the ends of said supports.

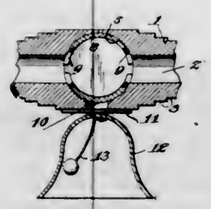
1,676,343. RAILWAY CAR. WILLIAM O. MCKAMEY, Knoxville, Tenn. Filed Jan. 8, 1926. Serial No. 80,062. 11 Claims. (Cl. 105—364.)

1. In a structure of the kind described, the combination of a car body having side sills, two pairs of stub axles supported by said sills and carrying said body, wheels carrying said axles, a hinged rod between and parallel to the pairs of stub axles, a bottom door hinged by one edge to said rod and extending thence rearward under the rear axles, and mechanism adapted to operate to secure and support the opposite edge of said door when the latter is forced upward into the closed position, substantially as described.



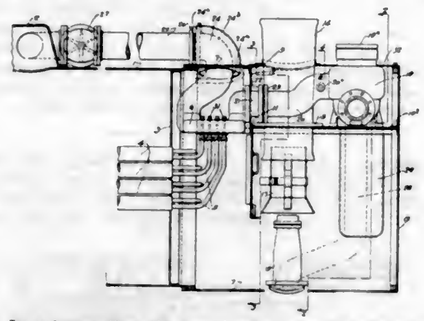
1,676,344. HOISTING APPARATUS. JOHN NEWMANN, Glendale, N. Y. Filed Aug. 17, 1926. Serial No. 129,784. 7 Claims. (Cl. 74—34.)

1. An apparatus of the character set forth comprising a planetary transmission mechanism having a drive pinion, an internal gear, an intermediate pinion, a driven



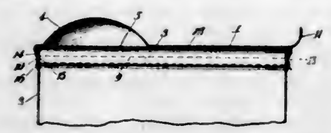
shaft connected with the intermediate pinion and brake means for said internal gear, an eccentric operative by said shaft, a gear operative by said eccentric, a third gear cooperative with the last named gear, said brake means retarding rotation of the third named gear, a drum, and means cooperative with the second named gear and the drum for rotating it.

1,676,345. TRANSMISSION MECHANISM. JOHN NEWMANN, Glendale, N. Y. Filed Oct. 26, 1926. Serial No. 144,236. 4 Claims. (Cl. 74—34.)



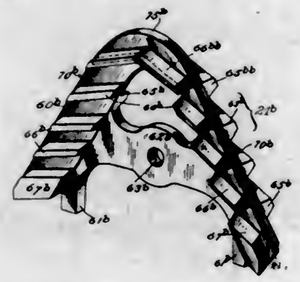
1. An apparatus of the character set forth comprising a planetary transmission mechanism including an internal gear and having a driven shaft concentric with said gear and brake means for said internal gear, a second planetary transmission mechanism including an internal gear and having one of its gears driven by said shaft for rotating its internal gear, part of said second planetary transmission being controlled with the first named internal gear by said brake means, driven means operative by the internal gear of the second named planetary transmission mechanism, and brake means for retarding rotation of the said driven means.

1,676,346. ARRANGEMENT FOR THE BETTER EXHAUST AND USE OF THE EXPLOSION OF THE MOTOR GAS IN ORDER TO OPERATE AN ALARM BELL. GARIBALDI NOCITO, Rosario, Argentina. Filed Feb. 18, 1926, Serial No. 89,240, and in Argentina Dec. 1, 1925. 2 Claims. (Cl. 116—151.)



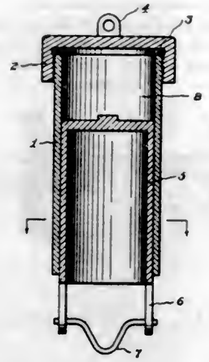
1. A signalling attachment for the exhaust pipe of a motor vehicle, including a casing provided with a longitudinal bore and a valve chamber intersecting the bore and having a secondary outlet leading therefrom, a valve rotatably mounted in the chamber for partially closing the outlet end of the main bore to allow some of the exhaust gases to pass through the secondary outlet, a diaphragm yieldably connected to the casing and positioned over the secondary outlet, and a signal carried by the diaphragm and adapted to be actuated by the vibration of said diaphragm.

1,676,347. LOCOMOTIVE FRONT END. HENRY B. OATLEY, Flushing, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Oct. 19, 1925. Serial No. 63,565. 5 Claims. (Cl. 105—37.)



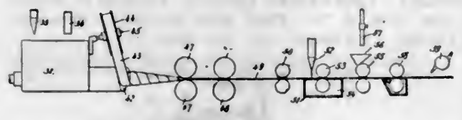
1. In a locomotive, the combination of a circular front flue sheet; a generally cylindrical smokebox sheet extending forward from it and having its forward upper portion cut away leaving two horizontal edges; a flat sheet extending between said edges; and closure means engaging the front edges of the flat sheet and of the smokebox sheet.

1,676,348. DISPENSING CLOSURE FOR CONTAINERS. MARGARET KATHRYN O'LEARY, Fordham, N. Y. Filed Mar. 14, 1925. Serial No. 15,437. 3 Claims. (Cl. 221—104.)



1. A dispensing closure for a container comprising an inner member adapted to be retained on the container and having an opening communicating with the inside of the container, an outer member movably retained on the inner member, a measuring device connected to said outer member normally covering said opening in a position to be filled therethrough with the contents of the container and movable to a position for discharging the material in the device while the opening is closed, a stop on said outer member and a flexible tab on said inner member adapted to lie either in nonengaging position or in position to engage the stop to limit the movement of the outer member and measuring device.

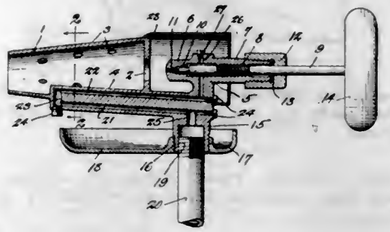
1,676,349. FURNACE GRATE. ERNEST B. PRIEBE, Inwood, N. Y. Filed Sept. 25, 1922. Serial No. 590,446. 4 Claims. (Cl. 110—44.)



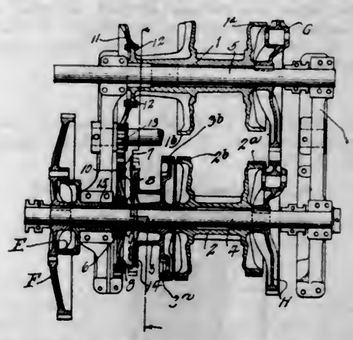
3. In a multiple retort progressive feed furnace having longitudinal air boxes between which the retorts are formed, a system of twyer structures carried upon the intermediate air boxes, and upon each extreme air box adjacent the furnace wall a twyer structure substantially higher than the first mentioned structures and comprising upstanding twyer bars having lateral ribs extending between ribs of adjacent bars to form numerous air apertures, and formed with projecting fins acting to deflect the advancing fuel from the apertures.

1,676,350. ADJUSTABLE PNEUMATIC SPRING. SVERRE QUISLING, Philadelphia, Pa. Filed May 2, 1924. Serial No. 710,653. 1 Claim. (Cl. 267—65.)

A pneumatic spring device comprising a body portion of cylindrical formation, a cap threadedly secured to the top of said body portion, a gasket between the cap and top edge of the body portion to form a fluid-tight connection, a piston movable in said body portion, an eyelet rising from the top of the cap for fastening an object thereto, diametrically oppositely disposed arms depending from the lower end of the cylinder, and a substantially U-shaped rod having its ends bent in opposed relation with respect to each other and secured to the arms adjacent their lower ends.



1,676,351. PREPARED ROOFING AND METHOD OF MAKING. THOMAS ROBINSON, New York, N. Y., assignor to Lancaster Asphalt, Inc. Filed Apr. 14, 1926. Serial No. 101,877. 33 Claims. (Cl. 154—2.)

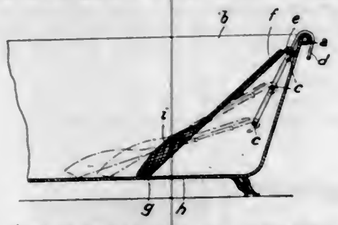


33. A roofing element which comprises a core of oblong shape having a greater thickness at one longitudinal edge than at the other, a continuous wrapping wound about the core in a number of convolutions which cover both faces of the core and extend around both longitudinal edges, cut-out portions forming notches in the longitudinal edge of greater thickness, a coating of sealing material applied over the wrapping, and a layer of granular material forming a wear surface on one face of the wrapped core, this material being affixed to the core by the sealing layer.

1,676,352. BLOWTORCH BURNER. CURTIS RUECKERT, Chicago, Ill., assignor to Mathias Klein & Sons, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1925, Serial No. 8,957. Renewed May 25, 1928. 2 Claims. (Cl. 158—33.)

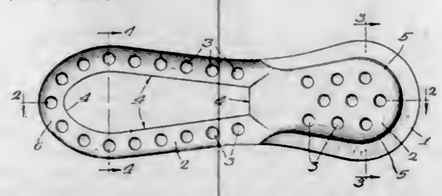
1. A torch of the character set forth, comprising a combustion head which is open at one end and has an integrally formed closure at the opposite end with an inlet aperture therethrough, an elongated generator body formed integrally with said head and projecting for some distance beyond the rear end of the head, said body being of relatively uniform cross section and having a substantial portion thereof projecting into the combustion chamber, said generator body having an extension at its rear end for connection with a supply pipe and having a second substantially T-shaped extension with its upper portion in alignment with said inlet aperture, said generator body having two substantially parallel bores extending inwardly from the rear end, screw plugs for closing the outer ends of the bores, a connecting bore for connecting the inner ends of said bores, a screw plug for closing the outer end of said connecting bore, an inlet port in the first named extension leading to the lower one of the parallel bores, an outlet port leading from the upper parallel bore through the T-shaped projection, a screw plug for closing the upper end of said last named bore, said T-shaped projection also having a longitudinal passageway with an outlet orifice adjacent to said inlet opening, and a valve for controlling the outlet orifice.

1,676,353. CRANE AND SHOVEL CONVERTIBLE OPERATING MECHANISM. LESLIE A. RUSSELL, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Dec. 3, 1925. Serial No. 72,925. 14 Claims. (Cl. 214—132.)



1. In operating mechanism for crane and shovel type machines, in combination, main drums for actuating the holding and closing lines of a clam-shell crane, a boom hoist drum, and clutch means for the boom hoist drum for controlling the raising and lowering of the boom of such a crane, and means for establishing alternative cooperation between the boom hoist drum clutch means and one of the main drums or the boom hoist drum when the said main drums are being used for cooperation with a shovel dipper.

1,676,354. BACK SUPPORT FOR BATHS. ANNA ELISE SACHSSE, Dresden-Blasewitz, Germany. Filed Mar. 24, 1927, Serial No. 178,055, and in Germany Jan. 4, 1927. 1 Claim. (Cl. 4—185.)

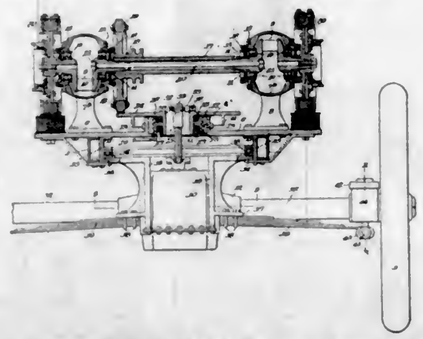


A back support for baths and tubs, comprising in combination a holder consisting of a frame hook-shaped at the outer end and having rungs in the lower end, and a

board fixed on a support having hooks on the upper end designed to be hooked over one of said rungs, and a thickened lower portion of said board resting upon the

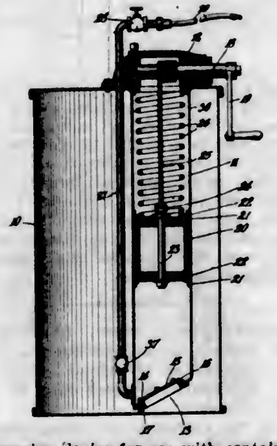
bottom of the bath and having a curved upper surface designed to fit into the small of the back of the bathing person.

1,676,355. INSOLE. PERRY SAPERSTON, Chicago, Ill. Filed Sept. 5, 1925. Serial No. 54,598. 1 Claim. (Cl. 36—71.)



An insole for shoes, normally flat on its entire upper surface, so that the entire upper surface of the insole is in the same plane, composed of flexible and resilient material adapted under foot pressure to conform to the foot and the shoe, comprising a rear portion transversely relatively thick at the edge and thin toward the middle and thereby adapted to roll up or rise at each side of the heel, by distortion thereof, and having a front portion transversely relatively thick at the middle and thin at the edges and thereby adapted, in effect, when the side edges are depressed by the weight of the foot, to rise at the transverse middle portion thereof to insure the transverse arch formation for the foot.

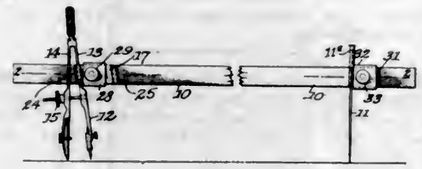
1,676,356. DISPLAY CABINET. MILTON C. SAPINSLEY, Providence, R. I. Filed May 2, 1924. Serial No. 710,502. 2 Claims. (Cl. 312—42.)



1. A display cabinet of the character described, comprising a supporting base having a spindle, a body journaled on the spindle and having opposed side walls at right angles to each other, said body having a bottom laterally projecting beyond the side walls and provided with notches medially with respect to each side wall, article containers of tray-like form covering the major portions of the side walls and having notched lower ends, the last-named notches being in register with the notches in the bottom, and a hood entirely surrounding the body with its corners angularly disposed and abutting the corners of the body, the portions of the hood between the angular corners being cut-away at their lower ends to provide slots adjacent to the bottom and merging into the notches.

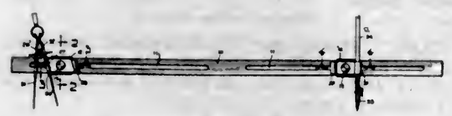
1,676,357. MOTOR VEHICLE. HARRY H. SCHIELER, New Meadows, Idaho, assignor of one-third to Charles E. Stoltz, Webster Groves, Mo. Filed Nov. 15, 1923. Serial No. 674,957. 27 Claims. (Cl. 180—52.)

1. A motor vehicle having in combination a frame, ground wheels, a plate on the frame adjacent the forward ground wheels and having an opening therethrough, two engines mounted on said plate at opposite sides of the opening therein, a sleeve connecting the crank shafts of the engines, a friction wheel mounted on and adjustable longitudinally of said sleeve, a friction disc positioned above said plate and having a hub portion extending through the plate opening, differential drive gearing supported by the frame below said plate and connected to the forward ground wheels, and a shaft extending through the opening in the engine plate and connecting said disc and differential gearing.



1,676,358. DISPENSING DEVICE. CHARLES R. SCHOTT, New York, N. Y. Filed Mar. 21, 1927. Serial No. 176,892. 2 Claims. (Cl. 221—80.)

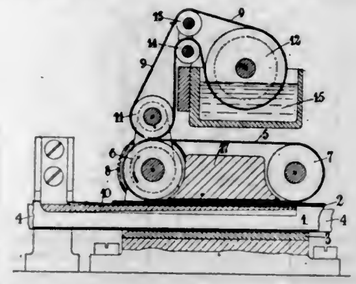
1. A dispensing device for use with containers in which lubricant is marketed, said device comprising a cylinder adapted to be inserted through the aperture provided in



one end of such container, said cylinder having its lower end terminating in an obliquely-arranged inlet flap valve, a head connected to said cylinder to rest on the end of said container to seal the same, a plunger slidably mounted in said cylinder, resilient means interposed between said plunger and said head, a delivery pipe leading from a point near the lower end of said cylinder and passing through said head, a valve in said delivery pipe, and means sealed in said head for moving said plunger in a direction to compress said resilient means.

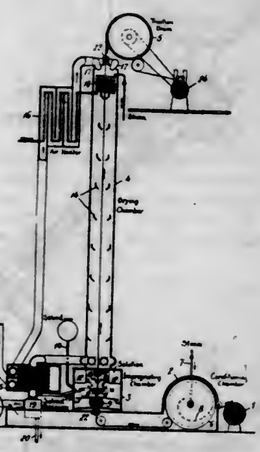
1,676,359. BEAM COMPASS. FRANK SCHWARTZ, New York, N. Y. Filed May 17, 1926. Serial No. 109,616. 3 Claims. (Cl. 33—158.)

1. In a beam compass, a beam, an engagement member comprising an integral blank having a medial body portion and crimped ends for selective accommodation thereunder and against the beam of instruments of a drawing set, and a clamping device for said member, said device comprising a sleeve element slidably engaging about the beam and adapted to accommodate said body portion between one side thereof and one side of the beam so as to hold and engage the instrument against the beam, and means for simultaneously securing said body portion to the clamping device and to the beam.



1,676,360. AUXILIARY BEAM-COMPASS KIT FOR DRAWING INSTRUMENTS. FRANK SCHWARTZ, New York, N. Y. Filed Oct. 30, 1926. Serial No. 145,112. 14 Claims. (Cl. 33—158.)

1. In a beam compass kit for use as an auxiliary to a set of drawing instruments, a beam, a pair of independent engagement members variably constructed and arranged to accommodate differing instruments, and a pair of clamping devices slidably adjustable along the beam, each of said devices being provided with means for interchangeably securing either of said members to the beam, whereby selected instruments may be variably associated with the beam to provide beam compasses of desired predetermined characteristics.

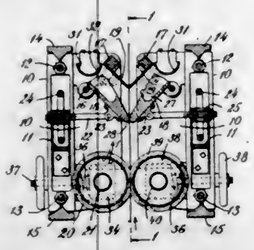


1,676,361. APPARATUS FOR PRESSING TOGETHER THE EDGES OF TUBES. IVAN ALEXANDROVIČ SEMENOV, Pilsen, Czechoslovakia. Original application filed Sept. 17, 1925, Serial No. 57,019, and in Germany Sept. 24, 1924. Divided and this application filed Sept. 7, 1926. Serial No. 134,118. 1 Claim. (Cl. 93—82.)

Apparatus for pressing together the edges that are to be stuck together in forming an uninterruptedly moving strip of paper into a tube, comprising a movable endless band adapted to apply pressure to said edges, means for slowly moving said endless band, and a movable moist

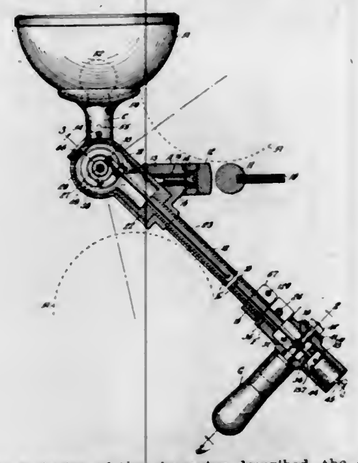
band in contact with said endless band, whereby any adhesive clinging to the said endless band is removed by the said moist band.

1,676,362. WATERPROOF FABRIC. LE ROY SEIDELL and GEORGE B. JACK, Jr., New York, N. Y., assignors to Jaton Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 25, 1924. Serial No. 695,039. 4 Claims. (Cl. 91—68.)



2. A process of making a flexible water proof fabric, comprising impregnating the fabric with a solvent for cellulose esters and then while still impregnated with the solvent impregnating it with a dilute solution containing an ether-soluble cellulose ester, a latent solvent therefor and a non-drying or semi-drying vegetable oil, said solution being of sufficiently low viscosity to coat and impregnate the individual fibres of the fabric without the formation of a thick relatively inflexible surface layer on the fabric and so that the impregnated fabric is substantially homogeneous with respect to the impregnating composition.

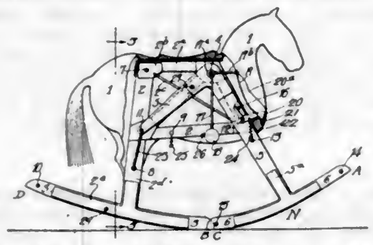
1,676,363. IMPREGNATING MACHINE AND PROCESS. LE ROY SEIDELL and GEORGE B. JACK, Jr., New York, N. Y., assignors to Jaton Manufacturing Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 25, 1924. Serial No. 708,875. 6 Claims. (Cl. 91—29.)



1. An improved knife adapted for use in impregnating machines, having a lower edge adapted to contact with the material treated and a recess adapted to contain a

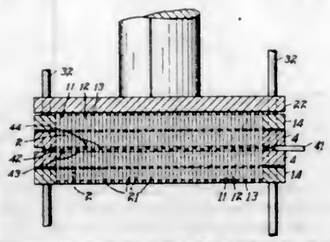
puddle of treating liquid in one face of the knife arranged away from the lower edge and substantially parallel thereto.

6. A method of impregnating which comprising forming two substantially uniform downwardly flowing films of impregnating liquid, simultaneously bringing said films in contact with opposite sides of the material to be treated and moving the material upwardly past said films.



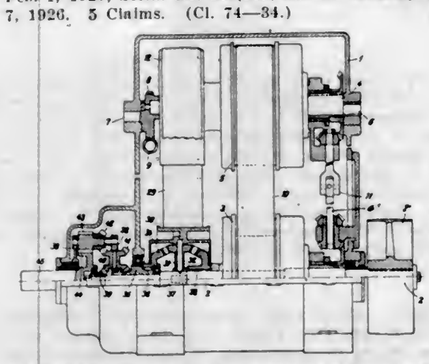
1,676,364. DIRIGIBLY-MOUNTED LIGHT. CLIFFORD SKLAREK, Chicago, Ill., assignor to International Spotlight Corporation, Chicago, Ill., a Corporation of Illinois. Filed July 29, 1921, Serial No. 488,268. Renewed May 9, 1928. 14 Claims (Cl. 240—61.)

1. In a device of the character described, the combination with a support adapted to be secured to a relatively stationary element, said support being provided with a bore and a counterbore; of a housing rotatably mounted in said bore and having a hollow rigid operating arm extending through said counterbore; coacting means on said arm and said support for preventing movement of the housing out of said bore; a lamp holder rotatably mounted on said housing to oscillate about an axis extending transversely of the axis of said support; a shaft rotatably mounted in said hollow arm and extending therethrough; gearing operatively interposed between said holder and adjacent end of said arm; an operating handle carried by said operating arm at the end thereof remote from the lamp holder, and by which said operating arm may be turned within said support, said arm being rotatable about its axis; and gearing operatively interposed between said handle and said shaft.



1,676,365. ROCKING AND GALLOPING HORSE. NICHOLAS SMIRNOFF, Brooklyn, N. Y. Filed June 13, 1927. Serial No. 198,529. 4 Claims. (Cl. 272—53.)

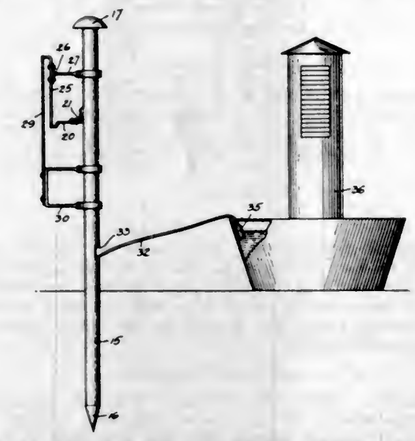
1. A rocking horse comprising a body, a main rocker frame secured thereto, an auxiliary rocker frame pivoted to the main frame, a latch on the auxiliary frame for connecting the same to the main frame, a pendulum, a connection between the pendulum and the latch whereby during the rocking motion, the pendulum will release the latch to disconnect the frame and said pivot point



being located so that after release of the latch, the frame will swing forward about the pivot point and relatively to said auxiliary frame to cause advance movement of said horse.

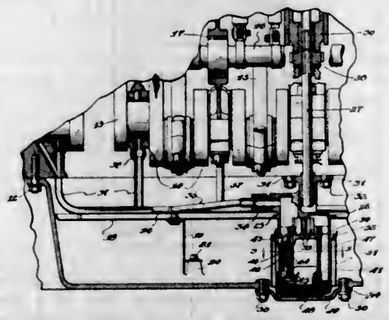
1,676,366. PROCESS AND APPARATUS FOR FORMING GRIDS. JAMES E. SMITH, Wilkinsburg, Pa., assignor of one-half to Isaac Gordon, Pittsburgh, Pa. Filed Jan. 19, 1923. Serial No. 613,627. 27 Claims. (Cl. 29—2.)

1. The process of forming a grid which comprises clamping a sheet of grid forming material between substantially flat holding frames having spaces therein for the passage of grid forming members, passing grid forming means through the spaces in said holding frames to form a completed grid from said material at one operation and while the grid is clamped in said holding frames, retracting the grid forming means from the completed grid while the grid still is held by said holding frames, and then releasing the completed grid from said holding frames.



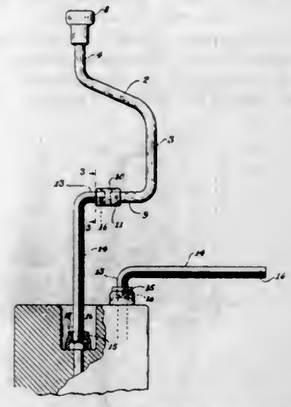
1,676,367. STAGELESS CHANGE-SPEED GEARING. ERNST STÖCKEMANN, Berlin-Tempelhof, Germany. Filed Feb. 1, 1927, Serial No. 165,169, and in Germany Feb. 7, 1926. 5 Claims. (Cl. 74—34.)

1. In a stageless change-speed-gearing a driving-shaft, a counter shaft parallel to said driving shaft, a stageless belt-pulley change-speed-gear between said shafts, an intermediate shaft coaxial to said driving shaft, a hollow shaft surrounding said intermediate shaft, a planet



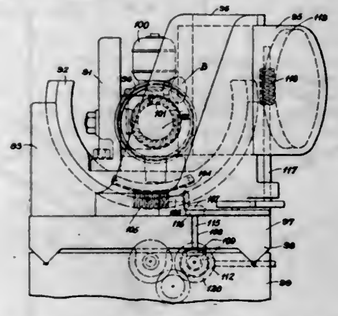
gear movement, the intermeshing wheels of said planet gear movement being arranged upon said driving shaft, upon said intermediate shaft and upon said hollow shaft, a belt driven between said countershaft and said intermediate shaft, through the agency of which the wheels upon the intermediate shaft are caused to travel around the axis of said shaft at a rate of speed corresponding to or varying from that at which the drive shaft is rotated, a driven shaft, a second planet-gear movement, the wheels of said second planet gear movement being arranged upon said intermediate shaft, upon said hollow shaft and upon said driven shaft.

1,676,368. IGNITION DEVICE FOR SMUDGE POTS. JOSEPH AMES ULMER, Los Angeles, Calif. Filed Jan. 5, 1926. Serial No. 79,380. 7 Claims. (Cl. 67—3.)



1. An ignition device comprising a platform capable of occupying supporting and discharging positions with respect to an ignitable substance, means for urging the platform to discharging position, means for latching the platform in supporting position, and means defining a passageway operable to guide the ignitable substance when discharged from the platform into igniting relation to a fuse.

1,676,369. INTERNAL-COMBUSTION ENGINE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 6, 1922. Serial No. 549,971. 8 Claims. (Cl. 184—6.)

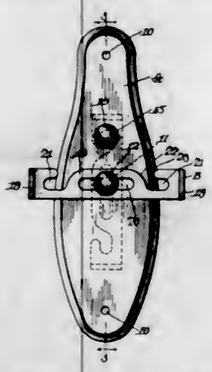


6. In an internal combustion engine, the combination with a pump having an inlet and an overflow outlet, of a screen surrounding and enclosing said inlet and outlet so that the overflow oil may be drawn into the inlet without passing through the screen.

1,676,370. SPEED-HANDLE WRENCH EXTENSION. WILLIAM J. VICTORY, New Britain, Conn., assignor to New Britain Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 17, 1925. Serial No. 3,063. 1 Claim. (Cl. 81—73.)

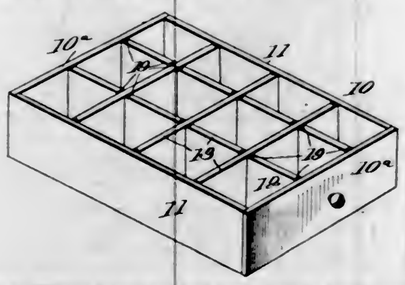
In a device of the class described, a bowed member comprising a shank, an offset crank handle, a right angled extension, and a socket terminating short of a line coincident with the axis of the shank, a co-operating right angled wrench bar having a long arm and a short arm, both ends of said bar being of corresponding angular cross section, said socket having an angular aperture to receive either end of said wrench bar, the length of the short arm of said bar being such as to position the long arm in substantial alignment with the shank of the bowed member when the end of said short arm is seated in said socket.

1,676,371. METHOD OF AND MACHINE FOR PRODUCING GEARS. ERNEST WILDHABER, Brooklyn, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed May 23, 1927, Serial No. 193,611, and in Great Britain and France June 14, 1926. 25 Claims. (Cl. 90—4.)



1. The method of producing a gear which consists in cutting its side tooth surfaces by moving a tool in a curved path across the face of a gear blank while simultaneously producing an additional relative movement between the tool and blank corresponding to that of a gear meshing with a helicoidal segment.

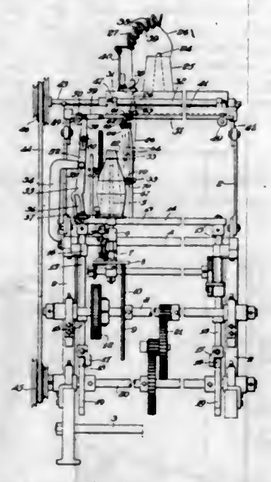
25. In a machine for producing gears, a tool support, a rotary annular face mill journaled therein, a blank support, a blank spindle journaled therein, a frame, a carrier, upon which one of said supports is mounted, journaled in said frame, a slide, upon which the other of said supports is mounted, slidable on said frame in a direction parallel to the axis of said carrier, means for positioning the blank spindle with its axis offset from the axis of said carrier, means for adjusting the tool and



blank into cutting relation, means for rotating the tool in engagement with the blank, means for simultaneously rotating the blank spindle on its axis, means for simultaneously moving the carrier on its axis, and means for simultaneously and in timed relation to the two last named movements imparting movement to said slide.

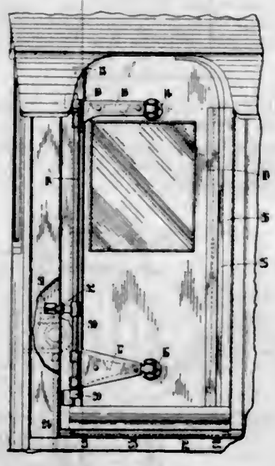
1,676,372. SUPPORT. MYRL J. WILLIAMS, Chicago, Ill., assignor to The Washburn Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 17, 1925. Serial No. 56,865. 1 Claim. (Cl. 211—99.)

In a support, the combination with a bracket; of a U-shaped bar; a plurality of swinging arms disposed between the free end members of said U-shaped bar, the main body portion of the bar having an elongated, longitudinally disposed central opening and a pair of locking recesses extending inwardly from one side edge thereof; a pivot member fixed to the bracket and slidingly accommodated in said elongated opening of the bar; and a locking lug on said bracket adapted to be engaged in either of said locking recesses of the bar to lock the latter to the bracket.



1,676,373. DIVISION-BOARD SUPPORT. ALBERT M. WOLTZ, Baltimore, Md., assignor, by mesne assignments, to Grand Rapids Store Equipment Corporation, Grand Rapids, Mich. Filed Sept. 5, 1924. Serial No. 736,193. 4 Claims. (Cl. 45—7.)

4. A division board support comprising a body provided with a guide portion intermediate between its ends and laterally disposed bearing portions at the ends in a plane at right angles to the guide portion, said bearing portions having prongs arranged in planes at right angles to the plane of the main parts of the bearing portions, and also at right angles to the plane of the guide portion.



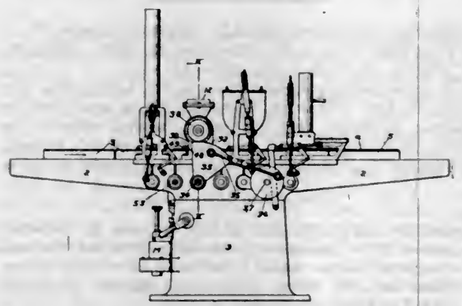
1,676,374. YARN-WINDING MACHINE. JACOB K. ALTEMUS, Philadelphia, Pa. Filed Oct. 28, 1926. Serial No. 144,734. 8 Claims. (Cl. 242—27.)

1. In a yarn winding machine, the combination of a supporting frame, a winding spindle adapted to carry a yarn receiver, means to rotate the spindle, a device for supplying yarn, means to guide yarn from said device to a receiver carried by the spindle, said means including a vertically reciprocable builder frame, means to reciprocate the builder frame and a part against which the yarn bears during its travel, a horizontally-extending,

longitudinally-reciprocable bar, means to support and guide the bar, an element carried by the bar adjacent to the yarn path and adapted to move the yarn transversely of its line to travel relatively to said part when the bar is actuated, and means operated by the builder frame to reciprocate the bar.

1,676,375. SWINGING DOOR. WILLIAM SEBASTIAN GRAFF-BAKER, Ealing, London, England, assignor to The National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Feb. 12, 1926, Serial No. 87,745, and in Great Britain Feb. 14, 1925. 2 Claims. (Cl. 20—19.)

1. In a door of the type described the combination with the door of guide tracks disposed so that their centre lines intersect one another at right angles, guiding elements on the door, one or more operating arms hinged at one end to a relatively stationary support to swing about an axis intersecting and perpendicular to the said two centre lines, said arms each having pivotal connection at the other end with the door, the axes of pivoting at

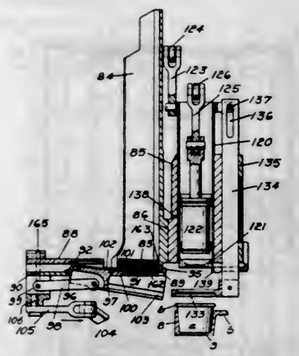


the two ends of the arms being parallel and so disposed that a plane containing them substantially bisects a line joining the centres of the guiding elements on the door which co-operate with the guide tracks.

1,676,376. GUARD FOR STICKPINS. FREDERICK ALLAN BALLOU, Jr., and EUGENE MOREHOUSE, Providence, R. I., assignors to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Nov. 17, 1927. Serial No. 233,850. 5 Claims. (Cl. 24—155.)

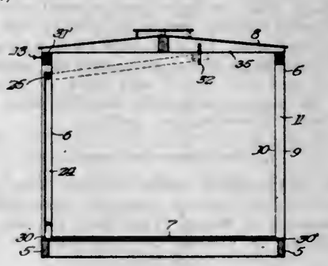
1. In combination a stick pin having a plurality of staggered notches in its shank, a guard having a body portion with end walls pierced to receive the shank of said pin and an abutment to engage any one of the notches in the pin.

1,676,377. UNIT-MEASURING MACHINE. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., assignor to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 14, 1923. Serial No. 680,633. 22 Claims. (Cl. 226—103.)



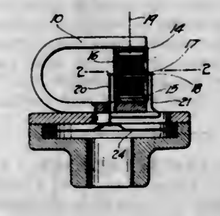
3. The method of extracting, separating and delivering a measured unit from a superimposed mass of plastic material consisting in withdrawing a uniform column portion of the mass by suction and accompanying expansion, then shearing it from the mass while re-locating the unit, and discharging the unit by gravitation simultaneously and in cooperation with the withdrawal of another similar portion while subject to the action of a temperature raising medium.

6. Means for extracting a measured unit from a superimposed mass of plastic material consisting of an upper reservoir, a lower cylindrical casing communicating therewith, a semi-rotatable drum having a middle transverse plunger cavity in full open undiminished registering communication with the reservoir and with an opposite substantially similar discharge opening in the casing, a longitudinally movable spline-controlled plunger in the plunger cavity adapted to freely withdraw a unitary portion from the reservoir by gravitating suction and to simultaneously follow a previously formed unit during its ejection, and separable means for imparting a part rotation to the cylinder.



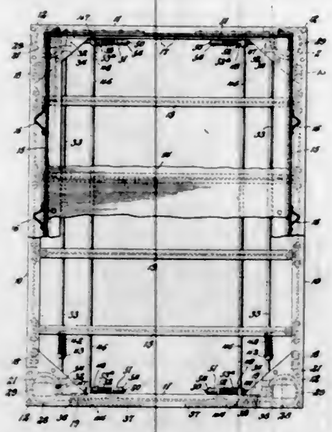
1,676,378. COVER-PLACING MECHANISM FOR UNIT-MEASURING MACHINES. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., ELMER Z. TAYLOR, Newark, N. J., and CYRUS TAYLOR, Hartford, Conn., assignors to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 2, 1925. Serial No. 41,106. 21 Claims. (Cl. 226—92.)

1. The combination with an intermittently movable package carrier, of a superimposed open bottom cover holder, a laterally arranged suction plunger, means operatively connected with the carrier for actuating the suction plunger, and a slide plate having edge engaging abutments and a vertically movable cover engaging device



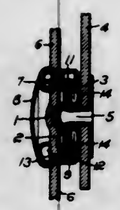
adapted to select and move a lowermost cover from the holder and to place it in registering relation with the plunger.

1,676,379. REMOVABLE CLOSURE. GEORGE BREIDENBACH, Chicago, Ill. Filed Apr. 14, 1922, Serial No. 552,545. Renewed Nov. 30, 1927. 6 Claims. (Cl. 20—30.)



1. In combination, a container for material in bulk, said container having a side opening and a side post, a closure within said container for said opening, a bar on one side of said opening, and means fixedly mounted on the post and with which said bar is slidably engageable for holding said bar for retaining said closure only against pressure from within the container.

1,676,380. ECCENTRICALLY-PIVOTED ARMATURE MOUNTING FOR VIBRATORY UNITS. GEORGE F. BORKMAN, Salt Lake City, Utah. Filed Mar. 31, 1926. Serial No. 98,835. 5 Claims. (Cl. 175—336.)



1. A vibratory unit comprising a spool having a sleeve with its winding, armature mounting pins eccentrically located within the said sleeve, and an armature operatively mounted upon said pins.

1,676,381. SWIVELED WHEEL FOR SUPPORTING PORTABLE CONTAINERS. ABNER F. CALLISON, New York, N. Y. Filed Dec. 4, 1924. Serial No. 753,918. 12 Claims. (Cl. 280—48.)

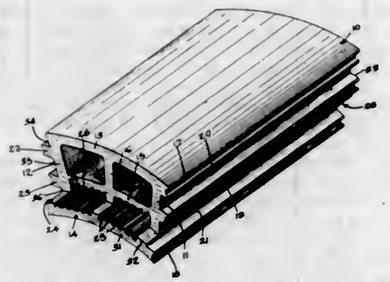
1. In a device of the character described, the combination of a frame, a block mounted therein for adjustment about a vertical axis, a supporting wheel journaled in said block, a shaft having a gear connection with said block, manually operable means for rotating said shaft to turn the block about its axis, said block having a plurality of radial holes, and a spring-held bar automatically projectable into any one of said holes as it comes in front of the same to positively stop the block when it has reached a predetermined position.

1,676,382. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Nov. 18, 1924. Serial No. 750,591. 8 Claims. (Cl. 24—218.)

7. A separable fastener socket including a casing presenting a notched aperture therethrough, the notch being of less width than the diameter of the neck of a cooperating stud, thereby to receive only a portion of the neck of the stud when the fastener parts are subjected to lateral stresses, a spring in said casing presenting a pair of resilient neck-engaging jaws intersecting said aperture, a closure plate secured to said casing and closure plate supporting and spring-positioning projections pressed from the front face of said casing.

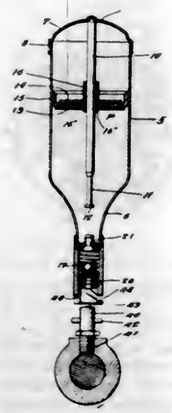
1,676,383. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,162. 3 Claims. (Cl. 24—214.)

1. A separable fastener stud comprising a head, a neck and a base portion having a plurality of slits extending a substantial distance into said base to provide a plurality of contractible and expansible portions adapted to bend in said base between the ends of the slits, an attaching member presenting a flange secured to the base of the stud, said flange having a depressed portion spaced from the base of the stud to permit free bending of the contractible and expansible portions of said base toward



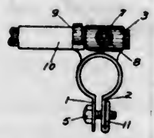
the flange of the attaching part and supporting means located in the recess formed by said depressed portion for supporting the portions of said base beyond the contractible and expansible portions of said base, said supporting means being located a substantial distance from the periphery of the base where it joins the neck of the stud.

1,676,384. BEARING STEEL. HENRY THOMAS CHANDLER, New York, N. Y. Filed May 27, 1927. Serial No. 194,858. 1 Claim. (Cl. 148—1.)



A roller bearing formed from a rod having free carbides in such proportion that said rod is unsuitable for bearing purposes, said rod being twisted whereby the lines of segregation of said carbides extend helically thereabout to produce a rod suitable for bearing purposes.

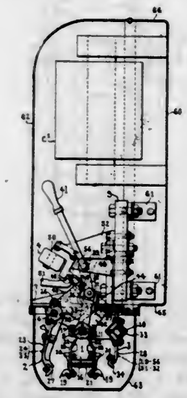
1,676,385. STRUCTURAL BLOCK. DAVID M. COLWELL, Akron, Ohio, assignor to American Vitrified Products Company, Akron, Ohio, a Corporation of New Jersey. Filed Jan. 11, 1928. Serial No. 245,823. 2 Claims. (Cl. 72—51.)



1. A structural block, for forming a tubular structure, such as a sewer, comprising: a first radial side provided with a top longitudinal rib, a bottom longitudinal rib, and a center longitudinal rib, said top and center ribs forming between them an outer longitudinal groove, and said center and bottom ribs forming between them an inner longitudinal groove; a second radial side provided with an outer longitudinal rib positioned to fit into said outer longitudinal groove of a like block and an inner longitudinal rib positioned to fit into said inner longitudinal groove of said like block; an outer circumferential wall connecting said sides at the outer edges thereof; an inner circumferential wall connecting said sides at the inner edges thereof; and a single intermediate circumferential wall connecting said side intermediate said outer wall and said inner wall overlapping at said first side said center rib and at said second side said inner rib.

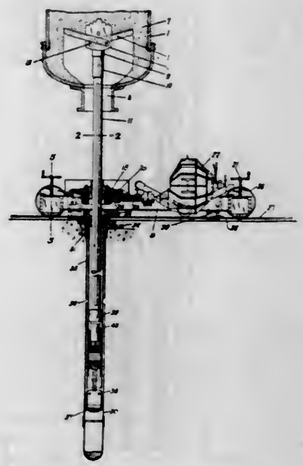
1,676,386. LUBRICATING SYSTEM. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 21, 1924. Serial No. 694,379. 15 Claims. (Cl. 221—47.4.)

1. A lubricant compressor comprising a barrel having a removable cap at one end, a rod secured to said cap and exteding inwardly into said barrel, a portion of said rod adjacent to its inner end being reduced in diameter, a piston slidably mounted on said rod, a sleeve secured to the other end of said barrel and comminicating therewith, said sleeve forming a high pressure cylinder, a valve seat clamped between said sleeve and barrel, an outwardly opening valve coacting with said seat, a flexible washer slidably mounted in said sleeve, a metal ring encasing the edge of said washer, a cup leather having its bottom abutting said said washer, a displacer having one end positioned in said cup leather, an outwardly opening valve in said displacer, a second ring surrounding said displacer and bearing against the edge of said cup leather, and a compression spring abutting said valve seat and said second ring.



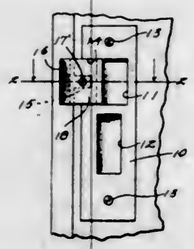
1,676,387. BATTERY CONNECTER. ALFRED C. DE LORME, Newark, N. J. Filed Oct. 14, 1927. Serial No. 226,080. 7 Claims. (Cl. 173—259.1.)

1. A battery connecter made from; a T shaped punched blank having its stem formed to grip an electrical cable and its arms formed to engage a battery terminal post, and means for drawing said arms securely around said battery post.



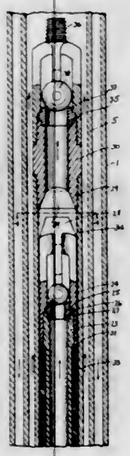
1,676,388. MOTOR STARTER. CLARENCE T. EVANS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 2, 1924. Serial No. 741,104. 10 Claims. (Cl. 200—5.)

10. In a motor controller, in combination, two sets of movable contacts, a set of stationary contacts, one set of said movable contacts being adapted to cooperate with said stationary contacts to establish starting connections and being also adapted to cooperate with the other set of said movable contacts to establish running connections, operating means for said movable contacts including a member having an extreme position corresponding to starting relation of said contacts and another extreme position corresponding to running relation of said contacts, said means insuring cooperation of said contacts



in starting relation prior to their cooperation in running relation, and said contacts being returnable directly from running relation to neutral relation while said member is maintained in its last mentioned position, and electromagnetic means for holding certain of said contacts in a given extreme position upon establishment of running connections.

1,676,389. METHOD OF CLEANING SOAKING DRUMS. HAROLD WHEELOCK FLETCHER, Houston, Tex. Filed Nov. 9, 1925. Serial No. 68,040. 3 Claims. (Cl. 83—6.)

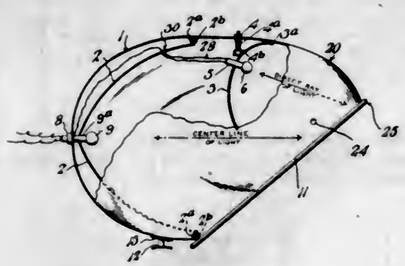


1. A method of clearing solid material from metallic soaking drums having a constricted opening in the lower end thereof, comprising introducing a rotary boring tool within said opening and cutting an upward passage through said material of substantially larger diameter than said opening, then cutting away the material from the walls of said passage until the material is entirely removed.

1,676,390. STRIKER PLATE FOR LOCKS. JESS EARL HALFERTY, Manhattan, Kans. Filed Dec. 10, 1927. Serial No. 239,190. 5 Claims. (Cl. 70—15.)

1. A striker plate having the usual latch bolt opening and having the material thereof cut-away at its opposite side faces in alignment with said opening to produce a reduced portion, said reduced portion having a slot and a stirrup having a slot to receive the reduced portion, said slot being of greater width than the reduced portion and means extending through the arms of the stirrup produced by the slot for clamping said arms upon the reduced portion.

1,676,391. PUMP. GRANVILLE A. HUMASON and WILLIAM L. CHILDS, Houston, Tex.; said Childs assignor to Reed Roller Bit Company, Houston, Tex., and said Humason assignor to J. A. Logan, Harris County, Tex. Filed May 14, 1926, Serial No. 109,137. Renewed May 18, 1928. 7 Claims. (Cl. 103—180.)

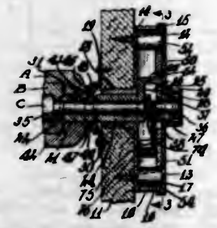


1. A pump comprising a pump barrel, a standing valve at the lower end thereof, said valve including a tube, a valve at the upper end and packing rings on the outer face thereof, a plunger adapted to telescope over said standing valve and means on said plunger to engage said standing valve to compress said packing.

1,676,392. CALLING DEVICE. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switch Board and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 18, 1920. Serial No. 431,561. 8 Claims. (Cl. 179—90.)

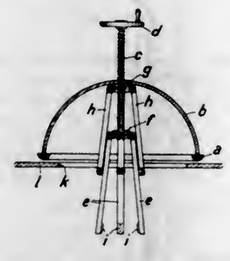
1. An impulse transmitter for automatic telephone systems, comprising a rotary shaft, a finger hold device to rotate said shaft, a coil spring to rotate said shaft when released and transmit the impulses, said spring having an unadjustable connection with a member of said device, a second member of said device connected to said spring and rotatable by hand with respect to said shaft, to adjust the torsion of said spring, apparatus including a radially extending detent fixed to the shaft, and means on said second member to be engaged thereby to hold said spring under any of its adjustable torsions with respect to the shaft, and contact springs controlled by said detent.

1,676,393. HEADLIGHT. CHARLES N. KISECKER, Dayton, Ohio. Filed Jan. 6, 1927. Serial No. 159,333. 4 Claims. (Cl. 240—41.)



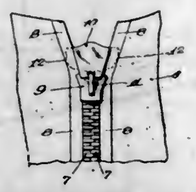
1. A headlight comprising a helmet-shaped casing with an oval opening in front portion thereof, a reflector within said casing, a second reflector movably mounted to inner top of said casing, adjustable means for focusing said second reflector affixed to the rear thereof, two sources of light one within each reflector, said second reflector and casing confining the projected and reflected rays of light from said lights and reflectors to a predetermined area, a lens disposed at an angle of approximately 45 degrees over said oval opening, the upper source of light being hidden from view by front curved portion of said casing.

1,676,394. PERMUTATION DOUBLE LOCK. JOHAN KONKUS, Fords, N. J. Filed Oct. 13, 1927. Serial No. 225,885. 3 Claims. (Cl. 70—53.)



1. In a lock of the class described, a casing, slidable bolts within the said casing, latch members engageable with the bolts a tubular shank passing within the said

casing and means thereon to actuate the said bolts, a dial element on the outer extremity of the said tubular shank, a knob rotatably mounted about the said dial element, a central shaft passing through the said tubu-

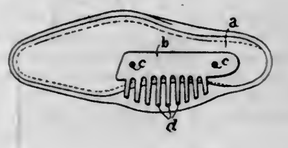


lar shank, a dial element on the said shaft, means on the said central shaft to actuate the said latches within the said casing, and suitable characters on the face of the said dial elements.

1,676,395. APPARATUS FOR STOPPING LEAKS, ESPECIALLY IN THE BOTTOM AND SIDE WALLS OF SHIPS' HULLS. BRUNO HUGO KÖRNER, Dohna, near Pirna, Germany, assignor of one-half to Emil Pietzsch, Dohna, near Pirna, Germany. Filed Apr. 5, 1927. Serial No. 181,210, and in Germany Mar. 31, 1926. 1 Claim. (Cl. 114—228.)

An apparatus for stopping leaks especially in ships' hulls and bottom, comprising in combination a hood of steel to be placed onto the ship's hull to cover the leak, a rubber packing on the edge of said hood, a screw spindle screwed into the apex of said hood, a hand-wheel on the outer end of said screw-spindle, a nut on the inner surface of said hood and serving to guide said screw-spindle, a collar mounted on the inner end of said screw-spindle, arms hingedly fixed to said collar, a rubber pad on the outer surface of each arm, and stays hingedly fixed at the upper end to said nut and at the lower end to a corresponding arm, substantially as described and shown.

1,676,396. SEPARABLE FASTENER. CLARA KRANZ, Chicago, Ill. Filed Jan. 27, 1928. Serial No. 249,783. 6 Claims. (Cl. 24—205.)

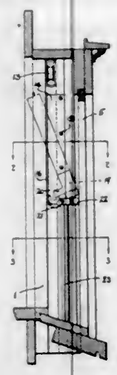


1. In a separable fastener having stringers, coacting locking jaws thereon, and a slider, slidably mounted on said jaws, a finger piece loosely connected to said slider and having a pair of laterally projecting rearwardly offset wings adapted to engage the edges of the stringers and behind the edge portions.

1,676,397. DOUBLE-SIDED CUFF FOR MEN'S SHIRTS, BLOUSES, AND THE LIKE. JOSEF LANZ, Mendrisio, Switzerland. Filed Nov. 1, 1926, Serial No. 145,597, and in Switzerland Oct. 1, 1926. 1 Claim. (Cl. 2—123.)

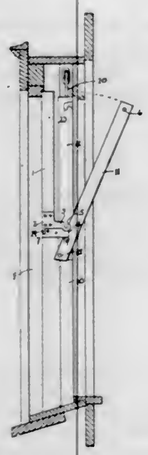
Double-sided reversible soft cuff, including a strip of material attached by its longitudinal edges to a shirt sleeve and folded into four equal layers stitched together at the center of their width by a seam constituting the folding line for the reversible parts of the cuff, said cuff having at each lateral end two button holes near said seam, the button holes at the same ends of the cuff being adapted in one position of the cuff to register one with the other on one side of said seam, the same button holes being positioned one above the other at different sides of the seam when the cuff occupies another position.

1,676,398. FOOT-ARCH SUPPORT. PAUL LENGEMANN, Bremen, Germany. Filed Jan. 26, 1926, Serial No. 83,795, and in Germany Mar. 16, 1925. 1 Claim. (Cl. 36—71.)



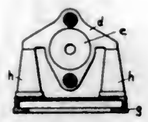
A shoe having incorporated therein a metallic arch support comprising a body portion permanently secured to the insole and provided on its inner side with a plurality of approximately equally spaced and parallel narrow, resilient, integral teeth, said teeth extending from between the outsole and insole against the upper of the shoe to support the arch of the foot, and the spaces between the teeth being of sufficient width to allow securing means to be passed through said spaces.

1,676,399. WINDOW. CLAUDE A. LEWIS, Houston, Tex., assignor to American Window Company, a Corporation of Delaware. Filed Sept. 7, 1926. Serial No. 133,930. 6 Claims. (Cl. 20—49.)



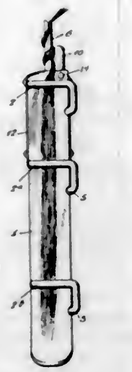
1. In a window a casing, including an upright jamb, the inner face thereof being plane except for a sash

channel therein and a marginal groove, a lower sash, a rider on said sash slidable within said channel, a plate



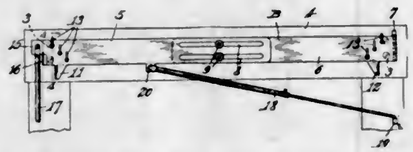
of sheet metal approximately closing said channel at the upper portion thereof, and an upper sash fitting in said casing and adapted to swing inwardly across said plate.

1,676,400. MOUNTING FOR WINDOW SASHES. CLAUDE A. LEWIS, Houston, Tex., assignor to American Window Company, Houston, Tex., a Corporation of Delaware. Filed Dec. 14, 1926. Serial No. 154,665. 9 Claims. (Cl. 20—49.)



1. In a window, a casing, a lower sash, opposite riders on said sash adapted to slide in channels in said casing, said riders having upper pin-receiving recesses opening forwardly and upwardly, and lower pin-receiving openings inclined to a point forwardly of the line of said recesses, pins on said sash engaging in said openings and recesses, and a stop arm on said casing approximately midway thereof, and means in said rider adapted to contact with said arm and limit the movement of said rider in an upward direction.

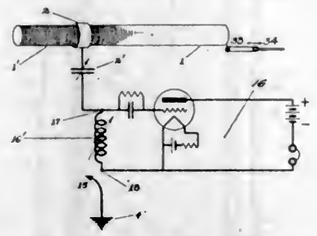
1,676,401. METAL TUBE AND BAR PRESS. HUGO LORANT, Dusseldorf, Germany, assignor to Schloemann Aktiengesellschaft, Dusseldorf, Germany, a Corporation of Germany. Filed May 20, 1927. Serial No. 192,821. and in Germany July 10, 1926. 3 Claims. (Cl. 207—1.)



1. In a horizontal metal tube extrusion press, the combination with the base-plate, of an hydraulic cylinder mounted thereon, a press-plunger in said cylinder, an ingot receiver, and means unaffected by the heat imparted to said ingot receiver for supporting the same in a horizontal central plane so as to permit free expansion in all directions without displacement of the central axis of said receiver.

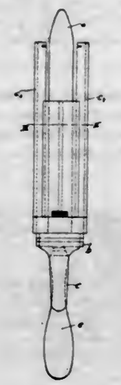
1,676,402. HAIR WINDER. CARL MACK, New York, N. Y., assignor, by mesne assignments, to Samuel Bonat and Harry Bonat, constituting the firm of Samuel Bonat & Bro., New York, N. Y. Filed June 29, 1926. Serial No. 119,359. 4 Claims. (Cl. 132—33.)

1. In a hair winder, the combination of an elongated member adapted to be moved along a curling rod, friction means on said member for engaging the rod, a plurality of spring clips spaced along said member for holding the hair tautly thereon, and means for releasing the pressure of said clips.



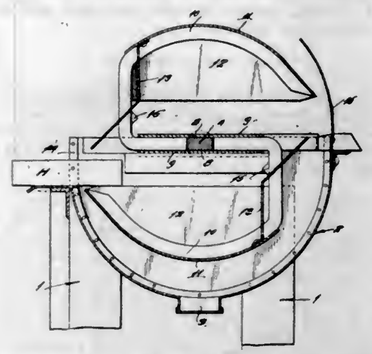
1,676,403. COMBINED WINDOW SHADE AND DRAPERY SUPPORT. GLADYS FANNIE MALLORY, Martins Ferry, Ohio. Filed Mar. 6, 1926. Serial No. 92,918. 1 Claim. (Cl. 156—23.)

A holder for shade and drapery fixtures, comprising a sectional bar for mounting stationarily upon a window casing, said bar having a hinge member formed at one



end thereof and carrying an outstanding lug at its opposite end, a sectional bar adapted for outward swinging movement relative to the first mentioned bar and having at one end thereof a hinge member complemental to that of said first bar and connected to the latter, the last mentioned bar having a portion adapted to rest normally upon said lug, curtain-rod and shade-roller supports carried by said second bar, means connected to and depending from said second bar whereby the latter may be elevated by hand into and out of supported relation to said lug, and a pivoted supporting brace having connection with said second bar and upon which the latter is supported in its outwardly swung position.

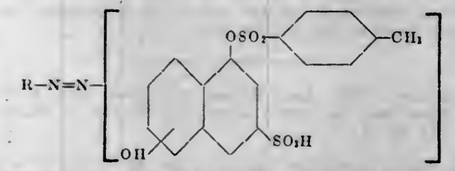
1,676,404. SYSTEM OF RADIO COMMUNICATION. JOSEPH O. MAUBORGNE and GUY HILL, Washington, D. C. Filed Feb. 17, 1921. Serial No. 445,880. 11 Claims. (Cl. 250—20.)



1. A system for receiving radio signals comprising a wave coil antenna upon which signals are directly received, means for detecting said signals, one terminal of said detecting means being connected to an adjustable metal ring slidable along said wave coil and capacitively connected therewith, the other terminal of said detecting means being grounded.

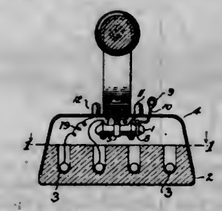
1,676,405. HAIR-WAVING TONGS. LOUISE ROBADEY-MARGOT, Geneva, Switzerland. Filed May 31, 1927. Serial No. 195,526, and in Switzerland June 2, 1926. 3 Claims. (Cl. 132—32.)

1. A pair of waving tongs comprising a plain jaw, a toothed jaw carrying two lateral combs, a longitudinally movable member in slidable engagement with the toothed jaw and provided with jaws of teeth parallel with the lateral combs, and means for pivotally connecting the said plain jaw and toothed jaw.



1,676,406. SANDING DEVICE. WILLIAM H. MCCLELLAND, Huntingdon, Pa., assignor, by mesne assignments, to Roy P. M. Davis, Mount Union, Pa. Filed Dec. 15, 1924. Serial No. 755,941. 6 Claims. (Cl. 25—117.)

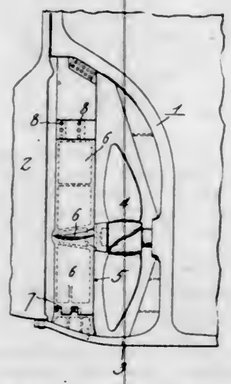
1. In a device of the class described, the combination of a material retaining hopper and a mold carrying element rotatable therein, means for periodically moving said element from a receiving to a discharging position, and a second means for locking said element in either of said positions.



1,676,407. HYDROXY-NAPHTHALENE-ARYLSULPHOESTER AZO DYESTUFF AND PROCESS OF MAKING THE SAME. WILHELM NEELMEIER, Leverkusen, near Cologne-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed July 21, 1926. Serial No. 124,089, and in Germany Aug. 2, 1924. 4 Claims. (Cl. 260—94.)

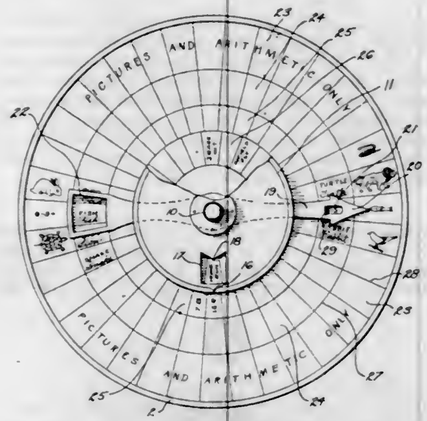
4. As new products, the mono-azo dyestuffs having in the free state most probably the formula:

wherein R stands for an aromatic nucleus, wherein the OH group is in either the 6- or 8-position in the naphthalene nucleus, and wherein the naphthalene nucleus may be further substituted by a sulphonic acid group, which dyestuffs are red powders, soluble in water and in concentrated sulphuric acid with a rod color, dye wool level red shades fast to light and milling, and yield on reduction an aromatic amine and an amino-hydroxy-naphthalene-arylsulphoester sulphonic acid.



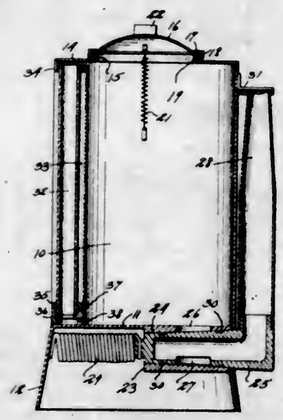
1,676,408. MERCURY SWITCH. JAMES P. O'SHEA, New York, N. Y., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Filed Nov. 21, 1923. Serial No. 675,981. 2 Claims. (Cl. 219—25.)

1. In an electric flatiron, in combination, a body having an electric heating element and a pivotally mounted switch for said element therein, a handle grip-



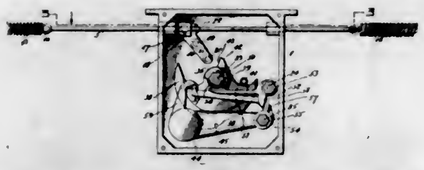
ping member for said iron, and two strap connections between said handle and said iron one of which has a moving connection to said iron and a pivotal connection to said switch and the other of said straps being in the form of a spring tending to move and hold said switch in the open circuit position.

1,676,409. REMOVABLE CONTRAPROPELLER. OLAV OVERGAARD, Brooklyn, N. Y., assignor to Star Contra Propeller Ltd. A/S., Oslo, Norway, a Corporation of Norway. Filed Nov. 25, 1927. Serial No. 235,511. 2 Claims. (Cl. 115—34.)



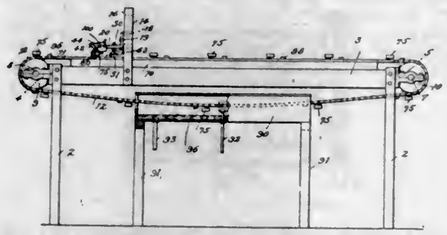
1. The combination with the main propeller of a vessel, of a contra-propeller in axial alignment therewith, the said contra-propeller having at its lower end a pivotal support adapted to allow the contra-propeller to be swung sidewise out of line with the main propeller for the purpose of removing the latter.

1,676,410. TOY. LEON RIVERA PAUL, New York, N. Y. Filed May 26, 1927. Serial No. 194,344. 1 Claim. (Cl. 35—2.)



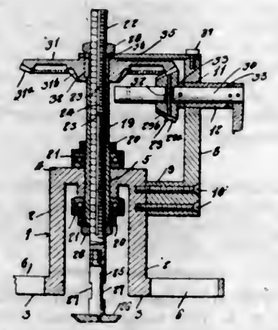
A device of the class described including a body having concentric series of spaces, a central bearing pin upstanding from the body, an indicator mounted to rotate freely on the pin and provided with a head for indicating any one of the spaces of one series and an aperture in the tail portion of the indicator through which any one of the spaces in the next adjoining series will be displayed, there being data displayed in the spaces of the outer series and in the spaces of the next adjoining series, a disk mounted to rotate freely upon and be supported by the pin and adapted to wabble on the pin, a knob rotatable with the disk, there being an aperture within said disk through which any one of an added series of spaces will be displayed, said disk, while rotating and wabbling, constituting means for intermittently engaging the indicator frictionally, thereby to rotate the same.

1,676,411. DUST-PROOF OIL-DISPENSING VESSEL. WILLIAM H. PEADEN, Tulsa, Okla., assignor to R. D. Donnelly and B. R. Graham, Tulsa, Okla. Filed Mar. 9, 1927. Serial No. 173,963. 3 Claims. (Cl. 221—26.)



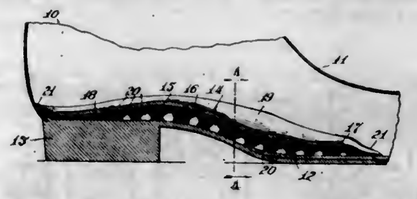
1. A dispensing vessel having a cylindrical, inwardly tapering valve casing having an inlet port communicating with the interior of the vessel and a discharge spout having an angularly disposed, tapering valve portion having liquid tight engagement with the casing and having a port adapted as the spout is lowered to be brought gradually into registry with the port in the valve casing, and a spring operatively connected at one end to the wall of the passage and at its other end to said valve portion and urging the valve portion of the spout into the casing and against its seat therein and yieldingly urging the spout to a raised position.

1,676,412. ALARM SIGNAL FOR AUTOMOBILES. WILLIAM A. PERVIER, Watertown, Mass., assignor, by mesne assignments, to William A. Pervier, trustee. Filed Jan. 16, 1926. Serial No. 81,773. 5 Claims. (Cl. 177—339.)



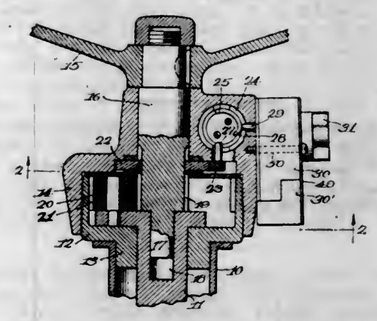
1. In a motor vehicle having a foot brake the combination comprising a warning signal, means for actuating the signal, and means co-operating between the foot brake mechanism of the vehicle and the signal actuating means whereby a relatively slow application of the brake leaves the signal unaffected and whereby a relatively rapid application of the brake causes the signal to be operated.

1,676,413. FRUIT SEEDER. ARTHUR S. PLOWMAN, New York, N. Y., assignor of one-fifth to Salvatore A. Danna, New York, N. Y. Filed Aug. 20, 1924. Serial No. 733,076. 2 Claims. (Cl. 146—17.)



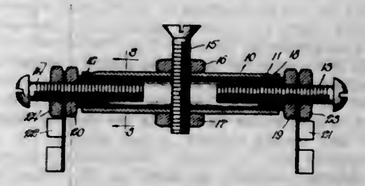
1. In a machine of the character described, the combination of an endless travelling member, a plurality of receptacles carried by said travelling member, means for slitting the fruit, means for ejecting the seed, means for engaging and guiding the seed, and a plurality of moistening devices carried by the travelling member adapted to engage and moisten the fruit slitting, seed guiding and seed ejecting means.

1,676,414. VALVE-RESEATING MACHINE. ANTHONY ROMANO and RALPH VITALE, Brooklyn, N. Y. Filed July 14, 1925. Serial No. 43,551. 1 Claim. (Cl. 90—12.5.)



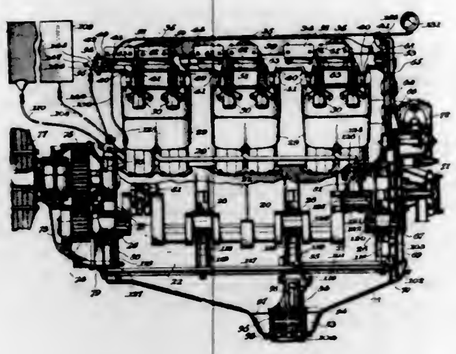
A valve reseating machine comprising an inverted U-shaped attaching and supporting bracket provided in its cross member with a bearing, arms extending outwardly from the side members of the bracket and provided with longitudinally extending slots, a sleeve extending through the bearing, elements carried by the sleeve at opposite sides of the cross member, bearings surrounding the sleeve and positioned between the elements and cross member, a threaded spindle carried by the sleeve for endwise adjustment with respect thereto, means preventing any relative rotation between the sleeve and spindle, retaining elements mounted on the spindle and contacting with the ends of the sleeve, an arm secured to the bracket and extending beyond the same in parallel relation to the sleeve, a strap secured to the arm and having an opening for the reception of the sleeve, a gear keyed to the sleeve, and provided with inner and outer rows of teeth, a shaft journaled in said last arm between said cross member and gear and extending inwardly and outwardly beyond the rows of teeth of the gear, a pinion provided with inner and outer rows of teeth and adjustably mounted on the shaft for engagement with one of the rows of teeth of the gear, and means for securing the pinion in adjusted position on the shaft.

1,676,415. ARCH SUPPORT. PERRY SAPERSTON, Chicago, Ill. Filed July 21, 1921. Serial No. 486,503. 2 Claims. (Cl. 36—71.)



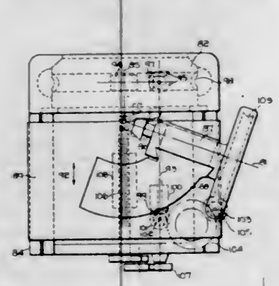
1. In combination, a flexible insole and a flexible and resilient body of material secured to one surface of said insole and substantially co-extensive therewith, said body having two distinct elevations merging into each other and adapted to conform to the longitudinal arch and the transverse metatarsal arch of the human foot in normal relationship, the longitudinal center lines of said elevations having such an angular relation that the elevations underlie the said longitudinal and transverse metatarsal arches.

1,676,416. COMBINED STEERING WHEEL AND IGNITION LOCK. FRANKLIN W. STEWART, Chicago, Ill. Filed Jan. 12, 1925. Serial No. 1,724. 3 Claims. (Cl. 200—44.)



1. A device of the class described comprising a block of insulating material having opposite recesses, two pairs of oppositely arranged contacts thereon, said contacts being arranged to provide a circular stepped path in one of said recesses, a circuit closing member arranged to bridge opposite contacts, a rotatable shaft for turning the same, a pair of circuit terminals representing two independent circuits, a third terminal representing a circuit common to the two, and a second switch in said other recess arranged to open said common circuit.

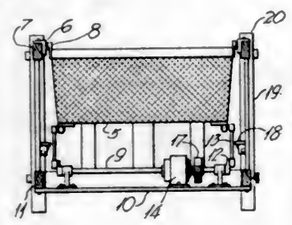
1,676,417. ELECTRICAL CONDENSER. EDWIN S. TRUE, Oak Park, Ill. Filed Aug. 9, 1923. Serial No. 656,494. 9 Claims. (Cl. 175—41.5.)



1. An electrical condenser comprising a conductive tube forming one electrode, a threaded conductor extending an adjustable distance therein and its threaded portion forming a second electrode, and a threaded insulating support for receiving said threaded conductor.

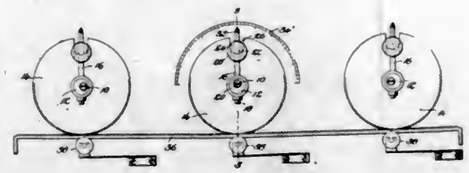
1,676,418. HYDROCARBON MOTOR. JESSE G. VINCENT, Dayton, Ohio, assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 10, 1918. Serial No. 239,206. 40 Claims. (Cl. 184—6.)

1. In a hydrocarbon motor, in combination, a tubular casing divided by bearings into several compartments, a cam shaft in said casing mounted in said bearings, rock shafts mounted in the upper part of said casing and operated by said cam shaft, means for feeding oil to said casing, and means including the cam shaft for splashing oil to the bearings of said rock shafts.



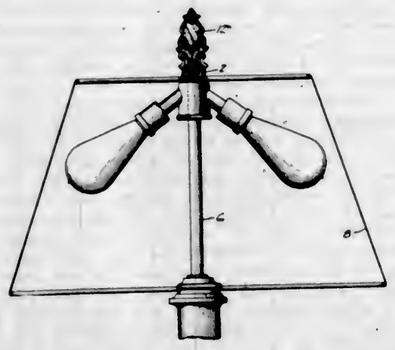
1,676,419. METHOD OF AND MACHINE FOR PRODUCING GEARS. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 22, 1925. Serial No. 38,725. 31 Claims. (Cl. 90—9.)

1. The method of producing gears which consists in moving a tool across the face of a gear blank while imparting an additional relative movement between the tool and blank as of a gear rolling on a helicoidal segment provided with teeth of constant profile and constantly inclined with respect to its axis.



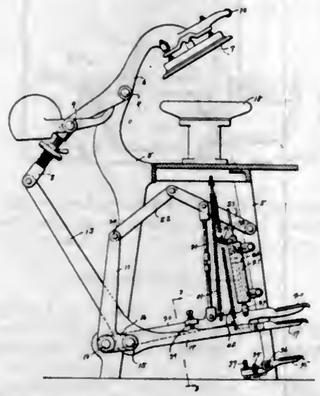
20. In a machine for producing gears, a frame, a support oscillatably mounted on the frame, a support slidably mounted on the frame, said last named support being movable in a direction parallel to the axis of oscillation of said first named support, a tool mounted on one of said supports for movement independently thereof, a blank spindle rotatably mounted on the other of said supports, means for moving the tool relative to its support across the face of the blank and means for simultaneously and in timed relation rotating the blank spindle on its axis and imparting to said supports their respective movements relative to the frame.

1,676,420. CRADLE. PRESTON W. ANDERSON, Los Angeles, Calif. Filed Jan. 31, 1927. Serial No. 164,711. 1 Claim. (Cl. 5—109.)



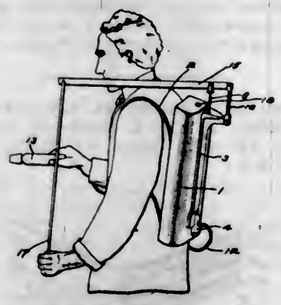
In a rocking cradle of the class described, the combination with a bed spring, of a collapsible frame, a basket, means for oscillatably and removably mounting the basket in the said frame, brackets positioned on the inside of the said frame suitably to receive the said bed spring when the said basket is removed from the frame; and means for oscillating the said basket, the said means comprising a support board, means removably mounting the support board on said frame, a shaft journaled on the support board, cranks positioned on the ends of the shaft, connecting links pivoted to the said cranks and the said basket, and means for rotating the said shaft.

1,676,421. GEARING. DORSEY F. ASBURY, Broomes Island, Md. Filed Feb. 27, 1926. Serial No. 91,197. 10 Claims. (Cl. 74—7.)



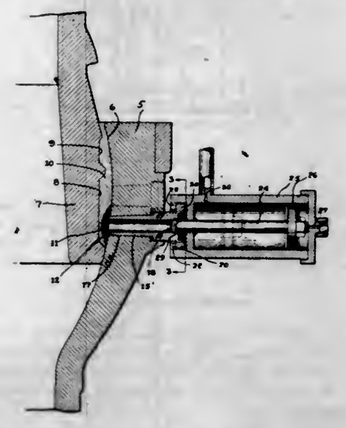
1. In mechanism of the class described, a rotatable shaft, an eccentric rotatably adjustable on said shaft, a gear wheel rotatably adjustable on said eccentric, and a rack for driving said gear

1,676,422. FINIAL. HARRY A. BEST, Chicago, Ill., assignor to H. A. Best Lamp Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1927. Serial No. 207,544. 8 Claims. (Cl. 41—10.)



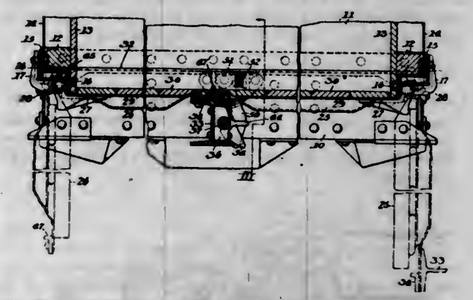
8. A finial comprising a relatively flat body having an internal recess opening through the edge of the body to permit the insertion therethrough of an ornate piece, the opening being smaller and of different design than the internal recess whereby the raw edges of the ornate piece are hidden.

1,676,423. GARMENT PRESS. PHILIP N. BRAUN, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 18, 1923, Serial No. 669,230. Renewed Sept. 23, 1927. 13 Claims. (Cl. 68—9.)



1. A pressing machine combination embodying relatively movable press members, operating means connected with one of the press members to close the press, a release means for opening the press, a dashpot connected with one of the press members to restrain the machine against sudden opening movement when released, means in the dashpot for locking the compressed air therein during the first portion of the stroke, means for releasing rapidly the air to hasten the opening movement during part of the remaining stroke, and means gradually diminishing the air release during the final part of the stroke and opening motion of the press.

1,676,424. LUBRICATING APPARATUS. MOSES F. CARR, Lexington, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 9, 1926. Serial No. 140,526. 1 Claim. (Cl. 221—47.1.)

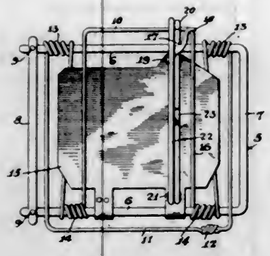


A lubricant compressor adapted to be carried upon the back of the operator comprising a relatively wide and long reservoir, carrying straps attached to one side of said reservoir, a bracket secured to the other side of the reservoir and extending substantially the length thereof, a cylinder casting mounted at the lower end of said bracket, a plunger reciprocable in the cylinder of said casting, a plunger operating rod formed integrally with said plunger and guided at its upper end in said bracket, a link pivoted to said bracket, a lever pivoted to said link and to the end of said plunger operating rod and extending transversely across said reservoir, and a handle pivotally connected to said lever and depending therefrom in the position in which it is adapted to be grasped by the operator when the reservoir is carried upon the operator's back.

1,676,425. APPARATUS FOR PACKING JOINTS. RALPH E. CHAPMAN, Brooklyn, N. Y. Filed Mar. 24, 1923. Serial No. 627,510. 2 Claims. (Cl. 221—78.)

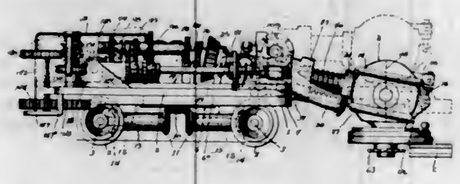
1. In apparatus for packing pipe joints in combination a nipple having its exterior tapered and threaded for a portion of its length to fit a correspondingly tapered and threaded hole in a pipe flange, said nipple having at its outer end a segmental flange, a plunger operable in the bore of the nipple to force packing into the joint, and plunger actuating means having hooks removably attachable to said segmental flange of the nipple.

1,676,426. CAR-DOOR STRUCTURE. ARNOLD CHRISTIANSON and CHRISTIAN CHRISTIANSON, Hammond, Ind. Filed Sept. 2, 1926. Serial No. 133,147. 8 Claims. (Cl. 189—46.)



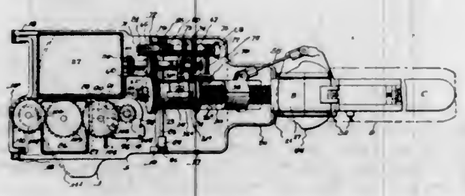
1. The combination with a car body having an opening in one end thereof, of a pair of doors hingedly connected at their outer edges, to said body, and having inter-engaging portions at their inner edges, arranged to prevent relative vertical movement thereof.

1,676,427. TRAP. BERENT O. DAHL, Viroqua, Wis. Filed Mar. 16, 1925. Serial No. 16,073. 2 Claims. (Cl. 43—88.)



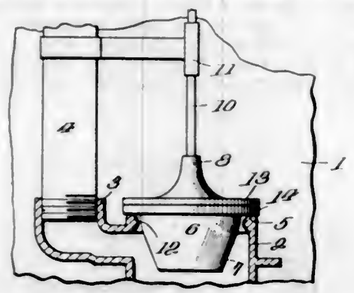
1. A trap comprising a base, a pair of spring urged jaws pivotally supported on opposite sides of the base and adapted to swing one within the other, a trigger rod

pivotally mounted on one of the jaws having an arm adjacent the pivoted end thereof and adapted to serve as an abutment for the other jaw when trap is set and thereby urge the end of said rod outwardly, a treadle



pivotally mounted on the base, said treadle having an opening, the free end of said rod being adapted to be inserted within the said opening when the trap is set whereby upon the depression of the said treadle the trap is sprung.

1,676,428. MINING MACHINE. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 29, 1925. Serial No. 33,624. 14 Claims. (Cl. 262—28.)

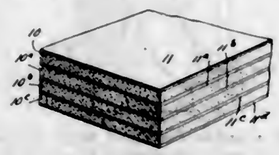


1. In a mining machine, the combination of a turntable, a platform mounted on said turntable and adapted to be tilted at an angle thereto, cutting mechanism mounted on said platform, a motor in driving connection with said cutting mechanism, and platform tilting mechanism in driving connection with said motor.

1,676,429. MINING MACHINE. CHARLES E. DAVIS, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 4, 1926. Serial No. 92,121. 11 Claims. (Cl. 262—28.)

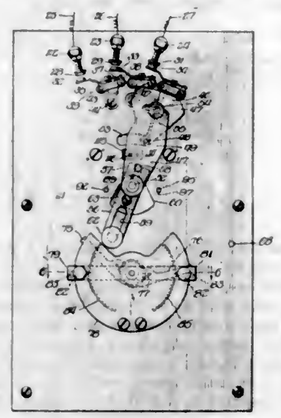
1. In a mining machine, the combination of a wheeled carriage, a turntable mounted on said carriage, an elevating platform tiltably mounted on said turntable, cutting mechanism mounted on said platform, driving mechanism for said cutting mechanism mounted on said platform, and independent driving mechanism mounted on said turntable for operating the same.

1,676,430. FLUSH-VALVE FLOAT FOR FLUSH TANKS. EDWARD L. DELANY, Brooklyn, N. Y., assignor to Delany Realty Corporation, Brooklyn, N. Y. Filed Sept. 29, 1925. Serial No. 59,368. 2 Claims. (Cl. 4—56.)



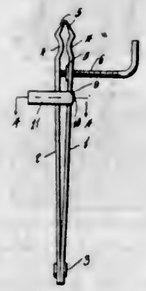
1. A flush valve float comprising a hollow body portion of hard rubber having a horizontal annular flange, and a seating surface vulcanized to the lower face of said flange.

1,676,431. AUTOMOBILE HOOD ILLUMINATION. CLIFFORD K. DENMAN, Los Angeles, Calif. Filed Mar. 8, 1927. Serial No. 173,679. 2 Claims. (Cl. 240—8.11.)



1. In combination with the hood of a vehicle an illuminating device extending along the top thereof, said illuminating device extending along the hood and cowl from the windshield support to the radiator filler cap and terminating in an ornamental design in front of the radiator filler cap, a horizontal top plate supported above the top surface of the vehicle, side plates extending perpendicularly from the edges of the top plate to the surface of the vehicle, said side plates having ornamental openings therein and terminating at their bottom edges in flanges whereby the device is secured to the vehicle, strips of colored glass adjacent the inner sides of the side plates effectively covering the ornamental openings and lamp bulbs conventionally mounted on the under side of the top plate whereby the device is illuminated.

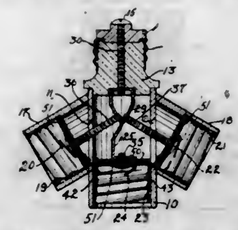
1,676,432. PACKING MATERIAL AND GASKET MADE THEREFROM. FRANCIS L. DIETERICH, Newark, N. J. Filed Apr. 10, 1925. Serial No. 22,112. 4 Claims. (Cl. 154—45.5.)



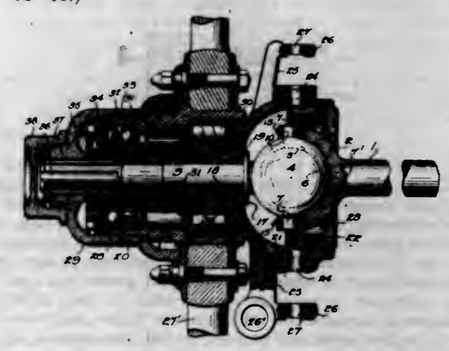
1. As a new article of manufacture, a sheet packing comprising flat, laminated, adherent sheets of vulcanized fiber arranged on opposite sides of a medially-disposed sheet of granulated cork whereby a composite is provided in which the vulcanized fiber reinforces the structure, resists rupture, prevents disintegration on compression, and guides the expansive force of the cork sheet to seal and to keep a joint tight.

1,676,433. ELECTRICAL SWITCHING MECHANISM. ARTHUR J. EVERS, Chicago, Ill. Filed Apr. 8, 1926. Serial No. 100,582. 12 Claims. (Cl. 200—92.)

1. In an electric switching appliance of the character described, the combination of a plurality of electric-switches, substantially constant-speed driving means, switch-operating means common to all of said switches and including a pair of movable members, independently adjustable stops against which said members respectively bear when inactive, and means actuated by said driving means to operate said members in alternation.



1,676,434. SPREADER FOR DISTANCING SPACED PIPES AND THE LIKE. GEORGE A. FURNEAUX, The Dalles, Oreg. Filed Mar. 8, 1927. Serial No. 173,732. 4 Claims. (Cl. 81—3.)



1. A spreader for distancing spaced pipes and the like, comprising spring arms secured together and having recesses opening outwardly of the arms to seat between articles to be distanced, and a screw threadedly engaging one of said arms and terminally engaging the other arm.

1,676,435. MULTIPLE SOCKET. ISAAC F. GILES, Yonkers, N. Y., assignor to Ilelte Electric Manufacturing Corporation, Tuckahoe, N. Y., a Corporation of New York. Filed June 15, 1925. Serial No. 37,029. 3 Claims. (Cl. 173—335.)

1. A multiple socket comprising an insulating cylindrical sleeve open at its opposite ends and having an opening in its cylindrical surface, a second cylindrical sleeve separate from the first, lying at an angle thereto and having the end of its wall concaved to engage the cylindrical surface of the first sleeve about the opening therethrough, metallic shells in the free end portions of the two sleeves, a plug at the other end of the first mentioned sleeve, and means within the sleeves for holding the shells and other contacts in place and for holding the two sleeves together.

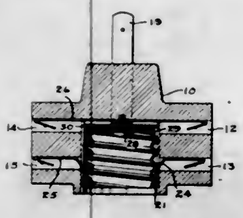
1,676,436. FRONT-WHEEL DRIVE FOR MOTOR VEHICLES. FRANK B. HAMLIN, Evanston, Ill. Filed Dec. 3, 1923. Serial No. 678,328. 4 Claims. (Cl. 64—91.)

1. A universal joint comprising a drive member, a driven member, a ball formed on the end of one of said members, a socket formed on the end of the other member, said ball being provided with an arcuate groove, an arcuate key mounted in said groove, trunnions formed on the end of said key, said socket being provided with diametrically opposite similarly shaped recesses formed in its edge, said recesses being widest at points remote from the edge of the socket and bearing members shaped to fit said recesses and mounted therein, said bearing members being adapted to receive said trunnions.

1,676,437. PROCESS FOR THE MANUFACTURE OF YEAST. ARTHUR PENNOYER HARRISON, Yonkers, N. Y., assignor to The Fleischmann Company, New York, N. Y., a Corporation of Ohio. Filed Oct. 19, 1925. Serial No. 63,448. 7 Claims. (Cl. 195—20.)

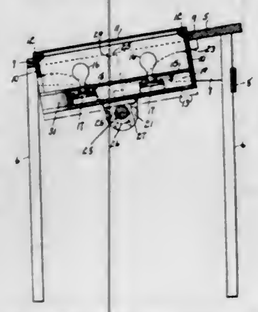
1. A process of manufacturing yeast including the steps of propagating yeast in a fermenter with aeration in a yeast nutrient solution until said solution has reached an approximately constant Balling, withdrawing a portion of the yeast-containing liquid, restoring approximately the initial conditions of volume and density in the fermenter by the addition of yeast nutrient materials, and repeating the propagation with aeration.

1,676,438. SHUTTLE. WILLIAM H. HARRISON, Philadelphia, Pa.; Nellie Harrison executrix of said William H. Harrison, deceased. Filed Jan. 15, 1927. Serial No. 161,276. 6 Claims. (Cl. 139—213.)



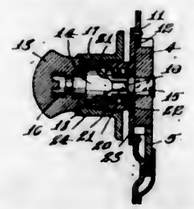
1. A removable lining for the bobbin recess in a weaver's shuttle comprising a fur-like material, a backing

therefor, consisting of a relatively stiff shoe having bottom and side portions and supporting the fur-like material



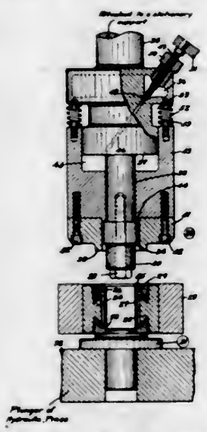
substantially throughout the entire contour thereof, means for attaching said material to said backing, and means for retaining said lining within said recess.

1,676,439. THREE-WAY ELECTRIC PLUG. WILLIAM ILE, Little Falls, N. J., assignor to Ileite Electric Manufacturing Corporation, Tuckahoe, N. Y., a Corporation of New York. Filed Mar. 19, 1925. Serial No. 16,606. 6 Claims. (Cl. 173—334.)



1. In a device of the character described, the combination with a casing of electrical insulating material having a pocket therein, and having a pair of passageways leading outwardly from the pocket in opposite directions, a contact plate extending across the pocket and into one of the passageways on each side of the pocket, a threaded socket member mounted in the pocket and opening outwardly, a separate contact plate in each of the remaining passageways, said separate plates cooperating with the first mentioned plate to provide independent outlets and having a portion thereof in abutting engagement with the socket member to provide electrical contact therewith, inlet current conducting members longitudinally of the pocket, means for electrically connecting one of the members to the socket member, means for electrically connecting the other member to the first mentioned contact plate.

1,676,440. TRACING TABLE. MARY G. JACKSON, New Haven, Conn. Filed Feb. 14, 1927. Serial No. 167,933. 4 Claims. (Cl. 35—12.)

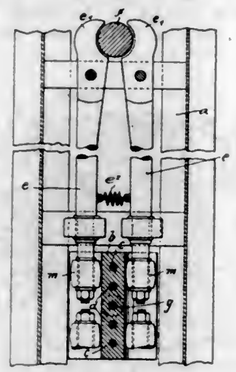


1. As a new article of manufacture, a tracing table comprising a table-top, supports therefor, a bodily-movable rectangular translumineseent tracing-surface of less length and breadth than the said table and adapted to set therein, and means for raising the said surface above the table-top and retiring it to the plane thereof.

1,676,441. MECHANICAL MOVEMENT. SHUMAN R. JACKSON, Syracuse, N. Y., assignor, by direct and mesne assignments, to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Oct. 26, 1923. Serial No. 670,980. 8 Claims. (Cl. 188—69.)

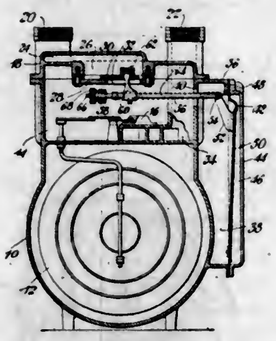
8. A mechanical movement comprising a gear member, a part actuated by said gear member, means engageable with said gear member for locking the same and means for turning said gear member including connections for disengaging said locking means and gear member, said locking means being adjustable relative to said gear member to effect locking engagement therewith when said part actuated by said gear member has been actuated by said gear member to the limit of its movement.

1,676,442. MANUFACTURE OF COMMUTATORS. RUSSELL G. JONES, New York, N. Y., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 18, 1924. Serial No. 738,549. 6 Claims. (Cl. 29—155.5.)



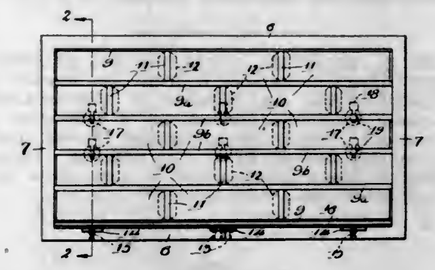
1. The method of making a commutator which comprises assembling an annulus of metal segments having anchoring tangs and spaced by insulation, placing against the ends of the tanks rings of insulating material adapted to soften under heat, forcing metal clamping rings, which have been heated to a temperature sufficient to soften the insulating rings, against said insulating rings with pressure sufficient to cause the insulating rings to be pressed into the surface irregularities of the segments and to cause the tangs to be bent so that the pressure applied to the tangs will be substantially equalized, and in securing the clamping rings in clamping relation while the clamping rings are still at a higher temperature than the segments.

1,676,443. SAFETY DEVICE FOR ELEVATORS AND THE LIKE. JOSEPH KASPE, Charbin, Russia. Filed Mar. 25, 1927, Serial No 178,419, and in Germany Feb. 13, 1926. 7 Claims. (Cl. 187—86.)



6. In an elevator a safety device comprising in combination with guide rails for the elevator and a counter-

weight, a casing on the elevator, a double sided wedge piece, vertical passages through said wedge piece, a hoisting cable passing from the elevator loosely through the wedge piece over a driving pulley to a cable block on the counterweight and back to the elevator over another driving pulley, an auxiliary cable attached with both its ends to the wedge piece and passing over loose pulleys to a second cable block on the counterweight, the

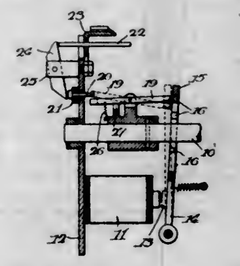


said second cable block being carried by the first cable block, means to vary the distance between the two cable blocks, tongue-like pivoted brake levers having their brake shoes adapted to grip around the guide rails of the elevator, and rollers on the free ends of the brake levers in close proximity to the apex of the said wedge piece so as to be forced apart when the latter ascends in relation to the elevator at the occurrence of a stretch or break in the hoisting cable.

1,676,444. DEMAND LIMITING AND VOLUMETRIC METER. JOHN F. KITCHEN, Erie, Pa., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1923. Serial No. 657,326. 7 Claims (Cl 73—1.)

1. The combination with a fluid meter having a mechanism for measuring the quantity of fluid passing therethrough, and means for restricting the rate of flow of fluid through the meter to a predetermined maximum, said means including an enclosed diaphragm having one side subject to pressure on the incoming side of the measuring mechanism and one side subject to pressure on the outgoing side, said diaphragm being responsive to the difference in pressure, a valve actuated by the diaphragm, and operating connections between said valve and said diaphragm.

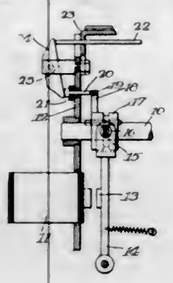
1,676,445. DISPLAY CASE FOR BRICK. WILLIAM C. KOCH, St. Paul, Minn. Filed Apr. 20, 1925. Serial No. 24,317. 7 Claims. (Cl. 206—78.)



7. In a device of the class described, a tray adapted to receive a plurality of brick samples arranged in rows, a series of parallel spacing strips severally disposed between rows of the samples, said strips being free for lateral movement to permit ready insertion of the samples between them, a flexible bar extending adjacent to the inner face of a side of the tray in parallel relation to the rows of samples and a series of screws threaded in said side of the tray and arranged to extend through said side with their inner ends impinging against said bar whereby all of the samples and strips may be shifted laterally to exert lateral gripping pressure upon the several samples.

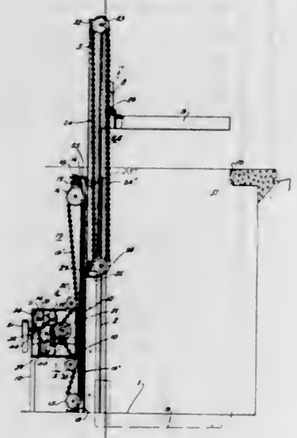
1,676,446. PRODUCTION OF ENZYMES FOR USE IN THE MANUFACTURE OF BREAD. HENRY ADOLPH KOHMAN, ROY IRVIN, and ERNEST SALATHIAL STATELER, Pittsburgh, Pa., assignors, by mesne assignments, to The Fleischmann Company, New York, N. Y. Filed Oct. 3, 1921. Serial No. 505,125. 2 Claims. (Cl. 195—20.)

1. The method of producing an enzyme product of fungus origin for use in the manufacture of bread, which comprises cultivating *Aspergillus oryzæ* upon a moist mass of ground hominy containing from 1 to 4 percent by weight, with respect to the hominy, of lactic acid.



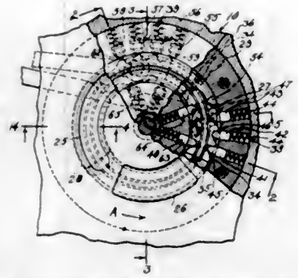
1,676,447. ELECTRIC SELECTING APPARATUS. CHARLES L. KRUM and HOWARD L. KRUM, Chicago, Ill., assignors to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Dec. 23, 1919, Serial No. 346,948, Patent No. 1,635,486. Divided and this application filed Nov. 4, 1926. Serial No. 146,211. 5 Claims. (Cl. 178—27.)

1. An electric selector mechanism for telegraph receivers comprising a set of selectors, a common actuator for mechanically positioning said selectors, a rotary member for mechanically moving said actuator into relation with said selectors one at a time, a cam having a series of angularly spaced projecting lugs for mechan-



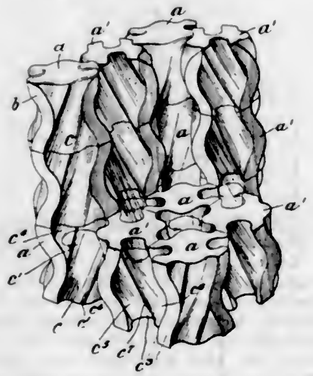
ically shifting said actuator at an angle to its path of movement to position said selectors, and a magnet having an armature mechanically and selectively controlling the selector positioning operations of said cam.

1,676,448. SELECTING APPARATUS FOR ELECTRIC TELEGRAPHS. CHARLES L. KRUM and HOWARD L. KRUM, Chicago, Ill., assignors to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Original application filed Dec. 23, 1919, Serial No. 346,948, Patent No. 1,635,486. Divdied and this application filed Nov. 4, 1926. Serial No. 146,212. 6 Claims. (Cl. 178—27.)



1. A selector mechanism for electric telegraphs comprising a set of selectors, a rotatable, axially movable member for effecting the setting of said selectors, means for rotating said member and a magnet for effecting the axial movements of said member and selectively determining the selector setting operations thereof.

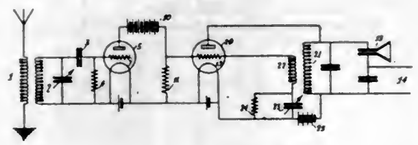
1,676,449. HOISTING MACHINE. FREDERICK J. LEDERER, Buffalo, N. Y. Filed Mar. 21, 1927. Serial No. 176,994. 17 Claims. (Cl. 187—62.)



9. An elevator comprising a stationary frame, an extensible frame slidably connected therewith, pulleys on each frame, an endless member for each frame taking over the respective pulleys thereof, the endless member of the stationary frame being connected to the lower part of the extensible frame, and the endless member of the extensible frame having one flight connected to a fixed part of the stationary frame, a platform slidably connected to the extensible frame and fixedly connected to the opposite flight of the endless member of said extensible frame, a closure member for an opening in a wall through which the platform is movable, said closure member being operably connected to the platform, and a skirt depending from the platform.

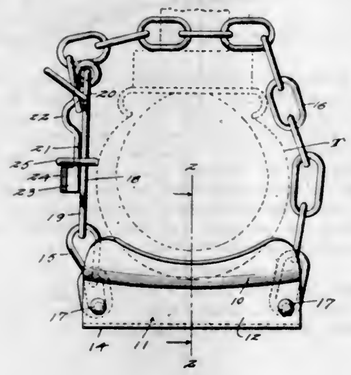
1,676,450. LOCK. CYRIL W. LE NOUE, Los Angeles, Calif. Filed July 28, 1927. Serial No. 209,057. 2 Claims. (Cl. 194—4.)

1. A lock comprising a casing provided with key slug inlet and discharge openings; a manually operable oscillating member mounted in said casing; a second oscillating member mounted in said casing provided with a socket, key slug engageable means to turn said second oscillatory member; a spring pressed plunger mounted in said casing adapted to engage in said socket; a tumbler adapted to engage in said socket and to be operated by said plunger; a spring pressed piston mounted in said casing and arranged in advance of said plunger, said casing being provided with a socket disposed forward of said piston adapted to receive said tumbler; and a key slug adapted to be engaged by said manually operable member and to operate said plunger and tumbler whereby said plunger will be disengaged from said second oscillating member and said tumbler will be carried forward with said key slug and second oscillating member and become deposited in the socket disposed forward of said piston.



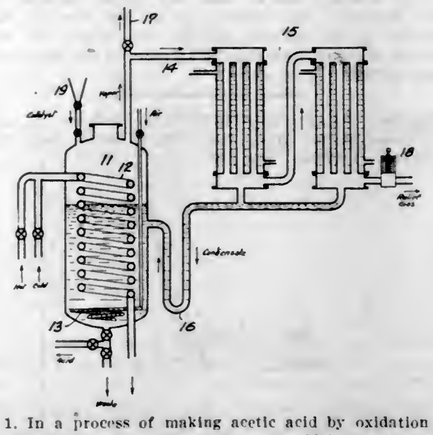
1,676,451. PACKING OR FILLING BODY. FRIEDRICH LILGE, Oberhausen, Germany. Filed Dec. 18, 1924, Serial No. 756,646, and in Germany Oct. 6, 1924. 5 Claims. (Cl. 261—95.)

1. A building block comprising a quadrifoliate-shaped body provided upon its exterior at quarter points with



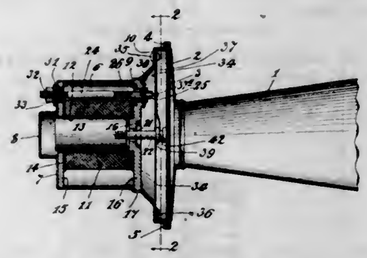
alternately arranged and longitudinally extending ribs and flutes, one or more of the flutes having expanded portions and contracted portions.

1,676,452. MEANS TO OPERATE ELECTROSTATIC TELEPHONES. SIEGMUND LOEWE, Berlin-Friedenau, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Apr. 29, 1927, Serial No. 187,678, and in Germany Feb. 20, 1924. 3 Claims. (Cl. 250—20.)



1. Radio signalling apparatus comprising a vacuum tube having plate and grid circuits regeneratively coupled together, means in series with the grid circuit for suppressing oscillations due to the regenerative coupling, an electrostatic telephone and a condenser in series, across a portion of the plate circuit of the tube, means for supplying a rectified high frequency current across said condenser, and means for coupling the output of another tube in said radio signalling apparatus across the grid and filament of said first mentioned vacuum tube.

1,676,453. TRACTION LUG FOR VEHICLES. ELMER E. MACGUIRE, Anaconda, Mont. Filed June 18, 1927. Serial No. 199,764. 3 Claims. (Cl. 24—237.)

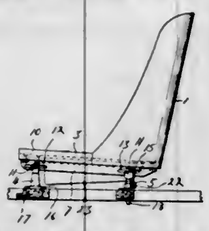


1. A chain connector comprising a body having an eye at one end for engagement with the end link of one of a pair of chain ends to be connected, an arm pivoted to the opposite end of the body and swingable about the pivot thereof to a position where it lies against the body, said arm being offset intermediate its ends whereby in the last named position it provides a cove for the reception of an end link of the second chain, means for securing said arm in said position comprising a ring surrounding and rotatable upon the body and a head on said arm, said ring in one position thereof being bodily movable longitudinally of the body over the head to overlie the arm and prevent separation thereof from the member.

1,676,454. PROCESS OF MAKING ACETIC ACID. HOWARD W. MATHESON, Montreal, Quebec, Canada, assignor to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Filed Mar. 31, 1921, Serial No. 457,465. 15 Claims. (Cl. 260—116.)

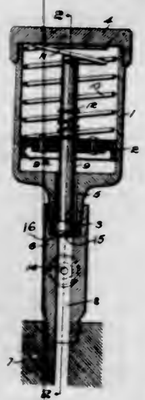
1. In a process of making acetic acid by oxidation of acetaldehyde while retaining formed acid in the acetaldehyde and after an initial rise in pressure at the commencement of the reaction, the step of further increasing the pressure above atmospheric as the acid content of the mixture increases.

1,676,455. ELECTRIC HORN. DUNCAN A. MCCONNELL, Montclair, N. J., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 3, 1922. Serial No. 558,109. 8 Claims. (Cl. 177—7.)



3. A signalling device comprising, in combination, a cup-shaped casing formed of thin magnetic material; a horn supported on the edge of said casing; a diaphragm interposed between the horn and casing; discs of comparatively thicker magnetic material than the casing held in spaced relation within said casing and forming partitions therein; a stationary contact; means insulatingly supporting said contact on said discs; a movable contact member supported by the casing so as to permit said member to engage with the stationary contact; a solenoid coil supported between said discs, and insulated therefrom, said coil containing a plunger-core; and a member on said plunger core adapted to strike the movable contact and diaphragm.

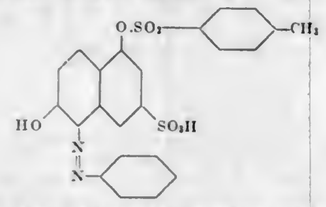
6. A signalling device, comprising in combination, a casing; a diaphragm carried by said casing; an electromagnet in said casing, having a movable armature provided with a head portion located between the magnet and the diaphragm; a circuit controlling device for said electromagnet, comprising a resilient member supporting a contact, said member being secured at one end, to the casing, the free end thereof engaging the head portion



of the armature on the side thereof adjacent the diaphragm; a stationary contact adapted to be engaged by the contact on the resilient member; and an apertured recoil blade spring attached at its ends to the casing and located in a plane between the stationary contact and the resilient member, said blade spring engaging the head portion of the armature on the side opposite that engaged by the resilient member, the contact on said member extending through the aperture in the said recoil blade spring.

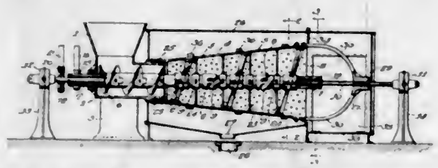
1,676,456. SEAT CONSTRUCTION. LAMONT A. MCDOWELL, Racine, Wis. Filed July 9, 1925. Serial No. 42,416. 1 Claim. (Cl. 155—14.)

The combination with a support having a vertical opening, a seat spaced above said support, of a longitudinal rail carried by said seat having a depending flange provided with spaced longitudinally extending slots, supporting brackets between said seat and support adjacent the front and rear edges of the seat, fastening elements carried by the upper ends of said brackets and engageable in said slots for permitting the seat to be adjusted longitudinally of the support, the lower end of one of said brackets being permanently secured to said support while the lower end of the other bracket is engaged in said opening for adjusting the seat to a plurality of vertical positions, the fastening element at the upper end of the bracket which is permanently secured to the support forming a fulcrum for said seat during vertical adjustment thereof.



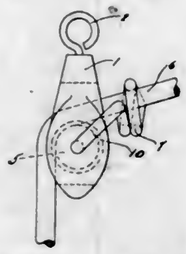
1,676,457. LUBRICATING APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1925. Serial No. 52,403. 8 Claims. (Cl. 184—45.)

1. A lubricant supply cup comprising a reservoir, a spring pressed closure valve normally permitting passage of lubricant from said reservoir, lubricant expelling means in said reservoir movable relative to said valve for slowly forcing the lubricant therefrom, resilient means interposed between the valve, the cup, and the lubricant expelling means, adapted to be compressed by the pressure of the lubricant entering said cup and acting upon said lubricant expelling means to permit filling said cup through said valve and to close said valve when said cup is filled to a predetermined level.



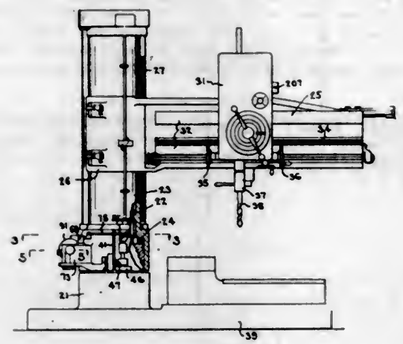
1,676,458. HYDROXY-NAPHTHALENE-ARYLSULPHOESTER AZO DYESTUFF AND PROCESS OF MAKING THE SAME. WILHELM NEELMEIER, Leverkusen-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed July 21, 1926, Serial No. 124,089, and in Germany Aug. 2, 1924. Divided and this application filed July 20, 1927. Serial No. 207,311. 1 Claim. (Cl. 260—94.)

As a new product the mono-azo-dyestuffs having in the free state most probably the formula:



which is in a dry state an orange-red powder, soluble in water and concentrated sulfuric acid with an orange-red color, dyeing wool from an acid bath orange-red shades of good fastness to light and milling.

1,676,459. DEVICE FOR SEPARATING LIQUID FROM SOLID MATERIAL. STEN V. C. PLATE, Chicago, Ill. Filed July 12, 1926. Serial No. 121,821. 8 Claims. (Cl. 210—69.)

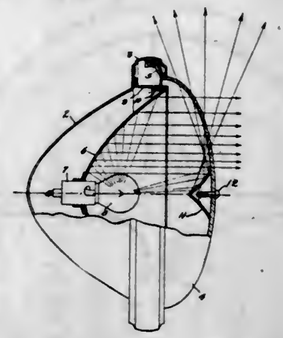


1. A device for removing liquid from solid material comprising a stationary chamber into which the material is received, a rotatable receptacle with which said chamber communicates, the wall of said receptacle being provided with a series of openings, a delivery mechanism for delivering the material from the chamber to said receptacle, a series of scrapers in said receptacle, braces in said receptacle intermediate said scrapers, and means for moving the scrapers and the receptacle relatively while the receptacle is rotating.

1,676,460. PULLEY STRUCTURE. JAMES S. REID, Cleveland, Ohio. Filed Sept. 7, 1926. Serial No. 134,069. 6 Claims. (Cl. 254—197.)

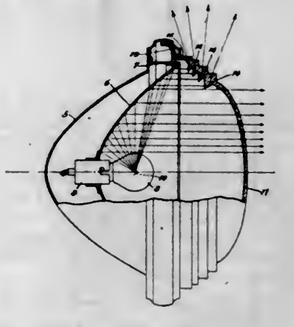
1. In combination, a frame, a rod mounted in said frame, and a pulley rotatably mounted upon said rod, said rod being provided with an integral portion formed as a guide for the rope which travels over said pulley.

1,676,461. DRILLING MACHINE. ALBERT E. ROBINSON and AUGUSTUS M. SOSA, Cincinnati, Ohio, assignors to The American Tool Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 20, 1926. Serial No. 130,554. 32 Claims. (Cl. 77—28.)



5. In a drilling machine, the combination of a base, a tool-arm adjustable to radial positions with relation thereto, a clamp for clamping said tool-arm in adjusted positions, a driving member, a brake normally in released relation, centrifugal means operated by said driving member for placing said brake in braking relation, means restraining said last-named means, and means operating in synchronism with said clamp for releasing said restraining means.

1,676,462. POWDER-DISPENSING DEVICE. RALPH R. ROOT, Lakewood, Ohio, assignor to The Root Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 25, 1925. Serial No. 11,615. 3 Claims. (Cl. 43—147.)

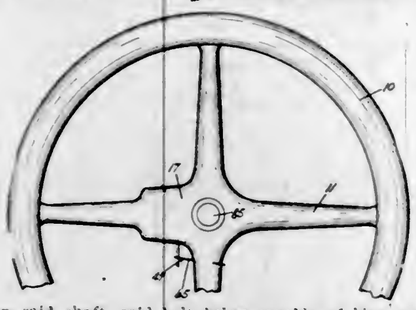


1. In a device of the character described the combination with a container having a chamber adapted to contain powdered material said chamber having a filling opening, a closure member for said filling opening said chamber being provided with a discharge opening, said closure member being provided with an extension adapted to cooperate with the said discharge opening to deflect the material coming therefrom said extension being movable to a position in which it is out of co-operation with the said discharge opening.

1,676,463. HEADLIGHT. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Sept. 2, 1924. Serial No. 735,407. 2 Claims. (Cl. 240—48.4.)

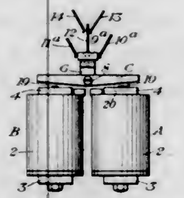
1. A headlight comprising a reflector, a lens for said reflector, a source of light in said reflector, and an auxiliary reflector carried by the central portion of said lens, for reflecting the light from said source through marginal portions of said lens, the top and bottom portions of said auxiliary reflector being cut away to permit the passage forwardly of direct rays of light from said source.

1,676,464. HEADLIGHT. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Sept. 2, 1924. Serial No. 735,409. 1 Claim. (Cl. 240—48.4.)



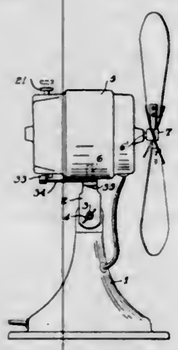
A headlight comprising a reflector, a source of light in said reflector, and a bowl-shaped lens for said reflector having a plurality of inwardly stepped annular prisms adjacent the margin thereof, said prisms each having one inwardly extending face substantially at right angles to the axis of said reflector and another inwardly extending face at an acute angle to said axis, the angles between said faces increasing from the inner to the outer prism and the greater portion of said lens being substantially non-refractive whereby the greater portion of the beam reflected from said reflector will be projected through said non-refractive portion while the rays reflected from the marginal surface of said reflector will be intercepted by said prisms and refracted laterally.

1,676,465. LOCKING HANDWHEEL. ALVA W. SCOTT and HARVEY D. GEYER, Dayton, Ohio, assignors to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 11, 1924. Serial No. 755,182. 9 Claims. (Cl. 70—129.)



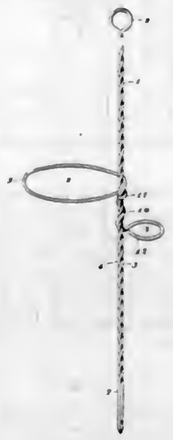
1. In a wheel and shaft locking means, a head attached to said shaft, a nut threaded upon said shaft above said head and preventing axial removal of said

head, a wheel having a central housing surrounding and preventing access to said nut, a rotary locking bolt having two positions for rendering said wheel fixed or loose



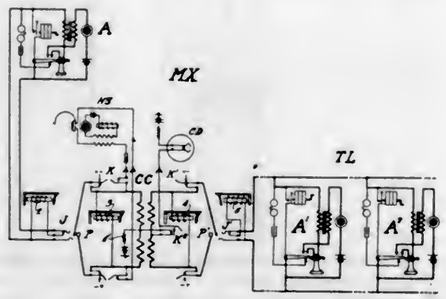
upon said shaft, said bolt being capable of bing swung into a third position to engage said nut whereby said nut may be turned upon the threads on said shaft by rotating the wheel.

1,676,466. ELECTRICAL RELAY. CLARENCE S. SNAVELY, Pittsburgh, and WESLEY B. WELLS, Wilkinsburg, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 12, 1924. Serial No. 712,556. 2 Claims. (Cl. 175—336.)



1. An electromagnetic device comprising a pivoted armature, two electromagnets one on each side of the pivotal axis of said armature whereby the armature is swung in one direction or the other according as one magnet or the other is energized, and an auxiliary magnetic path of low reluctance connecting the two poles of each magnet for delaying the decay of flux in the core of the magnet when the magnet becomes deenergized and for delaying the action of the magnet on the armature when the magnet becomes energized.

1,676,467. OSCILLATING FAN. HARVE R. STUART, Springfield, Ohio, assignor to The Robbins & Myers Company, Springfield, Ohio, a Corporation of Ohio. Filed Feb. 10, 1926. Serial No. 87,402. 3 Claims. (Cl. 230—156.)



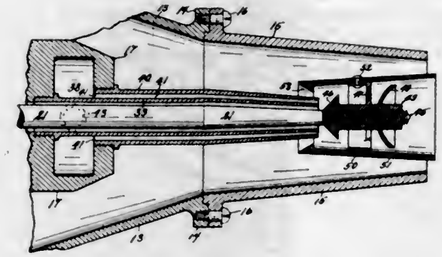
1. In an oscillating mechanism for a motor and fan mounted to oscillate, the combination of a motor shaft, a driven shaft having a crank pin, a pinion mounted upon said pin, a stationary internal gear and a rotatable internal gear concentric with said driven shaft and in mesh with said pinion, said gears and pinions constituting speed reducing mechanism, manual means for connecting and disconnecting said driven shaft with and from said motor shaft, a crank connected with said rotatable gear, and a link pivotally connecting said crank with a stationary part, said motor and fan being locked against movement by said speed reducing gearing excepting when said gearing is connected with said motor shaft.

1,676,468. PLANT SUPPORT. NIXON WATERMAN, Canton, Mass. Filed May 13, 1927. Serial No. 191,218. 3 Claims. (Cl. 47—47.)

1. In a plant-support, the combination of a standard provided with spiral guiding means, and a plant-holder comprising a plant inclosing loop, spiral means adapted to fit into and coincide with the said spiral guiding means of the standard, and auxiliary means whereby under the influence of gravity automatic adjustment of the plant-holder may be effected.

1,676,469. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed June 10, 1925. Serial No. 36,069. 31 Claims. (Cl. 179—27.)

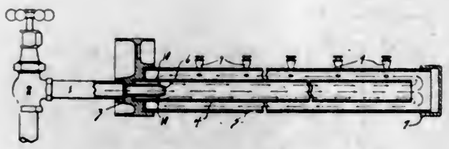
30. In a telephone system, a connector, a line accessible to the connector, means controlled by the connector for projecting ringing current over the line over either of two paths, one of said paths including the talking conductors of the connector and the other path excluding said talking conductors.



1,676,470. PRODUCTION OF ESTERS OF AROMATIC ACIDS. ROGER ADAMS, Urbana, and ERNEST H. VOLWILER, Chicago, Ill., assignors to The Abbott Laboratories, Chicago, Ill., a Corporation of Illinois. Filed Mar. 9, 1922, Serial No. 542,462, and in Great Britain Sept. 27, 1921. 10 Claims. (Cl. 260—105.)

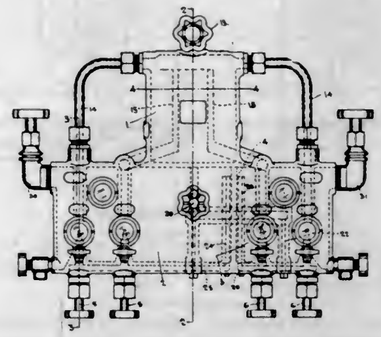
1. The process of producing a compound of the general series:

$$Ar-C(=O)-O.CH_2CH_2CH_2-N(R')(R'')$$



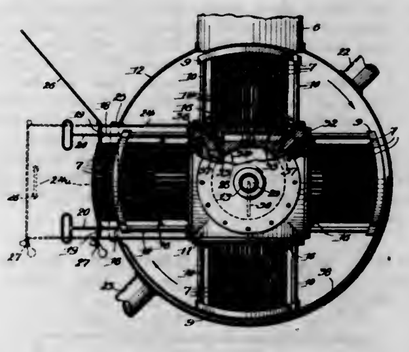
in which R' and R'' represent alkyl radicals, one of which is larger than an ethyl group, and in which Ar represents an aryl group, which consists in condensing the gamma-halogen-n-propyl alcohol ester of a benzoic acid, with a di-alkyl amine in which one of the alkyl groups is greater than ethyl.

1,676,471. OIL BURNER FOR FURNACES. CHURCH ANDERSON, Los Angeles, Calif. Filed Aug. 5, 1927. Serial No. 210,770. 4 Claims. (Cl. 158—77.)



1. An oil burner for a furnace including nozzles directed toward a line extending axially and longitudinally through them, means for driving air and liquid fuel through said nozzles, and means adjacent the discharge end of said fuel nozzle for causing a preliminary mixture of the fuel with a portion of the air and then a final mixing of the unmixed air with the preliminary mixture.

1,676,472. CIRCULATING GAS BURNER. JAY M. AXTELL and FREDERICK G. VON HOFEN, Fort Worth, Tex., assignors to A.-V. Burner Company, Fort Worth, Tex., a Corporation of Texas. Filed Nov. 21, 1925. Serial No. 70,475. 3 Claims. (Cl. 158—104.)

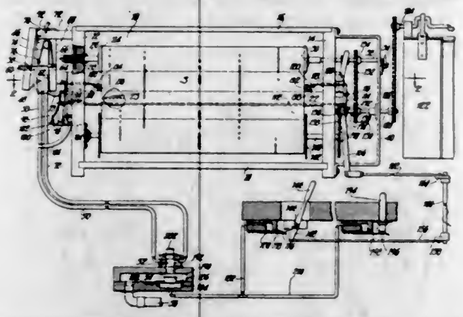


1. A circulating burner comprising a holder, an outer circulating member rigid with said holder and provided with burner nozzles, a circulating member within said outer member rigid with said holder and open at the opposite end for permitting gas to enter said outer member and having perforations near said holder for permitting gas to enter therein from said outer member, and a feed nipple rigid with said holder for supplying gas to said inner member and projecting beyond said perforations for aiding in directing gas from the outer to the inner member.

1,676,473. LUBRICATOR. FREDERICK C. BLANCHARD, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 31, 1922. Serial No. 585,397. 6 Claims. (Cl. 184—50.)

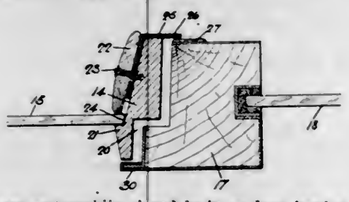
1. In a lubricator, the combination with the condensing chamber, of a plurality of lubricant compartments adapted to communicate therewith, separate filling openings for each compartment, lubricant outlet pipes adapted to communicate with said compartments, and steam equalizing passageways communicating with said outlet pipes.

1,676,474. MACHINE AND METHOD FOR DRYING MACARONI. ARTHUR E. BROUGHTON, Minneapolis, Minn. Filed Mar. 29, 1926. Serial No. 98,240. 11 Claims. (Cl. 34—26.)



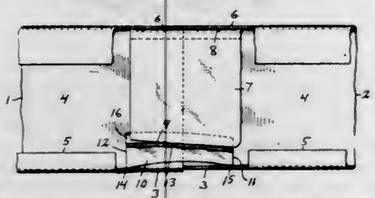
1. The method of drying macaroni or other moist tubular particles of a pasty consistency without protective covering, which includes the step of applying heat to the individual particles within the longitudinal opening therein, while permitting the free escape of moisture from the exterior thereof and progressively drying the particles from the interior thereof outward, whereby the interior portions of each particle are dried before the outer surfaces thereof are hardened.

1,676,475. TRACKING DEVICE. REINHOLD BUKOW, Long Island City, N. Y., assignor to Hardman, Peck & Co., New York, N. Y., a Corporation of New York. Filed Apr. 9, 1926. Serial No. 100,874. 5 Claims. (Cl. 84—138.)



1. The combination with a tracking control mechanism, a take-up roll and rewinding mechanism, of a spool arranged to be coupled with the latter, means for render-

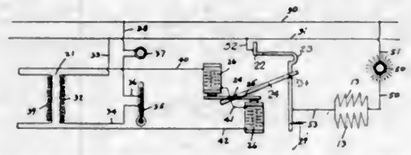
ing the tracking control mechanism non-operative during the operation of said rewinding mechanism, and means



for automatically shifting said spool relatively to said take-up roll to centralize said spool upon the operation of said rewinding mechanism.

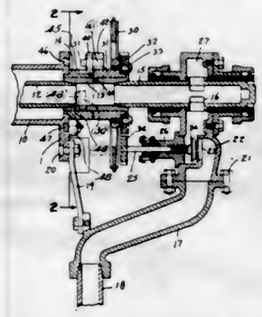
1,676,476. AUTOMOBILE BODY CONSTRUCTION. ALEXANDER CARLSON, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 24, 1923. Serial No. 627,480. 2 Claims. (Cl. 296—28.)

1. In an automobile closed body, a door having a front door post and a glass panel attached thereto, said door post having a recess on its forward edge forming a vertical shoulder thereon of considerable width, a metallic front body pillar having a transverse width approximately equal to that of said door post but having a relatively small longitudinal width, said pillar having a vertical shoulder thereon opposed to and internesting with the shoulder in said door post, said door post having a flange on its forward outside edge which substantially conceals the relatively narrow portion of said pillar which would otherwise be exposed when viewed from the outer side.



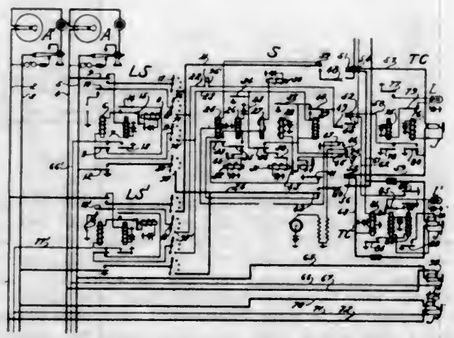
1,676,477. ROAD-FORM CONNECTION. EDWARD G. CARR, Chicago, Ill. Filed Aug. 31, 1922. Serial No. 585,399. 9 Claims. (Cl. 25—118.)

1. The combination with abutting road-forms, including bases and treads, of a straight aligning member adapted to engage with the treads, and means to force the treads and the aligning member into contact by pressure exerted on each base independently of the planes in which the two bases may lie.



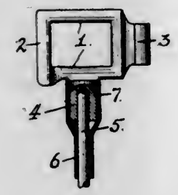
1,676,478. THERMOSTATIC CONTROL. REUEL C. CHESHIER, Frankfort, Ind., assignor to Schlosser Brothers, Incorporated, Frankfort, Ind. Filed July 13, 1925. Serial No. 43,283. 2 Claims. (Cl. 236—78.)

1. In combination, a source of electrical energy, three electrical circuits, only two of which are directly connected to said source of electrical energy, one of said source connected circuits and the remaining circuit being magnetically coupled together, and means in each of



said remaining circuit and the other source connected circuit and mechanically connected together, whereby an operative control in the first source connected circuit is imparted upon the second source connected circuit.

1,676,479. SOOT BLOWER. WILLIAM A. COOK and EVERETT P. STROUP, Marion, Ind., assignors to Marion Machine, Foundry & Supply Company, Marion, Ind., a Corporation. Filed Apr. 7, 1924. Serial No. 704,773. 10 Claims. (Cl. 122—392.)

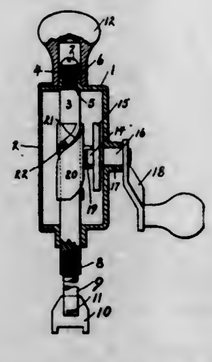


1. A soot blower including a rotary blow tube construction, means for supplying steam thereto, a steam valve for controlling said steam supply, a wheel loosely and rotatably mounted on the blow tube construction and adapted to operate the valve and open and close the same and rotate the blow tube construction, and means for disengaging said wheel from the blow tube construction during a part of the cycle of the operation of the device.

1,676,480. TELEPHONE SYSTEM. THOMAS F. CROCKER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 23, 1925. Serial No. 17,539. 24 Claims. (Cl. 179—27.)

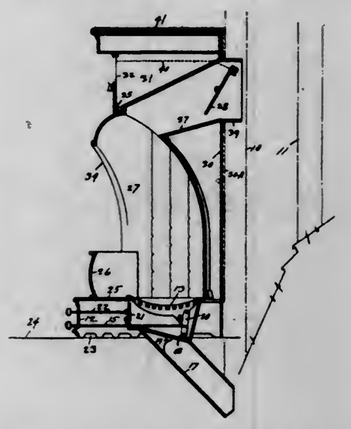
17. In a telephone system, a cord circuit comprising talking strands and having a plug at each end, said strands being normally open, and means controlled through either plug for closing said strands.

1,676,481. CONVEYER. JOHN D. CRUMMEY, WILLIAM J. AUSTIN, and FRANK H. LEWIS, San Jose, Calif., assignors to Bean Spray Pump Co., San Jose, Calif., a Corporation of California. Filed Apr. 30, 1928. Serial No. 274,126. 3 Claims. (Cl. 198—195.)



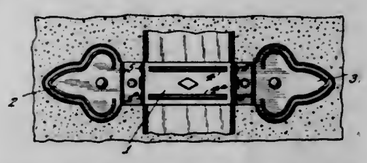
1. A conveyer comprising spaced parallel side chains composed of articulated links; spaced, parallel cross members connecting opposing corresponding links; and a rubber cushion sheath completely enveloping each cross member, the ends of said sheath being stretched to cover and bind upon the link and cross member connection.

1,676,482. METHOD AND MEANS FOR THREADING NUT BLANKS. OTTO HARRY DE LAPOTTERIE, Kent, Ohio, assignor to Roy H. Smith, Kent, Ohio. Filed Dec. 5, 1921. Serial No. 519,902. 7 Claims. (Cl. 10—152.)



4. A tool for forming threads in nut blanks having a tapered thread swaging head with alternate circular and non-circular portions spaced circumferentially, and having threads formed in both portions.

1,676,483. VALVE GRINDER. WILLIAM E. DUTHIE, Indianapolis, Ind. Filed Aug. 25, 1926. Serial No. 131,321. 1 Claim. (Cl. 74—14.)

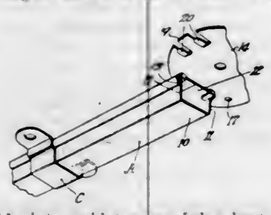


In a valve grinder, the combination with a casing, of a shaft mounted therein to rotate on a vertical axis and held against vertical movement therein, a spiral cam sleeve surrounding said shaft, intermediate of its ends, rotatably fixed and reciprocable with respect to said shaft, fixed means on the shaft engaging the cam face of said sleeve, a transversely extending grooved bearing block secured to said sleeve intermediate of its ends, a crank pin engaging in the groove of said bearing block and a crank handle for rotating said crank pin to impart a vertically reciprocating movement of the sleeve to thereby impart to the shaft an oscillating rotary movement, the shaft of said crank handle extending at right angles to the first mentioned shaft and mounted in said casing.

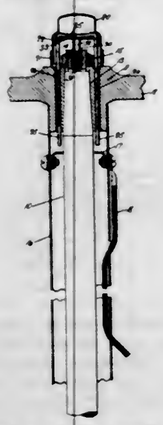
1,676,484. FIREPLACE. JOHN B. EHRLICH, Portland, Oreg. Filed July 15, 1926. Serial No. 122,617. 3 Claims. (Cl. 126—242.)

1. A fireplace having a hinged grate, a grate-holding base including a fire wall, an ash duct under said grate having a normally closed door thereon, a link connecting said grate and door, and means for actuating said link in a manner to open said door when said grate is opened.

1,676,485. LEADER-PIPE STRAP. DANIEL J. FINCANE, Brooklyn, N. Y. Filed June 11, 1926. Serial No. 115,240. 2 Claims. (Cl. 248—30.)



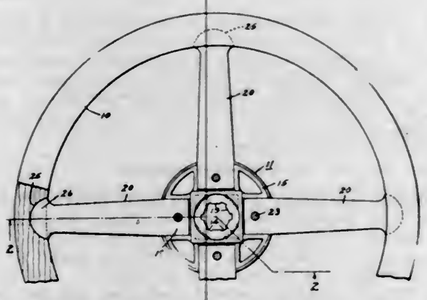
1. A leader-pipe supporting strap comprising a single strip of sheet metal consisting of end portions having embossed reinforcements and a front portion between said end portions and having embossed reinforcement, said front embossed portion being spaced from the end embossed portions to form flat bending zones between said front and end portions.



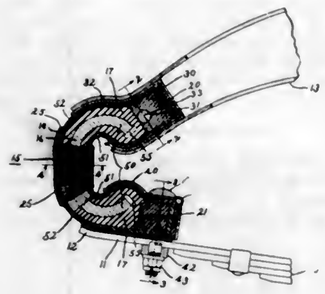
1,676,486. CONDUIT FOR ELECTRIC CONDUCTORS. OTTO A. FREDERICKSON, Hartford, Conn., assignor to American Wiremold Company, Hartford, Conn., a Corporation of Pennsylvania. Filed May 4, 1923. Serial No. 636,529. 6 Claims. (Cl. 247—25.)

1. In a conduit for electrical conductors and the like, the combination of a one piece closed conduit of relatively stiff material, having a flat base and having sub-

stantially straight ends, with a supporting plate of relatively stiff material comprising a flat plate having a plurality of tongues struck from the same within the boundary of said plate, said tongues being bent to extend outward substantially parallel to said plate and spaced from said plate sufficient to receive the base of said conduit.

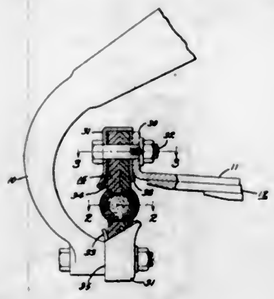


1,676,487. HORN-BUTTON MOUNTING FOR STEERING WHEELS. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 19, 1924. Serial No. 757,067. 3 Claims. (Cl. 200—59.)



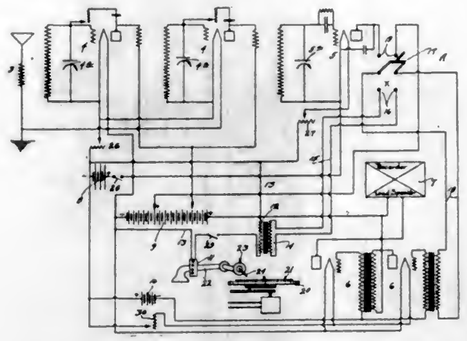
1. In combination, a steering shaft, a handwheel fixed upon said shaft, a nut threaded upon the shaft to hold said handwheel against axial movement thereupon, a horn button guide casing mounted upon the top of the handwheel and completely enclosing said nut and having a portion extending under said nut whereby said casing is retained in place, and a horn button reciprocative within said guide casing.

1,676,488. STEERING WHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor to Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 25, 1926. Serial No. 90,672. 7 Claims. (Cl. 74—33.)



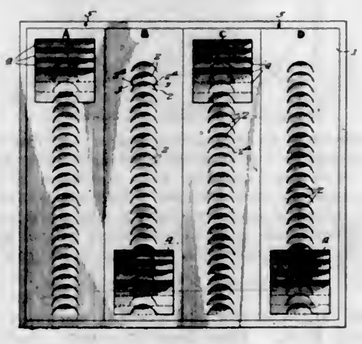
2. A handwheel spider comprising: a cast metal hub having a sleeve portion adapted to fit over a shaft, said sleeve portion having a square outer periphery and integral lugs projecting from the corners thereof, four wooden spokes having inner ends projecting individually into the openings between said lugs, upper and lower clamping plates for clamping said inner ends rigidly in place between said lugs, said clamping plates having square apertures fitting snugly about the square outer periphery of said sleeve portion, and a lower pressed metal cover concealing said lower clamping member and retained in place thereby.

1,676,489. SPRING SHACKLE. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 16, 1926. Serial No. 142,118. 11 Claims. (Cl. 267—54.)



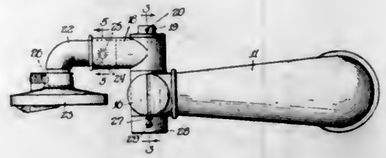
1. In combination with the spring and frame member of a vehicle, a shackle comprising: a molded rubber unit having an interior metal insert, a soft rubber body and rubberized fabric extending around the periphery of said rubber body, said molded unit having one end thereof rigidly fixed to the vehicle spring and the other end thereof rigidly fixed to the frame member.

1,676,490. SPRING SHACKLE. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 21, 1927. Serial No. 162,605. 6 Claims. (Cl. 267—54.)



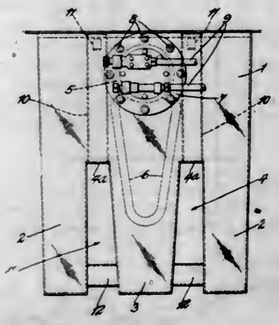
1. A suspension shackle for two relatively movable parts comprising: a flexible web of molded rubberized fabric having its end portions rigidly secured to said movable parts respectively, the central portion of said flexible web being substantially non-extensible, while the lateral edges of said web are slightly yieldable under tension load, whereby edge loading upon said flexible web is distributed over a substantial width thereof.

1,676,491. COMBINED RADIO AND PHONOGRAPHIC RECORDING AND REPRODUCING SYSTEM. PAUL GOLDSBOROUGH, Minneapolis, Minn., assignor of one-fourth to Albert P. Upton, Minneapolis, Minn. Filed Sept. 16, 1926. Serial No. 135,860. 3 Claims. (Cl. 179—100.1.)



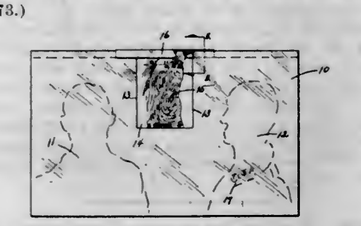
2. An apparatus of the class described, comprising a radio receiving set, an electrical reproducer for phonograph records, an audio-frequency amplifier, electric circuits connecting said amplifier with the aforesaid devices, a loud-speaker electrically connected to the output of said amplifier, phonograph record recording means, and acoustical means connecting said loud-speaker and said recording means whereby sound produced by the loud-speaker may be simultaneously heard and recorded.

1,676,492. CARD RACK. GEORGE L. GOODWIN, Chicago, Ill., assignor to The International Committee of Young Men's Christian Associations, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,333. 1 Claim. (Cl. 40—124.)



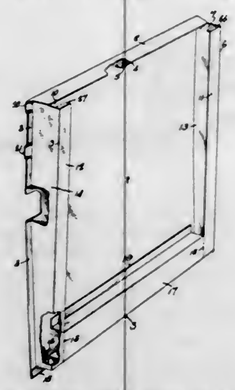
A card rack comprising a sheet of flexible material having a vertical series of slits cut therein to form a vertical column of card holding straps, each strap comprising all of the sheet material lying between adjacent slits and margins of uncut material on each side thereof resiliently resistant to displacement toward said column of straps, each strap normally lying in the plane of said sheet and the portion of each strap lying between its ends being displaceable from said plane outwardly to admit a card behind it and by said outward displacement imposing tension on the margins in the plane of the sheet, whereby the resistance of said margins tends to restore said tongues to their normal plane and grip the inserted card.

1,676,493. SOUND-CONVEYING APPARATUS. OTTO R. GRASS, Chicago, Ill., assignor to The Oro-Tone Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1924. Serial No. 738,994. 7 Claims. (Cl. 274—24.)



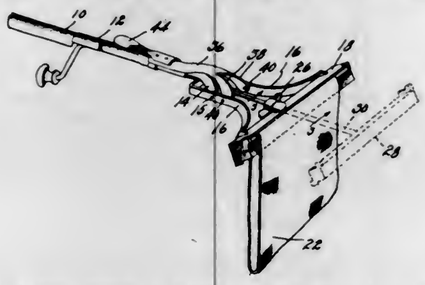
1. A sound box coupler and sound recording means for sound reproducing instruments, comprising means adapted to connect a tone arm and sound box, a removable closure covering an opening in said coupler, and a horn having a portion insertable in said opening to thereby communicate with said tone arm.

1,676,494. REFRIGERANT CONTAINER. GUSTAV J. GRUENDLER, Clayton, Mo. Filed Aug. 2, 1926. Serial No. 126,655. 6 Claims. (Cl. 62—95.)



1. A refrigerant container for refrigerators comprising a plurality of vertically disposed legs adapted to contain brine, means in one of said legs for cooling the brine therein, and means whereby the brine may flow from substantially the lower end of said leg in which the brine is cooled into the other of said legs.

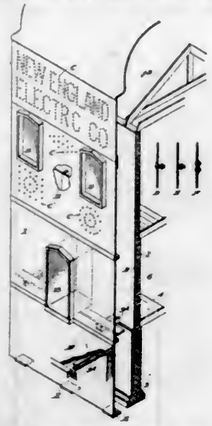
1,676,495. METHOD OF IDENTIFYING INDIVIDUALS. WILLIAM MCKINLEY HAMMOND, Des Moines, Iowa. Filed Jan. 21, 1926. Serial No. 82,708. 3 Claims. (Cl. 95—73.)



1. A method of producing a device for the identification of an individual which consists in preparing a photographic likeness of the individual in negative on a film, cutting a section out of said film, preparing a finger print of the individual on a sheet of paper, fitting said sheet into the opening in said film and making a photographic print through said negative and paper simultaneously whereby a reproduction of the likeness and finger print are combined in the same print.

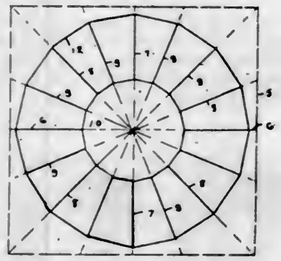
1,676,496. DOOR. EDWARD J. HARDTKE, Milwaukee, Wis., assignor to Seaman Body Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 30, 1924. Serial No. 746,727. 8 Claims. (Cl. 296—44.)

1. A sheet metal door constructed of a single piece of metal having the main portion thereof constituting the front panel of the door, the upper edge portion of the piece of metal extending inwardly from the main portion to provide a reinforcing top plate, the side edge portions of the piece of metal extending inwardly from the main portion and having their extremities extending toward each other and terminating in spaced relation to the main portion to provide reinforcements for the sides of the door.



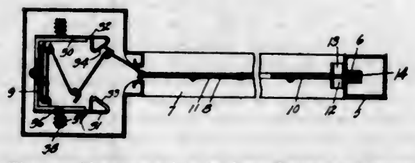
1,676,497. MOP. THOMAS HILL, Detroit, Mich., assignor to Dan H. Gilchrist, Detroit, Mich. Filed July 29, 1927. Serial No. 209,201. 5 Claims. (Cl. 15—120.)

1. A mop having a handle, a head pivoted to the handle and adapted to be locked within the axial line of the handle or at an angle with respect thereto, a cloth carried by the head, a rotatable cloth engaging part mounted upon the head to twist the cloth with respect to the head, said rotatable part having a handle portion extending rearwardly along the mop handle, said mop handle having a groove to receive the handle portion of the rotatable part and having means adapted to grip the same to secure it therein at any position wherein it may be disposed.



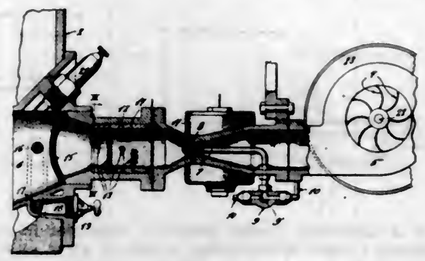
1,676,498. SUB OR REMOVABLE BUILDING FRONT. HARRY W. LAWRENCE, Denver, Colo. Filed Apr. 25, 1927. Serial No. 186,480. 6 Claims. (Cl. 40—126.)

1. A sub and removable building front for the front permanent walls of old or new buildings; comprising a thin sheet metal front wall member constructed of attachable and detachable sections of sheet metal; and secured to said permanent wall by structural members at a sufficient distance from it for workmen to work between said walls; and a platform between said walls for workmen to stand on; said subwall being provided with apertures arranged to form the outlines of advertising letters and ornamental designs; transparent lenses of any predetermined color removably secured in said apertures; a



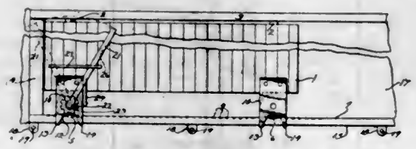
light reflecting surface on the wall of said permanent wall behind said lenses; and electric lights arranged to illuminate the light reflecting surfaces on said permanent wall; whereby said lenses are illuminated.

1,676,499. METHOD OF PRODUCING FOLDED TOILET-SEAT COVERS. WILLIAM P. MCCORKINDALE, Holyoke, Mass. Filed Aug. 26, 1926. Serial No. 131,806. 4 Claims. (Cl. 270—61.)



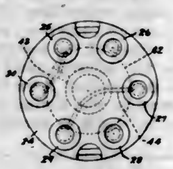
1. The process of making paper toilet seat covers consisting in folding a rectangular sheet upon itself along a series of fold lines radiating from a common center to provide a final triangular shaped folded article, and then sawing a series of similarly folded sheets along the apex portion thereof and then along the outer portion thereof, to provide an approximately annular toilet bowl seat cover.

1,676,500. SLIDING DOOR. CLAUDE C. MCGINNIS, Sedro Woolley, Wash. Filed June 27, 1927. Serial No. 201,616. 4 Claims. (Cl. 189—51.)



1. The combination with a door frame and housing and an oscillatable receiver in the housing, of a sliding door comprising jointed panels one of which is hinged to the receiver in off-center position, and means for guiding the door, in closing and opening movements.

1,676,501. BURNER. GEORGE F. MOORE, St. Louis, Mo., assignor to Recip-Roto Engine Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 26, 1919. Serial No. 340,855. 4 Claims. (Cl. 158—76.)

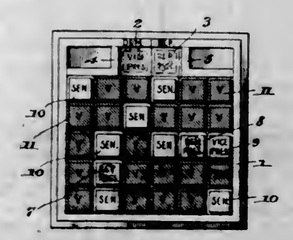


1. A burner comprising a blower, an air passage leading from said blower, a fuel outlet nozzle in said passage, a restriction in said passage spaced from and surrounding said nozzle near the outlet end of said nozzle, a vaporizing chamber beyond said nozzle and said restriction, heating means in said vaporizing chamber, an expanding discharge nozzle leading from the vaporizing chamber, a grid formed across said discharge nozzle between the inlet and outlet ends of said discharge nozzle and an igniter beyond the grid.

1,676,502. DEVICE FOR MOVING FREIGHT-CAR DOORS. GAITHER A. PLUNKETT, Bay Point, Calif. Filed Feb. 10, 1927. Serial No. 167,340. 6 Claims. (Cl. 268—44.)

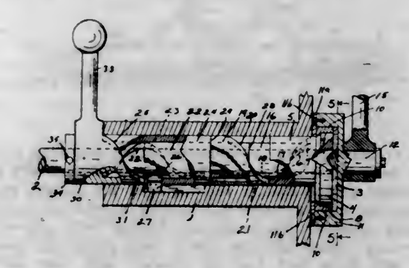
1. In a device of the type described comprising a door, a supporting rail for said door having a plurality of openings therein, the walls of said openings being inclined, and a door supporting roller movable on said rail and having projections removably receivable in rail and having projections removably receivable in said openings.

1,676,503. DUAL IGNITION FOR 2-CYLINDER ENGINES. EDWARD V. RIPPINGILLE, Detroit, Mich., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 14, 1927. Serial No. 205,782. 8 Claims. (Cl. 123—148.)



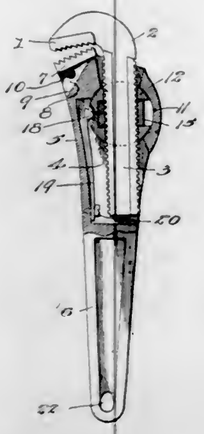
1. An ignition device comprising in combination, a distributor head having a plurality of terminal posts arranged in a circular row; and a rotatable member having separate conductors each providing a bridging connection between certain pairs of terminal posts in recurrent sequence.

1,676,504. FIT-EASY FACING FOR HATS. INEZ E. RISLEY, Los Angeles, Calif. Filed Feb. 23, 1926. Serial No. 90,018. 1 Claim. (Cl. 2—175.)



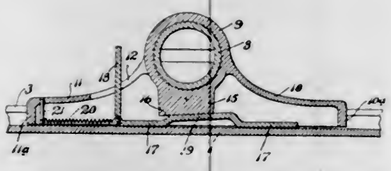
As an article of manufacture, a made-up brim facing unit for hats comprising: a main textile member in the form of a flat web made endless and adapted to contact with the surface of the brim of the hat on which said facing unit is to be used; a circumferentially extending reinforcement and a web of diaphanous material provided with peripheral reinforcement, detachably secured to said textile member reinforcement.

1,676,505. GAME OR PUZZLE. THOMAS J. SCANLAN, Oakland, Calif. Filed July 22, 1927. Serial No. 207,720. 2 Claims. (Cl. 273—132.)



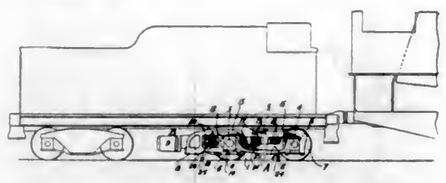
2. A group of blocks of the same size and shape adapted for playing a "presidential" game or puzzle, comprising blocks representing opposing candidates for the Presidency, a block representing a Vice-President, which is adapted to be arranged alongside either candidate block, blocks representing Senators, and blocks representing voters, and a tray for accommodating all of said blocks in edge-to-edge arrangement for relative shifting the area of which is greater by the area of two of said blocks than the aggregate of the areas of all of the blocks.

1,676,506. MECHANICAL MOVEMENT. RUDOLPH E. SCHLEY, Beaver Dam, Wis. Filed Apr. 30, 1926. Serial No. 105,661. 7 Claims. (Cl. 74—38.)



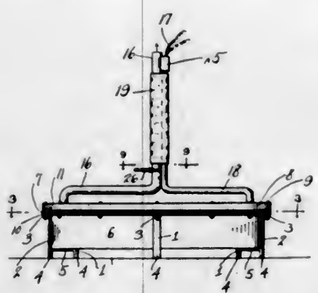
1. A shaft, a sleeve carried thereby, an eccentric upon the sleeve, a guide block upon the end of the shaft, a sliding member provided with slots intersecting at 90°, one of which is adapted for engagement with said guide block, a bearing member journaled upon the eccentric and adapted to be engaged within the slot at right angles to the slot engaged by said guide block, and a crank pin carried by the sliding member.

1,676,507. PIPE WRENCH. NINKO SPANOVIC, Duquesne, Pa. Filed Jan. 27, 1927. Serial No. 164,081. 2 Claims. (Cl. 81—105.)



1. In a wrench, the combination of a hollow body having a head and circular openings in its walls, a circular head in said openings having a transverse slot opening at one side of the head, a circular nut in the circular head, a fixed jaw on the body, a movable jaw having a shank threaded into the nut and passing through said circular head, a pair of concave lugs on the exterior of and at opposite sides of the circular head for guiding the finger and thumb to the nut, said circular head having a socket, a spring in the hollow body, and a lug on said spring engaging the socket for the purpose described.

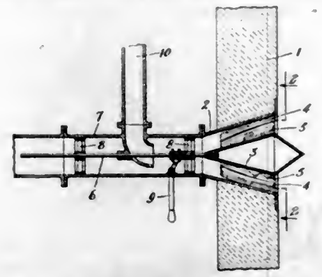
1,676,508. PEDESTAL MOUNTING. ANTHONY VANDERVELD, Grand Rapids, Mich., assignor of one-half to Harry B. Parrish, Grand Rapids, Mich. Filed June 16, 1924. Serial No. 720,193. Renewed Dec. 16, 1927. 7 Claims. (Cl. 188—43.)



1. In combination, an elongated track including a vertical web, upper and lower flanges and downwardly and upwardly turned lips at the edges of the flanges paralleling the web, a pedestal including a vertical member located adjacent the track and formed with oppositely extending horizontal arms and a boss projecting toward the web from said vertical member, said boss having its free end face located at an angle to the length of the web, means on the arms loosely engaging in the grooves between said lips and web of the track, and a manually operable member located between the boss and web and having a section to engage the boss with the side thereof engaging the boss in a plane substantially paralleling the said face of the boss, said member being spring operated to normally draw said section of the member into engagement with the boss.

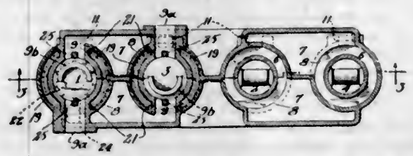
1,676,509. LOCOMOTIVE BOOSTER APPARATUS. HARRY S. VINCENT, Ridgewood, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed May 25, 1923. Serial No. 641,288. 3 Claims. (Cl. 105—82.)

1. A locomotive booster apparatus comprising in combination a truck frame having a pair of wheel axles, a truck center plate located nearer to one axle than to the other, weight distributing structure comprising pairs of levers pivoted together and carried on the axles, means for transmitting the load from the frame to the axles through said weight distributing structure, and an auxiliary motor adapted to drive the axle which is nearer the center plate and supported in part at least on the frame, the torque of the motor when driving acting through the frame on said distributing structure to increase the load on the driven axle whereby to increase the adhesion between its wheels and the rails.



1,676,510. ELECTRICAL WATER HEATER. HARRY C. WELCOMER, Steelton, Pa. Filed Aug. 25, 1927. Serial No. 215,357. 5 Claims. (Cl. 219—41.)

1. An electrical heater comprising a series of spaced frame members of general U-shape, each of said members having upright spaced portions and a cross bar disposed above the lower ends of said upright portions and also having outwardly extending apertured terminals at the upper ends of said upright portions, an annular receptacle arranged in said frame members and on the cross bars thereof and having flanges superposed on said apertured terminals, an annulus superposed on the flanges of the receptacle, means connecting the said terminal portions, flanges and annulus together, means for excluding water from the interior of the receptacle, a dielectric annulus arranged in the annular receptacle and superposed on the bottom thereof, and a heating unit disposed on said dielectric annulus and having terminals carried through an aperture in the first named annulus.

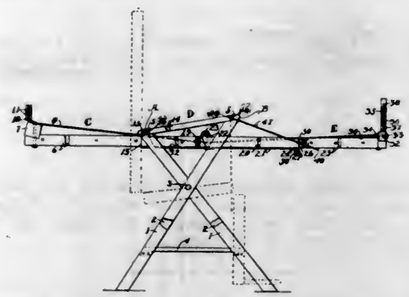


1,676,511. PULVERIZED-FUEL BURNER. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1926. Serial No. 85,098. 2 Claims. (Cl. 110—104.)

1. A pulverized fuel burner comprising in combination, a flaring shell, an inner cone mounted for rotation and arranged with sides paralleling the shell sides and axially movable to vary the discharge area between shell and cone, spiral vanes extending inwardly from the shell

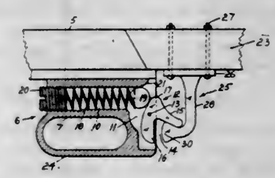
a portion of the distance to the cone, and similar vanes extending outwardly from the cone to cooperate with said first vanes in directing the fuel.

1,676,512. TWO-CYCLE GAS ENGINE. HOWARD E. ALLEN, Linn, Ohio. Filed June 17, 1924. Serial No. 720,491. 2 Claims. (Cl. 123—196.)



1. In an engine of the class described having hollow pistons the combination of a lubricant collecting member in the hollow portion of the pistons, apertures extending from the collecting members through the piston walls, and webs in the fuel ports of the cylinder, the aforesaid apertures being so spaced that certain apertures register with the fuel port webs whereby to prevent flow of lubricant into the ports.

1,676,513. LOOM REED. ISAAC ANDREWS, Spartanburg, S. C. Filed Apr. 7, 1927. Serial No. 181,833. 4 Claims. (Cl. 139—192.)

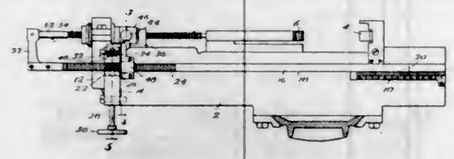


1. A loom-reed including spaced dents, supports connecting the dents adjacent to the ends of the dents, the ends of the dents extending beyond the supports said dents adapted to move within the supports and flexible means cooperating with the extended ends of the dents for moving the dents within the supports.

1,676,514. CONVERTIBLE FURNITURE. LYMAN P. ARMSTRONG, San Jose, Calif. Filed Oct. 25, 1926. Serial No. 143,996. 1 Claim. (Cl. 155—45.)

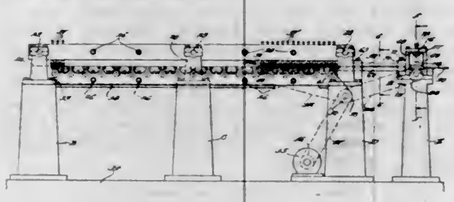
In a chair of the character described, the combination of a pair of upright standards, an arm rigidly mounted on each standard, a frame pivotally mounted off-center on said arms and at one end thereof, side bars pivotally mounted on said frame to form a seat portion and releasable fastening means therefor, side bars pivotally mounted on said last mentioned side bars and releasable fastening means therefor, means for supporting a bed bottom on said frame and side bars, and supporting connecting elements inserted between the second mentioned side bars adjacent their pivotal connections to the first bars and the ends of the arms remote from the pivotal mounting of the frame.

1,676,515. WEDGE CLOSURE FASTENER. TRACY J. ANSTEY, Oakland, Calif. Filed Apr. 17, 1926. Serial No. 102,620. 5 Claims. (Cl. 292—216.)



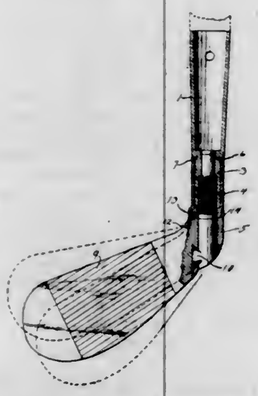
1. A closure fastener of the character described comprising a casing adapted to be secured to a swinging support; a lock plate pivotally secured in the casing at one end thereof and provided with a pair of adjacent tongues forming a notched portion and with a cam opposite to one of the tongues; a keeper adapted to be secured to a stationary support and provided with a head adapted to be received within the notched portion for engagement with the tongues; and means within the casing comprising a freely movable ball adapted to engage the cam and a wall of the casing for holding one of the tongues in engagement with the keeper, when the swinging support is nearing its closed position, so as to force the swinging support to the closed position and hold it wedged in said position, and, conversely, when the swinging support has been swung to a position in which the first-named tongue is released from its engagement with the keeper, to move the other tongue to a position for operative engagement by the keeper.

1,676,516. ATTACHMENT FOR TYPOGRAPHICAL MACHINES. WILLIAM S. AUSTIN, Kansas City, Mo., assignor of one-half to Nellie F. Austin, Kansas City, Mo. Filed Mar. 22, 1927. Serial No. 177,337. 4 Claims. (Cl. 199—50.)



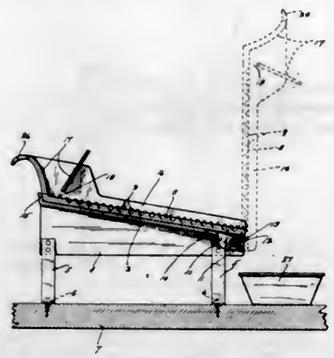
1. In combination with a vise of the character described provided with a scale and an abutment for limit-

ing the movement of the movable vise jaw from the fixed vise jaw, an index bar movably mounted upon said vise for coacting with the scale in adjusting said abut-



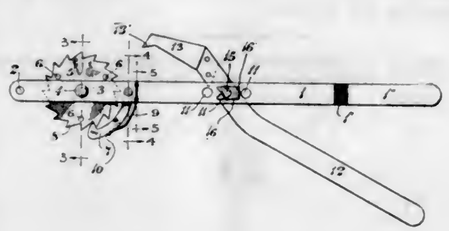
ment into proper relation with the fixed vise jaw, means for securing said abutment at any point of its adjustment, and rotary means engaging the index bar for moving the latter and the abutment.

1,676,517. EXPANDED-METAL MACHINE. RICHARD G. BIRKHOLZ, Milwaukee, Wis., assignor to Penn Metal Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 3, 1926. Serial No. 126,891. 15 Claims. (Cl. 164—6.6.)



1. In an expanding machine, the combination of a plurality of laterally spaced sets of co-operating pairs of expanding rollers, the rollers of each set being spaced longitudinally and the several sets diverging in the same plane, each of said pairs of rollers comprising mating peripheral grooves and ribs, and means for guiding a slitted and ribbed sheet to said rollers.

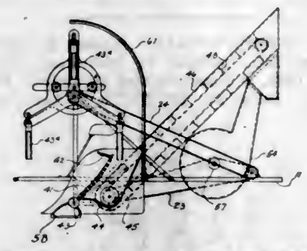
1,676,518. ADJUSTABLE HEAD FOR GOLF CLUBS. SHERMAN L. BOLES, San Francisco, Calif. Filed July 7, 1926. Serial No. 120,899. 3 Claims. (Cl. 273—79.)



2. A golf club comprising a handle, a blade having a wedge shaped recess therein, a left handed screw removably secured to said handle, a wedge shaped projection carried by said screw and being removably receivable in said recess.

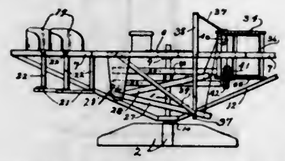
1,676,519. DOCKAGE TESTER. CLARENCE W. CARTER, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 25, 1926. Serial No. 83,548. 2 Claims. (Cl. 209—93.)

1. In a separator of the kind described, a separating plate provided with pockets adapted to receive and hold certain materials and to reject other materials, means for vibrating said separating plate to shake off the rejected materials, said plate being detachably pivoted so that it may be moved to a position to discharge from said pockets the material lodged therein and may be removed for the substitution of a similar separating plate having pockets of a different character.



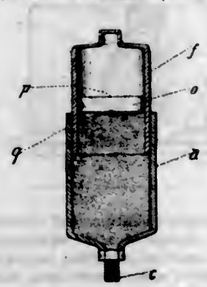
1,676,520. CAN OPENER. HAZEL H. CARTER, Norwood, Ohio. Filed May 28, 1927. Serial No. 195,118. 8 Claims. (Cl. 30—3.)

1. A can opener comprising a bar, a ratchet head pivoted thereon and having holding points adapted to pierce the can lid and hold it from turning relative thereto, a spring actuated pawl mounted on said bar and engaging the teeth of said ratchet head, a knife handle arm pivoted to said bar and having a knife on its end adjacent said ratchet head adapted to be drawn into cutting engagement with a cam by oscillating movement of said arm upon its pivot against the resistance of said pawl and ratchet head.



1,676,521. HARVESTING MACHINE FOR SOY BEANS AND THE LIKE. FLOYD CARTER, Gridley, Ill. Filed Oct. 10, 1925. Serial No. 61,737. 3 Claims. (Cl. 56—128.)

1. A harvesting machine for beans, comprising a rotatable reel, flat beaters carried by said reel and positioned to engage the standing bean plants, means for retaining said beaters in vertical position during the rotation of the reel, a yielding grid disposed in the path of said beaters and cooperating with said beaters to thresh the beans from the plants, a transverse hopper positioned

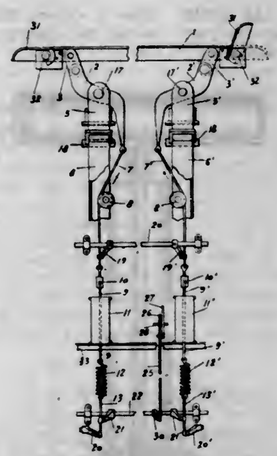


below said grid to receive the threshed beans, and a screw conveyor operating in said hopper to remove the beans therefrom.

1,676,522. ROTARY AMUSEMENT DEVICE. EMERY E. CLARK, Topeka, Kans. Filed Mar. 26, 1927. Serial No. 178,673. 4 Claims. (Cl. 272—33.)

1. In combination, a rotary amusement device having a base supporting member, a vertical center post rigidly attached to said base and on which the device rotates, a pair of ratchet gears rigidly attached to the post, a lever centrally and rotatably positioned on each of said gears, a pawl in the levers to engage with the teeth of said gears so that both levers will rotate in the same direction, a pair of pedals peripherally positioned and hingedly connected to said device, a frame vertically positioned on said device in working relation to the free ends of the pedals, a plurality of sheaves carried by the frame, a pair of cables connected to the free ends of each of the pedals, said cables engaging on the sheaves, the opposite ends of the cables separately engaging with one end of each of the levers for alternately rocking thereof to rigid engagement with the post by the reciprocating movement of the pedals for the continuous rotation of the said device in one direction.

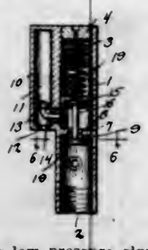
1,676,523. GREASE CUP. EWALD CONRAD, Quasnitz, near Leipzig, Germany, assignor to the Firm Aktien-Gesellschaft für Schmiertechnik, Leipzig, Germany. Filed May 4, 1926, Serial No. 106,630, and in Germany May 9, 1925. 2 Claims. (Cl. 184—39.)



1. A grease cup from which grease is expelled by compressed air, comprising a container having an outlet for the grease, a cap adapted to be forced into the cup to compress the air, and a hollow piston fitted into the cap, said piston having a small opening of capillary dimensions in its upper surface to gradually equalize air pressure.

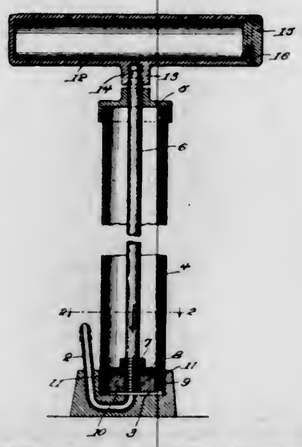
1,676,524. AERIAL. GEORGE ROSS CONRAD, Watson, Mo. Filed Feb. 4, 1926. Serial No. 86,007. 6 Claims. (Cl. 250—33.)

1. An aerial comprising a pole having laterally projecting means at its lower end for securing it to a vertical side of a building, wire supporting means projecting from the upper end of said pole, wire anchoring means spaced below said pole and having an attaching portion for attachment to the building, and aerial means depending from said supporting means and connected with said anchoring means.



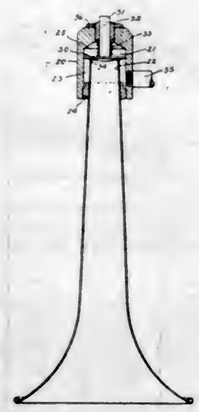
1,676,525. SHOCK-ABSORBING MEANS FOR AUTOMOBILES. EMILE CONTI, Alfortville, France. Filed Nov. 22, 1926, Serial No. 150,000, and in France Nov. 28, 1925. 7 Claims. (Cl. 180—83.)

1. In a motor propelled vehicle having a chassis, the combination of a plurality of pivotally mounted levers at the front end of said chassis, a transverse bumper hinged to said levers, a plurality of shock absorbers carried by said chassis, flexible means interconnecting said levers and



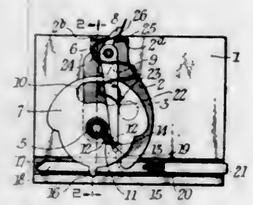
said shock absorbers and means associated with said first mentioned means for causing the movement of a single lever to be transmitted to each of said shock absorbers when said bumper is displaced.

1,676,526. LOW-TIRE-PRESSURE SIGNAL. JOSEPH B. COX, Tulare, Calif. Filed Feb. 3, 1927. Serial No. 165,718. 1 Claim. (Cl. 116—34.)



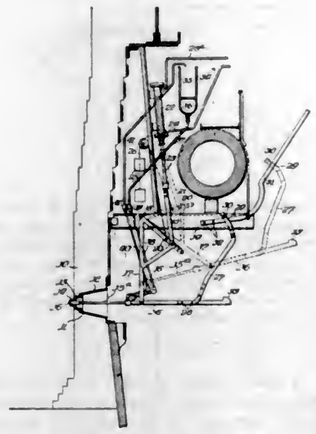
A pneumatic tire low pressure signal of the character described, comprising an elongated tubular body adapted to be threaded at one end upon a tire valve stem and having its other end closed, said body being provided intermediate its end with a centrally apertured partition and further having a lateral opening formed through the wall thereof between the partition and said closed end, a valve head upon each end of said stem, one of said heads being designed to close the aperture of said partition, and further being formed to permit air to pass between its edge and the adjacent wall of the tubular body, a resilient body arranged within the tubular body having one end bearing against the closed end thereof with its other end bearing against the adjacent valve head, and an air operated signal arranged to receive air from said lateral opening of the tubular body substantially as and for the purpose described, said valve head having the resilient member bearing thereagainst being designed to close the lateral opening upon the fall of the air pressure below a predetermined point, the closed end of said tubular body comprising a plug body threaded into the tubular body and adapted to be adjusted therein to regulate the tension of said resilient member.

1,676,527. AIR PUMP. JOHN A. CRIMP, Yakima, Wash. Filed Apr. 25, 1927. Serial No. 186,371. 1 Claim. (Cl. 230—272.)



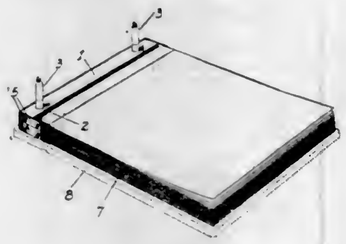
In combination, a pump including a piston rod, a hollow handle supported by said rod and open at one end, said handle having a depression adjacent its open end, a plug adapted to be removably fitted in said end, and a spring pressed plunger carried by the plug and adapted to be received by said depression for the purpose specified.

1,676,528. SOUND SIGNAL. ROBERT M. CRITCHFIELD, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 23, 1927. Serial No. 221,472. 3 Claims. (Cl. 116—142.)



2. A fluid pressure operated sound signal comprising, in combination, a body member having a cylindrical recess, a wall member for closing one end of the recess and having an aperture coaxial with the recess, a projector having its throat projecting through said aperture and spaced from the cylindrical wall of said recess, a rigid disc having a sliding fit within the cylindrical wall of said recess, a rod to which the disc is attached, said rod being received within a hole provided in the end wall of the body adjacent the disc, a helical coil spring surrounding the rod and located between the disc and the body member for urging the disc against the end of the throat of the projector within the recess, and a fluid pressure inlet duct leading into the space between the body and the exterior of the projector.

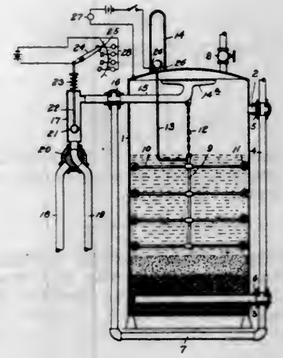
1,676,529. CAMERA, SHUTTER. MAURICE EUGÈNE CUENDET, Lausanne, Switzerland, assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 21, 1926. Serial No. 110,678. 11 Claims. (Cl. 95—59.)



1. In a photographic shutter, the combination with a blade having an elongated slot terminating in a pair of spaced slots, shutter operating mechanism including a lever adapted to be moved, said lever having a portion engaging the slot, being adapted to move the shutter by engaging the elongated slot and being adapted to hold the shutter blade in a fixed position by engaging one of the spaced slots.

1,676,530. CINDER-NOTCH STOPPER. JAMES DEWAR, Chicago, Ill. Filed Feb. 19, 1927. Serial No. 169,498. 3 Claims. (Cl. 266—42.)

1. A cinder notch stopper comprising in combination, a dolly bar, a stopper mounted on one end thereof, an operating lever connected to said dolly bar intermediate the ends thereof, power operating means connected to said lever, a guide connected to the rear end of said dolly bar, and a track extending backward and upward upon which the upper end of the said guide is adapted to travel.



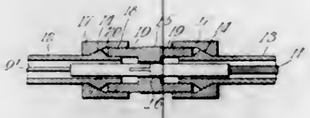
1,676,531. TRANSFER-FILER HANGER. RICHARD H. DODD, Stockton, Calif. Filed Mar. 18, 1927. Serial No. 176,457. 3 Claims. (Cl. 129—19.)

1. A hanger for the purpose described comprising a body having spaced openings to receive file binding posts, and an element rigidly fixed connected to the body and extending continuously from end to end thereof on which to hang a book or the like.

1,676,532. APPARATUS FOR TREATING WATER. ANDREW J. DOTTERWEICH, Pittsburgh, Pa. Filed Dec. 24, 1924. Serial No. 757,912. 3 Claims. (Cl. 210—24.)

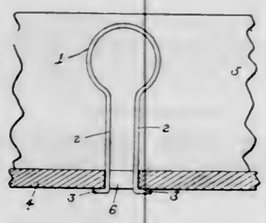
1. In apparatus adapted to treat water by passage through a mass of treating material contained in a tank, said treating material being normally granular but adapted to become caked by use and requiring washing to restore it to granular condition, the combination with such a tank of means to admit wash water to the bottom of the tank and to draw it off at the top, an internal member adapted to be embedded in the granular treating material and to rise therewith after caking thereof upon admission of wash water below the cake of treating material, and an external visible member adapted to rise with said internal member, whereby to indicate the position of said treating material relative to the tank.

1,676,533. GUN SIGHT. MAURICE DRIEOHE, Butte, Mont. Filed Sept. 16, 1926. Serial No. 135,889. 1 Claim. (Cl. 33—51.)



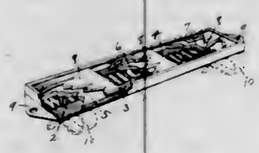
A gun sight for a double-barreled gun comprising a base member consisting of a pair of split bands substantially encircling the gun barrels, a thickened web disposed beneath the barrel connecting web of the gun and integrally connecting the lower ends of said bands, a set-screw threaded through said band connecting web and into engagement with said barrel connecting web whereby the sight is longitudinally adjustably secured to the gun barrels, upwardly and laterally extending right angularly shaped arms secured to the outer sides of said bands, side sight points arranged at the outer ends of the laterally extending portions of said arms, an inverted V-shaped member secured at its lower ends to the outer ends of the laterally extending portions of said arms adjacent to said side sight points and having its apex disposed above the center of said barrel connecting web, and a central sight point formed on said apex.

1,676,534. LIQUID-LEVEL-INDICATING MEANS. GEORGE J. DUNBAUGH, Jr., Chicago, Ill., assignor to Champion Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1923. Serial No. 662,650. 2 Claims. (Cl. 64—30.)



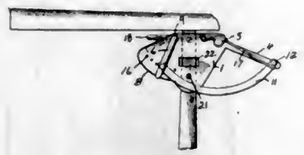
1. Driving mechanism comprising a relatively long rigid shaft adapted to be rotated, a flexible shaft connected to one end of said rigid shaft to rotate therewith, a sheathing section enclosing said rigid shaft and having an enlarged end, a second sheathing section enclos-

ing the flexible shaft and having an enlarged end, a coupling section engaging the enlarged ends of said sheathing sections, and nuts slidable on said sheathing sections



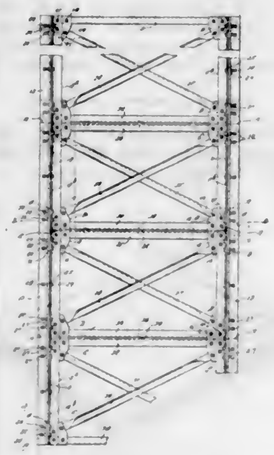
and engaging the adjacent ends of the coupling section and abutting against said enlargements to hold said parts in assembled relation.

1,676,535. BRICK OR TILE VENEER BINDER. SPENCER C. ESTILL and JAMES A. TODD, Fort Worth, Tex. Filed Dec. 29, 1923. Serial No. 683,477. 3 Claims. (Cl. 72—103.)



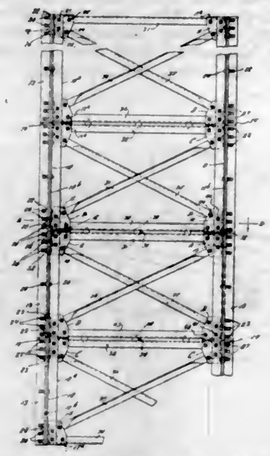
1. A binder for securing brick and tile to a wooden wall comprising a body of a single piece of steel wire and curved horizontally and forming a loop to lie between and to be embedded in mortar between surfaces of adjacent brick and provided with shanks adapted to project through the wooden wall and provided with terminals bent against the inner side of the wooden wall.

1,676,536. TEMPERATURE-INDICATING MEANS. KARL A. FERKEL, Los Angeles, Calif. Filed Aug. 26, 1925. Serial No. 52,623. 5 Claims. (Cl. 116—114.)



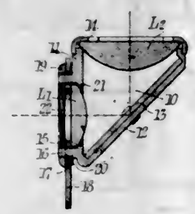
1. Temperature indicating means of the character referred to including a container having therein a plurality of different chambers, a colored signal element associated with each chamber, a covering substance in each of said chambers normally hiding from view said signal element, said substances being capable of changing their form so as to expose to view said signal elements covered thereby, and requiring different temperatures to cause said change in form, whereby to indicate that one temperature has been reached and another has not been reached.

1,676,537. VISOR ATTACHMENT FOR MOTOR VEHICLES. ARTHUR G. FORSTER, Oakland, Calif. Filed Oct. 19, 1925. Serial No. 63,296. 5 Claims. (Cl. 296—95.)



5. In a device of the type described, a visor moving arm, a support for rotatively carrying said arm, and having recesses therein, and a spring pressed catch adapted to enter any one of said recesses for holding said arm in adjusted position, said arm having a portion thereof curved around said support and bearing against the opposite side of said support.

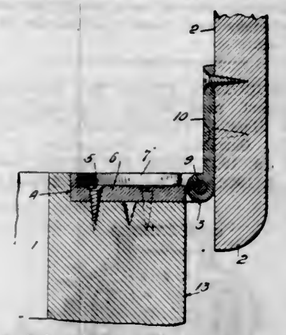
1,676,538. FABRICATED-STEEL TOWER OR DERRICK CONSTRUCTION. CLARENCE B. FOSTER, Glendale, Calif., assignor of one-sixth to Frederick L. Feisthamel, one-sixth to Arthur J. Carr, and one-sixth to Thomas A. Collins, Los Angeles, Calif. Filed July 17, 1926. Serial No. 123,134. 14 Claims. (Cl. 189—13.)



1. In a structure of the nature disclosed, the combination of: relatively spaced triple-angle corner leg columns, each comprised of only two opposed inner leg angles and one intermediate outer leg angle disposed in relatively spaced back-to-back relationship to form a corner leg column substantially cross-shape in cross section; transverse girts forming the respective sides of the structure and connecting the adjacent corner leg columns, the girts of each side being secured at opposite ends to the adjacent inner leg angles of the associated leg columns; means connecting the inner leg angles of each corner column independently of the intermediate leg angles thereof; and independent removable means for securing the intermediate leg angle of each corner column to the inner leg angles thereof, whereby the intermediate leg angles may be independently removed.

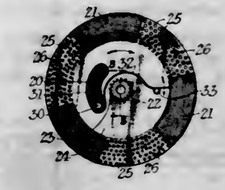
1,676,539. FABRICATED-STEEL DERRICK OR TOWER CONSTRUCTION. CLARENCE B. FOSTER, Glendale, Calif., assignor of one-sixth to Frederick L. Feisthamel, one-sixth to Arthur J. Carr, and one-sixth to Thomas A. Collins, Los Angeles, Calif. Filed July 17, 1926. Serial No. 123,135. 13 Claims. (Cl. 189—13.)

1. In a structure of the nature disclosed, the combination of: relatively spaced triple-angle corner leg columns, each comprised of only two opposed inner leg angles and one intermediate outer leg angle disposed in intimate back-to-back contact to form a compact corner leg column substantially cross-shape in cross section; transverse girts forming the respective sides of the structure and connecting the adjacent corner leg columns, the girts of each side being secured at opposite ends to the adjacent inner leg angles of the associated leg columns; means connecting the inner leg angles of each corner column independently of the intermediate leg angles thereof; and independent removable means for securing the intermediate leg angle of each corner column to the inner leg angles thereof, whereby the intermediate leg angles may be independently removed.



1,676,540. CAMERA FINDER. CHARLES W. FREDERICK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 27, 1926. Serial No. 112,107. 5 Claims. (Cl. 88—1.5.)

1. A camera finder comprising two spaced positive lenses, spaced by a distance approximating the focal length of one of the lenses, and one surface of one of the lenses being a paraboloid.



1,676,541. HINGE. JOSEPH FRIEDMAN, New York, N. Y. Filed June 3, 1927. Serial No. 196,194. 1 Claim. (Cl. 16—128.)

A hinge adapted to fit an auger hole and have one leaf flush with the sides of a box and a depressed center adapted to receive the other leaf of the hinge so that when the other leaf is folded into the depression it will lie substantially flush with the surrounding rim so that when this hinge is adapted to a box and its cover a

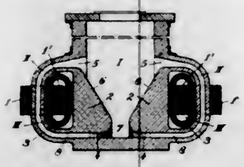
single auger hole will be sufficient for one member and the other member may be secured to the under side of the cover, whereby a hinge may be secured in place with a minimum of cutting and fitting.

1,676,542. MOTION-PICTURE PROJECTOR. EDWIN C. FRITTS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 14, 1925. Serial No. 69,142. 8 Claims. (Cl. 88—19.4.)

1. In a motion picture projector, the combination with a blade shutter, of a safety shutter adapted to cooperate therewith, the two shutters being movably mounted with respect to each other, means including a weight on one shutter and a guideway for the weight on the other shutter for defining the movement of one shutter relative to the other.

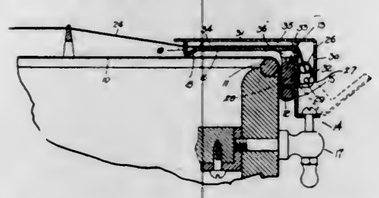
1,676,543. CONDENSATION PRODUCT OF UREA AND FORMALDEHYDE AND PROCESS OF MAKING SAME. ALPHONSE GAMS and GUSTAVE WIDMER, Basel, Switzerland, assignors to the Firm: Society of Chemical Industry in Basle, Basel, Switzerland. Filed May 20, 1926, Serial No. 110,529, and in Switzerland June 5, 1925. 18 Claims. (Cl. 260—3.)

1. A process for the manufacture of condensation products from urea and formaldehyde, wherein the condensation is conducted in presence of active carbon, the latter being afterwards eliminated in any desired stage of the condensation.



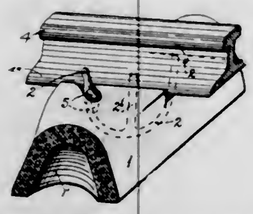
1,676,544. CHIMNEY. WILLIAM E. GILSON, St. Louis, Mo. Filed Oct. 14, 1926. Serial No. 141,508. 3 Claims. (Cl. 72—94.)

1. A chimney construction comprising a column of abutted internal tubular members, a column of external abutted tubular members in spaced relationship to said



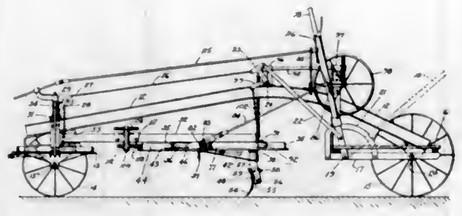
internal members, a monolithic mass of concrete between said members, the abutments between the internal members and the abutments between the external members being disaligned an amount adapted to provide successive forms, whereby said monolithic column of concrete may be built up.

1,676,545. INDUCTION FURNACE. REINHOLD GROSS, Hohenneuendorf, near Berlin, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed June 16, 1927, Serial No. 199,204, and in Germany July 2, 1926. 8 Claims. (Cl. 266—1.5.)



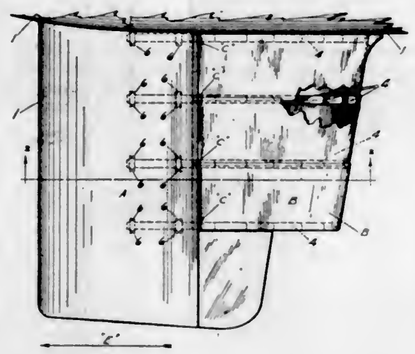
1. An induction furnace comprising in combination, a hearth, a transformer core, a channel surrounded by the transformer core and communicating on the one hand with the bottom of said hearth and on the other hand with a point vertically above the bottom opening, and an inclined hearth wall between the openings of said channel whereby the cross-section of said hearth is reduced toward the bottom.

1,676,546. EXTENSION TAILPIECE. ALBERT D. GROVER, Long Island City, N. Y. Filed Feb. 4, 1925. Serial No. 6,746. 6 Claims. (Cl. 84—300.)



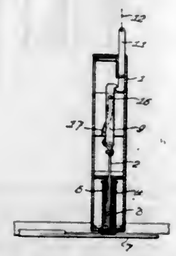
1. An extension tail piece for stringed musical instruments comprising a head plate extending over the head of the instrument and having a V-shaped lip, the latter being provided with spaced slots to receive and guide the strings beyond the head plate, the other end of the plate being bent at an angle to provide a rim plate the upright side portions of which are bent outwardly to form ears, and a cover plate hinged at one end in said ears and having its opposite end supported on and projecting beyond the upturned edge of the lip.

1,676,547. RAIL-HOLDING TIE. CARL G. GULBRAND, Los Angeles, Calif. Filed Apr. 18, 1927. Serial No. 184,669. 5 Claims. (Cl. 238—378.)



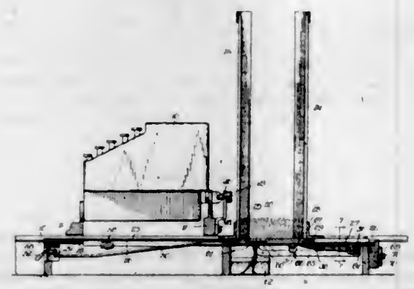
1. A cast railway tie having cavities formed therein from the underside thereof with openings up through the top surfaces of said tie, holding members inserted up through said openings and having angle portions adapted to be turned simultaneously to overlie and clamp a rail flange to said tie.

1,676,548. ROAD-FINISHING MACHINE. CARL A. GUSTAFSON, Minneapolis, Minn., assignor to Russell Grader Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Sept. 25, 1922. Serial No. 590,408. 12 Claims. (Cl. 37—156.)



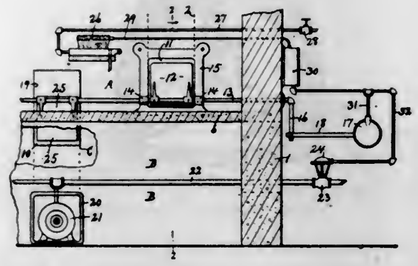
1. In a road grader, a blade comprising a central section, and a pair of end sections, the contiguous ends of said sections being connected by spring-controlled connecting means, and means for adjusting horizontally and at times vertically, the outer end of each end section.

1,676,549. AIRCRAFT. CHARLES S. HALL, Los Angeles, Calif., assignor to Hall Airways Corporation, Dover, Del., a Corporation. Filed Feb. 1, 1922, Serial No. 533,466. Renewed Nov. 28, 1927. 3 Claims. (Cl. 244—12.)



1. In an aircraft wing, the combination of; a forward body portion forming a part of the aliform contour thereof; a flexible trailing element forming a continuation and completion of the aliform contour, the forward margin of upper body element of the said trailing portion being rigidly attached to the rearward margin of the forward body portion, the lower forward margin of the said trailing element slidably held upon the upper, inner, surface of the rearward margin of the lower body element of the forward body portion; and a rib element arranged within the said aliform body portion by the said forward and the said rearward body portion, the said rib having a forward portion of rigid construction in conformity with the aliform contour of the said wing, the rearward portion of the said rib being formed by a leaf spring the same being arranged in cantilever position in the said forward portion, the leaves of the said spring being of receding lengths and of inverse proportion to their common cantilever position, the said spring forming a supporting element for the rearward and flexible portion of the said wing forming elements, substantially as shown.

1,676,550. WATER-CLOSET SYSTEM. ANTON HANAMANN, Vienna, Austria. Filed Nov. 8, 1923, Serial No. 673,571, and in Austria Nov. 16, 1922. 2 Claims. (Cl. 4—64.)



1. In a water closet system a seat, a member rigidly secured to the seat, resilient means acting on said member to maintain said seat normally in a lifted position, a hooked pawl arranged to be moved both by the said member and the said resilient means, a hooked member connected to the water discharge pipe and arranged to be engaged by the hooked pawl, a fixed guide providing a slot, the said hooked pawl engaging said guide slot, the said slot being arranged to bring the said hooked pawl and hooked member positively into and out of engagement.

1,676,551. FEED MECHANISM FOR STENCIL-CUTTING MACHINES. NATHAN C. HEATON, Westmont, Ill., assignor to Montgomery Ward & Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1924. Serial No. 757,676. 21 Claims. (Cl. 197—1.)

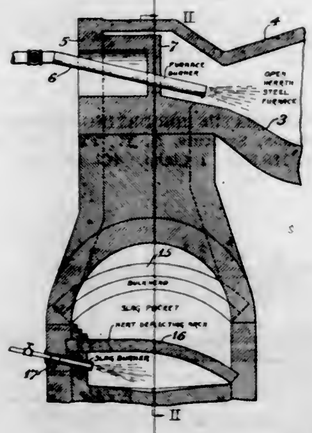
1. A mechanism of the class described, the combination with a writing head, and a platen operatively related thereto, of a magazine for the cards or sheets to be acted on by the writing head, and means operable by the writing head for feeding said cards or sheets from the magazine to said platen, said feeding means being responsive to the movements of the writing head when positioning the latter with respect to the platen to establish operative relation between the writing head and said feeding means, and means for interrupting the operative relation between the writing head and the feeding means when the writing head is moved in the direction of a line of writing.

1,676,552. APPARATUS FOR DRYING LUMBER. HIRAM L. HENDERSON, Syracuse, N. Y. Filed Feb. 21, 1927. Serial No. 169,852. 1 Claim. (Cl. 34—46.)

In a dry kiln having a drying chamber and a heating chamber communicating with each other through a recirculating passage having a fresh air inlet port, said drying chamber having a ventilating port, separate dampers for said ports, a rock shaft connecting said dampers, fluid-pressure-operated means for rocking the shaft and thermally-controlled means for varying the fluid-pressure in said fluid-operated means.

1,676,553. SCREEN FOR PICTURE PROJECTION. EDWARD R. HEWITT, Midvale, N. J. Filed Mar. 13, 1925. Serial No. 15,363. 4 Claims. (Cl. 88—24.)

1. A screen for picture projecting having a coating of small crystals of calcium tungstate and an adhesive securing said crystals to form a contiguous surface.



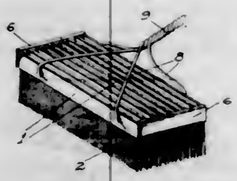
1,676,554. TOPICAL MEDICINE. ALDUS ARTHUR HOOPMAN, Seattle, Wash. Filed July 6, 1925. Serial No. 41,883. 1 Claim. (Cl. 167—9.)

A topical medicine comprising substantially equal parts of resublimed iodine, phenol and menthol, in solution in a solvent vehicle consisting of glycerine and alcohol.

1,676,555. APPARATUS FOR CLEANING SLAG POCKETS. JAMES HORNE, Birmingham, Ala. Filed June 17, 1927. Serial No. 199,590. 4 Claims. (Cl. 263—45.)

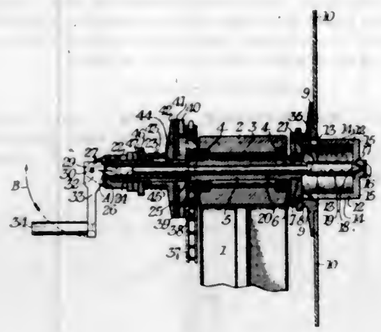
2. The combination with a slag pocket of an open hearth steel furnace and the like, comprising a bottom

sloping towards one side, a cinder hole at the low level of the bottom, a main arch disposed transversely above



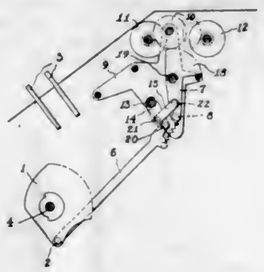
the center of the pocket, a heat deflecting arch disposed centrally under the main arch, and a gas burner entering the slag pocket below the heat deflecting arch.

1,676,556. PROCESS FOR THE PREPARATION OF SODIUM PHOSPHATE. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 4, 1925. Serial No. 73,252. 9 Claims. (Cl. 23—165.)



2. In a process for the preparation of sodium phosphate from a solution of phosphoric acid containing a sulfate and a silicofluoride compound the steps of which comprise treating the solution with a sodium compound and thereafter treating the solution with a barium compound capable of precipitating the sulfate content of the solution.

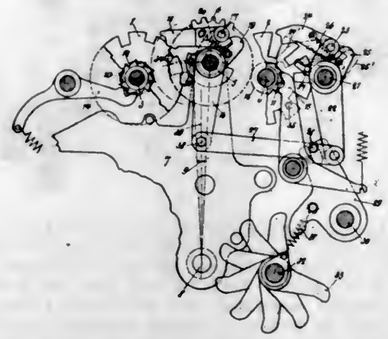
1,676,557. BRUSH CONSTRUCTION. ANDREW M. JENSEN, Stockton, Calif. Filed Feb. 1, 1927. Serial No. 165,077. 3 Claims. (Cl. 15—199.)



1. A brush comprising a plurality of spaced bristle holding members, wires projecting from the ends of said members, and means supporting and securing said wires at their ends to maintain the members in fixed spaced relation to each other.

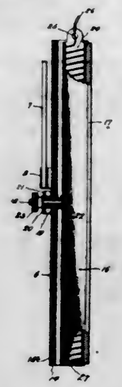
1,676,558. FILM-WINDING MACHINE. JOHN G. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 4, 1927. Serial No. 180,958. 4 Claims. (Cl. 242—55.)

1. In a film winding device, the combination with a hub, said hub including a plurality of hinged hub sections, of a tubular shaft by which the hub may be rotated, a plunger in the tubular shaft adapted to engage and position the plurality of hub sections, a pivoted crank for rotating the shaft, said crank being also adapted to turn upon its pivot to engage and position the plunger whereby the hub may be turned and the hub sections may be positioned through the crank.



1,676,559. DUPLEX ADDING MACHINE AND CASH REGISTER. ERNST KASSNER, New York, N. Y. Filed Apr. 30, 1925. Serial No. 26,875, and in Germany May 1, 1924. 2 Claims. (Cl. 74—5.)

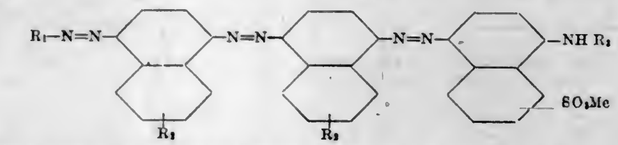
1. In a calculating machine, a pair of spaced gears, a pivoted carrying member, a drive lever pivoted to said carrying member and movable therewith to two operative positions, means carried by said carrying member and connected to said drive lever for selectively rotating said gears, and means for oscillating said lever when in either operative position, comprising a link arranged to be moved longitudinally through predetermined distances,



a connecting lever pivoted to said carrying member and to said link and substantially parallel with said drive lever, and a second connecting lever pivoted to said first mentioned connecting lever and to said drive lever.

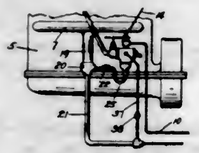
1,676,560. TRANSFER MECHANISM FOR DUPLEX ADDING MACHINES, CASH REGISTERS, ETC. ERNST KASSNER, Berlin, Germany. Original application filed May 26, 1923, Serial No. 641,650. Divided and this application filed Sept. 22, 1926. Serial No. 136,942. 3 Claims. (Cl. 235—138.)

1. A decimal stepping device for machines of the kind described, comprising two multidigit counting trains, a stepping wheel for each digit of each train, a stepping pawl for each stepping wheel, a rocking arm for each stepping pawl, a link between each rocking arm of one counting train and the rocking arm of the corresponding digit of the other counting train, a revoluble main operating shaft for the machine, and means for rocking either of said links with its rocking arms at each revolution of the operating shaft.



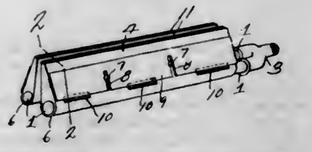
1,676,561. WINDSHIELD WIPER. SELDEN P. KIENAST, Battle Creek, and CLARENCE E. DRAKE, Parma, Mich. Filed July 11, 1927. Serial No. 204,961. 5 Claims. (Cl. 15—255.)

1. In a windshield wiper, a carrying body, a squilgee carried by said body, an electrically heated scraper carried by said body, and means whereby said scraper may be projected relative to said squilgee into contact with a windshield or withdrawn from such contact.



1,676,562. MANUFACTURE OF TRISAZOIC COLORING MATTERS. OSKAR KNECHT and HANS BRÜTSCH, Basel, Switzerland, assignors to Society "Chemical Works formerly Sandoz," Basel, Switzerland. Filed Dec. 16, 1924, Serial No. 756,328, and in France Jan. 11, 1924. 2 Claims. (Cl. 260—72.)

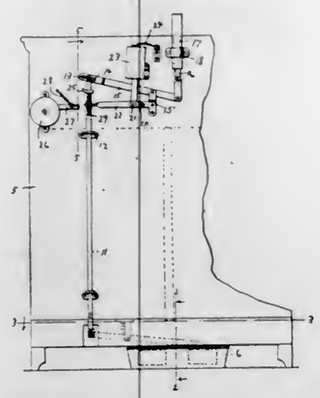
2. As new articles of manufacture the herein described trisazoic coloring matters, having the following general formula



wherein R_1 stands for a benzene- or naphthalene derivative, R_2 for a hydrogen atom or the group SO_3ME, R_3 for an aromatic radical and Me for an inorganic radical, these dyestuffs constituting grey-black powders suitable for dyeing cotton of grey to black tints extremely fast to light and washing.

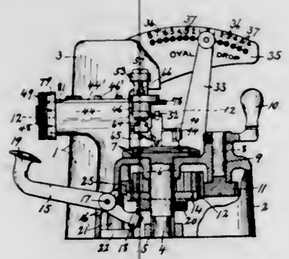
1,676,563. CARBURETION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. SIMEON H. LA PLANT, Salida, Colo., assignor to The L. T. N. Manufacturing & Development System, Platteville, Colo., a Common Law Trust. Filed July 27, 1925. Serial No. 46,358. 10 Claims. (Cl. 123—119.)

1. In combination with an internal combustion engine, a fuel tank, a carburetor for supplying the fuel to the internal combustion engine having a restricted mixing



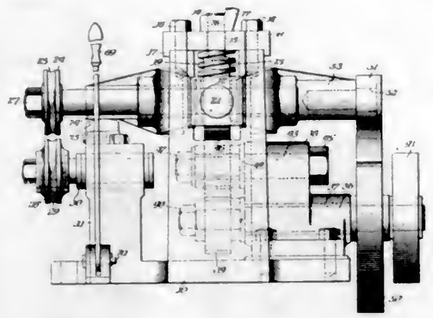
1,676,564. GAS BURNER. CHRISTIAN A. LAUSEN, Fort Worth, Tex. Filed July 26, 1927. Serial No. 208,474. 5 Claims. (Cl. 158—118.)

5. The combination with a gas burner pipe having discharge openings, a casing surrounding said pipe and rotatably mounted thereon and having a mixing chamber



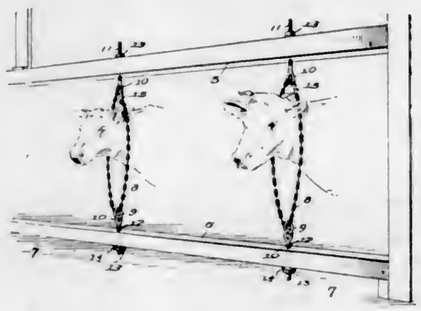
and a discharge opening, of an adjustable slide mounted on said casing and cooperating with an air intake opening, a bolt extending through said casing and slide, said bolt forming means for holding said slide in various adjusted positions and for contracting the casing into frictional engagement with the periphery of the burner pipe.

1,676,565. OVERFLOW ALARM. OLIVER LA VALLEE and ODILON LEMELIN, New Britain, Conn. Filed Jan. 7, 1928. Serial No. 245,169. 4 Claims. (Cl. 116—110.)



1. In a liquid level indicator of the class described comprising a float arranged within a liquid container, a gauge operatively connected therewith and adapted to register the movements of the float, an alarm actuated at a predetermined period of movement of the float and means actuated by the movement of the float to a predetermined level for removing said float from said container.

1,676,566. LENS-CUTTING MACHINE. ELI MAYNARD LONG, Geneva, N. Y., assignor, by mesne assignments, to Shur-On Standard Optical Company, Inc., Geneva, N. Y., a Corporation of New York. Filed Mar. 14, 1923. Serial No. 624,935. 15 Claims. (Cl. 33—28.)

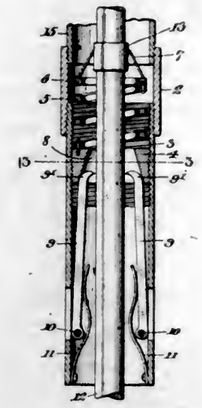


1. In a lens-cutting machine, a rotary work-holder, a pattern rotatable about an axis parallel with the axis of the work-holder and provided with a plurality of zones arranged in sequence axially and having their surfaces gradually merging one with the other, means for rotating the work-holder and pattern in unison, a cutter movable relatively to the work holder, pattern-controlled means including a contact member for moving the cutter, and an indexing device operable at will for moving the pattern axially to register any one of its zones with the contact member.

1,676,567. AUTOMATIC FEED MECHANISM FOR HEADING MACHINES. WILLIAM LOWERY, Hammond, Ind., assignor, by mesne assignments, to Hammond Bolt & Nut Company, a Corporation of Indiana. Filed Aug. 11, 1921. Serial No. 491,396. 27 Claims. (Cl. 140—128.)

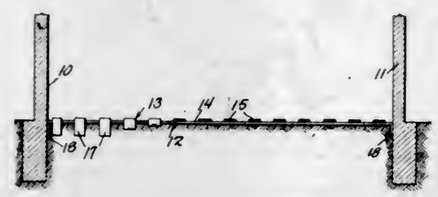
1. In feed mechanism of the class described, the combination with stock-feeding means, of a support therefor having intermittent rocking movement to advance and retract the feeding means to and from the stock, a stock support cooperating with said feeding means for advancing the stock in the feeding movement, and intermittently-acting means for actuating said rocking support to engage the feeding means with the stock.

1,676,568. STANCHION. HENRY W. MCCANDLESS, New Albany, Ind. Filed Dec. 9, 1927. Serial No. 238,930. 2 Claims. (Cl. 119—119.)



1. A stanchion comprising a pair of horizontal beams spaced from each other and having alined holes extending therethrough, relatively long eyebolts extending through said holes and rotatable and slidable therein, the eye heads of said bolts projecting from opposed faces of said beams, nuts on said bolt shanks for limiting the movement of the eye heads toward each other, a pair of chain lengths connected to said eye heads for encompassing the neck of an animal, and the adjustment of said eyebolts toward or away from each other serving to vary the lateral spreading capacity of said chain lengths to suit the neck sizes of different animals.

1,676,569. AUTOMATIC DRILL-PIPE CUTTER. KEARNEY FELIX MITCHELL, Sulphur, La. Filed Aug. 15, 1927. Serial No. 212,935. 1 Claim. (Cl. 81—191.)



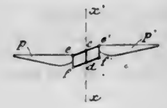
A drill pipe cutter, comprising a cylindrical shell adapted for vertical disposition within the well and over the drill pipe, the upper end of the shell being interiorly

threaded; means for connecting the shell with an operating pipe; a bit compressing collar threadedly engaging the threaded upper end of the said shell, the lower end of the collar having its inner wall beveled off conically; a coil spring mounted upon the upper end of the said collar; lock prongs mounted upon the upper end of the said

spring; cutter bars pivoted oppositely upon the interior wall of the shell below the said bit compressing collar and having their upper ends extending upwardly within the said conical lower end of the said bit compressing collar; inwardly directed bits at the upper ends of the said cutter bars; and means for normally forcing the cutter bars asunder.

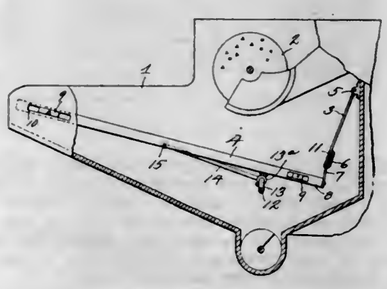
1,676,570. METAL FLOORING. CASPER M. MUGLER, Clay Center, Kans. Filed Apr. 20, 1926. Serial No. 103,336. 1 Claim. (Cl. 119—15.)

In a flooring for hog sheds and the like embodying a plurality of longtudinally extending spaced parallel metal bars, and a plurality of spaced transverse metal cross bars secured to said longitudinally extending bars, the opposite ends of the said longitudinally extending bars and transverse cross bars being directed at right angles to the intermediate portions thereof to provide depending legs, said legs adapted to be embedded in the dirt floor of the hog shed while the intermediate portions of the said bars are adapted to rest on top of the said dirt floor.



1,676,571. ELECTRIC SIGNALING DEVICE FOR VEHICLES. DANIEL F. MURPHY and LUKE COTTER, Boise, Idaho. Filed Mar. 6, 1922. Serial No. 541,440. 2 Claims. (Cl. 177—337.)

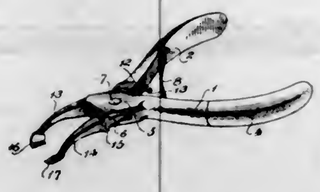
1. An electric signaling device for vehicles comprising a tubular case open at one end to be mounted upon a vehicle, a guide tube of readily magnetized material mounted within the tubular case with its outer end somewhat within the open end of the case, a return coil or solenoid disposed around the inner end of the guide tube, a drawing coil or solenoid disposed around the outer end of the guide tube, a plunger of insulating material fitted slidably within the guide tube, a drawing core carried at the inner end of said plunger, a collapsible and extensible flag mounted at the outer end of the plunger, circuit wiring from a suitable source of electric supply to selectively energize the drawing coil to project the signal flag to permit the same to expand beyond the open end of the case and to energize the return coil to retract the signal flag to be collapsed in the outer end of



the case, said signal flag having different traffic indications on the two sides thereof, said plunger being provided with a longitudinal guide groove on one side and having a second guide groove branching helically therefrom and extending longitudinally on the opposite side, a plunger guiding switch mounted on the guide tube and having a point projecting into the guide grooves, a spring normally holding the switch with the point positioned to track in one of the grooves, and electrical means to shift the switch to position the point to track in the remaining guide groove.

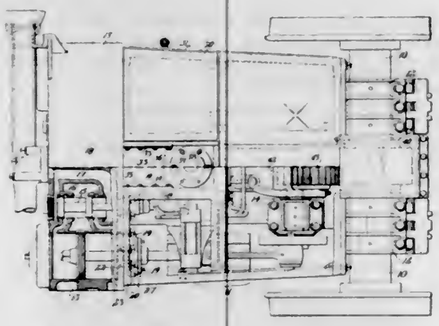
1,676,572. PROPELLING OR LIFTING DEVICE WITH AUTOMATIC CORRECTION. ETIENNE OEHMICHEN, Valentigney, France. Filed Apr. 22, 1927, Serial No. 185,858, and in France May 31, 1926. 3 Claims. (Cl. 244—19.)

1. In a propelling or lifting device, the combination of a driving shaft, a jointed parallelogram whereof two opposite sides are jointed at their middle to the said driving shaft, and two blades carried by the two other sides of the said parallelogram.



1,676,573. CORN SHELLER. FRANK OSMERA, Wauneta, Nebr. Filed Aug. 28, 1924. Serial No. 734,660. 1 Claim. (Cl. 130—7.)

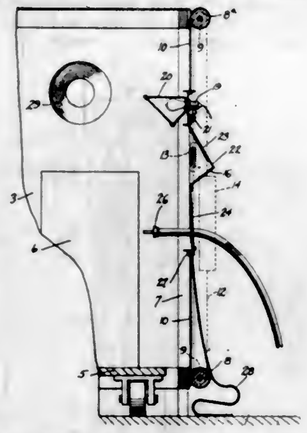
The combination with a corn sheller, a separator box, means for reciprocating the separator box, of a downwardly inclined baffle board, said baffle board having its upper end hingedly mounted, an upwardly extending rigid flange carried by the separator box, a hinge connection between the lower end of the baffle board and the upwardly extending flange of the separator box, said last named hinge connection being a loose one whereby



said flange of the separator box may move with the movement of the separator box and the baffle board may arcuately swing during the movement of the separator box.

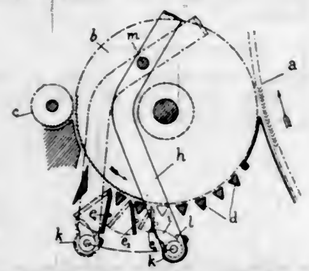
1,676,574. PROCESS TRIMMER. GEORGE A. OSTERMEIER, New London, Wis. Filed Mar. 14, 1927. Serial No. 175,357. 2 Claims. (Cl. 128—318.)

1. An instrument of the character described comprising pivotally connected shafts, shanks carried on the same, the adjacent and inner sides of said shanks being formed to effect their relative spacing when in closed position, and opposed complemental blades carried on the free ends of said shanks laterally offset from the longitudinal axis of the instrument, and the cutting edges of said blades being parallel, when meeting, to said longitudinal axis of the instrument.



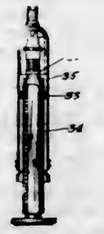
1,676,575. RAILWAY BOOSTER. MONTAGUE H. ROBERTS, Englewood, N. J., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Sept. 5, 1925. Serial No. 54,600. 14 Claims. (Cl. 105—133.)

1. A railway booster mechanism comprising a bed plate provided at the rear end thereof with a pair of transversely aligned walls, a multiple cylinder structure provided with an integrally formed end wall for each cylinder, and means for securing said cylinder end walls directly to said transversely aligned walls of the bed plate.



1,676,576. SAND BLAST CURTAIN. RICHARD RUBMBLIN, St. Paul, Minn. Filed May 16, 1924. Serial No. 713,801. 9 Claims. (Cl. 51—8.)

3. The combination with a cabinet adapted to contain an article having a face to receive a sand blast, of a curtain mounted for movement in a plane parallel substantially to the face of the article, doors mounted on said curtain and adapted to open and expose the interior of the cabinet and the article, said doors being movable with the curtain and having observation openings and



means through which a sand blast nozzle may be inserted and held opposite the face of the stone at any desired elevation thereon.

1,676,577. CARDING MACHINE. JOSEPH SCHMITT, Brunstatt, France. Filed Aug. 5, 1926, Serial No. 127,440, and in France Aug. 19, 1925. 2 Claims. (Cl. 19—105.)

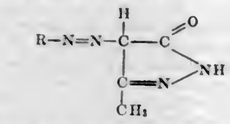
1. In carding machines, the combination with a breaker cylinder and breaker-bars under the said cylinder of movably supported toothed carding-bars arranged in the intervals between the breaker-bars, and means for oscillating the said carding-bars from a working to a cleaning position and reciprocally, substantially as described.

1,676,578. VALVE STEM COVER. EMIEL P. SEGHERS, Chicago, Ill. Filed Mar. 28, 1923. Serial No. 628,180. 3 Claims. (Cl. 152—12.)

1. The combination with a valve stem, of a locking sleeve threaded thereon, a cover cap disposed over said valve stem and locking sleeve and means other than the threaded connection between said sleeve and stem for preventing accidental removal of said sleeve from said stem but operative to permit removal thereof.

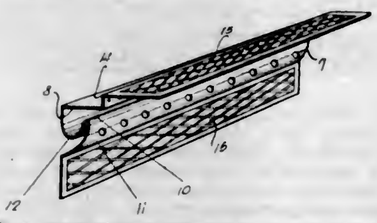
1,676,579. LIGHT-TREATMENT PROCESS. GEORGE SPERTI, Covington, Ky.; ROBERT J. NORRIS, Greenville, and ROBERT B. WITHROW and HERMAN SCHNEIDER, Cincinnati, Ohio, assignors to Daniel Laurence, trustee, Cincinnati, Ohio. Filed Feb. 14, 1927. Serial No. 168,226. 9 Claims. (Cl. 99—15.)

7. The process for killing bacteria in solutions containing enzymes, which consists in treating the solutions with light from which wave lengths shorter than 2750 A° have been eliminated.



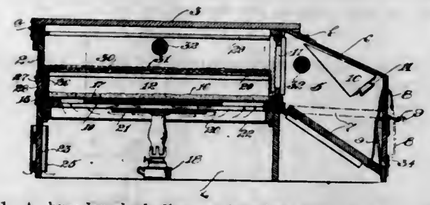
1,676,580. PHOTOGRAPH AND METHOD OF MAKING THE SAME. SAMUEL E. SHEPPARD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,776. 4 Claims. (Cl. 95—88.)

1. A photograph comprising a support that is absorptive of a high percentage of visible light rays but is capable of transmitting photographically actinic light rays, and a layer thereon containing an image that is substantially opaque but is of a light appearance by reflected light, whereby the photograph is capable of use as a photographic printing negative by transmitted light, but the image appears as a positive upon a dark ground when viewed by reflected light.



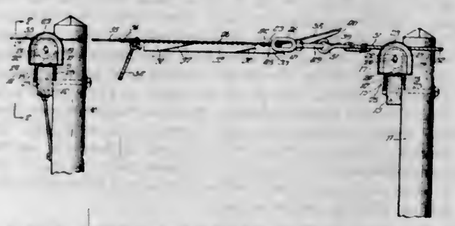
1,676,581. CHROMIUM COMPOUND OF PYRAZOLONE-AZO-DYESTUFF AND PROCESS OF MAKING SAME. FRITZ STAUB and GUILLAUME DE MONTMOLLIN, Basel, and MAX SCHMID, Riehen, near Basel, Switzerland, assignors to the Firm Society of Chemical Industry in Basle, Basel, Switzerland. Filed Dec. 16, 1927, Serial No. 240,622, and in Switzerland Dec. 24, 1926. 6 Claims. (Cl. 260—12.)

3. As new products the chromium compounds of the dyestuffs of the general formula:



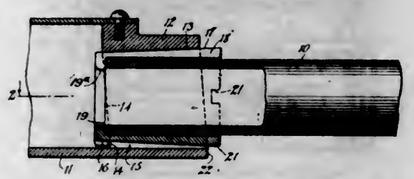
wherein R means an aryl residue which contains in ortho-position to the azo-group an hydroxyl group, which products form orange to red and brown powders which dissolve in water with orange to red coloration, dyeing wool fast orange to red tints.

1,676,582. CORNER PIECE FOR BUILDINGS. DONALD R. STUART, Omaha, Nebr. Filed May 5, 1927. Serial No. 188,931. 3 Claims. (Cl. 72—125.)



1. In a corner-piece for the purposes described, a metallic strip bent to provide a horizontal wing and a vertical wing adjacent to the horizontal wing, said vertical wing being bent to provide a combined holder-ledge and screed, the horizontal wing being bent to provide a screed disposed forwardly of the plane of said holder-ledge.

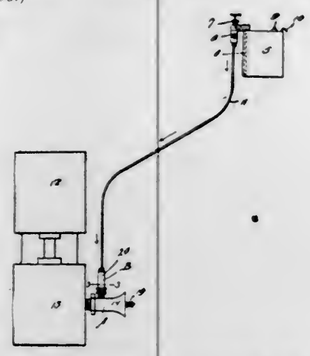
1,676,583. BROODER. WALTER E. STRAW, Keene, Tex. Filed May 5, 1927. Serial No. 188,989. 2 Claims. (Cl. 119—32.)



1. A brooder including a housing having a heating chamber containing a hover mountable at different levels therein; a lamp thereunder; a feeding chamber disposed also in said housing forwardly of said heating chamber and provided with a transparent cover; means hinged to the sides of said housing capable of being moved to operative position to support said cover in slightly raised position to admit air; a porous night partition for closing the passage between said chambers and capable of being moved to close the opening formed when said transparent cover is held slightly raised, and means for ventilating said chambers.

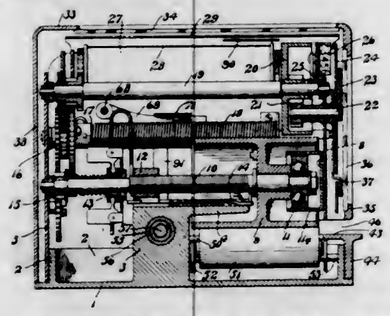
1,676,584. MEANS FOR STRINGING CONDUCTORS. SELIM N. TIDEMAN, Wilmette, Ill., assignor to Pierce Electric Company, a Partnership composed of J. M. Pierce, S. N. Tideman, R. A. Morrison, and Paul Pierce. Filed Feb. 18, 1926. Serial No. 89,249. 4 Claims. (Cl. 175—376.)

1. In a device of the character described, the combination with a member adapted to be mounted on a cross arm and having spaced guiding means thereon, of a member adapted to be drawn over said first mentioned member and having substantially parallel guiding means thereon cooperating with said first mentioned guiding means, and means for securing wires to said last mentioned member substantially in alignment with the guiding means thereon.



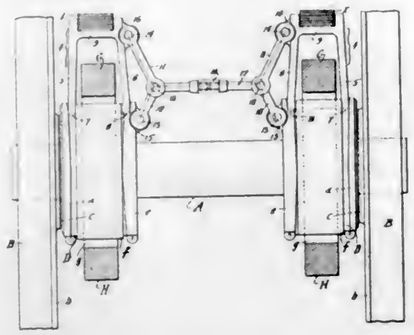
1,676,585. LOCKING COUPLING. THOMAS B. TIEFENBACHER, North Elizabeth, N. J. Filed Oct. 28, 1925. Serial No. 65,393. 2 Claims. (Cl. 247—25.)

1. A pipe coupling, comprising a fitting having a smooth, conical socket provided with a shoulder having a cam surface at its inner end and a longitudinal groove



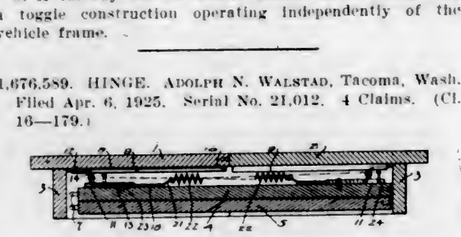
extending throughout the length of the socket, and a conical split bushing adapted to encircle the end of a pipe, said bushing having a smooth exterior surface and provided at its inner smaller end with an exterior laterally projecting lug, said lug adapted when the bushing and pipe are inserted in the socket, to engage the cam surface of the shoulder of the socket, whereby when the bushing is turned it will be drawn into the socket in tight engagement therewith and effect contraction of the bushing and gripping of the pipe.

1,676,586. AIR-COMPRESSION-CYLINDER LUBRICATOR. GEORGE F. TURNER, Mahoningtown, Pa. Filed June 27, 1927. Serial No. 201,771. 1 Claim. (Cl. 230—206.)



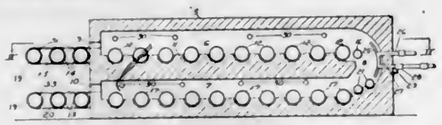
A device for automatically controlling the feeding of oil to an air compressing cylinder comprising in combination a valve casing formed with a valve seat therein and having means to engage the casing in communication with the cylinder, an air inlet, a check valve in the casing closable against the seat away from the cylinder, spring means urging the valve against the seat, a second valve casing tapped into the first mentioned valve casing to extend laterally therefrom, a valve seat in said second mentioned casing, an oil check valve in the second mentioned casing closable against the seat therein away from the first mentioned casing, spring means urging the second mentioned check valve closed against the second mentioned seat, and means for connecting the end of the second mentioned casing remote from the first mentioned casing with a source of oil.

1,676,587. CLOTH-MEASURING MACHINE. ANTHONY VANDERVELD, Grand Rapids, Mich., assignor of one-half to Harry B. Parrish, Grand Rapids, Mich. Filed Sept. 7, 1926. Serial No. 133,949. 20 Claims. (Cl. 33—133.)



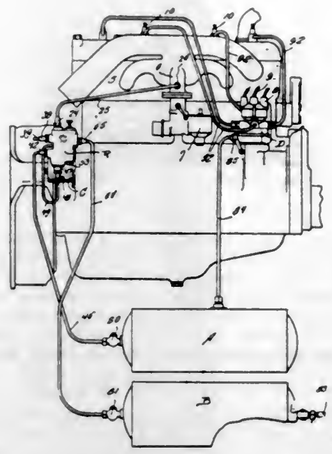
1. In a measuring machine including a measurement indicator actuated by cloth passed through the machine, said machine having a definite starting point, of means movably mounted and adapted in one position to cover said measurement indicator and means for operating said movably mounted means to move it to covered position, said last mentioned means being actuated by placing cloth in the machine with the end of the cloth extending beyond said starting point.

1,676,588. LATERAL MOTION FOR AXLE BOXES. JOHN S. WALLIS, Great Neck, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Aug. 15, 1925. Serial No. 50,347. 13 Claims. (Cl. 105—80.)



3. A railway vehicle lateral motion device comprising a toggle construction operating independently of the vehicle frame.

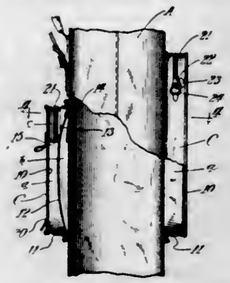
1,676,589. HINGE. ADOLPH N. WALSTAD, Tacoma, Wash. Filed Apr. 6, 1925. Serial No. 21,012. 4 Claims. (Cl. 16—179.)



1. A hinge adapted to secure two bodies together, comprising a hinge plate slidably mounted on one body; a complementary hinge plate slidably mounted on the other body; and a pivot pin connecting both said hinge plates together, whereby said two bodies are secured together and one body is permitted a slidable and revolvable movement with relation to the other body.

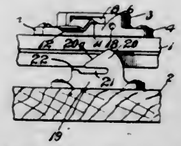
1,676,590. FURNACE FOR HEATING METAL SHEETS AND PLATES. RUDOLPH W. STULER, McKeesport, Pa. Filed Apr. 17, 1924. Serial No. 707,084. 4 Claims. (Cl. 263—6.)

1. A pack heating furnace comprising a furnace structure having upper and lower longitudinally extending chambers therein, an input door opening into the top chamber at the front of the structure, a discharge door at the same end of the furnace opening into the bottom chamber, pack conveying means in each chamber, said upper and lower chambers being connected by a vertical passage, and idler rollers in the furnace in juxtaposition to the vertical passage.



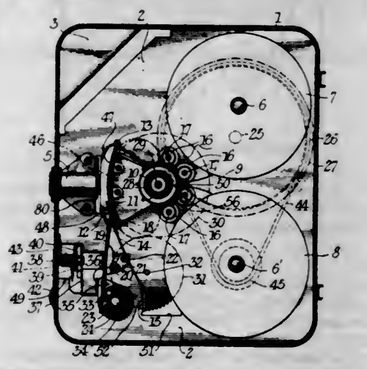
1,676,591. VAPORIZED GAS AND AIR STARTER FOR AUTOMOBILES AND THE LIKE. JOHN H. WELLER, Cadillac, Mich. Filed Apr. 19, 1927. Serial No. 184,939. 2 Claims. (Cl. 123—180.)

1. A regulator for the purpose specified, comprising a body having a cylinder formed therein, a valve guide in the cylinder, a valve seat cap in the cylinder, said body formed with a passage adapted to lead from the suction end of a compressor, a valve stem in the guide, a valve on the end of the valve stem cooperable with the valve seat cap, a by-pass leading from the first mentioned passage into the other end of the cylinder, said body having an opening leading from said other end of the cylinder and adapted to be connected with the atmosphere, a valve seat in the by-pass, a second valve on the valve stem, spring means normally holding the second valve closed and the first valve open, said body formed with a second cylinder to which the valve stem extends, means communicating the bottom of the second cylinder with the outlet end of a compressor, a hollow piston slidable in the second cylinder, spring means normally holding the piston downwardly, said piston having an opening, said body formed with a passage leading from the bottom of the second cylinder and adapted to be connected with a storage tank, said body formed with a third cylinder, a passage leading from the bottom of the second cylinder to the bottom of the third cylinder, a piston slidable in the third cylinder and of hollow construction and having its side opening, said body having an opening adjacent its upper end adapted to be communicated with an air tank, and also provided with an escape passage above the last mentioned opening, spring means in the third cylinder normally holding the hollow piston therein downwardly.



1,676,592. GOLF BAG. JAMES S. WHITE, Chicago, Ill. Filed Jan. 27, 1927. Serial No. 163,879. 7 Claims. (Cl. 150—1.5.)

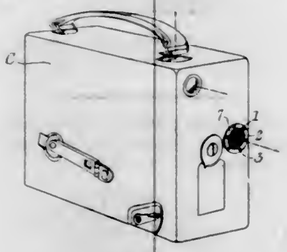
1. A latch construction, comprising a latch housing having spaced apart slotted sides one of said slots having a recess disposed at right angles to the length of the slot joining therewith, a latch lever passing through the slots and formed with a part struck therefrom to bear against the inner side of one side of the housing, said lever also having a boss struck therefrom in the opposite direction and located so as to be received in said recess when moved to proper position, and spring means acting on said lever to turn it in one direction so that the boss is normally carried away from said recess, said means also acting to tilt the lever to automatically position the boss in said recess on movement of the lever



against the force of the spring to a position such that the boss is brought to the recess, substantially as described.

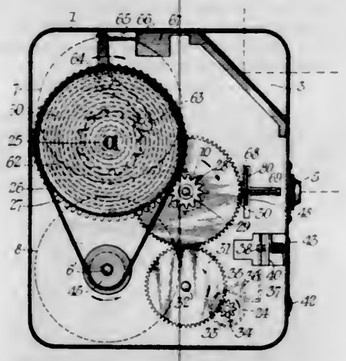
1,676,593. CUPBOARD LATCH. ALEXANDER F. WINTERS, Grand Rapids, Mich. Filed Jan. 19, 1925. Serial No. 3,294. 4 Claims. (Cl. 292—228.)

1. A latch construction, comprising a latch housing having spaced apart slotted sides one of said slots having a recess disposed at right angles to the length of the slot joining therewith, a latch lever passing through the slots and formed with a part struck therefrom to bear against the inner side of one side of the housing, said lever also having a boss struck therefrom in the opposite direction and located so as to be received in said recess when moved to proper position, and spring means acting on said lever to turn it in one direction so that the boss is normally carried away from said recess, said means also acting to tilt the lever to automatically position the boss in said recess on movement of the lever against the force of the spring to a position such that the boss is brought to the recess, substantially as described.



1,676,594. MOTION-PICTURE MECHANISM. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 17, 1926. Serial No. 88,791. 8 Claims. (Cl. 88—18.4.)

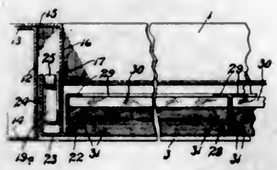
1. In a motion picture apparatus, a film driving sprocket having a series of equi-spaced teeth about its periph-



ery, two rolls having a position near the periphery of the sprocket and adapted to hold a perforated band in driving relation with the sprocket, the angular relation of said rolls to the axis of the sprocket being the same as that of two of the teeth of the sprocket, mechanism by which the sprocket may be turned and means operative on said mechanism and providing a stop therefor, there being a definite predetermined relation between the stopping means and the mechanism such that one of the teeth will automatically stop in a definite predetermined position between said rolls.

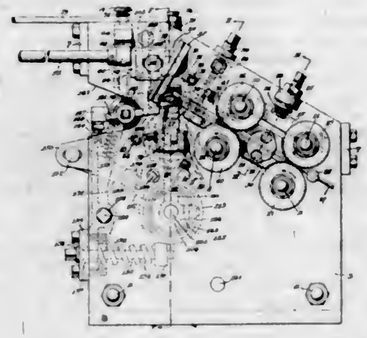
1,676,595. OPTICAL UNIT FOR CAMERAS. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 13, 1926. Serial No. 108,796. 16 Claims. (Cl. 95—45.)

1. In an optical unit for cameras, the combination with an objective including two lens cells, of a barrel for supporting the lens cells at a fixed separation, connections between one lens cell and the barrel through which one lens cell may turn therein, and a plurality of diaphragm leaves operatively connected to the movable and fixed lens cells whereby the light opening may be altered by moving the movable lens cell.



1,676,596. SPRING MOTOR. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 13, 1926. Serial No. 108,797. 9 Claims. (Cl. 185—37.)

1. In a motion picture camera, a spring motor comprising a continuous coiled spring band and an antifriction band interwound therewith.



1,676,597. WINDOW CONSTRUCTION. FAY A. YEAGER, Muskegon, Mich., assignor to Joachim R. M. Knudsen, Muskegon, Mich. Filed Sept. 20, 1926. Serial No. 136,414. 8 Claims. (Cl. 189—69.)

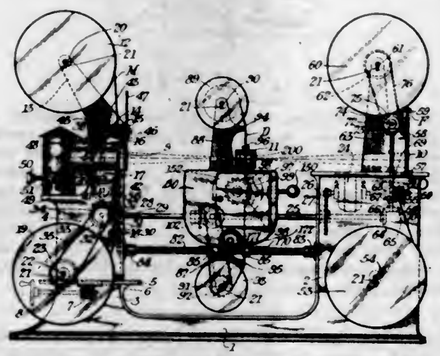
1. In a window, an open rectangular frame of metal having vertical spaced apart sides, a metal flange spaced inwardly a short distance from each vertical side of the frame and permanently connected to said frame, a bar of angle form attached vertically to the outer side of each of said flanges, each of the said bars having a downwardly and inwardly inclined lower section and each having an outwardly extending flange, a sash frame adapted to be detachably located in the opening of the first frame, said

sash frame having vertical sides of U-shape passing over the outer portions of said first flanges and covering the same, and a roller connected to the outer leg of the U-shaped portion of each of said vertical sides of the sash frame at the inner side of said leg and extending over and back of the adjacent flange of the angle bar connected to the said flange embraced by said U-shaped portion.

1,676,598. SPRING-FORMING MACHINE. WILLIAM H. BLEUEL, Detroit, Mich. Filed Nov. 27, 1925. Serial No. 71,634. 22 Claims. (Cl. 153—65.)

1. In a spring forming machine wherein springs are formed from wire stock, a mandrel on which the wire stock is formed, means for feeding the wire stock to the mandrel, a convolution former adjacent said mandrel and against which former the wire stock impinges and is coiled, a spring actuated rock shaft supporting said convolution former to move the said former away from said mandrel, a slide bar retaining said convolution former in a defined position relative to said mandrel, and a pivoted guide adapted to be adjusted relative to said mandrel and former to cooperate with the latter in regulating the size of a spring convolution.

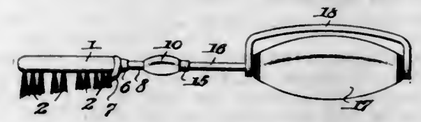
1,676,599. BODY CONSTRUCTION. PAUL E. BRENEMAN, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 4, 1926. Serial No. 92,223. 3 Claims. (Cl. 296—28.)



1. A pillar for an automobile body comprising an inner and an outer sheet metal trough sectioned member secured together in nested relation to form a hollow structure, an

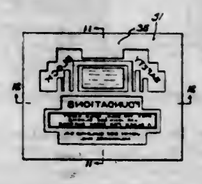
angle member secured to the inner face of said inner member at the upper end thereof to provide a horizontal

attaching flange, and an offset member secured to said member adjacent to said angle member to provide a vertical attaching flange.



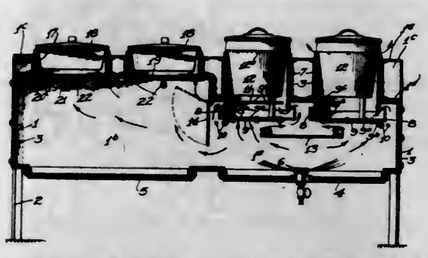
1,676,600. DIAPHRAGM CONTROL FOR PROJECTION PRINTERS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 8, 1923. Serial No. 644,277. 7 Claims. (Cl. 88—24.)

1. In a projection printer, two separated gates, mechanism for moving a master strip and a sensitized strip past said gate respectively in timed relation, an optical system for projecting an image from the master strip at one gate upon the sensitized strip at the other gate, adjustable means for controlling the amount of light so projected and positioned between the two films, and means connected to and movable in timed relation with the mechanism and controlling the adjustment of said adjustable means at definite, adjustably predetermined, timed intervals throughout the time when the printer is in operation, whereby the amount of light so projected may be varied at any time in accordance with a predetermined schedule.



1,676,601. FOUNTAIN TOOTHBRUSH. LEO C. CAVANAUGH, Youngstown, Ohio. Filed Oct. 23, 1926. Serial No. 143,646. 5 Claims. (Cl. 15—136.)

1. A fountain tooth brush including a brush-head having a chamber therein, openings extending outwardly from said chamber, a bushing fitted into the chamber, a tube having one end thereof connected with said bushing, a valve casing connected with the opposite end of said tube for controlling the passage therethrough, a second tube having an end thereof slidably and removably re-

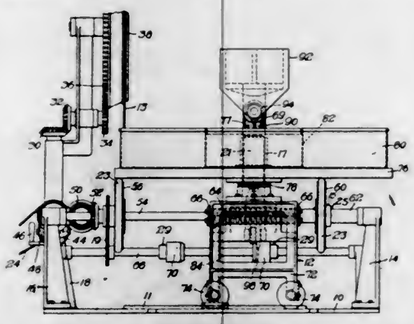


ceived in the opposite side of said valve casing, and a pressure bulb for receiving a liquid connected with the outer end of said last mentioned tube for receiving fluid therethrough and forcing said fluid through the valve casing and tubes into the brush-head.

1,676,602. METHOD OF FORMING MOLDS FOR PRINTING PLATES. LESLIE W. CLAYBOURN, Milwaukee, Wis. Filed May 9, 1927. Serial No. 189,894. 8 Claims. (Cl. 101—401.2.)

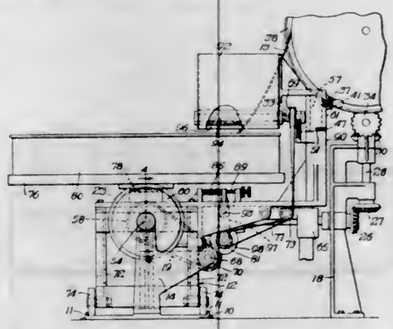
1. A method of forming a mold for a printing plate which includes making a mold of the form whereby depressions of the printing portions are formed in the face side of the mold, and then removing a portion of said face side of the mold in which such depressions of printing portions have not been formed to an even depth equal to the depth of said previously formed depressions, and thereby forming a depression in said face side of said mold for bearer area on the printing plate formed from said mold.

1,676,603. COOKING AND HEATING APPLIANCE. WILLIAM R. DICK, San Diego, Calif. Filed June 15, 1925. Serial No. 37,044. 17 Claims. (Cl. 126—39.)



1. In an appliance of the class described, a body provided with a combustion chamber, a heating means positioned in said combustion chamber, a receptacle container supported at the upper portion of said combustion chamber, communicating at its lower end therewith and adapted to receive a receptacle and support the same at its upper end, said container being adapted to surround the outer side wall of said receptacle in spaced relation relatively thereto, a heat diverting plate positioned at the lower end of said container, there being provided passages at the lower end of said container, permitting gases of combustion from said combustion chamber to pass into said container and upwardly therein around the receptacle adapted to be positioned therein.

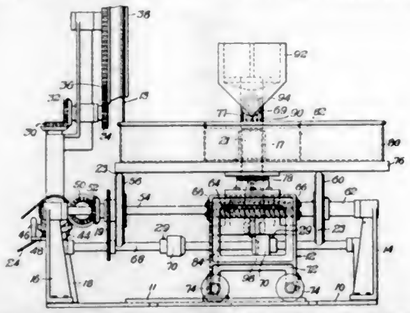
1,676,604. QUALITY OF SULPHUR. CARLETON ELLIS, Montclair, N. J. Filed Dec. 26, 1922. Serial No. 609,133. 23 Claims. (Cl. 106—22.)



1. A composition comprising sulphur and a sulphur-containing resin miscible therewith.

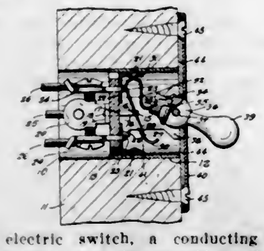
1,676,605. FEEDING MECHANISM. CARL DEMPSTER HART, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,960. 4 Claims. (Cl. 91—13.)

2. In a machine for handling strand, a strand receiving means, a receptacle for material having a relative movement with respect to the receptacle, and means associated with the receptacle to cause a discharge of material from the receptacle into the receiver at predetermined points in the relative movement of the receiver and the receptacle.



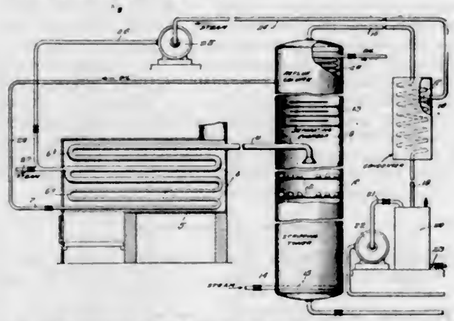
1,676,606. FEEDING MECHANISM. HENRY FLEETWOOD ALBRIGHT, Jr., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,961. Renewed Mar. 20, 1928. 10 Claims. (Cl. 242—83.)

1. In a machine for storing strand, a platform, a receiver mounted thereon, and means for imparting a combined rotating and lateral motion to said platform to store a strand in the receiver.



1,676,607. FEEDING MECHANISM. LESLIE FAWCETT LAMPLOUGH, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1923. Serial No. 654,962. Renewed Feb. 21, 1928. 8 Claims. (Cl. 91—13.)

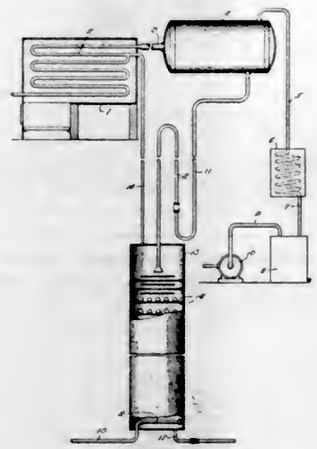
1. In a machine for handling strand material having a receptacle for receiving the strand material, a rotary support for the receptacle, a chamber for other material, and means for controlling the discharge of the material from said chamber to said receiving receptacle comprising a control element, the combination therewith of a



reciprocating member associated with said receiving receptacle, and means operated by said member for operating said control element.

1,676,608. BATTERY SWITCH. HARVEY HUBBELL, Jr., Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 14, 1925. Serial No. 69,007. 6 Claims. (Cl. 200—67.)

1. In an electric switch, a conducting member, a stationary contact at one side of said member, a switch member pivotally mounted on the conducting member and adapted to engage the stationary contact, said switch member comprising a body portion pivoted to the conducting member and an end portion curved backwardly upon the body portion and then extending outwardly away from the body and terminating in a free end, and a rocking lever engaging said free end to swing the switch member about its pivot.

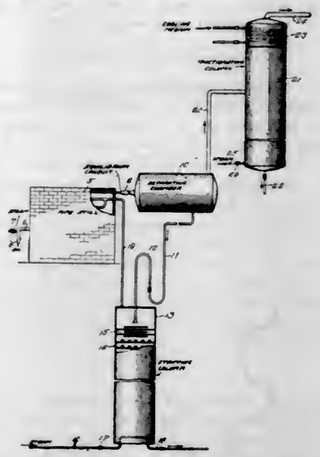


1,676,609. ART OF DISTILLING HYDROCARBON OILS. ROGER D. HUNNEMAN, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 12, 1924. Serial No. 755,429. 14 Claims. (Cl. 196—85.)

1. The method of distilling hydrocarbon oils comprising passing the oil in a confined stream of restricted cross section through a heating zone into an enlarged separating chamber, separately removing from said separating chamber vapors and unvaporized liquid, passing the unvaporized liquid in countercurrent to a current of steam, and forcing at least a part of said steam and vapors carried thereby into the stream of oil flowing through the heated zone.

10. In distillation apparatus, a tower having an intermediate enlarged chamber, stripping plates therebelow, refluxing plates above said chamber, means for introducing steam into the lower portion of said tower, a heating coil emptying into the enlarged chamber in the tower, means for supplying oil to the heating coils, and means for maintaining subatmospheric pressure within the tower.

1,676,610. ART OF DISTILLING HYDROCARBON OILS. ROBERT E. WILSON, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Dec. 22, 1924. Serial No. 757,395. 12 Claims. (Cl. 196—85.)

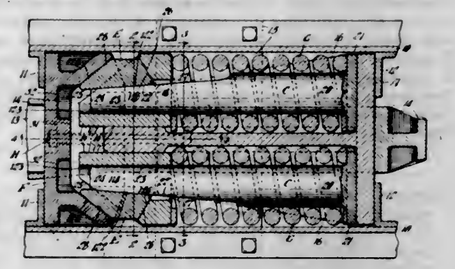


1. The method of distilling hydrocarbon oils which comprises passing such oil in a confined stream through a heating zone, discharging the stream of oil into an enlarged chamber, wherein separation of vaporized products takes place, removing unvaporized oil from said chamber and immediately subjecting said unvaporized oil to direct contact with steam, thereby completing the removal of the lighter constituents thereof, forcing the steam and vapors carried thereby into the stream of heated oil at an intermediate point in the heating zone, and maintaining a sufficient head of liquid in the discharge line from the vaporizing chamber to prevent return of steam and vapors therethrough.

11. In apparatus for the distillation of oil, a heating conduit, means for supplying oil and means for supplying steam thereto, means for heating said conduit, an enlarged separating drum, an unheated conduit larger than the heating conduit and connecting the outlet of the latter with the drum and means for removing vaporized and unvaporized products from the drum.

1,676,611. ART OF CONTINUOUS DISTILLATION OF HYDROCARBON OILS. ROGER D. HUNNEMAN, Chicago, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Mar. 27, 1925. Serial No. 18,818. 5 Claims. (Cl. 196—85.)

1. The method of distilling hydrocarbon oils which comprises passing the oil in a confined stream through a heating zone, discharging the oil into a separating chamber, supplying steam in said chamber at substantially the same temperature as the oil and in thermal equilibrium therewith, separately removing unvaporized oil and vapors from said chamber, subjecting the removed unvaporized oil to the action of live steam, thereby removing lighter fractions therefrom, withdrawing from the system the thus treated unvaporized oil, commingling the removed lighter fractions with the vapor contents of the separating chamber, subjecting the vapors removed from the separating chamber to a refluxing action and separately collecting the reflux formed.



5. In distillation apparatus, a heated conduit, a separator into which said conduit discharges, said separator effecting separation of vapors and unvaporized oils, a scrubbing tower, means for supplying unvaporized oil from said separator to the scrubbing tower, means for introducing steam into the lower portion of said scrubbing tower, means for leading vapors from said scrubbing tower into the heating conduit, a vapor conduit leading from the separator, a fractionating tower into which the vapor conduit opens at an intermediate point, and means for separately withdrawing reflux from said tower.

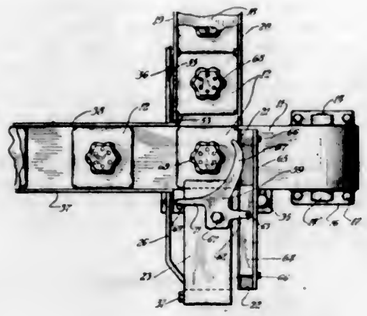
1,676,612. CELLULOSE-ESTER COMPOSITION. RICHARD L. KRAMER, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 6, 1924. Serial No. 736,367. 14 Claims. (Cl. 134—79.)

5. A product comprising cellulose nitrate and methylphenoxy-ethyl phthalate in substantially the proportion of .75 to 2.0 parts of phthalate to 1 of pyroxylin.

1,676,613. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,122. 13 Claims. (Cl. 213—36.)

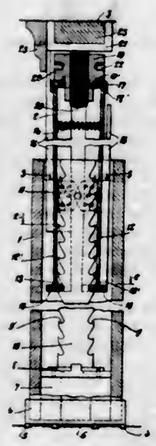
1. In a friction shock absorbing mechanism, the combination with a plurality of column elements having longitudinally arranged friction surfaces, certain of said

column elements having limited lateral movement, said last named column elements having friction surfaces on the outer sides thereof diverging inwardly of the mechanism; of friction members co-operating with said column elements including friction shoes cooperating with said friction surfaces; means for yieldingly opposing relative movement of said members and elements; and means for wedging said friction shoes laterally, inwardly against the friction surfaces of said elements and effecting relative longitudinal movement thereof.



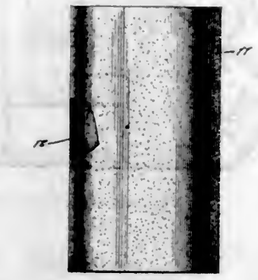
1,676,614. FREQUENCY-GROUPING ARRANGEMENT FOR COMMUNICATION SYSTEMS. RAYMOND A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,631. 8 Claims. (Cl. 250—9.)

1. In a system for carrying on multiplex two-way communication by means of a certain range of wave frequencies in which the available frequency range is divided into groups, each group being composed of two portions each containing the same number of wave frequencies and comprising one or more pairs of two-way channels corresponding to the frequency groups, said groups being so physically related as to tend to interfere, means for transmitting a wave of one frequency from each portion in opposite directions to constitute a two-way channel, and means for receiving each said transmitted wave and combining it with the locally transmitted wave to produce a difference frequency wave, the difference between the frequencies of the pairs of waves for the two-way channels of each group being constant within each group, which constant amount differs for each group.



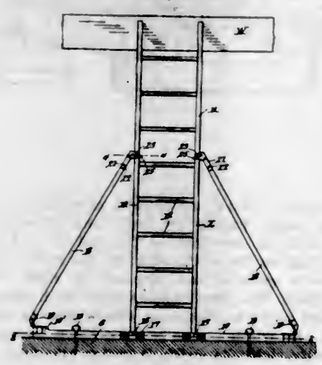
1,676,615. SIFTER-TOP-CLOSING DEVICE. NICHOLAS LORSEL, Richmond Hill, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 28, 1925. Serial No. 33,581. 18 Claims. (Cl. 113—1.)

1. In combination, feeding mechanism for box parts, said box parts including a rotatably positioned cap having sifter openings therein, and means automatically operable during the operation of said feeding mechanism for turning said caps upon the box parts to close said sifter



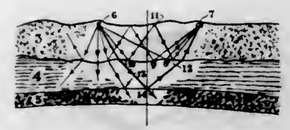
openings, said means comprising a closing member bearing against the side of said cap, and devices for reciprocating said closing member.

1,676,616. EXTENSIBLE PILASTER. SAMUEL LOWY, New York, N. Y. Filed June 17, 1925. Serial No. 37,655. 13 Claims. (Cl. 20—4.)



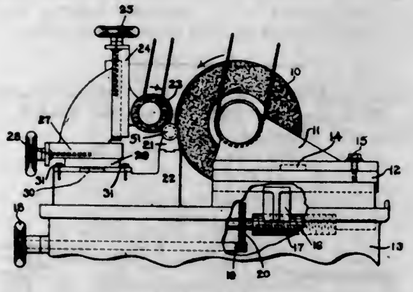
1. In an extensible pilaster, a main hollow post, a second post within said hollow post extending upwards from the base thereof, notches along the length of said second post, a jacket over said second post adapted for longitudinal movement relatively thereto and provided with a lug adapted to engage one of said notches, and resilient means for releasing said lug from said engagement.

1,676,617. FIBER BOARD FOR CONTAINERS AND THE LIKE. DONALD G. MAGILL, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed July 31, 1922. Serial No. 578,536. 2 Claims. (Cl. 91—68.)



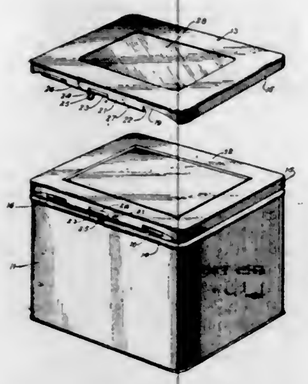
1. Fiber board, for use in the formation of can bodies and the like, comprising fibrous stock impregnated with a mixture of paraffine and Montan wax, said mixture having a melting point in excess of the theoretical mean melting point of the component parts of the mixture, said impregnation producing a fiber board of increased stiffness and strength.

1,676,618. LADDER SUPPORT. JOHN W. MORRIS, Rensselaer, N. Y. Filed Mar. 28, 1927. Serial No. 178,975. 3 Claims. (Cl. 228—64.)



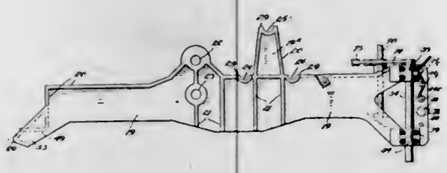
1. A ladder support comprising a horizontal base member adapted to rest upon the ground or other support and extend across a ladder, said member being adapted to engage and hold against sliding movement relative thereto the lower end of a ladder, rigid brace elements pivotally secured to said base member adjacent its ends and movable from an operative position, in which they extend upwardly from said base member at an inclination thereto, to an inoperative position in parallelism with said base member, said brace members having means serving to secure the same when in operative position to the opposite sides of a ladder a substantial distance above said base member, and serving also to fasten the same in said inoperative position to said base member.

1,676,619. METHOD AND APPARATUS FOR STUDYING GEOLOGIC CONTOURS. BURTON MCCOLLUM, Washington, D. C. Filed Oct. 12, 1923, Serial No. 668,244. Renewed Sept. 8, 1927. 5 Claims. (Cl. 181—0.5.)



4. In the art of determining the slope of a subsurface rock layer overlaid by a layer of undisintegrated rock covered in turn by an unconsolidated stratum, the method which comprises producing wave energy by a source located in said overlying undisintegrated rock, and determining at a point in said overlying undisintegrated rock the time interval between the emission of said wave energy from said source and the arrival thereat of the wave energy reflected from said sub-surface rock layer.

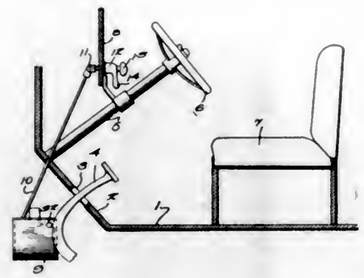
1,676,620. GRINDING APPARATUS. CHARLES H. NORTON, Plainville, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 2, 1923. Serial No. 610,093. 6 Claims. (Cl. 51—103.)



1. In apparatus of the character described, in combination, a grinding throat adapted for simultaneous grinding and rotating action upon work of round section and comprising three means, one of which means is in the form of a grinding wheel adapted to be rotated at a relatively high speed, another of said means being in the form of a regulating wheel adapted to be rotated at a relatively low speed and in a direction to present an operative surface traveling in a direction opposite from that of the adjacent grinding wheel surface and adapted thereby to control the rotation of the work, and the third of which means includes a member for holding work of round section in operative relation to said two wheels, each of said means being shaped to present a line of contact to work of round section and said three means being related one to the other so that the lines of contact presented thereby to the work form elements of a frustrum of a cone; and means for moving a work piece into and through said grinding throat and in a direction from the larger end of said grinding throat to the smaller end thereof, thereby progressively to grind a frusto-conical surface from one end of the work to the other and to reduce the work piece to a diameter equal to that of the smaller end of the frustrum.

1,676,621. INTERCHANGEABLE - COVER CRACKER CAN. AUGUST PITTELKOW, Chicago, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 6, 1922. Serial No. 599,181. 12 Claims. (Cl. 220—32.)

1. A cracker can, comprising a body having hinge bearings in a wall thereof and spaced apart, a cover having curled flange sections arranged between said hinge bearings, and a longitudinally movable hinge part permanently mounted to slide in either direction in said flange sections and adapted to be removably inserted alternately in said bearings to form a hinge connection.



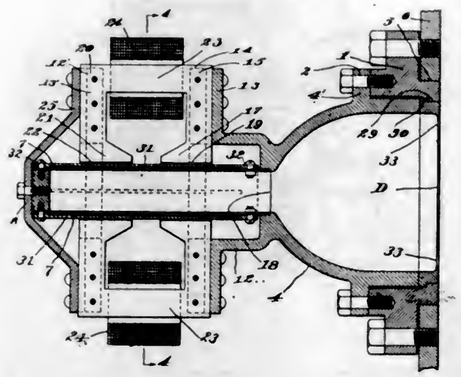
1,676,622. TRACTOR. WILLIAM S. L. ULRICH, Grafton, Ill. Filed Nov. 24, 1923. Serial No. 676,810. 8 Claims. (Cl. 180—41.)

1. In a tractor having driving mechanism, driving wheels and a guide wheel mechanism, a unitary frame comprising a single casting having two longitudinal side members and a plurality of cross web members, a foot adapted to project downwardly at one end of the frame, a plurality of sets of bearings cast integral with the frame, one set being disposed at the end opposite the foot for the support of the guide wheel mechanism, other sets being disposed at different levels centrally of the frame for the driving wheels, and the remaining sets of bearings being arranged and adapted for the driving mechanism.

1,676,623. MULTIPLE LOCK. ERVEN R. TURNER, Memphis, Tenn., assignor to Clinton Burl Grant, Memphis, Tenn. Filed Apr. 2, 1926. Serial No. 99,421. 7 Claims. (Cl. 70—126.)

1. In a device of the character described, a casing, an operating rod extending into said casing, an operating shaft mounted in said casing and operatively connected to said rod, a spreader member mounted on said shaft, a

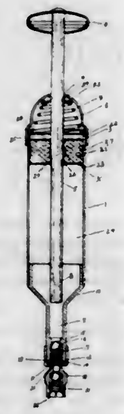
pivoted arm arranged adjacent said member and adapted to be actuated thereby, and a plunger connected to said arm and adapted to be projected thereby.



1,676,624. TRACTOR MECHANISM. WILLIAM S. L. ULRICH, Grafton, Ill. Filed Nov. 24, 1923. Serial No. 676,811. 6 Claims. (Cl. 74—26.)

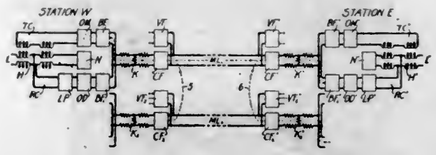
1. A tractor driving mechanism comprising, in combination, a motor having its shaft longitudinally of the tractor, a friction cone-gear at the end of said shaft, a thrust bearing on the shaft adjacent the motor, a second shaft movable endwise and disposed at right angles to the first shaft, two bevel wheels rigid with said second shaft spaced apart so that said wheels may be free from contacting the friction cone gear, a block on said shaft longitudinally rigid therewith, a wedge arranged to move said block in one direction to shift the shaft endwise, whereby one of said bevel wheels engages the friction gear, a relatively inverted wedge arranged to move the block to shift the shaft in the other direction, whereby the other bevel wheel may be made to mesh with the friction gear to reverse the rotation of the movable shaft, means to move said wedges, a gear on the movable shaft, and other gears arranged to mesh therewith to drive the tractor wheels.

1,676,625. SOUND TRANSMITTER. WILLIAM L. WALKER, New York, N. Y. Filed Mar. 18, 1922, Serial No. 544,962. Renewed Oct. 21, 1927. 10 Claims. (Cl. 177—386.)



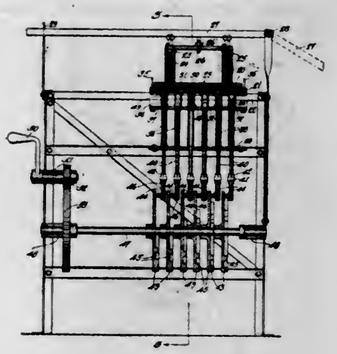
1. A submarine signaling transmitter comprising an enclosing casing, enlarged at one end portion, a transverse

resilient diaphragm closing said enlarged end, a resilient tubular portion communicating with said enlarged end portion, a substantially non-compressible liquid with-



in said casing and means for vibrating said tubular portion whereby vibrations are impressed upon said diaphragm through said liquid.

1,676,626. LUBRICATING-DISPENSING APPARATUS. OSCAR ULYSSES ZERK, Chicago, Ill., assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed Jan. 2, 1924. Serial No. 683,971. Renewed Mar. 12, 1926. 24 Claims. (Cl. 221—47.4.)

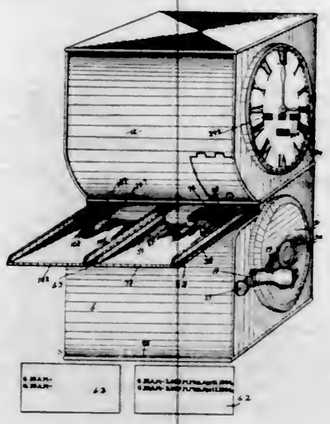


6. A lubricant compressor comprising a barrel, an axially slidable plunger extending through said barrel for ejecting lubricant at one end thereof under high pressure, an annular follower encircling said plunger for forcing a mass of lubricant toward the exit end of said barrel, said plunger being removable from said barrel, and means for drawing said follower out with said plunger.

1,676,627. METHOD AND MEANS FOR REDUCING CROSS TALK IN CARRIER-CURRENT SIGNALING SYSTEMS. HAROLD S. BLACK, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1926. Serial No. 132,452. 14 Claims. (Cl. 179—78.)

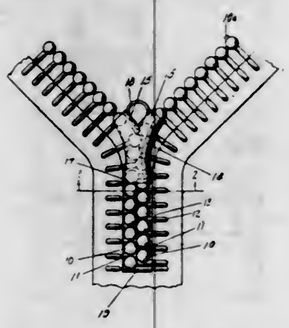
1. The method of reducing crosstalk between adjacent signaling circuits which comprises attenuating the crosstalk components at the terminals of said circuits a greater number of times and to a greater extent than the effective signalling currents therein.

1,676,628. METHOD OF BACKING ELECTROTYPE PLATES. HARRY M. BLAETZ, Philadelphia, Pa., assignor to Royal Electrotype Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 7, 1924. Serial No. 748,428. 17 Claims. (Cl. 22—203.)



1. The method of distributing or eliminating air trapped between the back face of an electrotype and a molten backing therefor or within the backing, which consists in jarring the electrotype after the back has been applied and before it solidifies.

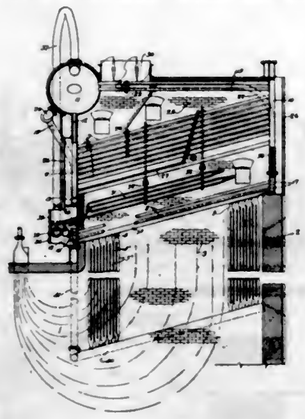
1,676,629. RECORDING APPARATUS. AUGUST N. E. BOOS, New York, N. Y. Filed Dec 15, 1920. Serial No. 430,911. 26 Claims. (Cl. 234—43.)



1. In a recorder having a support, a spring motor carried by the support, a plurality of groups of printing devices each including a plurality of wheels peripherally provided with stamps adapted to be operated simultaneously by the spring motor, and carried by the support, a

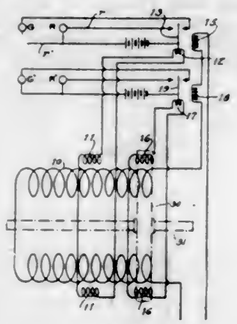
plurality of carriages each adapted for supporting a record sheet and further adapted to reciprocate on said support and convey the record sheet into and out of

contact with the said printing device, and selectively connected means for reciprocating said carriages each independently of the other.



1,676,630. SEPARABLE FASTENER. ARTHUR L. BREITENSTEIN, Akron, Ohio; Maude E. Breitenstein administratrix of said Arthur L. Breitenstein, deceased. Filed Jan. 27, 1926. Serial No. 84,091. 9 Claims. (Cl. 24—205.)

9. In a device of the class described, a double series of stems and fasteners therefor, for attachment thereof to opposing edges of a piece of fabric, and spherical elements on the outer ends of said stems, adapted for interlocking with the similar elements on the opposing series of stems, said stems being disposed so as to support said elements in a plane at one side of the plane of the fabric to which they are attached.

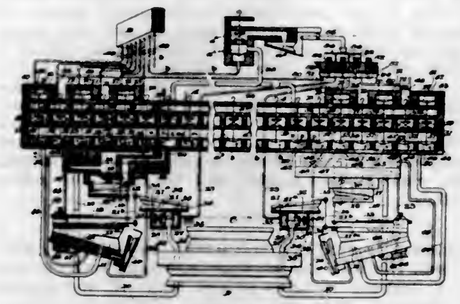


1,676,631. WATER-TUBE BOILER. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Oct. 20, 1924. Serial No. 744,668. 6 Claims. (Cl. 122—235.)

1. In a water tube boiler, a steam and water drum, spaced upper and lower banks of horizontally inclined upflow generating tubes, said banks of tubes terminating at one end in correspondingly spaced header means, independent connections from each of said header means to said drum, said connections being constructed and arranged to leave the space between said header means

free and unobstructed, and superheater units extending between said spaced header means into the space between said banks.

1,676,632. METHOD OF AND APPARATUS FOR TESTING MAGNETIZABLE OBJECTS. CHARLES W. BURROWS, New York, N. Y., assignor, by mesne assignments, to Magnetic Analysis Corporation, Long Island City, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,368. 36 Claims. (Cl. 175—183.)

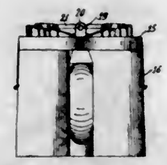


29. Apparatus for testing the physical properties of a specimen including means for producing a varying magnetic field about the specimen, and a pair of independent exploring devices in the field located in parts of the field that differ in magnetic intensity.

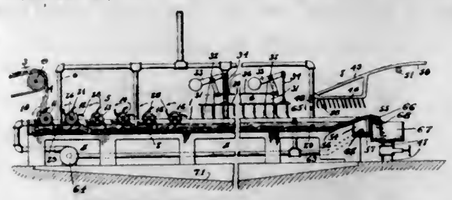
1,676,633. RECORD-CONTROLLED MUSICAL INSTRUMENT. TOLBERT F. CHEEK, New York, N. Y., assignor, by mesne assignments, to Welte-Mignon Corporation, New York, N. Y., a Corporation of Delaware. Filed May 7, 1921. Serial No. 467,649. 25 Claims. (Cl. 84—41.)

1. In a piano playing mechanism, striker pneumatics, a source of power for actuating the striker pneumatics, expression controlling means to control the degree of pressure at the striker pneumatics in accordance, with the setting of said expression controlling means for high, low or intermediate pressures respectively, pressure maintaining means for maintaining substantial uniformity of the pressure for which the pressure controlling means may

be set, whatever number of striker pneumatics be simultaneously operated, a spring connecting said expression controlling means with said maintaining means, to transmit the action of the former to the latter, an operating pneumatic connected to the expression controlling means to operate the same, and humanly operable means connected to the operating pneumatic to control the same.



1,676,634. TIRE-RIM TOOL. WILLIAM H. CONNER, Berkeley, Calif. Filed June 3, 1926. Serial No. 113,406. 4 Claims. (Cl. 157—1.)

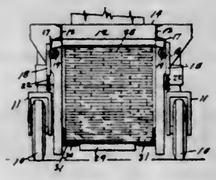


1. A tire rim tool comprising a pair of anchor heads, each having a hook adapted to engage a side of the tire rim and a leg on said hook adapted to abut against the inner edge of the tire rim, and an arm extending perpendicularly to the plane thereof, a rod having a pointed outer end and a threaded inner end and fixed to each arm, and means connecting the rods for drawing the arms together when the anchor heads are seated on the flange of the rim, and for moving them apart when the pointed heads are bearing against the inner surface of the rim.

1,676,635. COMPOUND CONDIMENT HOLDER. MICHAEL COSTELLO, Jersey City, N. J. Filed Dec. 15, 1926. Serial No. 154,870. 2 Claims. (Cl. 65—57.)

1. In a condiment holder having separate reservoirs a flat cover member closing said reservoirs, said cover member being provided with a first group of perforations for one reservoir and a second group of perforations for a second reservoir, a flat bar provided with projection arranged to register with all of said perforations normally to close the same, and means whereby the bar may be tilted to withdraw the projections from one group of perforations while maintaining certain projections in said other group of perforations.

1,676,636. SOAKING MACHINE EMPLOYED IN MAKING PAPER. CHARLES T. CROCKER, Fitchburg, Mass. Filed Nov. 30, 1927. Serial No. 236,700. 5 Claims. (Cl. 92—3.)

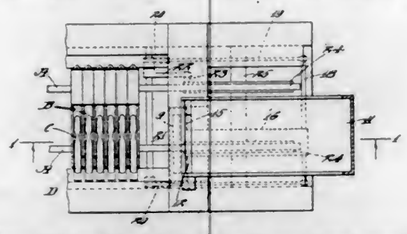


1. In a soaking machine, a tank having an imperforate bottom, to hold a chemical liquor; a series of duckers to completely immerse, in said liquor, paper stock at the receiving end of the tank, and move the stock along the bottom; other duckers, to move said stock further along said bottom, said duckers being formed to allow the liquor in the tank to find and keep its own level; means to rotate all of said duckers.

1,676,637. METHOD FOR PRODUCING DESIGNS UPON STONES. GEORGE DI BONA and TIMOTHY JELLOW, Quincy, Mass. Filed Feb. 16, 1925. Serial No. 9,459. 2 Claims. (Cl. 41—24.)

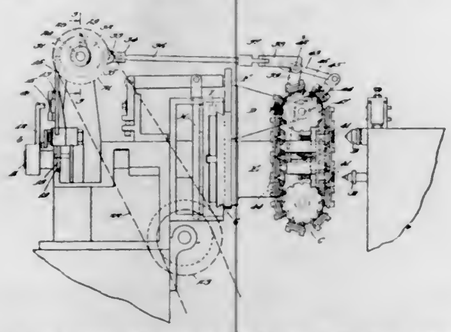
1. The method of forming a design in stone, which consists in first arranging individual preformed members having raised outlines of portions of the design to form the latter, placing a thin sheet over the members thus assembled, transferring by rubbing the outlines of the design to said sheet, then affixing the sheet to the stone, and cutting the design in the stone.

1,676,638. LOAD BINDER FOR LUMBER CARRIERS. JOSEPH S. EASTHAM, Portland, Oreg., assignor to Willamette Iron and Steel Works, Portland, Oreg. Filed Oct. 25, 1926. Serial No. 143,982. 3 Claims. (Cl. 280—179.)



1. A load binder for lumber carriers which are adapted to straddle a pile of lumber and raise same up bodily consisting of a cable mounted transversely across the arch of said carrier having yieldable supports for the ends of said cable.

1,676,639. HANDLE-FEEDING MECHANISM FOR BRUSH MACHINES. WILLIAM S. ELLIOT and GOTTFRID EMIL LINDGREN, Northampton, Mass., assignors to Pro-phy-lac-tic Brush Company, Northampton, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1925. Serial No. 11,091. 2 Claims. (Cl. 198—35.)



1. The feeding mechanism for a machine of the character described comprising a continuously moving endless

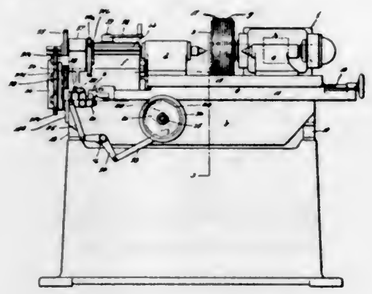
chain having a series of cells to receive the articles to be fed, a stack for said articles, a rest for the articles in the stack interposed between the stack and the endless chain and having a slot therein out of line with the stack but in registration with one of said cells, and a slide

between the stack and the rest, said slide being moved in time with the conveyor to register in one position with the stack and in another position with the slot in the rest, the articles in the stack in said second position being supported on the slide.

1,676,640. SHIFTING DEVICE FOR POSITIONING MECHANISM FOR BRUSH MACHINES. WILLIAM S. ELLIOT, Northampton, Mass., assignor to Pro-phy-lac-tic Brush Company, Northampton, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1925. Serial No. 11,096. 6 Claims. (Cl. 300—11.)

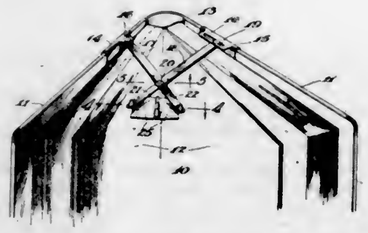
1. In a brush machine having a travelling blank carrier, in combination, a shaft, mechanism for driving the carrier, a constantly rotating member, a clutch connecting said rotating member and said driving mechanism, and means on the shaft for controlling the clutch to connect the rotating member and the driving mechanism.

1,676,641. INTERCHANGEABLE PANORAMIC-PICTURE BLOCKS. GUSTAVUS W. ESCHENBACH, Los Angeles, Calif. Filed May 20, 1927. Serial No. 192,974. 2 Claims. (Cl. 273—157.)



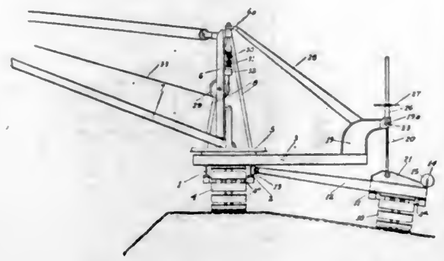
1. A series of panoramic pictures adapted to be placed adjacent each other in succession and to match with each other when pictures of the series are interchanged in position relative to each other, and symbols near the matching edges of the pictures indicating which edges of the pictures may be matched by bringing together edges of pictures having like symbols.

1,676,642. PROCESS FOR COMPOUNDING INGREDIENTS OF A CHEMICAL PAINT REMOVER. OTTO L. FLUEGEL, Birmingham, Mich. Filed Jan. 24, 1925. Serial No. 4,445. 2 Claims. (Cl. 87—5.)



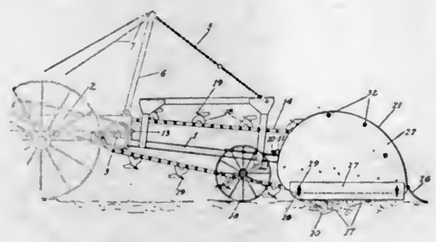
1. A process for preparing a paint remover compound, by mixing tri-sodium phosphate and oxalic acid in water, making a thin cream thereof, also mixing hydrate of lime in water, making a thin cream thereof, then mixing the two compositions together, and adding thereto a thick starch cream made by adding cold water to the starch, at the same time rapidly agitating the combining compositions to prevent formation of starch globules therein, then prepare a mixture of caustic alkali and water and drop same quickly into the above resulting compound while the caustic mixture is boiling, stirring the whole mixture rapidly until the composition ceases boiling.

1,676,643. GRINDING MACHINE. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney executors of said Bengt M. W. Hanson, deceased. Filed Feb. 9, 1924. Serial No. 691,643. 35 Claims. (Cl. 51—50.)



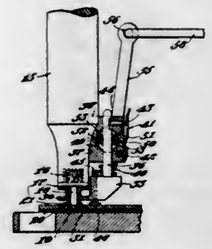
1. In a thread grinding machine, a grinding wheel having a plurality of circumferential grinding edges or serrations, means for rotating said wheel, a work holder including a work spindle and mounted for movement axially of the spindle, a rotary shaft; a cam thereon connected to said work holder and having a cam portion for moving said holder on its operative stroke in accordance with the pitch of the thread operated upon and a cam portion for returning said work holder on its inoperative stroke; means for rotating said work spindle, and gearing between said work spindle and shaft whereby said cam makes one revolution in moving said work holder on its operative and inoperative strokes while said work spindle is rotating more than one revolution.

1,676,644. BOOKMARKER. AUGUST FALKEN, Jamaica, N. Y. Filed Feb. 25, 1927. Serial No. 170,975. 7 Claims. (Cl. 116—119.)



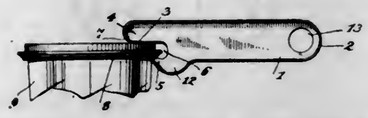
6. In a device of the class described, the combination of a book having swingingly mounted covers and pages located between the same, a marker, and connections between said marker and the covers adapted to cause the marker to be inserted between the pages upon movement of the covers toward one another in closing movement of the book, and to withdraw said marker from between the pages when the covers are spread apart to open the book.

1,676,645. DREDGER-FRAME CONSTRUCTION. JOHN E. FUNK, Stockton, Calif. Filed Jan. 24, 1927. Serial No. 163,251. 4 Claims. (Cl. 212—59.)



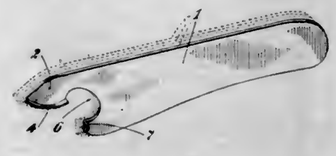
1. A frame structure for a dredger including a main frame comprising transversely spaced beams, and a transverse beam connecting said beams and extending some distance to one side of the same; a wing frame parallel to the main frame disposed adjacent and under the outer end of the transverse beam, means pivotally connecting the wing frame to the adjacent main-frame beam, means between the outer end of the transverse beam and the wing frame for vertically adjusting the beam relative to the wing frame, and ground bearing means mounted on said frames.

1,676,646. SUPPORTING AND INCLOSING STRUCTURE FOR GROUND-WORKING IMPLEMENTS. JOHN E. FUNK, Stockton, Calif., assignor to Funk Soil Pulverizer Company, Stockton, Calif., a Corporation. Original application filed Sept. 27, 1926, Serial No. 137,884. Divided and this application filed Apr. 11, 1927. Serial No. 182,601. 6 Claims. (Cl. 97—40.)



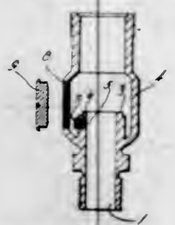
1. A ground working implement including a boom structure, means for supporting and holding the rear end of the boom at different distances from the ground, a rotary ground working unit mounted on the rear end of the boom, a hood having side members mounted in fixed connection with the unit and inclosing the upper portion of the same, and vertically adjustable plates along the sides of the hood at their lower ends.

1,676,647. DEVICE FOR SETTING INVISIBLE EYELETS. FREDERICK S. GLINES, Lynn, Mass., assignor to Peerless Machinery Company, Boston, Mass., a Corporation of Massachusetts. Refiled for abandoned application Serial No. 394,090, filed July 6, 1920, and in Canada June 10, 1924. This application filed June 2, 1925. Serial No. 34,361. 26 Claims. (Cl. 218—14.1.)



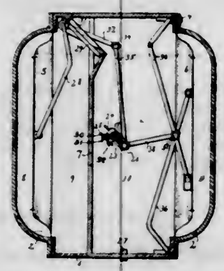
1. A device for setting blind or invisible eyelets comprising a projecting setting shoulder, adjustable means above said setting shoulder, automatic means for varying the distance between said setting shoulder and the lower surface of said adjustable means, and means for locking said adjustable means in adjusted position prior to the clenching of the eyelet.

1,676,648. UNCAPPING TOOL. JAMES S. HARDIMAN, Long Island City, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed July 7, 1925. Serial No. 41,939. 7 Claims. (Cl. 65—46.)



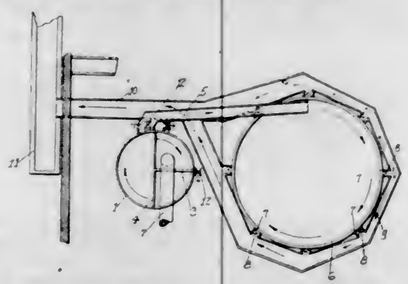
1. In a tool of the class described; an operating end comprising a flat edgewise disposed fulcrum member provided with a rounded nose; a reenforcing flange integral with said fulcrum member and extending at right angles therefrom, said flange extending along the cap engaging edge of the fulcrum member and round the rounded nose thereof; and a cap engaging jaw beneath said fulcrum.

1,676,649. CAP OPENER. ABRAHAM PODEL, Long Island City, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 17, 1925. Serial No. 69,565. 4 Claims. (Cl. 65—46.)



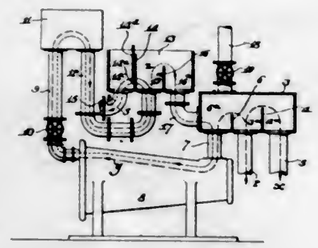
1. A cap opener comprising a substantially flat body portion provided with an integral forwardly extending fulcrum portion, a curved fulcrum shoe on the lower part of the fulcrum portion, a cap engaging hook disposed beneath said fulcrum portion, and a projecting lip on the end of said hook, said shoe and said lip both extending laterally on the same side of said body portion.

1,676,650. TEMPERATURE-CONTROLLED RELIEF VALVE. FRANKLIN T. HOLMES, Springfield, Mass., assignor to Tryco Products, Inc., Westfield, Mass., a Corporation of Massachusetts. Filed May 2, 1927. Serial No. 188,241. 6 Claims. (Cl. 137—53.)



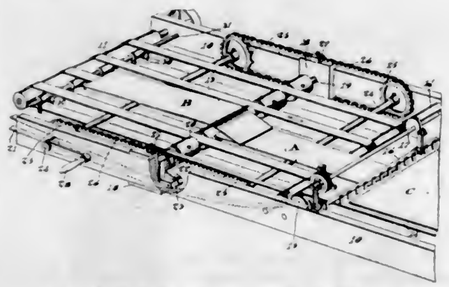
1. A safety valve having a casing wholly enclosing a valve seat, a by-pass around said seat, a fusible plug in said by-pass, a removable section of said casing adjacent said plug and a series of spare plugs carried in the body of said section.

1,676,651. GAS METER. ARNO R. HUETTIG, Stratford, Conn., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,694. 3 Claims. (Cl. 73—1.)



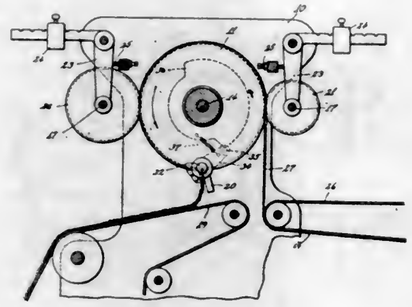
1. A meter comprising a body member having a partition, a diaphragm at one side of said partition, a crank shaft at the other side of said partition, a bell crank lever operatively connecting said diaphragm with said crank shaft, one arm of said lever being located at one side of said partition and the other arm of said lever being located at the opposite side thereof.

1,676,652. APPARATUS AND PROCESS FOR CLEANING PAPER STOCK. CHARLES L. KELLER, Glendale, Ohio, assignor to The Richardson Company, Lockland, Ohio, a Corporation of Ohio. Filed May 11, 1926. Serial No. 108,381. 7 Claims. (Cl. 92—28.)



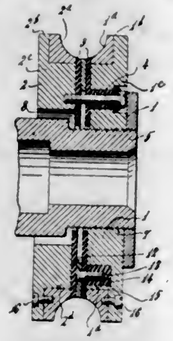
1. Apparatus for cleaning pulped paper stock consisting of a sedimentation tank and a skimming tank arranged in series, said sedimentation tank having a baffle therein over which the liquor flowing through said tank must pass, and said skimming tank having a conduit extended from the top of the liquor level in said sedimentation tank, said conduit extending tangentially through the side of said skimming tank.

1,676,653. METHOD AND MEANS FOR PAPER-STOCK REFINING. HARRY LIEBECK, Swarthmore, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Sept. 22, 1926. Serial No. 136,926. 4 Claims. (Cl. 92—27.)



1. The combination with a paper stock refining engine having an inlet extending above the level of the engine so as to keep a solid body of fluid paper stock entering the engine to the exclusion of free air, a regulating box arranged above the engine having an inlet and two outlets, the inlet receiving paper stock from the engine and the outlets respectively leading to the next stage in a paper making process and communicating with the inlet to the engine, a dam arranged in the box between the inlet of the box and the outlet therefrom leading to the inlet of the engine over which refined fluid paper stock is returned to the engine for recirculation, an adjustable orificed partition for the regulating box intermediate of the inlet thereto and the outlet leading to the next stage of the paper making process for regulating the quantity of paper stock to be returned for re-treatment in the engine, and a static head arranged between the discharge from the engine and the inlet to the regulating box whose normal height extends above the level of the dam in the regulating box.

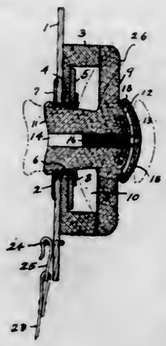
1,676,654. APPARATUS FOR CONTROLLING SHEETS. HARMON E. LINDBLADH, Brookline, Mass., assignor to The Lindbladh Corporation, a Corporation of Massachusetts. Filed July 5, 1921. Serial No. 482,587. 32 Claims. (Cl. 271—46.)



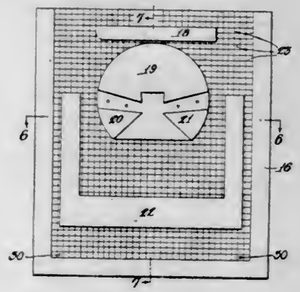
1. In an apparatus for controlling sheets, means for advancing successive sheets, and means associated with the advancing means for elevating the forward extremity of each sheet upon said advancing means above the preceding sheet, said elevating means thereafter remaining in contact with the sheets throughout their lengths.

1,676,655. PAPER-MAKING MACHINE. WILLIAM A. LORENZ, West Hartford, Conn., assignor to The Otaka Fabric Company, West Hartford, Conn., a Corporation of Connecticut. Filed Feb. 2, 1927. Serial No. 165,432. 5 Claims. (Cl. 92—69.)

1. In a paper crinkling machine and in combination, a cylinder, a doctor blade supported for angular movement from one position to another, said blade in one position being adapted to crinkle the paper and strip the same from said cylinder, said doctor blade in its other position being adapted to strip the paper from said cylinder without crinkling it and means for moving said doctor blade at intervals from one position to another whereby said paper is crinkled at intervals.



1,676,656. RESISTANCE WELDING ELECTRODE. GEORGE A. LUTZ, Cranford, N. J., assignor to American Circular Loom Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1926. Serial No. 143,105. 2 Claims. (Cl. 219—6.)



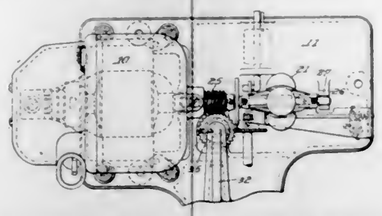
2. Electrodes for welding comprising a pair of annular metallic body portions secured together in spaced relation and having peripheral contact portions of higher heat resisting metal than the body portions, and an annular member located in the space between said body portions and insulated therefrom, said member being secured to one of said body portions and having its periphery in position to bear against the edge of stock being welded to prevent protrusion of said stock.

1,676,657. TRUSS. AUGUST F. LUZZI, Houston, Tex., assignor to J. B. Akers, Breckenridge, Tex. Filed Sept. 28, 1926. Serial No. 138,174. 3 Claims. (Cl. 128—96.)

1. A truss including a flexible supporting body having a bearing, an annular support carried by said body and surrounding said bearing, a flexible disc whose margin rests on said support thus forming an annular enclosed chamber, a projection carried by said disc and working through said bearing and forming means to retain the disc in place and a retaining pad carried by said disc formed of rigid material and whose outer face is convex, said pad being adjustable relative to said disc.

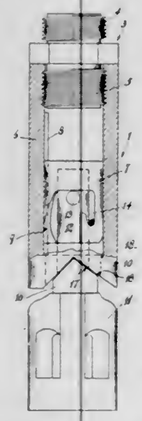
1,676,658. PLATE AND PREPARATION OF PLATE FOR ELECTROTYPING. WILLIAM J. MAGINNIS, Philadelphia, Pa., assignor to Royal Electrotype Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 7, 1924. Serial No. 748,434. 5 Claims. (Cl. 22—204.)

1. A mould having a body section carrying indices balanced on opposite sides of the center to assist in accurately setting plates therein, having a top adapted to mould bearers the height of original half tone plates about the plates and open along an edge for the receipt of molten metal.



1,676,659. MUSICAL TOY OR INSTRUMENT. MICHAEL J. MCINTYRE, Eden Center, N. Y. Retiled for abandoned application Serial No. 707,518, filed Apr. 18, 1924. This application filed Mar. 2, 1927. Serial No. 172,029. 4 Claims. (Cl. 46—46.)

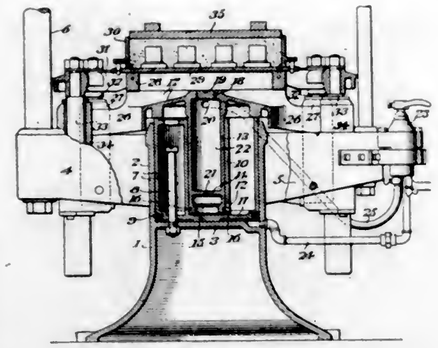
1. In a device of the character described, including a tubular body having inlet and outlet ends and forming the neck of an instrument, a horn reed mounted adjacent to said outlet end, a side opening in said body, a diaphragm over said side opening, a second side opening in said body, air passage means on the side of said body



adjacent said inlet end to form with said second side opening a whistle, an instrument head attached to the outlet end of said neck and strings aligned over said head and neck, whereby said horn, diaphragm, whistle or strings may be operated independently of the others.

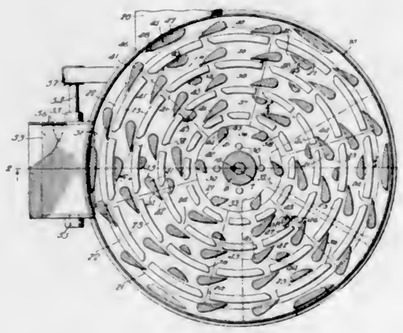
1,676,660. DRIVING MECHANISM FOR TALKING MACHINES. WILLIAM W. MOYER, Camden, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Apr. 26, 1918, Serial No. 230,863. Renewed June 18, 1923. 10 Claims. (Cl. 74—36.)

1. An operating mechanism for talking machines including a motor having a rotatable shaft, a pair of supporting bearings therefor, one of which is intermediate the ends of said shaft, and a governor mounted on the free end of said shaft and entirely supported by said shaft, in combination with a driving gear secured to said shaft, a turntable spindle and a gear on said spindle adapted to mesh with said driving gear and to be driven thereby.



1,676,661. STANDING VALVE PULLER. KARL P. NEILSEN, Long Beach, Calif. Filed Sept. 15, 1926. Serial No. 135,523. 6 Claims. (Cl. 103—180.)

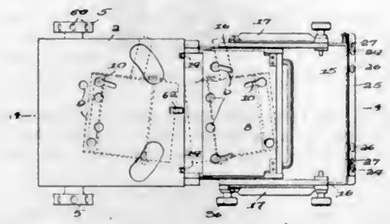
1. In a pump comprising a standing valve and a plunger, a post rising from said standing valve, pins extending from said post, a sleeve having a bayonet slot therein, means slidably mounting said sleeve on the plunger and means on said standing valve co-acting with said mounting means, whereby, said pins are registered with said slot.



1,676,662. JOLT MECHANISM FOR MOLDING MACHINES. WILLIAM HENRY NICHOLLS, Brooklyn, N. Y. Filed June 10, 1926. Serial No. 114,993. 9 Claims. (Cl. 22—45.)

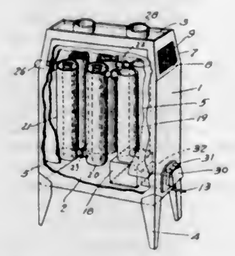
1. In a molding machine, a jolting mechanism, comprising a vertically disposed cylinder; a plunger in said cylinder; a mold flask support adapted to be raised and lowered by the reciprocation of the plunger; a compressed air reservoir located closely adjacent to the cylinder and provided with a charging port to receive air from a compressor; a constantly open admission port smaller than the charging port connecting the reservoir with the cylinder below the plunger therein; an exhaust port

larger than the admission port leading from the cylinder adjacent the lower end thereof; and means to automatically close the exhaust port when the plunger moves to its lowermost position and automatically open it when the plunger rises to a certain point.



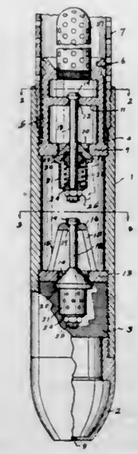
1,676,663. SAND-MULLING DEVICE. WILLIAM H. NICHOLLS, Brooklyn, N. Y. Filed Jan. 14, 1927. Serial No. 161,145. 17 Claims. (Cl. 83—11.)

1. A sand muller comprising a substantially horizontal fixed support; a plurality of lower plates removably mounted upon the upper face of said support and arranged around the center of it; upstanding wall-forming projections rigidly carried by said plates and defining a plurality of circular sand-receiving channels around the center of the support, said projections forming the side walls of the channels and each wall being formed with a plurality of circumferentially spaced openings to place the channels in transverse communication; a rotor member spaced above the fixed support and mounted to rotate about a vertical axis located at the center of the support; a plurality of upper plates removably mounted upon said rotor; sand-mulling-and-carrying projections rigidly carried by said upper plates and depending from them, a plurality of said mulling projections extending downwardly into each channel at points spaced therealong and each projection being formed with an upright mulling face opposed to and spaced from the outer



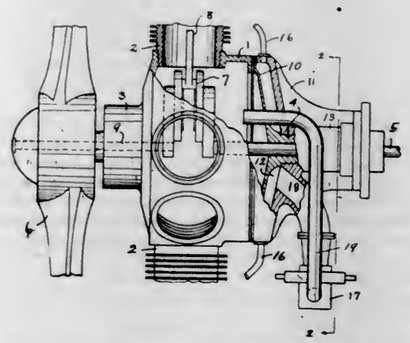
channel side wall and making an acute angle with it, the angles of all the faces opening in one direction around the channels and the mulling projections being tapered in said direction and formed with upright leading edges disposed adjacent the inner walls of the channels; baffle projections rigidly carried by said upper plates, depending into the channels adjacent the outer walls thereof, tapering in the same direction as the mulling projections and formed with upright leading edges adjacent the outer channel walls, said baffle projections being adapted to intermittently close the gaps in the channel walls as the rotor is rotated and to direct sand back into the paths of the mulling projections; and means to deliver sand to the innermost channel, the muller being adapted to discharge sand from the outermost channel.

1,676,664. APPARATUS FOR PROMOTING FLEXIBILITY OF THE JOINTS OF THE HANDS. HARRY OSTROVSKY, Bryn Athyn, Pa. Filed May 17, 1927. Serial No. 192,112. 16 Claims. (Cl. 272—67.)



1. Apparatus for promoting flexibility of the joints of the hands, comprising a main body, a slidable plate mounted thereon, means for imparting movement thereto, a second plate adjacent said slidable plate, finger gripping members adapted to be locked in place on both of said plates, whereby when said slidable plate is oscillated on said body, the fingers in said gripping members will be stretched.

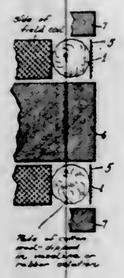
1,676,665. GAS FURNACE. EL ROY L. PAYNE, Beverly Hills, Calif., assignor to Payne Furnace and Supply Company, Beverly Hills, Calif., a Corporation of California. Filed June 3, 1926. Serial No. 113,877. 9 Claims. (Cl. 126—116.)



9. A gas furnace comprising a furnace casing, a gas burner near the bottom of said casing, a combustion chamber within said casing and extending upwardly from said burner, a plurality of heating elements within said casing, and means connecting all of said heating elements in parallel to the upper portion of said combustion chamber; each of said heating elements comprising a series of vertical gas conducting flues, gas passage means connecting all the flues of each element in series alternately at the bottom and top thereof, and a single air passage tube extending centrally within each of said gas conducting flues.

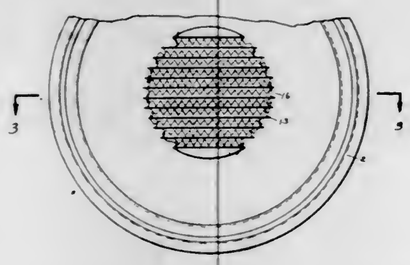
1,676,666. VALVE MECHANISM. FELIX L. PIVOTO, Beaumont, Tex. Filed Aug. 18, 1927. Serial No. 213,802. 11 Claims. (Cl. 251—144.)

1. A valve mechanism including a valve seat having an opening, a downwardly opening valve controlling said opening, a bearing member above said seat having a bearing therein, a stem supporting the valve and working through and having a swiveling connection with said bearing, a yieldable member associated with the stem and normally holding said valve in closed position, a screen disposed above the seat and provided to exclude foreign matter therefrom.



1,676,667. AIRCRAFT MOTOR. CHARLES E. QUICK, Houston, Tex. Filed Nov. 23, 1925. Serial No. 70,821. 4 Claims. (Cl. 123—119.)

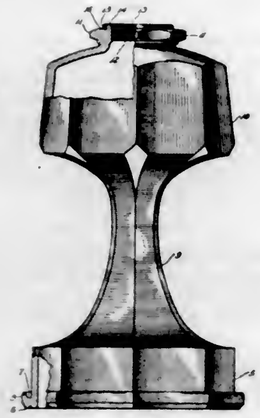
1. An internal combustion motor including a crank case having a closed crank chamber and an intake chamber at the rear end thereof, an intake manifold entering the intake chamber, a crank shaft rotatably mounted in the crank case and having a crank in said crank chamber, said shaft having an air inlet duct lead-



ing from its forward end and terminating in said crank chamber and forming the only air inlet into said crank chamber, a carbureter associated with said intake manifold, an air outlet line leading from the crank chamber and connected into the carbureter.

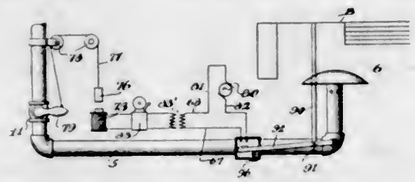
1,676,668. TELEPHONE TRANSMITTER. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 3, 1925, Serial No. 12,912, and in Great Britain Mar. 3, 1924. 3 Claims. (Cl. 179—121.)

1. In a telephone apparatus of the magneto-phone type, an electro-magnet having an annular air gap, a flat aperiodic annular diaphragm supported therein, and a flat spiral coil secured to said diaphragm.



1,676,669. ELECTRIC COOKING AND HEATING DEVICE. OSCAR SCHAFFLER, Detroit, Mich. Filed Aug. 3, 1927. Serial No. 210,257. 3 Claims. (Cl. 219—37.)

1. A convertible heating device adapted for use as both a heater and cooker, comprising a semi-spherical metal casing having suitable supporting legs attached thereto for holding said casing in a horizontal position, two sets of electrical terminal plugs mounted within the bottom walls of said casing and completely insulated therefrom, an electric heating unit slidably mounted on one set of the terminal plugs for completing an electric circuit through all of the terminal plugs, and means for connecting said terminal plugs and heating unit within an electric circuit.

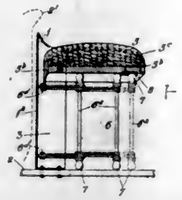


1,676,670. LAMP. CHARLES E. SCHMUNK, Crafton, Pa. Filed Dec. 6, 1921. Serial No. 520,277. 3 Claims. (Cl. 67—81.)

1. A glass lamp having a container, a neck portion therefor, said neck portion having a burner receiving opening therethrough, a collar in the burner opening, a flange on the upper end of the collar, an inwardly curled edge on the flange, and an integral bead on the neck

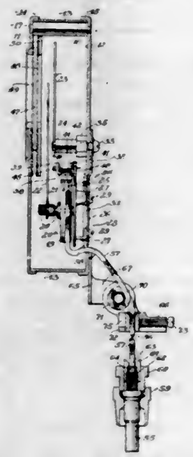
extending into the curled flange and interlocking therewith to hold the collar in the burner opening, the curled edge of the collar being of less depth than the collar.

1,676,671. ELECTRIC CONTROL DEVICE. GERHARDT F. SCHWARTZ, St. Louis, Mo. Original application filed Feb. 25, 1921, Serial No. 447,664. Divided and this application filed Oct. 28, 1922. Serial No. 597,567. 1 Claim. (Cl. 67—116.)



In a safety control for gas appliances, the combination of a pilot burner, a valve controlling the supply of gas to the burner, a thermostat disposed so as to act in one direction in the presence of the flame on the pilot burner and to react in the absence of such flame, a solenoid for closing said valve, the core of said solenoid connected by a flexible element trained over pulleys to a handle of the valve, an electric circuit including said solenoid and having normally open contacts therein, means for bridging said contacts, said contacts and bridging means being located away from the zone of the flame and its heat, said thermostat being disposed relatively to said last named means, whereby to cause closing of the contacts upon the extinguishing of the pilot flame.

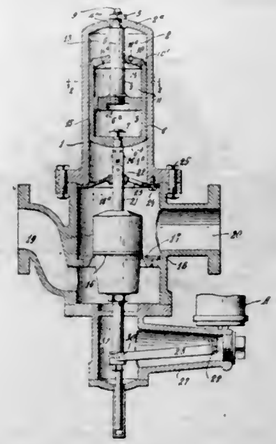
1,676,672. SEAT CONSTRUCTION AND SEAT ATTACHMENT. EDWARD J. STAHL, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 18, 1924. Serial No. 686,983. 5 Claims. (Cl. 155—12.)



1. In a seat construction, the combination of a frame adapted to be supported on the floor, a seat pivoted to the upper end of said frame and swingable downwardly into a position in front of said frame, and means for supporting said seat in a horizontal position, said means

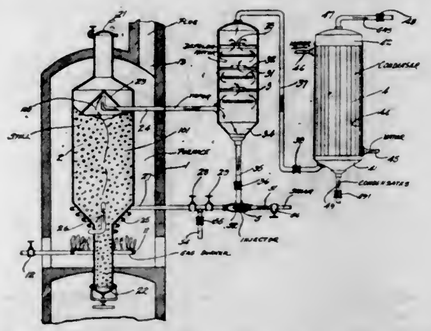
comprising superposed sets of links pivoted to said frame in spaced relation and rods engaging the floor and forming pivotal connections between the said sets of links to

permit the latter to be expanded laterally away from said frame into position to be engaged by said seat when swung to a horizontal position.



1,676,673. GAUGING INSTRUMENT. FREDERICK W. STALKER, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1925. Serial No. 18,956. 4 Claims. (Cl. 73—52.)

1. In a gauging instrument, the combination of a casing having an opening through its wall, indicating mechanism disposed within the casing, a holder for said mechanism, a support for the holder, connected therewith through said opening and rotatably disposed upon the outer wall of the casing, an operating extension upon the support arranged to cooperate with the casing to indicate different positions of adjustment of said mechanism and means for securing the support in the desired position upon the casing.

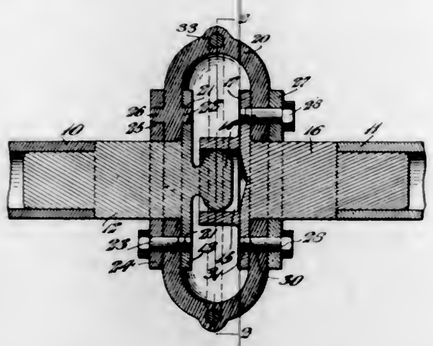


1,676,674. DASHPOT. GAMALIEL C. ST. JOHN, Greenwich, Conn. Filed Dec. 22, 1926. Serial No. 156,436. 5 Claims. (Cl. 188—96.)

1. A dash-pot comprising a cylinder, a hollow member therein having a closed lower end to contain fluid, a head within said member normally located between the ends of its bore providing spaces within the member on opposite sides of said head, one of said spaces being adapted to contain fluid between the closed lower end of said member and said head, means providing com-

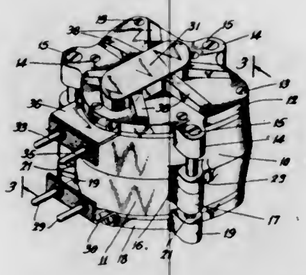
munication between said spaces for the flow of said fluid between said spaces and means to admit fluid within the cylinder on opposite sides of the member.

1,676,675. PROCESS OF RECOVERING LIGHT HYDROCARBONS FROM CARBONACEOUS MATERIAL. MILON J. TRUMBLE, Los Angeles, Calif. Original application filed July 31, 1922, Serial No. 578,736. Divided and this application filed Apr. 7, 1924. Serial No. 704,678. 2 Claims. (Cl. 202—8.)



1. A process for the distillation of coal which comprises treating it in a closed retort with superheated steam under a pressure of not less than five pounds, leading off the steam and volatile products, condensing desired fractions thereof separately, and collecting the remaining gas for use as desired.

1,676,676. UNIVERSAL JOINT. ALFRED WEILAND, Neshanic, N. J., assignor to Pneumatic Appliances Corporation, New York, N. Y., a Corporation of Delaware. Filed May 5, 1926. Serial No. 106,869. 1 Claim. (Cl. 64—96.)



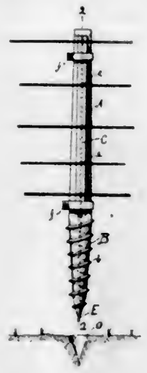
A universal joint comprising a part connected to a driving shaft, a part connected to a driven shaft, one of said parts terminating in a ball-like end, and the other of said parts terminating in a bearing bore to receive said

ball-like end, an annular tubular disc-shaped casing connecting said parts for yielding relative movement, flanges respectively carried by said parts and seating respectively against the inner walls of said casing, said flanges having holes arranged therein, lugs molded to project in-

ternally of said casing for interfitting with certain of said flange holes, lugs molded exteriorly of said casing, clamping plates for opposite sides respectively of said casing and having holes to receive said exterior lugs, and clamping devices for holding said flanges, casing and plates clamped together.

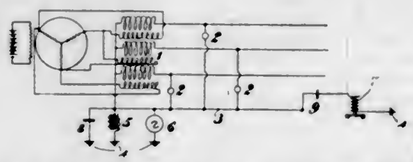
1,676,677. DENTAL FLASK. MEYER L. AXELROD, Cleveland, Ohio, assignor to Ohio Chemical & Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 28, 1926. Serial No. 118,941. 1 Claim. (Cl. 219—35.)

A self-heating dental flask composed of separable upper and lower sections having hollow upper and lower walls, electrical heating elements housed in the top of the upper section and the bottom of the lower section, means for connecting the heating elements with a source of current, and a thermostat also housed in one of the hollow walls and connected with the heating element therein to open and close the circuit thereof as the temperature rises and falls relatively to a predetermined value.



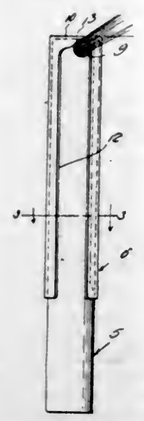
1,676,678. LEVEL-WINDING FISHING REEL. RAYMOND B. BENNETT, Montague City, Mass., assignor to Montague City Rod Company, Montague City, Mass., a Corporation of Massachusetts. Filed June 20, 1927. Serial No. 199,994. 3 Claims. (Cl. 242—84.4.)

1. In a level winding fishing reel, level winding means comprising an endless screw shaft, a split sheet metal bearing sleeve embracing said shaft, integral extensions from said sleeve forming a pocket, a nut in said pocket for connecting the sleeve to the screw thread, a slotted line guide arranged to extend radially of said shaft and formed as an integral extension from one of said first



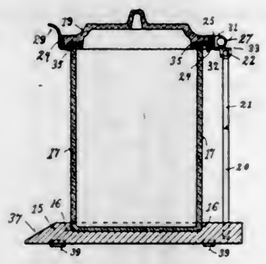
named extensions but at an angle thereto, all constructed for a convenient manufacture of minimum weight to decrease inertia of movement on the endless screw shaft.

1,676,679. CONCRETE FENCE POST. WILSON BENSINGER, Lodi, Ohio. Filed Aug. 27, 1923. Serial No. 659,542. 1 Claim. (Cl. 72—82.)



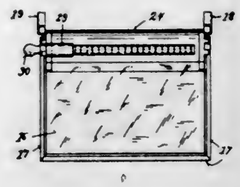
A concrete post comprising in combination and above soil portion, a subsoil portion tapering to a point at its lower end, a spiral thread on said tapered surface, and a metal rod embedded at the longitudinal center of both portions, said rod projecting beyond the spiral thread terminus to penetrate the soil in advance thereof, substantially as set forth.

1,676,680. SYSTEM FOR THE ELECTRIC TRANSMISSION OF SIGNALS ALONG LINES FOR POWER DISTRIBUTION. JOSEPH BETHENOD, Paris, France. Filed Jan. 4, 1923, Serial No. 610,735, and in France Feb. 2, 1922. 3 Claims. (Cl. 177—352.)



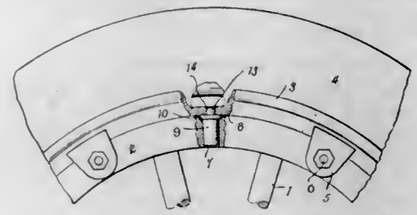
1. In a system for signaling over transmission systems having an insulated neutral conductor, means for connecting a source of relatively high frequency current between said neutral conductor and ground, means between said neutral conductor and ground affording a low impedance path for currents of power frequency but a high impedance path for currents of signaling frequency, and signal receiving means responsive to high frequency currents connected between the neutral conductor and ground.

1,676,681. METAL HAIR TUBE. DAVID J. BOLDUC, San Francisco, Calif. Filed Feb. 23, 1927. Serial No. 170,360. 3 Claims. (Cl. 132—36.2.)



1. As a new product of manufacture, a hair steaming tube of the class described comprising a pair of telescopically connecting relatively rotatable sections, having entrance slots adapted to be brought into registry, after which the sections may be turned upon each other for closing the openings and completing the steaming process.

1,676,682. DISPLAY AND VENDING APPARATUS. EDWARD BRUNHOFF, Cincinnati, Ohio. Filed Apr. 30, 1925. Serial No. 27,030. 4 Claims. (Cl. 215—76.)

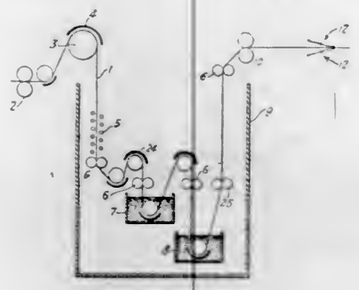


1. In combination with a display and vending apparatus having a base member adapted to be seated upon a show-case and provided upon its upper face with means to engage and hold an original container in a predetermined position relative to said base and an original container mounted in position on said base, a pair of resilient hinge rods projecting upwardly from said base to the upper portion of said original container, said hinge rods having their upper free ends turned away from each other and at substantially right angles to the vertical position of said rods, and a lid having hinged relation to the upper ends of said hinge rods with a limited hinge movement and guided by said hinge rods from an open position to a position to close the open mouth of said original container, said hinge rods being adapted to have their upper free ends sprung toward each other and out of their normal position to be operatively engaged in hinged relation with or disengaged from said lid.

1,676,683. HUMIDOR DISPLAY LID. EDWARD BRUNHOFF, Wyoming, Ohio. Filed Jan. 29, 1927. Serial No. 164,624. 3 Claims. (Cl. 131—30.)

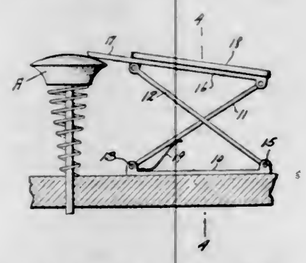
3. A humidor display lid comprising a lid member to be detachably applied to the open mouth of a container to protect the contents of the container and to display the contents of the container through said lid, means to detachably attach said lid to the original container lid so as to utilize the hinge connection of the original container lid also as a hinge connection between the container and the display lid, a humidor chamber carried by said display lid and in communication with the interior of said container, and a humidor mounted in said humidor chamber and axially thereof with an intervening air circulating channel between the exterior of said humidor and the inner face of the wall of said humidor chamber to provide for an air circulation upwardly from said container to said humidor chamber and encircling said humidor and thence back and downwardly to said container, and means to detachably and replaceably support said humidor substantially axially of said humidor chamber and operable from the exterior of said humidor chamber.

1,676,684. RIM LOCK. PHILANDER R. BUNDY, Indianapolis, Ind. Filed May 24, 1927. Serial No. 193,901. 3 Claims. (Cl. 70—90.)



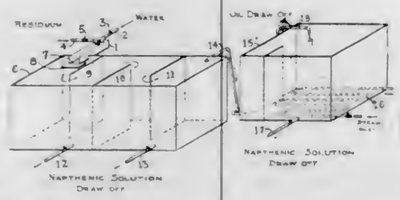
1. A rim lock comprising a tubular body adapted to be secured in a wheel felly and having a threaded bore, a bolt having threaded engagement with the bore of the body, and a guard ring also having threaded engagement with the bore of the body whereby it may be turned home against the bolt.

1,676,685. APPARATUS FOR THE ANNEALING OF METALS IN CONTINUOUS COLD ROLLING. LEON CAMMEN, New York, N. Y. Filed Apr. 19, 1928. Serial No. 271,366. 6 Claims. (Cl. 80—2.)



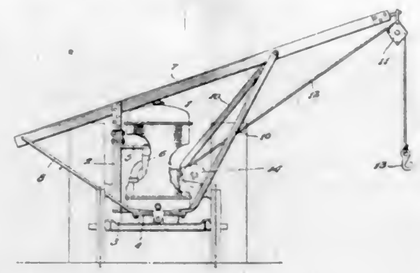
1. In an apparatus for continuous cold rolling of metals, two pairs of working rolls, adapted for the passage therebetween of a body of metal in the process of

being rolled thereby, means for heating said body of metal while travelling between said two pairs of working rolls said means consisting of a coil surrounding in part



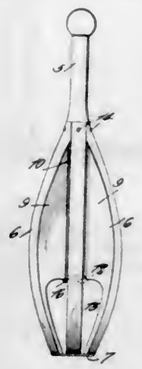
said body of metal and carrying a high-frequency alternating current, and means for cooling said body of metal while it is travelling between said two pairs of rolls.

1,676,686. PEDAL-ACTUATING DEVICE. HAROLD CHRISTENSON, Savannah, Ga. Filed May 10, 1927. Serial No. 190,284. 6 Claims. (Cl. 74—81.)



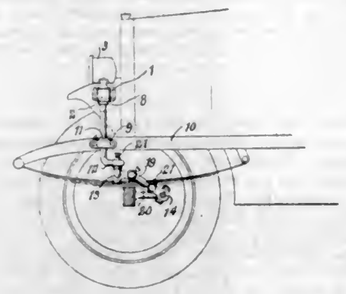
1. A pedal actuating device including two crossed members hingedly supported at their lower ends, a plate constituting a foot rest and hingedly connected to the upper ends of the crossed members whereby the upper plate may be tilted into depressive engagement with a pedal but cannot be bodily depressed.

1,676,687. RECLAIMING DISTILLATION RESIDUES. STEWART P. COLEMAN, Cambridge, Mass., and WAYNE S. HUGHES, Goose Creek, Tex., assignors to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 7, 1924. Serial No. 691,162. 4 Claims. (Cl. 260—108.)



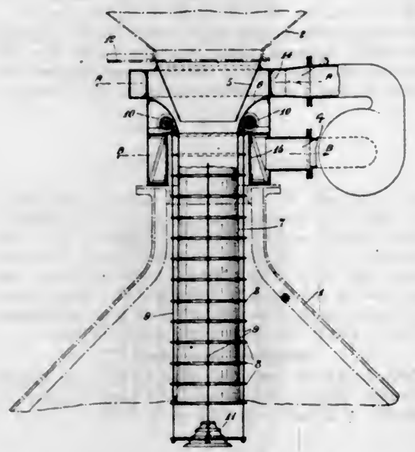
1. The process of reclaiming naphthenic distillation residues, which comprises discharging the hot residue onto the surface of flowing water, then allowing stratification into layers to occur, withdrawing the water and dissolved naphthenate from the bottom layer, subjecting the residual material to further stratification, withdrawing the oil from the top and withdrawing the water containing metal naphthenates from the bottom layer.

1,676,688. BOOM ATTACHMENT FOR TRACTORS. JAMES D. CUMMINGS, Houston, Tex., assignor of one-half to Carl J. Managuh, Houston, Tex. Filed July 24, 1926. Serial No. 124,712. 1 Claim. (Cl. 189—16.)



A derrick attachment for tractors comprising a boom to extend transversely across a tractor above the same with its end portions projecting from opposite sides of the tractor, a cable guide at the forward end of said boom, a standard disposed vertically below said boom in spaced relation to the rear end thereof and having its upper end rigidly connected with the boom, upper and lower arms projecting laterally from said standard and adapted to be secured respectively to the block and crank case of the engine at one side of the tractor, brace rods carried by the rear end of said boom and extending downwardly therefrom and adapted to be secured to the crank case at the ajacent side of the tractor, and bracing bars connected with the boom intermediate the standard and forward end of the boom to extend downwardly from the boom at the opposite side of the tractor from the standard and having their lower ends adapted to be secured to the engine at the opposite side thereof from the brace rods.

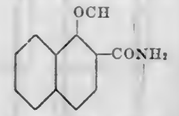
1,676,689. INDIAN CLUB. ROBERT EMMETT DWYER, Concord, N. H. Filed June 14, 1927. Serial No. 198,789. 3 Claims. (Cl. 272—84.)



3. In an illuminated Indian club, an Indian club having ribs, a seat in the said club encompassed by the ribs, an electric battery having a lamp located in the seat, and means for detachably securing the battery and lamp in the seat.

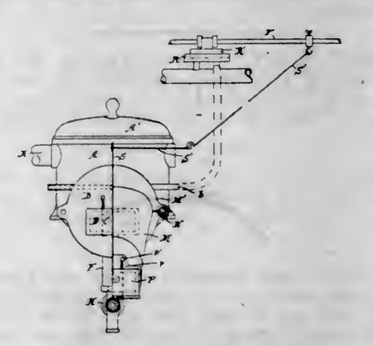
1,676,690. VEHICLE HEADLIGHT. JOHN F. FLANNERY, Carbondale, Pa. Filed Dec. 29, 1926. Serial No. 157,754. 2 Claims. (Cl. 240—62.)

1. In dirigible headlights for vehicles, the combination with pivotally mounted lamps, and a link connecting the lamps for synchronous movement, of a compensating connection between said link and the steering link connecting arms of the steering knuckles, the same comprising clamps fast to the respective links, a pair of ears projecting rearwardly from the clamp on the first-mentioned link, a pair of ears projecting forwardly from the clamp on the steering link, sleeves mounted between each pair of ears, pivots inserted through the respective ears and links, a tube projecting from one of the sleeves and a stem projecting from the other sleeve and having a telescopic engagement with the said sleeve.



1,676,691. METHOD OF CHARGING CELLULOSE DIGESTERS AND THE LIKE AND MEANS THEREFOR. PER ALBERT FRESK, Robertsfors, Sweden. Filed Nov. 24, 1924, Serial No. 752,072, and in Sweden May 13, 1924. 7 Claims. (Cl. 214—17.)

6. In the process of charging and packing pulp digesters with chips to secure a close and uniform packing of the chips therein, the steps which comprise establishing a circulating air current into and out of a digester, and introducing a charge of chips into said air current entering the digester.

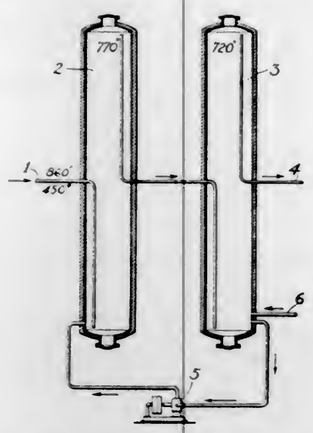


1,676,692. PROCESS FOR CONVERTING CYANNAPHTHALENE-SULPHONIC ACIDS. RICHARD HERZ and FRITZ SCHULTE, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 24, 1927, Serial No. 170,732, and in Germany Dec. 4, 1925. Divided and this application filed Nov. 10, 1927. Serial No. 232,467. 3 Claims. (Cl. 260—124.)

3. As a new compound the 1-methoxynaphthalene-2-carboxyamide of the probable formula:

being when dry a colorless powder, crystallizing from water or dilute alcohol as long colorless needles, melting at 156–157°, insoluble in alkalies, which compound is substantially identical with a product obtainable by treating the 2-cyannaphthalene-1-sulphonic acid at temperatures from about 80 to 150° with a caustic alkali in presence of methylic alcohol, until a test, when acidified, shows, that the product obtained is insoluble in dilute solutions of alkali metal carbonates, but soluble in organic solvents, as ether, benzene, etc.

1,676,693. MILKING-MACHINE RELEASER. JOSEPH HOPKIRK, Cambridge, and GEORGE WILLIAM GANE, Normanby, New Zealand. Filed Jan. 3, 1927. Serial No. 158,699. 5 Claims. (Cl. 31—82.)



1. In a milking machine releaser, the combination with a receiving chamber connected with a source of vacuum and with the milk pipe and having a discharge opening controlled by a gravity flap valve, of a discharging chamber fitted upon such receiving chamber and over the discharge opening thereof and itself having a discharge opening and a gravity flap hinged on the outside of such opening, a pulsator apparatus connected to such discharging chamber and operated by a reciprocating rod, a lever arm fixed to the flap valve of the discharging chamber, and a flexible cord attached to the end of such lever arm and to the said reciprocating rod and so arranged as to open the valve when the rod moves in one direction and to allow it to close when the rod moves in the other direction.

1,676,694. PYROGENESIS OF PETROLEUM PRODUCTS. FRANK A. HOWARD, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 2, 1926. Serial No. 85,432. 3 Claims. (Cl. 196—51.)

1. The process of pyrogenesis of petroleum products which consists in delivering a stream of products of

petroleum heated to an active cracking temperature, into a primary drum in which the products remain at an elevated temperature, above a cracking temperature but below the temperature at which they are delivered, removing admixed products of conversion continuously

from the primary drum and passing them through a secondary drum of similar form, maintaining in the secondary drum a temperature substantially below that in the primary drum, and recirculating a portion of liquid products from the secondary drum directly into the primary drum.

1,676,695. BRACELET CLASP. PERCIVAL W. JONES, Warwick, R. I., assignor to Rosenheim Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed June 24, 1927. Serial No. 201,124. 6 Claims. (Cl. 24—191.)

1. A band clasp comprising a body having arms to receive and secure between them and the body one end of the band and an anvil plate spaced from said band end to receive between it and the sand band end the opposite end of the band, and means for forcing both of said ends toward said anvil plate.

1,676,696. CLOTHESLINE POLE AND REEL. OSCEOLA KANAWYER and HOWARD KEENER, Huntington Beach, Calif. Filed Feb. 21, 1927. Serial No. 170,008. 2 Claims. (Cl. 68—3.)

1. In a device of the class described, a supporting standard, a shaft journaled transversely on the upper end of the standard, a reel mounted on the shaft for rotation, a clothes line secured at one end on the reel and adapted to be wound therearound, a segmental housing for the upper major portion of the reel, said segmental housing being loosely mounted on the shaft and adapted for swinging movement, said housing being formed with an opening in its peripheral face through which the clothes line passes, and coacting means on the standard and said housing for limiting the pivotal movement of the housing in one direction.

1,676,697. ORTHO-HYDROXYAZO DYE. OSKAR KALTWASSER, Berlin, HANS OEHRN, Charlottenburg, and HERMANN KIRCHHOFF, Berlin-Lichterfelde, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 30, 1925, Serial No. 40,681, and in Germany July 28, 1924. 5 Claims. (Cl. 260—87.)

3. The herein-described new orthohydroxyazo dyes, which in their dry pulverized form are dark powders soluble in water yielding a yellow to reddish yellow solution but insoluble in ether and in benzene, which dye wool orange to brown tints which become red to bluish red when chromated, which dyes may be obtained by coupling with a 1-aryl-3-methyl-5-pyrazolone the 4-toluenesulphonic ester of 7-hydroxynaphthalene-1,2-diazo-oxide-4-sulphonic acid, and which dyes in the form of their sodium salts probably correspond to the formula:

1,676,698. 2-HYDROXYNAPHTHALENE-3-MONOSULPHO-6-CARBOXYLIC ACID AND PROCESS OF MAKING IT. FRIEDRICH KRECKE, Offenbach, near Frankfort-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 2, 1927, Serial No. 196,148, and in Germany June 26, 1926. 8 Claims. (Cl. 260—10.)

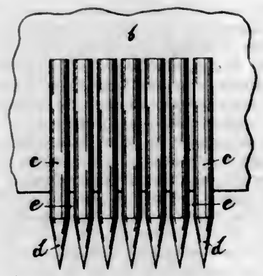
1. As a new compound a 2-hydroxynaphthalene-6-carboxymonosulphonic acid having probably the formula:

which is soluble in hot water, difficultly soluble in dilute acids, the disodium salt of which crystallizes in compact needles, which acid is characterized by a blue fluorescence of its solutions in dilutealkali carbonate solutions and its difficultly soluble neutral calcium salt, which acid is substantially identical with that obtainable by acting with sulphuric acid of at least 1,82 specific gravity on 2-hydroxynaphthalene-6-carboxylic acid.

1,676,699. PARING KNIFE. EDWARD WILLIAM LACOSS, Florence, Kans. Filed Oct. 25, 1926. Serial No. 144,057. 1 Claim. (Cl. 30—20.)

In a paring knife of the class described, a cutting blade, a pair of headed rivets associated with the blade in spaced longitudinal relation, the heads of the rivets

being spaced from the adjacent side face of the blade, a gage blade, the lower edge portion thereof being slightly bent outwardly, upwardly extending fingers at the opposite ends of the gage blade, said fingers being of concavo-convex formation in transverse section and being formed with slots which extend downwardly from the upper ends of the fingers for engagement with the headed rivets to facilitate the attachment of the gage blade in predetermined spaced relation with respect to the cutting edge of the knife blade, the heads of said rivets adapted to overlie the slots of said fingers, the fingers being wedged between the knife blade and the heads for frictional locking engagement with the knife blade.



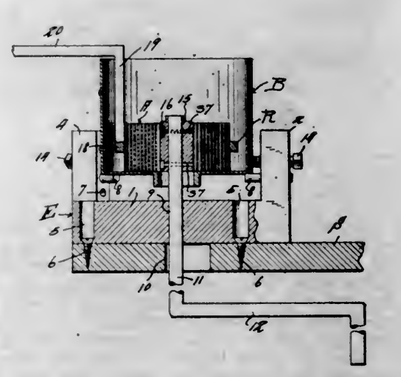
1,676,700. DEHYDRATING ALCOHOL AND THE LIKE. WARREN K. LEWIS, Newton, Mass., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Aug. 16, 1922. Serial No. 582,136. 6 Claims. (Cl. 195—15.)

1. Process of concentrating aqueous solutions of ethyl alcohol, comprising fractionally distilling an aqueous solution containing less than 95.6% alcohol under an absolute pressure corresponding to not more than six inches of mercury, taking off a distillate containing more than 95.6% alcohol, fractionally distilling such distillate under a pressure of at least 100 pounds per square inch, so as to leave a substantially anhydrous residue and obtain a distillate containing less than 95.6% alcohol.

1,676,701. METHOD OF MANUFACTURING ELECTRON-EMITTING CATHODES. GUSTAV LIEBERT, Nuremberg, Germany, assignor to Süddeutschen Telephon-Apparate, Kabel-U. Drahtwerke Aktien Gesellschaft, Nuremberg, Germany. Filed July 1, 1925, Serial No. 40,956, and in Germany July 24, 1924. 3 Claims. (Cl. 250—27.5.)

1. A method of manufacturing electron emitting cathodes consisting in first intimately mixing an electron emitting substance with a carbon compound of high molecular weight, both in a finely pulverized form, then heating and fusing them together, and finally coating the cathode with the substance thus produced.

1,676,702. COMB IN COMBING MACHINES. JOHN WILLIAM NASMITH, Manchester, England. Filed Mar. 10, 1926, Serial No. 93,640, and in Great Britain Mar. 17, 1925. 2 Claims. (Cl. 19—116.)



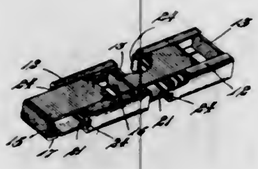
1. A comb for a combing machine, comprising a blade, and a series of combing teeth secured against one side of the blade and having straight cylindrical combing portions spaced apart and arranged parallel to each other and projecting below the edge of the blade and terminating in conical pointed ends.

1,676,703. TOOTHBRUSH. GEORGES NUYTS, Paris, France. Filed May 10, 1927, Serial No. 190,272, and in France Apr. 6, 1927. 2 Claims. (Cl. 15—176.)

1. A tooth brush comprising a brush head provided with a longitudinal channel and provided with identical recesses at the respective ends intersecting the channel, a handle provided with a longitudinal channel, engaging means on one end of the handle complementary to either of the recesses in the head for interengagement with one of said recesses when the handle and head are interengaged with each other, and interengaged fastening elements arranged throughout both of the channels and including a stop head adapted to be countersunk in the outer recess in the head, substantially as and for the purposes set forth.

1,676,704. SPRING-HANDLING APPARATUS. DANIEL E. ODOM, Bennettsville, S. C. Filed Jan. 25, 1927. Serial No. 163,418. 9 Claims. (Cl. 29—87.1.)

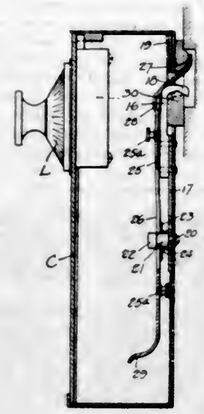
1. An apparatus for handling a clock-like spring comprising a base member, a rotating mandrel disposed through said base member and projecting therebeyond in opposite directions, and means arranged at one side of the base member for holding a spring closely adjacent thereto, said mandrel at the same side of the base member as the spring holding means being engageable with the spring to wind or unwind the spring upon required



rotation of the mandrel, said mandrel at the opposite side of the member being provided with means for rotating the same thereby leaving the first named side unobstructed for the application or removal of the spring.

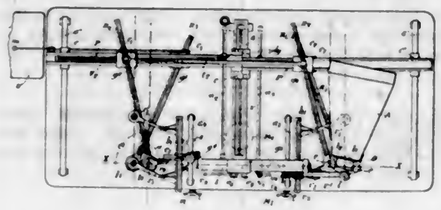
1,676,705. TREAD ATTACHMENT FOR VEHICLE WHEELS. PER WILHELM PALM, Baudette, Minn. Filed Feb. 23, 1927. Serial No. 170,372. 1 Claim. (Cl. 152—16.)

A tread attachment for vehicle wheels comprising an inner band composed of a plurality of sections arranged end to end and each of arcuate cross section whereby to encircle a tire upon a wheel, an outer shoe flat in cross section adapted to encircle the said band, and means for securing the shoe and the band in fixed relation about a wheel and the tire thereon.



1,676,706. BRACELET. JOSEPH A. PAYETTE, Attleboro, Mass., assignor to S. O. Bigney Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1927. Serial No. 182,291. 8 Claims. (Cl. 59—79.)

3. A bracelet chain comprising a series of units connected together, each comprising a guide link and a connecting slide link, said guide link having oppositely disposed side walls with a cross bar connecting said walls at one end only, a spring guided by said walls and acting between said links to press them to contracted position, and fingers on the unconnected ends of said walls folded into said spring to retain the spring in position and at the same time prevent said walls from spreading outwardly.



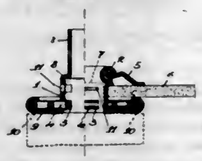
1,676,707. SAFETY-DEPOSIT RECEPTACLE. EDWARD S. PEER, Los Angeles, Calif. Filed Feb. 2, 1927. Serial No. 165,429. 7 Claims. (Cl. 109—1.)

1. A safety deposit receptacle comprising a box, one side of which is provided with an opening and the other side of which is open, stationary and spaced arms fixed to the receptacle and projecting through said opening, a movable arm attachable to the box from a point interiorly thereof and extendible through said opening to

coact with the first arms in providing means for securing the box to a wall bracket, a closure for the box, and locking means for the closure.

1,676,708. APPARATUS FOR AUTOMATICALLY DRAWING MAPS AND PLANS FROM TWO TERRESTRIAL OR AERIAL PHOTOGRAPHS. GEORGES JEAN POIVILLIERS, Paris, France. Filed Apr. 16, 1923, Serial No. 632,417, and in France Apr. 25, 1922. 20 Claims. (Cl. 33—20.)

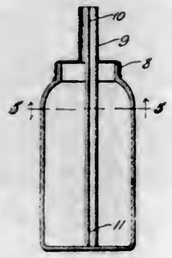
1. In an apparatus of the character described, a pair of rotatable observation chambers, a periscopic binocular telescope having rotatable parts provided with sighting marks, and means for simultaneously actuating the observation chambers and said rotatable telescope parts whereby the steroscopic mark may be caused to follow the contours of the steroscopic photograph.



9. In a device of the character described, a pair of pivoted observation chambers, a binocular telescope associated therewith, corrector devices mounted in the telescope, a periscopic carriage at each end of said telescope, each of the carriages being independently movable about the axis of the telescope, there being a sighting mark carried by each carriage, and means for simultaneously moving the observation chambers and the periscopic carriages.

17. In apparatus of the character described, a pair of observation chambers rotatable about a fixed axis, a periscopic binocular telescope having sighting marks rotatable about an axis at right angles to said first named axis, and means for simultaneously actuating said observation chambers and said movable telescope parts whereby the stereoscopic mark may be caused to follow the contours of the stereoscopic photograph.

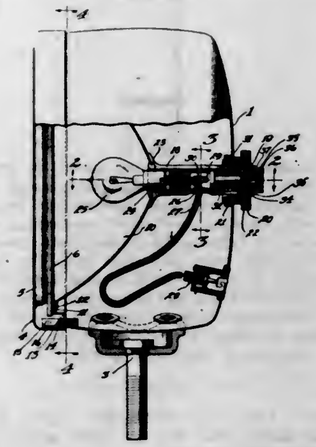
1,676,709. PROCESS FOR DETERMINING THE COMPOSITION OF COPPER AND ZINC ALLOYS. MICHAEL POLANYI, Berlin-Zehlendorf Mitte, and STEPHAN VON BOGDANDY, Berlin-Dahlem, Germany. Filed Feb. 25, 1927, Serial No. 171,011, and in Germany Mar. 24, 1926. 2 Claims. (Cl. 23—230.)



1. A process for determining the composition of alloys of copper and zinc, consisting in weighing a portion of the alloy to be treated, subjecting said weighed portion to the action of heat in a vacuum until all the zinc contained in said alloy is volatilized, and weighing the remaining metal.

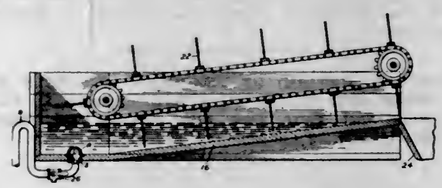
1,676,710. PRESS BUTTON. VOJTĚCH PUC, Prague-Weinberge, Czechoslovakia. Filed Sept. 24, 1926, Serial No. 137,568, and in Czechoslovakia Nov. 19, 1925. 4 Claims. (Cl. 24—208.)

1. For use in a press button fastener, a socket part having a tubular extension capable of being riveted over for securing the socket part in position, slots in the said socket part and springs in the socket part extending through the said slots for engaging with a stud part, weak places in the wall of the socket part above the said slots for the springs, as and for the purpose set forth.



1,676,711. CAN. EDWARD A. REAP, Oilton, Okla. Filed Sept. 27, 1926. Serial No. 138,002. 1 Claim. (Cl. 221—28.)

In a receptacle for containing liquids, a body portion having a threaded mouth, a threaded cap for closing the mouth of the body portion, a tubular member secured within the cap, and extending into the body portion, one side of the tubular member being cut away from a point adjacent to the threaded cap to the inner end thereof, a partitioning member extending throughout the length of the tubular member for dividing the upper portion of the tubular member into lateral compartments, and said partitioning member having a cut away portion at its inner end for admitting fluid to the tubular member.

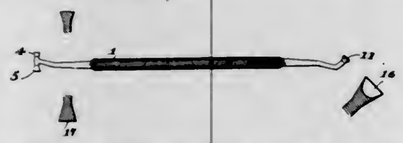


1,676,712. LAMP. CHARLES D. RYDER, Covington, Ky., assignor to The Cincinnati Victor Company, a Corporation of Ohio. Filed Oct. 29, 1924. Serial No. 746,643. 3 Claims. (Cl. 240—44.)

2. A head lamp comprising a casing, a transparent door adapted to close the forward end of said casing, locking means between said door and casing for securing the door to the casing against outward displacement, a reflector mounted within the casing and having a flange at its forward end, said flange in engagement with said transparent door, a tubular stem secured centrally of the reflector and extending rearwardly therefrom, said tubular stem translatably extending through the back of the reflector, and a nut having a rotatable bearing in

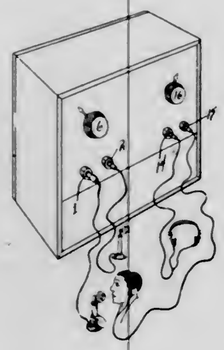
the back of the reflector and maintained therein against longitudinal movement, said bearing nut having a threaded engagement with the outer end of the tubular stem, whereby rotation of the nut moves the reflector against the transparent door under the flexing of the casing rear wall.

1,676,713. FEATHER-WASHING MACHINE. FRANK P. SIMMEN, San Mateo, Calif., assignor to Sunset Feather Company, San Francisco, Calif. Filed June 16, 1926. Serial No. 116,405. 1 Claim. (Cl. 141—1.)



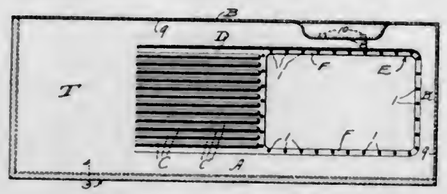
A feather washing machine comprising a vat provided with an inlet and an outlet connected into opposite ends of the vat for circulating a detergent solution therethrough; a longitudinally disposed partition in the vat extending from the inlet end to a point spaced from the outlet end of the vat, the inlet and outlet being arranged upon opposite sides of said partition; agitating means mounted within the inlet side of the vat for agitating feathers introduced thereinto and for propelling said feathers through the detergent; an inclined bottom mounted within the outlet side of the vat and arranged to slope upwardly to a point above the water level of the vat; an endless conveyor mounted adjacent the sloping bottom; combs mounted upon the conveyor and arranged to dip into the detergent above the submerged portion of the bottom to move the feathers from the solution onto the upwardly extending portion of said bottom; and means arranged outside of the vat and connected to the outlet for maintaining a constant water level within the vat said outlet being arranged below the water level to prevent the clogging thereof by the feathers.

1,676,714. FRUIT-CLEANING MACHINE. FRANK E. SMALLIDGE, Wenatchee, Wash. Filed Feb. 9, 1927. Serial No. 166,915. 2 Claims. (Cl. 146—200.)



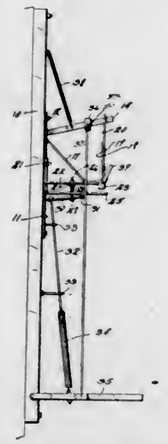
1. In a fruit washing machine, means for spraying and wiping fruit, means for passing air through the fruit, and an elevating mechanism between the two-mentioned means, said elevating mechanism comprising an endless belt, means for training the endless belt through a predetermined orbit, arms projecting from the endless belt and arranged in pairs, frames pivoted between the pairs of arms, canvas or the like across said frames, for maintaining the frames between the arms, means for tilting the frames to deliver the fruit from the elevator mechanism to the second mentioned means.

1,676,715. AMALGAM PLUGGER. EARL M. SNYDER, Detroit, Mich. Filed Nov. 19, 1925. Serial No. 70,128. 1 Claim. (Cl. 32—10.)



A dental instrument having a carrying end comprising a head, the head consisting of a smooth, deep, conical shaped concavity extending substantially the full length of the head of the instrument, for maintaining the amalgam or other plastic or semi-plastic material from falling off the instrument, whether in normal or inverted position.

1,676,716. METHOD OF TEACHING THE DEAF TO HEAR AND MUTES TO SPEAK. HAROLD L. WARWICK, Fort Worth, Tex. Filed Oct. 11, 1926. Serial No. 140,959. 3 Claims. (Cl. 179—171.)

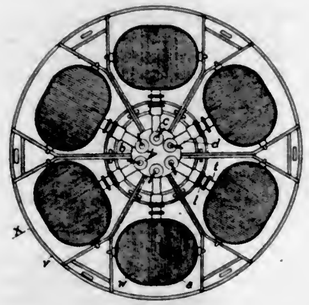


1. The method of training the voice of persons of defective hearing and speech, which consists in electrically transmitting to such person through bone conduction amplified speech sounds, causing the person to simulate the sounds which he hears, and transmitting and amplifying the same similarly to the original sounds to his own hearing senses for comparison.

1,676,717. COMBINATION SINK UNIT. WILLIAM HARTMAN WOODIN, Jr., Plainfield, N. J. Filed Oct. 9, 1926. Serial No. 140,663. 2 Claims. (Cl. 4—189.)

1. A combination sink and splash apron including a sheet metal horizontal member having depending channel shaped front and end portions and an upstanding back flange, and said member being also provided with an opening, a corrugated stiffening portion formed adjacent one end of the opening and constituting a drain board and a sheet metal member providing the splash apron and adapted to be disposed in a vertical plane with respect to the horizontal member and overlapping said upstanding back flange and secured thereto.

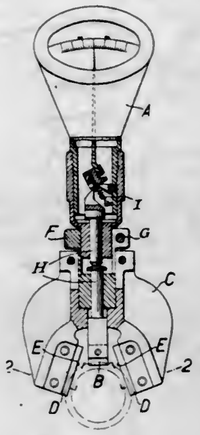
1,676,718. MACHINE FOR STAPLING CHICK BOXES. CORNELIUS VAN ZYL, Sheldon, Iowa. Filed Nov. 2, 1926. Serial No. 145,842. 5 Claims. (Cl. 1—4.)



1. A stapling machine of the character described including a support, an upper jaw rigidly mounted upon the support and extending out therefrom and having a staple receiving recess at its outer end, a bracket mounted upon the support and engaging said jaw and provided with guides immediately above the recess, a plunger operating through said guides and recess, an arm mounted upon the support for vertical movement and connected to the plunger, a treadle mounted upon the support and operatively connected to the arm, a lower jaw hingedly mounted upon the support and having an upsetting anvil disposed below said recess, a lever supported below the lower jaw and having one end bearing against the same and a connection between the other end of the lever and said treadle including a coiled contractile spring.

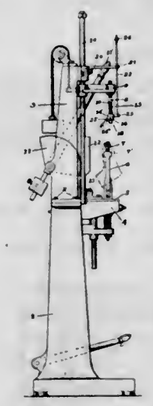
1,676,719. MILLING CUTTER. OTTO VON EBERHARD, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed July 20, 1926, Serial No. 123,673, and in Germany Jan. 30, 1926. 4 Claims. (Cl. 29—104.)

1. A milling cutter comprising a plurality of disks, two series of teeth on said disks, one series being arranged along quick motion helical lines inclined to the right, the other series being arranged along quick motion helical lines inclined to the left, the lines of one series being broken at the joints between two disks to form zig-zag rows of teeth when the teeth of the other series are arranged in common ranks along all the disks, and means for holding the disks in two different angular positions relative to each other, in one of which the teeth of one series are arranged in common ranks, and in the other of which the teeth of the other series are arranged in common ranks.



1,676,720. MACHINE FOR THE SINTERING OF ORE AND THE LIKE. PAUL ANDERSON, Vasteras, Sweden. Filed Nov. 16, 1926, Serial No. 148,739, and in Sweden Aug. 1, 1926. 4 Claims. (Cl. 266—21.)

1. An ore sintering machine, comprising, in combination, a horizontal rotatory frame, sintering pans distributed around the axis of said frame and being adapted to be tilted around horizontal axes lying at substantially right angles to the radii extending from the frame axis to the mid points of said pans; suction pipes extending from the bottom of the pans radially inwards with the respect to said frames and other suction pipes extending from the center portion of the said frame radially outwards and communicating each with one of the pan suction pipes.

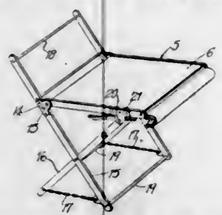


1,676,721. GAUGE WITH A PRECISION INDICATOR FOR TESTING THE FLANK DIAMETER OF EXTERNAL THREADS. MAX BARTHOLDY, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed June 8, 1926, Serial No. 114,543, and in Germany Dec. 16, 1925. 2 Claims. (Cl. 33—199.)

1. A gauge for testing the flank diameter of external threads, comprising a precision indicator having a feeling bolt, a holder in which said precision indicator is clamped, and a pair of angularly related jaws on said holder, said feeling bolt projecting through the apex of the angle

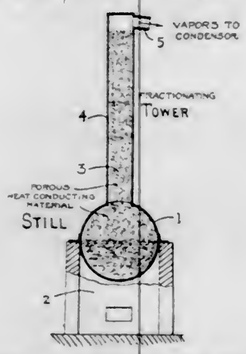
formed by said jaws, the jaws and feeling bolt having measuring plates adapted to engage a thread at the flank diameter thereof.

1,676,722. SHOE LOCATOR FOR SHOE-TURNING MACHINES. DAVID BAUM, Livermore Falls, Me. Filed Oct. 29, 1925. Serial No. 65,616. 5 Claims. (Cl. 12—57.)



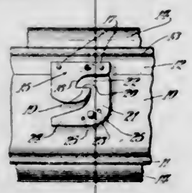
1. In a shoe turning machine, a reciprocable plunger, a deflector member yieldingly and oscillatively mounted on said plunger, means to actuate said plunger whereby said deflector member may be brought into engagement with the upper of a shoe, loosely positioned in said machine, for the purpose of automatically and positively positioning the shoe for the subsequent turning thereof.

1,676,723. COMBINATION CHAIR AND WINDOW SEAT. PAUL BAUMGARTEN, Richmond Hill, N. Y. Filed July 8, 1927. Serial No. 204,332. 2 Claims. (Cl. 304—27.)



1. A combination chair and window seat comprising a main seat member, an auxiliary seat piece slidable therein and having depending side edges, serrations in said

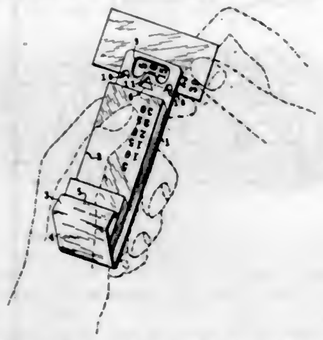
edges, a hook on the forward edge of said auxiliary seat for attaching the same to a window sill, a pawl at each side of said seat for engaging in any one of said serra-



tions of the same side edge for limiting the movement of the auxiliary seat relatively to the main seat member and foldable legs on the main seat member.

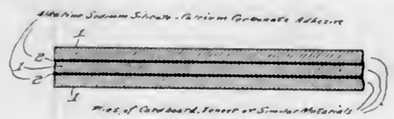
1,676,724. ART OF DISTILLATION. ARMAN E. BECKER, Newark, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Mar. 6, 1923. Serial No. 623,122. 1 Claim. (Cl. 196—79.)

The improvement in the art of distilling hydrocarbon oils, which comprises subjecting a considerable body of oil to distillation at a temperature not materially in excess of its temperature of vaporization, while in contact with steel wool.



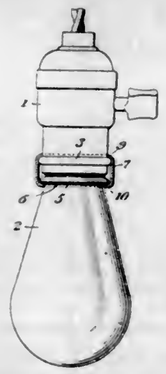
1,676,725. RIM FOR VEHICLE WHEELS. CHRIS T. BIERS, Lamoille, Ill. Filed Dec. 9, 1926. Serial No. 153,501. 3 Claims. (Cl. 301—35.)

2. In a split tire rim a latch pivoted in spaced relation to said rim and frictionally contacting therewith at two spaced points, said points of contact being on opposite sides of said pivot so that movement of the latch from latched position toward unlatched position will cause said points of frictional contact to subtend an increasing chord of said rim.



1,676,726. SALES-CHECK HOLDER. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed Nov. 3, 1922. Serial No. 598,700. 5 Claims. (Cl. 206—40.6.)

1. A holder for a pad of checks including, in combination, a pad supporting plate having a punch opening, and a strip of resilient metal held on the plate intermediate its ends, the opposite ends of said strip lying opposite opposite faces of said plate respectively, one of said ends having a punching jaw adapted to cooperate



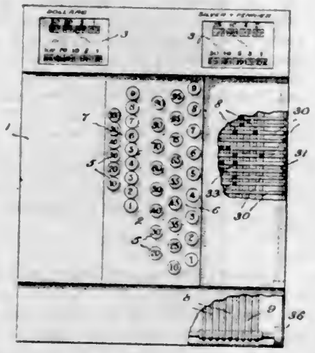
with the punch opening to mark a check in position between the punching jaw and plate and the other end providing a spring cooperative to retain the pad on the holder.

1,676,727. COMPOSITE BOARD. JOHN D. CARTER, Lansdowne, Pa. Filed July 18, 1921. Serial No. 485,648. 3 Claims. (Cl. 154—45.9.)

1. A laminated article comprising water-resistant plies united by the reaction products of alkaline sodium silicate solution and calcium carbonate, said article being resistant to water and humid climatic conditions.

1,676,728. INCANDESCENT-LAMP LOCK. JAMES COOKE, New York, N. Y., assignor of one-half to Wilcox A. Creamer, Brooklyn, N. Y. Filed Mar. 12, 1927 Serial No. 174,875. 7 Claims. (Cl. 176—31.)

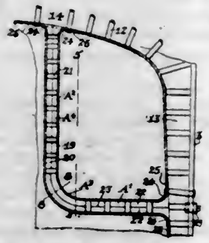
1. The combination of a lamp socket; an electric lamp in the form of a glass bulb provided with a screw plug adapted to fit said socket; a non-conducting locking shoulder directly and rigidly carried by the lamp bulb adjacent the screw plug; and retaining means to connect said locking shoulder with the socket and prevent the removal of the bulb from the socket.



1,676,729. PROCESS FOR MAKING SYNTHETIC CARBONACEOUS COKE BRIQUETTES FOR METALLURGICAL USES. BERTRAM ERWIN CROCKER, Los Angeles, Calif. Filed Jan. 22, 1925. Serial No. 4,122. 7 Claims. (Cl. 44—16.)

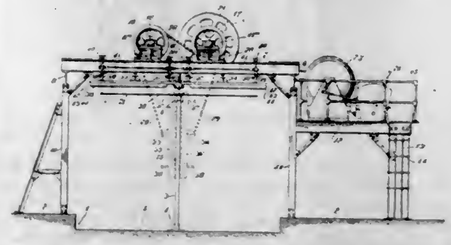
1. The process of forming synthetic coke briquettes for subsequent use as a metallurgical coke from the carbon residue previously obtained from fluid hydrocarbons in the manufacture of oil gas; and comprises incorporating with said residue a gas liberating substance, then comprising and molding said residue and substance into a briquette and then causing gas to be liberated in the briquette by heating the briquette to a temperature to liberate the gas in said substance.

1,676,730. METHOD OF PREPARING SMOKED JOINT MEATS. ARTHUR W. CUSHMAN, Winnetka, Ill., assignor to Allied Packers, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 13, 1926. Serial No. 81,104. 3 Claims. (Cl. 99—11.)



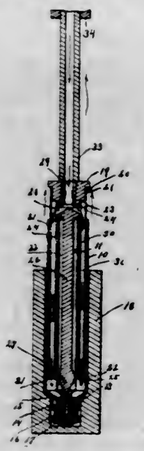
1. A method of preparing smoked joint meats, which consists in first smoking a joint, then subjecting it while in a deformable condition to a pressure which is sufficient to change its shape, and then holding the joint under pressure until it has permanently assumed such shape.

1,676,731. DENOMINATING MACHINE. JAMES HARRISON, Brooklyn, N. Y. Filed Feb. 26, 1924. Serial No. 695,239. 5 Claims. (Cl. 235—82.)



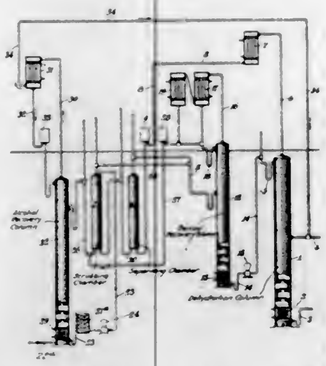
4. A denominating machine comprising keys, a registering mechanism, selector mechanism controlled by said keys for operating said registering mechanism including two overlapping groups of pivoted levers disposed at right angles to each other.

1,676,732. LOCOMOTIVE FIRE BOX. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,663. 4 Claims. (Cl. 122—68.)



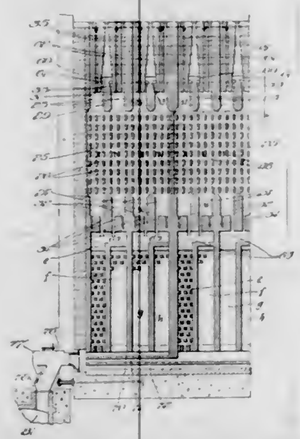
1. A locomotive boiler and its stay bolted internal firebox, in combination with two longitudinally disposed and transversely opposed flat faced and stay bolted bracket-shaped water circulating walls within said firebox, each said wall having a transverse lower portion that is rearwardly and upwardly inclined and, at its outer end, attached to its respective side of the firebox, each said wall having an upright upper portion which has its top attached to the top of the firebox, and, the upright portions of the two walls being separated by a passage which affords access to the front of the firebox.

1,676,733. MACHINE FOR FORMING, BENDING, FOLDING, AND SHAPING HEAVY METAL SHEETS. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 6, 1925. Serial No. 7,230. 25 Claims. (Cl. 153—16.)



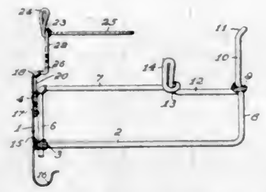
1. A device of the kind described embodying therein a mandrel, a pair of swingable members, a plurality of spotting columns for locating and holding said swingable members with respect to said mandrel, brackets secured to said swingable members, and means for operatively connecting said brackets together, said last mentioned means being secured to said spotting columns.

1,676,734. APPARATUS AND METHOD FOR FILLING COLLAPSIBLE TUBES. NEVIL MONROE HOPKINS, New York, N. Y., assignor, by mesne assignments, to Gilmont Products Corporation. Filed Dec. 16, 1922. Serial No. 607,338. 5 Claims. (Cl. 226—100.)



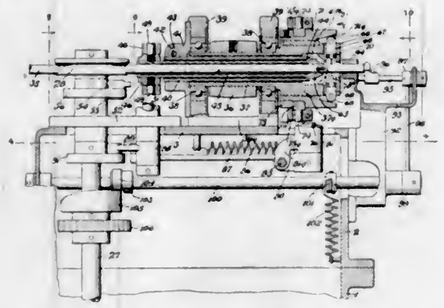
1. A method of filling a receptacle comprising separated compartments formed by collapsible tubes which comprises introducing matter initially at the bottom of the outer compartment and continuing progressively upwardly to fill the compartment while internally supporting the walls of the inner compartment and subsequently filling the inner compartment.

1,676,735. PROCESS OF OBTAINING ABSOLUTE ALCOHOL. DONALD B. KEYES, New York, N. Y., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Dec. 27, 1922. Serial No. 609,201. 10 Claims. (Cl. 195—15.)



4. In a process of separating the constituents of a mixture of three liquids that form a ternary minimum constant boiling mixture, which upon condensing settles into layers, the steps comprising distilling the mixture so as to leave a portion of one of said liquids in substantially pure form as a residue, condensing the constant boiling mixture evolved and allowing it to settle into layers, rectifying one of the layers so as to recover at least a portion of one of said three liquids other than said residue in pure form and returning it to the mixture being distilled, treating the other layer so as to recover therefrom, in concentrated form, at least a portion of the other one of the liquids which is not the same as said residue, and returning it to the first-mentioned mixture being distilled.

1,676,736. COKE OVEN. THOMAS G. KUS, Chicago, Ill., assignor, by mesne assignments, to Chicago Trust Company, trustee, Chicago, Ill., a Corporation. Filed July 16, 1923. Serial No. 651,693. 11 Claims. (Cl. 202—9.)

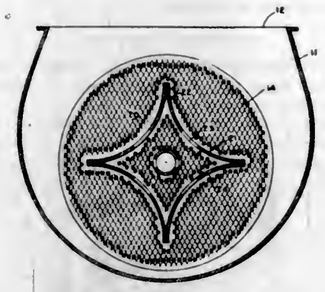


1. A series of horizontally elongated coking chambers arranged side by side, the intermediate walls thereof being common to each two contiguous chambers respectively, each heating wall having heating chambers on opposite sides of the central plane thereof, ignition chambers at the top and bottom respectively of the heating chambers, ports for conveying air to and waste gases from the lower ignition chambers, vertical passages intermediate the heating chambers and communicating with the lower ends thereof for supplying them with fuel gases, mains supplying the upper ends of said passages with fuel gases, other vertical passages extending between the heating chambers and opening thereinto intermediate their height, mains for supplying gas to the last named passages, ports communicating with the upper ignition chambers for supplying air thereto and permitting the escape of waste gases therefrom and vertical flues intermediate the heating chambers and communicating with the last named ports on opposite sides of the wall.

1,676,737. COMBINATION HANGER. AMOS F. LADWIG, Waterloo, Iowa. Filed Aug. 8, 1925. Serial No. 49,027. 2 Claims. (Cl. 211—96.)

1. A device of the character described, comprising a vertically disposed and elongated back-plate, said plate having a plurality of pressed-out apertured bearing-lugs, a bracket-hanger consisting of an elastic rod bent to have an end member serve as a rock-shaft and seated loosely in said bearing-lugs, said rod having end-connected substantially parallel reaches and having at its other end a terminal eye mounted loosely upon said shaft part and engaged between two lower bearing-lugs, and engaging means upon the uppermost bearing-lug engageable by the upper reach of the rod yieldingly to hold the same releasably in either of two positions horizontally relatively to the back-plate.

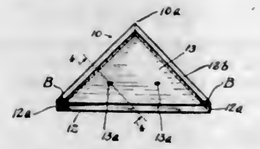
1,676,738. AUTOMATIC WOODWORKING MACHINE. WILLIAM LOTTERMAN, LEONARD B. LESTER, and MERRITT K. ONTON, Grand Rapids, Mich. Filed Jan. 26, 1925. Serial No. 4,718. 6 Claims. (Cl. 142—29.)



1. In a machine of the class described, a support, a horizontal sleeve rotatably mounted in said support, means for continuously driving said sleeve, cutting tools mounted at one end of the sleeve and slidable radially inward or outward thereon, a second sleeve located within the first sleeve and connected to the support, a third guide sleeve located within the second sleeve through which a length of material may be fed, means for moving said guide sleeve longitudinally to bring the same into engagement with the second sleeve and thereby

clamp the material against longitudinal movement, and means movably mounted on the first sleeve and engaging with the cutting tools operable to move said tools inwardly toward the material during the times that the material is held against movement, substantially as described.

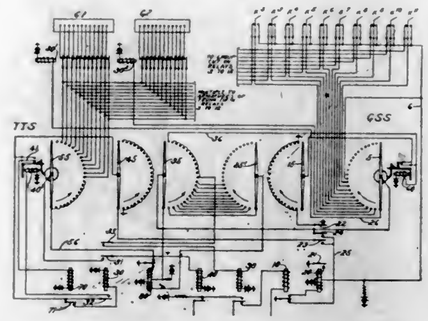
1,676,739. APPLYING, BLENDING, AND SETTING COLORS. OTTO S. MARCKWORTH, Columbus, Ohio. Filed July 10, 1924. Serial No. 725,212. 17 Claims. (Cl. 41—27.)



16. The method of applying color which comprises coating the area to be colored with a wax emulsion and then applying color to said area.

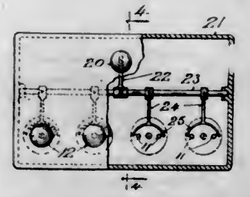
1,676,740. CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 19, 1927. Serial No. 185,009. 10 Claims. (Cl. 257—43.)

1. A radial-flow condenser comprising a shell having an inlet, a nest of tubes within the shell, partition means dividing the nest into substantially sector-shaped portions and providing a central chamber for cooling air and non-condensable gases, a bank of tubes within the central chamber, and an air and non-condensable gas offtake extending within the central chamber.



1,676,741. BOOK-CORNER PROTECTOR. JAKOB MOSKOWITZ, Brooklyn, N. Y. Filed Aug. 5, 1927. Serial No. 210,759. 2 Claims. (Cl. 281—20.)

1. In a book corner protector, the combination of an outside member, and an inside member, the former having edge walls within which the inside member is positioned, said walls having inward extending flanges, said flanges having beaded engagement with the inside member.

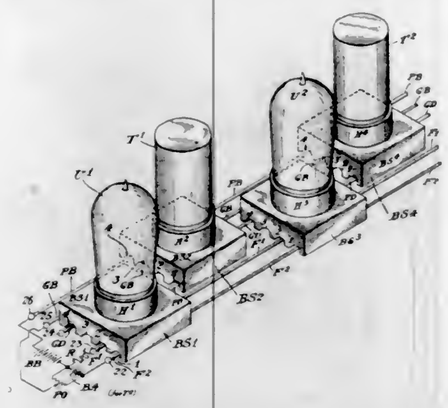


1,676,742. TRAFFIC-RECORDING EQUIPMENT FOR TELEPHONE SYSTEMS. JOHN E. OSTLINE, Liverpool, England, assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed July 12, 1924. Serial No. 725,539. 26 Claims. (Cl. 179—9.)

1. In a telephone system, groups of trunk lines, a trunk testing switch common to said groups, means for associating said groups with said switch, in a definite order and for causing said switch to determine the busy or idle condition of each trunk of a connected group, and means responsive to each group testing operation for

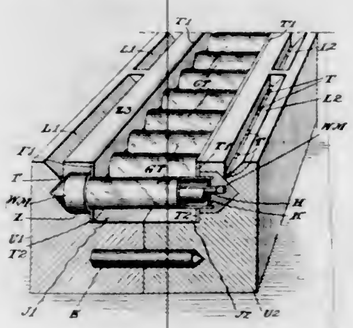
making two separate records indicating the number of the group tested and the individual numbers of the busy trunks in the tested group, respectively.

1,676,743. PUSH-BUTTON APPARATUS FOR MULTIPLE-UNIT DOOR-CONTROL SYSTEMS. ABRAM FRANK PAUL, Llanerch, Pa., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Dec. 17, 1921. Serial No. 523,077. 2 Claims. (Cl. 200—17.)



1. In a multiple circuit control device the combination of a plurality of circuit terminals, independent means for closing the circuit to each individual pair of contacts, a rod having a plurality of contact fingers thereon for simultaneously closing the circuits to each individual pair of contacts, and independent means to operate said rod to close the circuits.

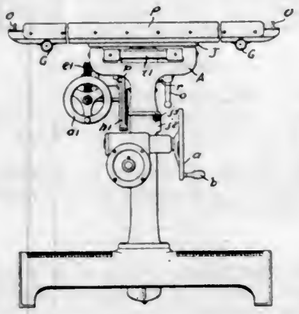
1,676,744. ELECTRICAL AMPLIFIER. GREENLEAF WHITTIER PICKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Feb. 5, 1923. Serial No. 616,923. 10 Claims. (Cl. 179—171.)



1. In a thermionic tube amplifier, the combination with the thermionic tube, a tube-coupler and the amplifier circuit leads arranged in six rows, each of the tube and coupler having four exterior contact terminals, of duplicate sockets comprising receptacles which, together with the tube and coupler are constructed for the detachable reception of such tube and coupler, and comprising bases formed with four grooves for the reception of the leads; said sockets being provided with contact terminals arranged co-operatively with the arrangement of the four contact terminals of the tube and coupler respectively for the mutual engagement of said contact terminals when the tube and coupler are held in the receptacle; said sockets being provided also with connectors electrically connected with the contact terminals of the sockets

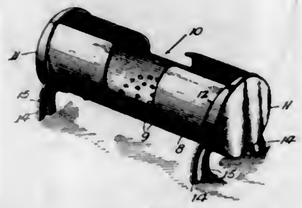
and constructed for detachable connection with the leads in the grooves of the socket; and said duplicate sockets

being arranged in relatively staggered positions for the conjoint reception of the six rows of leads in the eight socket-grooves.



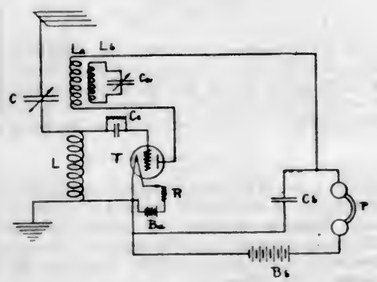
1,676,745. ELECTRICAL REACTANCE, AND METHOD AND APPARATUS. GREENLEAF WHITTIER PICKARD, Newton Center, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,517. 2 Claims. (Cl. 201—76.)

2. The method consisting in placing an electrical device in an open-ended tube of insulating material, with the conducting terminals of the device located approximately at the open ends of the tube; inserting perforated disks in the ends of the tube and over the terminals of the device, locating the disks inwardly of the ends of the tube and the terminals of the device; embedding the ends of said assembled structure exposed from said disks in molten metal of low melting point which expands upon solidification; and allowing solidification of said expanding metal portions thereby causing the latter to grip the terminals of the electrical device in good electrical contact.



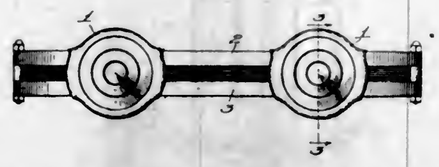
1,676,746. UNIVERSAL DRAFTING TABLE. MARCELLUS REID, Cleveland, Ohio. Filed May 6, 1922. Serial No. 559,004. Renewed Apr. 20, 1927. 5 Claims. (Cl. 45—110.)

1. A drawing table comprising a vertically disposed support, a horizontally disposed frame fastened to said support, said frame being formed of sheet metal bent to define a series of reversely disposed channels, T square



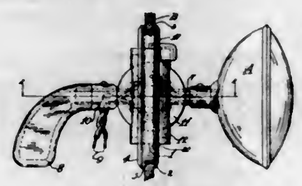
guides carried by said frame, a drawing board detachably connected to said frame, and means for clamping said drawing board to said frame.

1,676,747. TOOTHPICK HOLDER. FRED RINGS, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,494. 2 Claims. (Cl. 312—73.)



1. As a new article of manufacture a tooth pick holder comprising a cylindrical body member adapted to hold tooth-picks, said member having an opening through which the tooth-picks may be withdrawn, and end members formed of sheet metal and provided with inwardly extending annular flanges fitting around and secured to the body member, the free margins of said flanges having formed integrally therewith a plurality of tongues, said tongues being bent downwardly and at substantially right angles to the flanges to form supporting legs for the holder.

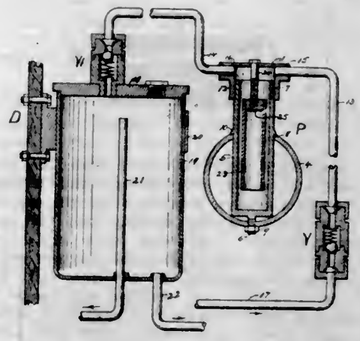
1,676,748. MEANS FOR RADIOSIGNALING. SAMUEL RUBEN, New York, N. Y. Filed June 16, 1924. Serial No. 720,341. 4 Claims. (Cl. 250—27.)



1. In a radio signaling system, the combination, with a resonant grid circuit upon which high frequency oscillations are impressed, of a plate or output circuit arranged to feed back in opposite polarity to the impressed oscillations in said resonant grid circuit, and of a third circuit coupled to said output circuit and adapted to be tuned to resonance with oscillations of the desired frequencies.

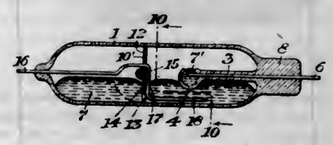
1,676,749. AUTOMOBILE BUMPER. HAROLD SCUTERUD, Chicago, Ill. Filed Dec. 26, 1927. Serial No. 242,535. 4 Claims. (Cl. 293—55.)

3. The combination with an automobile, of two large stiff vertical bumper plates secured thereto and lying beyond an end thereof on opposite sides of the longitudinal center line of the automobile, each plate being in the form of a shield the major portion of which consists of a flat cone having its apex at the front.



1,676,750. VEHICLE SEARCHLIGHT MOUNTING. WALTER VAN GUILDER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Jan. 24, 1925. Serial No. 4,592. 7 Claims. (Cl. 240—61.)

1. In combination with an apertured wall, a searchlight and the like by which it is carried extending transversely of said wall; an immediate carrier for the arm to which the same is pivoted transversely of the length of the arm for rocking longitudinally; a support to which said immediate carrier is pivoted transversely both of the length of the arm and of the pivot of the arm to the carrier, said support being secured at the wall aperture, the immediate carrier and the support therefor being respectively a cylinder which is long relatively to its diameter, and a cylinder which is flat and thin relatively to its diameter, the cylindrical carrier being longitudinally divided at a plane cutting the aperture which accommodates the bearing member, and means for pivoting the latter in the former, comprising two pivotal trunnions adapted for housing between them a spring, and a spring so housed for reacting to spread the trunnions, thereby tending to spread the divided members of the cylindrical carrier for simultaneously effecting snug seating of the trunnion bearing parts in the cylindrical carrier and the parts of the cylindrical carrier in the mount.



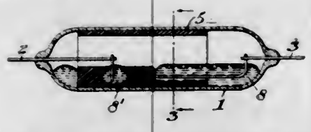
1,676,751. FUEL-FEED SYSTEM FOR INTERNAL-COMBUSTION ENGINES. LESTER E. VAN HISE, Altadena, Calif., assignor to James V. Baldwin, Los Angeles, Calif. Filed May 12, 1925. Serial No. 29,822. 8 Claims. (Cl. 158—36.4.)

1. A thermal pump including a tubular receptacle having valved intake and discharge connections, a tubular shell open at one end and closed at its other and arranged in said receptacle to provide a relatively constricted passage between the shell and the receptacle

and a sealed vapor chamber within the shell when the receptacle is supplied with liquid, and means for adjusting said shell in said receptacle.

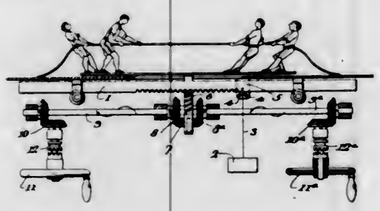
1,676,752. ELECTRIC SWITCH. WARREN R. WALKER, Great Kills, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Nov. 25, 1924. Serial No. 752,099. 16 Claims. (Cl. 200—152.)

1. In an electric switch of the liquid flow type, a sealed envelope of glass, a support arm in said envelope and unitary therewith, a cup formed on said arm, the opening of said cup being parallel to the longitudinal axis of the tube, and electrode sealed into said envelope and terminating therein and another electrode sealed into the envelope and terminating in said cup, and a body of mercury in said envelope in quantity sufficient to extend into said cup and to connect said electrodes in a closed circuit position of the switch and to form separate pools about said electrodes in an open circuit position thereof.



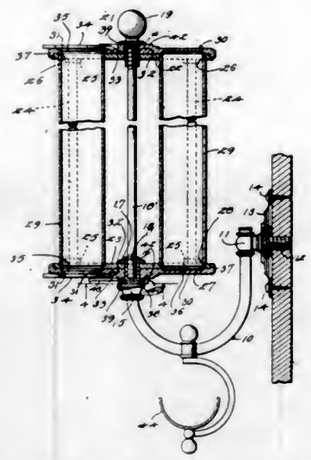
12. In an electric switch of the liquid flow type, a sealed vitreous envelope, a baffle formed separate from the envelope and spaced therefrom mounted substantially across the interior of said envelope dividing it into two chambers, said baffle having formed therein a restricted opening near the bottom to connect the two chambers, an electrode sealed through the wall of said container, a second electrode sealed through said envelope, a wall of vitreous material sealed to said envelope about and terminating above said second electrode, mercury in said envelope connecting with first said electrode and extending between the limits of said wall about second said electrode and connecting with said second electrode in a closed circuit position of the switch, and in an open circuit position of the switch positioned at a level below that of the upper limit of said wall about said second electrode said baffle being hinged to permit its movement in one direction only from its normal position across said envelope.

1,676,753. LIQUID-FLOW SWITCH. WARREN R. WALKER, Great Kills, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 21, 1925. Serial No. 24,753. 12 Claims. (Cl. 200—152.)



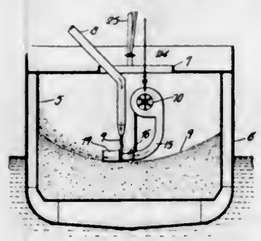
1. In a mercury switch having a sealed envelope of glass, electrodes sealed therethrough and terminating therein, one of which has mounted about the end thereof a cup of vitreous material opening into the envelope and having integral connection with said envelope through a sleeve of vitreous material covering said electrode between the cup and the envelope wall, and an integral lining within said envelope and spaced apart therefrom at a short distance and positioned across the shortest path between the envelope wall and any part forming position which said conductors can assume in any position of the switch.

1,676,754. MERCURY SWITCH. WARREN R. WALKER, Great Kills, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed June 17, 1925. Serial No. 37,646. 3 Claims. (Cl. 200—152.)



3. In a mercury switch, a tubular envelope, a tubular lining in said envelope having a pocket therein between the limits thereof, leads sealed into said envelope, one of them terminating in said pocket, mercury in said envelope in sufficient quantity to fill said pocket and to form a conducting path between said electrodes in a closed circuit position of the switch, said lining being formed to present within the limits of the envelope an edge for separating the mercury of said pocket from the main body thereof in an opening of the switch.

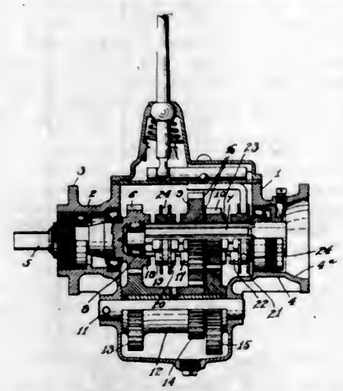
1,676,755. GAME APPARATUS. ALFRED LEONARD WALTON, Blackpool, England. Filed Sept. 16, 1926. Serial No. 135,971, and in Great Britain Sept. 18, 1925. 6 Claims. (Cl. 273—85.)



1. A game apparatus comprising a movable indicating member, an element coupled to the indicating member for moving it in opposite direction from a zero point, a plurality of control devices coupled to the direction element adapted to be operated independently at competitive speeds by opposing participants in the game and an element coupled to the indicating member tending to keep such member in the zero position.

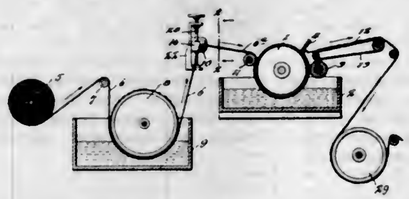
1,676,756. ROTARY CONTAINER. ARTHUR J. WEICHSEL, New York, N. Y. Filed Aug. 11, 1927. Serial No. 212,297. 6 Claims. (Cl. 206—15.1.)

6. In a tooth brush holder, a stationary axle, a rotatable structure mounted on the axle and including a plurality of parallel open-ended tubes grouped about and uniformly spaced from the axle, and means for holding the tubes in assembled relation, upper and lower stationary plates carried by said support and each having an opening with which the tubes of the rotatable structure are alignable and means closing the openings of said stationary plates.



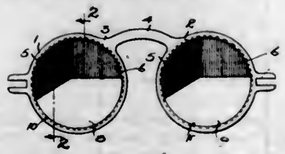
1,676,757. APPARATUS FOR TRIMMING GRAIN. OSCAR E. WEST, New Orleans, La. Filed May 21, 1927. Serial No. 193,138. 4 Claims. (Cl. 302—17.)

1. A portable grain trimmer comprising in a unitary structure adapted to be suspended from a rope, a fan, an electric motor driving said fan, a conduit projecting downwardly from said fan and having a horizontally directed nozzle, and a directing conduit arranged in front of said nozzle in a spaced relation thereto, whereby grain will fall into the path of air passing from said nozzle into and through said directing conduit and will enter and be projected from the latter.



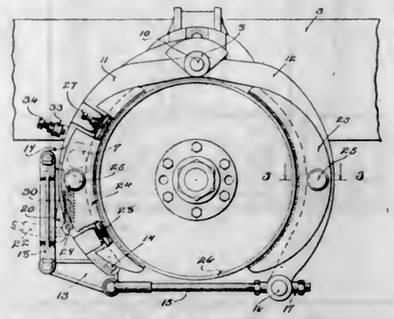
1,676,758. AUXILIARY TRANSMISSION. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Jan. 5, 1925. Serial No. 558. 4 Claims. (Cl. 74—59.)

3. In an automobile transmission the combination with a casing, of a driving shaft and a secondary driving shaft mounted therein, and having continuous splines thereon, a gear on said driving shaft, a set of gears for driving said secondary driving shaft including a gear floatingly mounted on said secondary driving shaft and a gear mounted on a counter-shaft and driven from the driving shaft the ratio of said gears being such as to drive said secondary driving shaft at a speed greater than the driving shaft, a second set of gears including a floating gear on the secondary driving shaft and a gear on the counter-shaft driven from the driving shaft



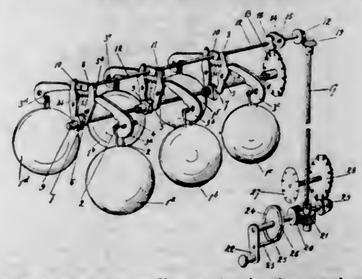
and having a speed ratio such as to drive the secondary driving shaft at a speed lower than that of the driving shaft, said floating gears having annular plates thereon engaging the gears on the secondary shaft to prevent lateral displacement of the floating gears, and clutch members splined on said secondary shaft and longitudinally shiftable for connecting said floating gears to the secondary driving shaft.

1,676,759. PROCESS AND MECHANISM FOR PRODUCING STRETCHABLE PAPER. HOWARD G. WIDMER, Brooklyn, N. Y., assignor to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1925. Serial No. 74,905. 42 Claims. (Cl. 92—69.)



1. The process of making stretchable paper which consists in forming in the paper tight, irregular, discontinuous longitudinal folds distributed throughout the length and breadth of the paper.

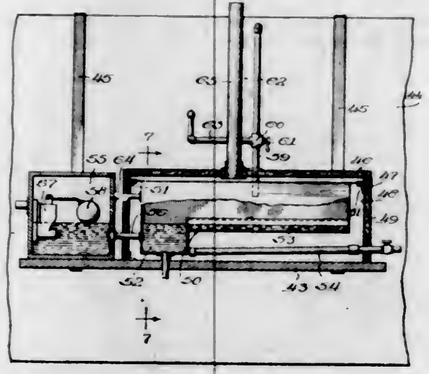
1,676,760. GOGGLES. JOHN ALEXANDER WILSON, Windsor, Ontario, Canada. Filed Dec. 1, 1926. Serial No. 151,890. 3 Claims. (Cl. 88—41.)



2. In an arrangement of the character described, the combination of two lens frames held in spaced relation to one another, a lens section of darker colored substantially transparent material in one upper side of each lens frame adapted to obstruct glare from headlights close at hand, a lens section of lighter colored substantially transparent material in the other upper side of each lens frame adapted to intercept light from headlights further away, the darker and lighter lens sections in each lens frame being contiguous to one another, and said darker and lighter lens sections having their lower margins so positioned that the wearer may look under them and obtain unobstructed vision.

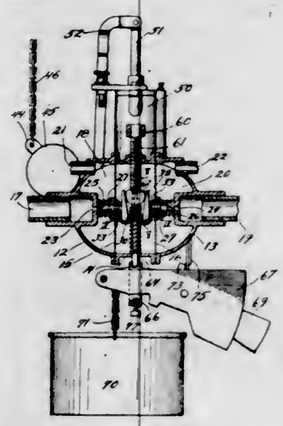
1,676,761. BRAKE. ARTHUR C. WOLLENSAK, ANTON JACOBS, and PAUL C. BALDUS, Milwaukee, Wis., assignors to Sterling Motor Truck Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 5, 1926. Serial No. 86,202. 1 Claim. (Cl. 188—74.)

A jack shaft brake for automotive vehicles provided with a jack shaft brake drum, said brake comprising a channel-shaped bracket attached to the side frame bar of the automotive vehicle and projecting outwardly above said brake drum and having a pair of spaced bearings, a pin carried between said bearings, a pair of channel-shaped brake levers having intermeshing upper ends pivotally mounted upon said pin, a pair of channel-shaped brake shoes enclosing a portion of said brake levers and pivoted intermediate the ends of said shoes to said brake levers, said brake shoes being adapted to grip the brake drum between them, set screws carried by each of said brake levers and limiting the swinging motion of the brake shoes in one direction, springs interposed between said brake shoes and brake levers and tending to swing such brake shoes into contact with the set screws, a bell crank lever pivoted to one of said brake levers and connected to the other of said brake levers by means of a link, means for rocking said bell crank lever, and an adjustable stop carried from said bracket for limiting the outward motion of one of said brake levers.



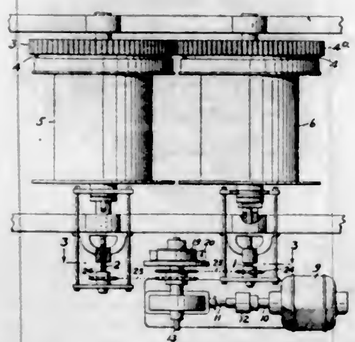
1,676,762. DEVICE FOR RELEASING PROJECTILES ON AIRCRAFT. ROBERT ALKAN and GEORGES LESOURD, Paris, France. Filed May 6, 1926, Serial No. 107,199, and in France May 12, 1925. 3 Claims. (Cl. 244—1.)

1. A device for suspending and releasing projectiles on air craft comprising in combination with releasing elements with positive locking and with automatic engage-



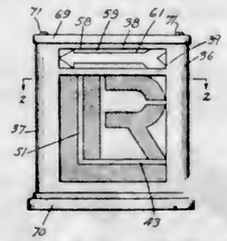
ment, two driving systems the one effecting at regular intervals the locking and unlocking of all releasing elements and the other, the movement of which depends on the first one, ensuring during the unlocking periods the successive releasings, and means for positively connecting said two driving systems so that all the elements are in the positively locked position.

1,676,763. HUMIDIFYING APPARATUS. FRANK A. ANETSBERGER and WILLIAM ANETSBERGER, Chicago, Ill. Filed Sept. 12, 1927. Serial No. 219,153. 8 Claims. (Cl. 107—64.)



2. Apparatus of the class described comprising a casing, a vapor generating receptacle within said casing having a vapor outlet, said receptacle being provided with a well and a channelled bottom portion, a burner in said casing beneath said bottom, a water reservoir communicating with said well, and means in said reservoir for controlling the level of water in said well and in the channels of said bottom.

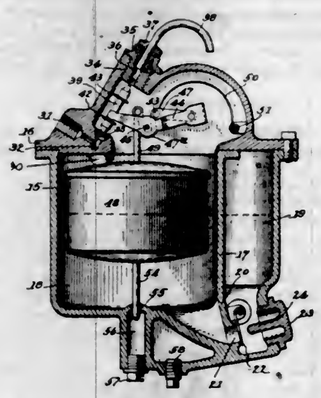
1,676,764. CONTROLLING MEANS FOR MULTIPLE FUEL BURNERS. ELI A. BASEL, Kansas City, Mo. Filed Nov. 26, 1923. Serial No. 677,146. 16 Claims. (Cl. 158—45.5.)



1. Valve mechanism for burners comprising, in combination with a pair of separate and independent fuel passages leading to the burner for feeding different fuels thereto, a separate valve controlling the flow of fuel into each of said passages, common means operating to maintain said valves normally in closed position, and valve controlling means comprising shafts provided with connections for simultaneously actuating both of said valves, and a cam element carried by one of said shafts and adapted to operate the corresponding valve in advance of the other valve, said cam element being adjustable to vary the timed relation of the operative movements of said valves.

1,676,765. MECHANISM FOR OPERATING WINDING-DRUM FRICTION CLUTCHES. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1927. Serial No. 168,491. 1 Claim. (Cl. 254—185.)

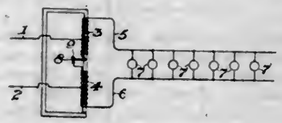
Mechanism for operating two winding drums comprising power mechanism, two friction clutches having positively driven elements and movable elements for respectively connecting the drums with the power driven elements, power transmission mechanism connected with the two movable elements and movable in opposite directions to cause the engagement of one clutch and the release of the other clutch, and a revesible motor having connection with said power transmission mechanism to move it in either direction, said power transmission mechanism including a friction slip drive device, and said motor being constructed and arranged to stall when said power transmission mechanism reaches its limit of movement in either direction and the motor thereby serving to continue to apply force which, limited by the friction drive device, serves to hold the corresponding friction clutch in engagement and to avoid jamming it.



1,676,766. SIGNAL. WILLIAM F. BRETTSCHNEIDER, St. Paul, Minn. Filed Dec. 12, 1923. Serial No. 680,251. 6 Claims. (Cl. 177—327.)

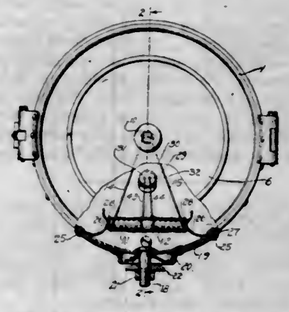
5. A casing polygonal in cross section having windows positioned on at least three of the sides thereof, signals formed upon said windows, including a plurality of corresponding elements, one element at least partially embracing the other radially formed partition walls extending from said windows to the center of the casing to separate the elements of said signals and to form compartments communicating with corresponding elements of all of said signals and means within said compartments for simultaneously illuminating all of the corresponding elements connected with said respective compartments.

6. A casing polygonal in cross section, a plurality of windows positioned along at least three of the sides thereof, a letter L formed on each of said windows, a letter R formed on said windows and positioned in the vertexes of said letters L, upwardly inclined, radially extending partitions issuing from the lines of separation of the legs of said L's and said R's, radially extending vertically positioned walls issuing from the lines of division of said stems of said L's and said R's and from the corners of said casing, intersecting said partitions to form two compartments communicating with all of said R's and said L's and means within each of said compartments for simultaneously illuminating all of said L's or said R's.



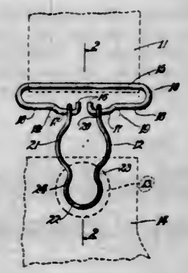
1,676,767. VACUUM TANK. ELMER G. BURNS, Los Angeles, Calif. Filed May 9, 1927. Serial No. 189,944. 6 Claims. (Cl. 103—236.)

1. A vacuum tank comprising a receptacle having a float chamber and a laterally disposed reservoir chamber, a port providing communication between the two chambers, a flapper valve controlling the port, a tubular and laterally disposed extension on the receptacle having a transverse opening adapted to receive the depending extension of a carbureter, a float in the float chamber, a cover for the receptacle having a fuel port, an air port and a suction port, a rod for the float, a lever mounted on the cover, a second lever fulcrumed on the first lever and connected to the float rod, a flat spring connected to the second lever at a point between its connections with the first lever and float rod, a stem having on one end a suction valve for the suction port and on the other end an air valve for the air port, flanges on the stem, and arms on the first lever disposed between the flanges to engage one or the other in moving the stem to actuate the valves.



1,676,768. TRANSFORMER AND CIRCUIT. LEROY J. BUTTOLPH, Grantwood, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Original application filed Jan. 24, 1923, Serial No. 614,572. Divided and this application filed May 1, 1926. Serial No. 105,953. 2 Claims. (Cl. 171—119.)

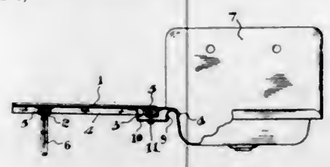
1. In a system for controlling electrical apparatus in combination an auto-transformer having two coils which are electrically symmetrical, lead wires for the apparatus to be controlled, taps from the ends of the coils adapted to be connected to the apparatus leads, a switch



between the two coils, taps from points intermediate the ends of each coil for connection with suitable feed mains.

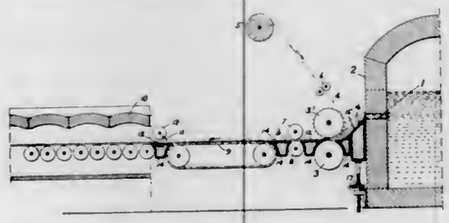
1,676,769. AUTOMOTIVE HEAD LAMP. WILLIAM B. CHURCHER, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 30, 1926. Serial No. 119,764. 7 Claims. (Cl. 240—41.)

1. In a head lamp, the combination with a casing, a lamp bulb having a plurality of filaments, a resistance unit comprising a pair of resistances, a body stiffener element contacting with a portion of the walls of the casing, securing means adapted to rigidly secure the stiffener element to the inner wall of the casing and supporting means for said unit scured in place within the casing by said securing means, a connection terminal means adapted to make electrical connection with circuit conductors exterior of the casing, said terminal means being carried in a wall of the casing and adapted to extend electrical connections therethrough, and electric circuit conductors interconnecting the said resistances with the said filaments and the said terminal means.



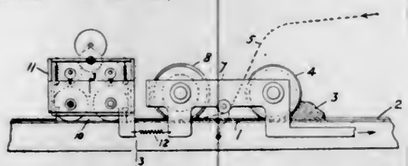
1,676,770. GARMENT LOOP. JOHN M. CLARK, Detroit, Mich., assignor to Universal Button Fastening and Button Company, Detroit, Mich., a Corporation of Michigan. Filed May 13, 1922. Serial No. 560,615. 6 Claims. (Cl. 24—246.)

1. A device of the class described, comprising in combination, a strap loop formed of a single piece of wire bent into loop form with the end portions thereof



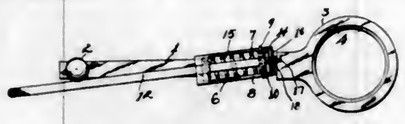
inclined to the loop, and a button loop formed of a piece of wire, the ends of which are hinged respectively to said inclined end portion of said strap loop.

1,676,771. SINK DRAINAGE BOARD. FREDERICK SINCLAIR CORRIGAN, Toronto, Ontario, Canada, assignor, by mesne assignments, to General Steel Wares Limited, Toronto, Canada. Filed Oct. 30, 1926, Serial No. 145,287, and in Canada Oct. 29, 1926. 5 Claims. (Cl. 141—11.)



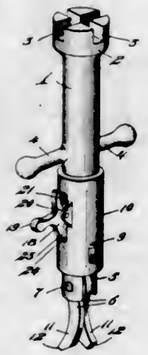
1. A sheet metal drainage board for sinks having a plurality of pairs of alined metal loops permanently secured to its under surface; wooden cleats adapted to be slipped into and held by said loops; a clamp member; a screw for securing the clamp member to one of said cleats with one end engaging under the edge of a sink on which one end of the board is rested; a wall bracket adapted to be secured to a wall; and screws for removably securing the wall bracket to the other cleat.

1,676,772. PROCESS AND APPARATUS FOR MAKING SHEET GLASS. WALTER COX and ARNO SHUMAN, Philadelphia, Pa., assignors to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Jan. 12, 1921. Serial No. 436,635. 8 Claims. (Cl. 49—17.)



1. Apparatus for making wire glass comprising the combination of wire mesh embedding rolls of which one is ribbed and the other is smooth, a weir provided in the glass tank furnace wall and discharging between the embedding rolls, and means for continuously passing wire netting or mesh between the embedding rolls along with the stream of glass flowing from the tank, substantially as described.

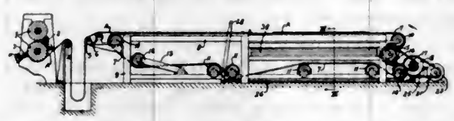
1,676,773. METHOD OF MAKING CORRUGATED WIRE GLASS. WALTER COX and ARNO SHUMAN, Philadelphia, Pa., assignors to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed July 16, 1927. Serial No. 206,215. 2 Claims. (Cl. 49—86.)



1. The method of making corrugated wire glass which comprises continuously rolling a lengthwise corrugated sheet of glass, initiating the corrugation of a flat wire mesh by securing its end in the first formed corrugations of the sheet, permitting the flat portion of the mesh to assume corrugated form above the corrugated sheet as the rolling progresses, embedding the corrugated wire mesh in corrugated form into the corrugated sheet, and pressing the roughened surface of the sheet though which the wire passed.

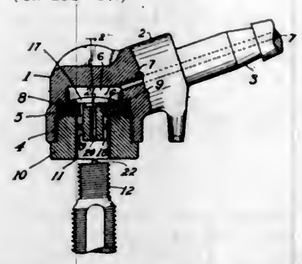
1,676,774. BRAKE-TESTING GAUGE. WESLEY M. CRONK, Burlingame, Calif., assignor, by direct and mesne assignments, to Master Products Corporation, San Francisco, Calif., a Corporation of California. Filed Oct. 6, 1926. Serial No. 139,897. 5 Claims. (Cl. 265—1.)

1. A brake testing gauge for vehicles comprising a lever having a handle at one end and means at the other end to so engage the vehicle axle as to prevent outward movement of the lever with reference thereto, a pivotally mounted member carrying a rod having a hook on one end thereof capable of engaging the periphery of the wheel, a spring gauge on the other end of said rod in said member to indicate the compression of the spring when an attempt is made to turn the wheel by lifting upon the lever.



1,676,775. PLUMBER'S TOOL. THOMAS P. DOHERTY, Providence, R. I. Filed July 26, 1927. Serial No. 208,531. 4 Claims. (Cl. 81—72.)

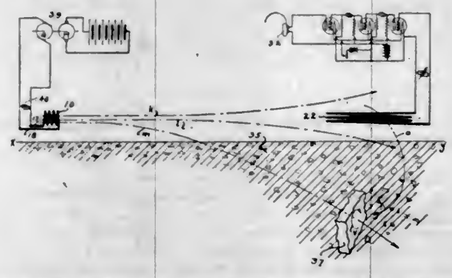
1. A device of the character described comprising a shaft provided with a handle and having one end thereof slotted, elbow shaped arms pivotally supported by said shaft within the slotted end thereof at points adjacent to the elbows, a sleeve slidably mounted on said shaft, and provided with oppositely positioned openings for the reception of the outturned ends of said arms which extend inwardly of the shaft whereby the outturned ends of said arms on opposite sides of their pivot points are withdrawn within the circumference of said sleeve when the sleeve is in retracted position and forced outwardly beyond the circumference of said sleeve when the sleeve is forced downwardly upon the shaft.



1,676,776. METHOD OF AND APPARATUS FOR MAKING RUBBER TUBES. JOHN A. FLEISCHLI, Clayton, Mo., assignor to Cupples Company, Manufacturers, St. Louis, Mo., a Corporation of Missouri. Filed July 27, 1925. Serial No. 46,239. 18 Claims. (Cl. 154—8.)

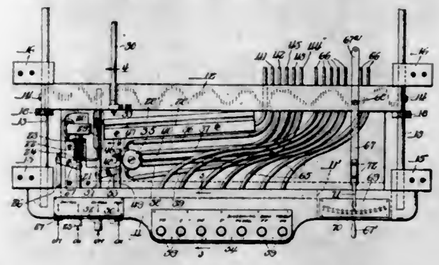
1. In the art of making rubber tubes, the method which comprises constantly passing plastic rubber between constantly rotating rolls to form a strip of sheet rubber, intermittently advancing the free end portion of said strip, cutting said strip into sections of the length

desired for the tubes, and then forming the tubes by rolling the sections around mandrels transversely of the direction in which the strip is fed.



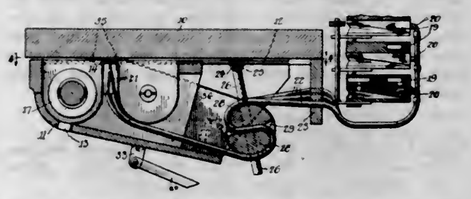
1,676,777. INFLATING VALVE. FRED E. HANSEN, Lakewood, Ohio, assignor to The Hansen Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 758,057. 3 Claims. (Cl. 284—17.)

1. An inflating valve for tires comprising a chambered head having a bore adapted to receive slidably the end portion of a valve stem, a soft washer inside said head and having an aperture registering with said bore, and a one piece, all metal valve member having a shank traversing said aperture, a head overlying said washer and a flange underlying said washer, said shank having a length between said head and said flange exceeding the thickness of said washer by approximately the distance between the head and chamber wall when the valve is closed, and having a passageway therein, said head being larger than said bore and said flange being smaller than said bore and slidable therein.



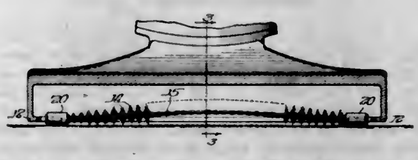
1,676,778. [WITHDRAWN.]

1,676,779. DEVICE FOR UNDERGROUND PROSPECTING. SHIBL HERR, Crawfordsville, Ind. Filed Dec. 20, 1926. Serial No. 155,837. 4 Claims. (Cl. 175—182.)



1. The method of prospecting underground regions from the surface of the earth to locate buried objects, which comprises producing a magnetic field by passing an electric current through a primary coil set up in an initial position; setting up a detecting coil at a substantial distance from the primary coil and in a position relative to said primary coil where the minimum current will be induced in the detecting coil; of transferring said primary coil and said detecting coil to points in the territory to be prospected, the said two coils being set up at each point in the same relative positions one in respect to the other and at the same distance apart as was determined by the initial minimum setting; and of observing the current output at each setting.

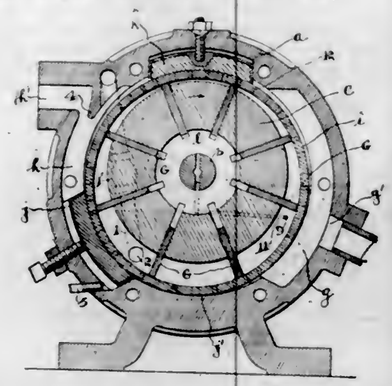
1,676,780. CONTROL-CARRYING SLIDE FOR SELF PLAYING MUSICAL INSTRUMENTS. EDMOND A. HUSEBY, Chicago, Ill. Filed May 15, 1926. Serial No. 109,293. 10 Claims. (Cl. 84—49.)



1. The combination with the key-bed of a mechanical playing instrument, and a tray slidably mounted beneath said bed, of an electric circuit switch mounted on said tray, and means for operating said switch projecting through the front edge of said tray.

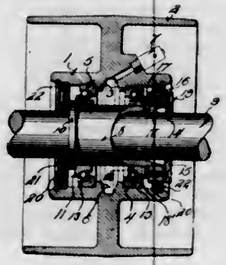
1,676,781. TRACKER-TUBE SUPPORT FOR PLAYER PIANOS. EDMOND A. HUSEBY, Chicago, Ill. Filed Feb. 5, 1927. Serial No. 166,090. 10 Claims. (Cl. 84—57.)

1. In a device of the character described, the combination with a key bed, and a player action in rear of said key bed, of a drawer slidable beneath the key bed, a tracker bar in said drawer, tracker tubes connecting said tracker bar with said player action, and a tracker tube supporting reel suspended from said key bed.



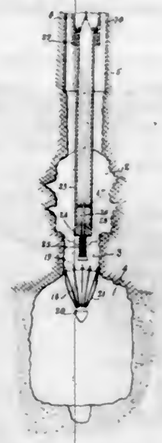
1,676,782. BRUSH MOUNTING FOR SUCTION CLEANERS. BENJAMIN B. JACKSON, Delphi, Ind., assignor, by mesne assignments, to The Marvel Company, Hammond, Ind., a Corporation of Indiana. Filed Apr. 15, 1922. Serial No. 552,909. 1 Claim. (Cl. 15—8.)

In a suction cleaner, the combination with the nozzle thereof, of a rotatable brush extending over the length of said nozzle, said brush having a flexible axle supported in the nozzle only at its ends, whereby said brush



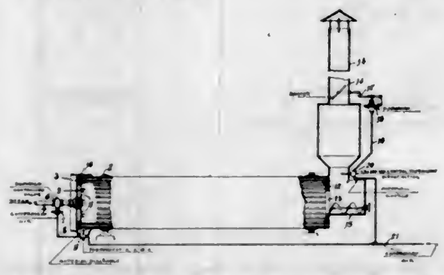
is yieldingly supported in the nozzle for lateral movement between its ends to be pressed and maintained by the weight of the nozzle in operative engagement with the surface to be cleaned, said brush having its greatest diameter at its mid-portion and tapering from said mid-portion to its ends, and means for driving said brush.

1,676,783. ROTARY PUMP. ROBERT W. KING, Toronto, Ontario, Canada. Filed Oct. 11, 1926. Serial No. 141,004. 14 Claims. (Cl. 230—152.)



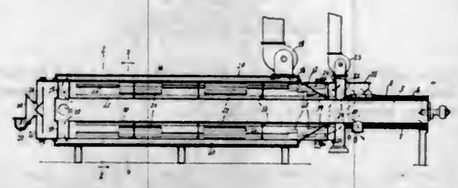
1. A rotary engine or pump comprising a cylinder casing; a rotary piston eccentric to the cylinder; a plurality of blades slidable in the piston; suction and compression chambers formed at opposite sides of the cylinder and of less width than that of the cylinder; and an unjournalled floating ring of the full width of the cylinder and interposed between the cylinder and piston, the ring being free to rotate with the piston and blades and having perforations located only intermediate the ends thereof for communication with the suction and compression chambers, the area of the perforations being proportioned to cause a frictional pressure of the ring against the casing, due to the flow of fluid, less than the frictional driving pressure of the blades against the ring.

1,676,784. LINE-SHAFT BEARING. HERMANN KRAUSE, Menomonee Falls, Wis. Filed Mar. 26, 1924. Serial No. 701,964. 2 Claims. (Cl. 308—190.)



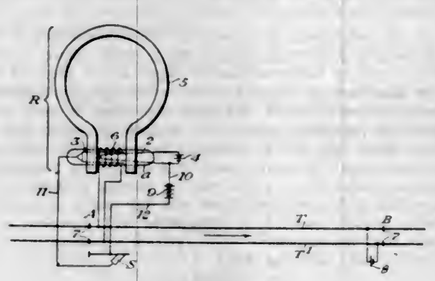
1. A bearing for a shaft comprising an outer casing having oppositely directed raceway rings, a sleeve mounted upon said shaft and having a flange at one end, a race way ring carried by said sleeve and abutting said flange, a second race way ring carried by said sleeve, the rings carried by said sleeve being mounted in proximity to said first mentioned rings, balls located between adjacent rings, said sleeve being externally threaded at the end remote from said flange and having a tapered cut out portion contracting to said shaft, a nut screwed upon said externally threaded end for adjusting the last mentioned raceway ring, a washer having a tapered collet fitted within said tapered cut out, and screws for drawing said washer towards said nut to cause said collet to grip said shaft, whereby the screws may be adjusted without rotating said nut.

1,676,785. METHOD OF AND APPARATUS FOR GROUTING THE WALLS OF AN OIL WELL. JAMES O. LEWIS, Tulsa, Okla. Filed Oct. 20, 1924. Serial No. 744,608. 4 Claims. (Cl. 166—1.)



4. In a grouting apparatus for oil wells, the combination of an air conveying tubular member, means to apply compressed air thereto, the lower end of said tubular member being opened and the upper end sealed, means to support said tubular member in different positions in the well, a lowering cable passing through said tubular member and means to provide an air tight stuffing box at the top of the tubular member to accommodate the passage of the lowering cable, a bail for containing coating material, a pressure valve at the bottom thereof adapted to support the material in the bail which is lowered by the lowering cable within the tubular member until air pressure behind the material in the bail achieves the predetermined point for opening the valve and discharging the material, and means for joining the upper end of the bail with the tubular member to prevent the escape of air.

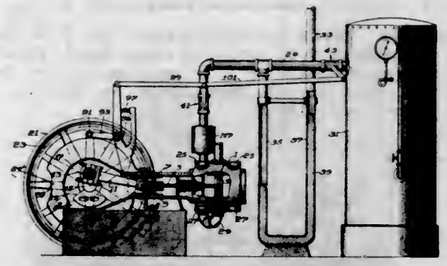
1,676,786. DRIER CONTROL. ADOLPH W. LISSAUER, Louisville, Ky., assignor to Louisville Drying Machinery Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Apr. 17, 1926. Serial No. 102,679. 7 Claims. (Cl. 34—6.)



6. In a method of drying material in a drier, steps which consist in circulating atmospheric air through the drier to carry off the products of evaporation and varying the volume of the air circulated in the drier by the temperature of the products of evaporation carried off by the air.

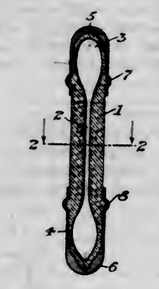
1,676,787. HEAT EXCHANGER. ADOLPH W. LISSAUER, Louisville, Ky., assignor to Louisville Drying Machinery Co., Inc., Louisville, Ky., a Corporation of Kentucky. Filed Mar. 31, 1927. Serial No. 179,754. 7 Claims. (Cl. 257—90.)

3. In a heat exchanger, a shell mounted to rotate, a stationary casing about the shell forming therewith an annular chamber, means carried by the shell and dividing the annular chamber into a plurality of longitudinal sections, means for supplying products of combustion to the sections of the annular chamber, and means for removing the products of combustion from the sections successively.



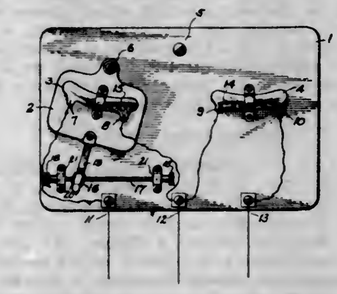
1,676,788. RAILWAY SIGNALING. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Apr. 18, 1922, Serial No. 555,339. Divided and this application filed Jan. 5, 1925, Serial No. 617. Renewed Feb. 11, 1927. 12 Claims. (Cl. 246—41.)

1. A railway signaling system comprising a thermionic tube, a circuit including a source of current and said tube, a signal controlled by said circuit, a magnet for opposing the flow of current through said tube, a winding or opposing the effect of said magnet on the flow of current through said tube, and train-controlled means for supplying current to said winding.



1,676,789. COMPRESSOR AND PUMP. CHARLES H. LUSK, Newton, Mass. Filed Sept. 19, 1923. Serial No. 663,594. 9 Claims. (Cl. 230—236.)

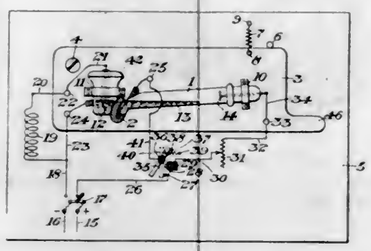
1. The combination with an air compressor, of a receiver for the compressed air, a pipe extending from the air compressor to the receiver, a tube communicating with said pipe at a point between the compressor and the receiver and containing a mercury column adapted to be elevated on strokes of the compressor, thereby to store up the velocity energy of the air set in motion by the strokes of the compressor, a valve operable to permit compressed air to flow from the compressor into the pipe and tube, or to prevent compressed air from flowing into the pipe and tube, a valve operable to permit the compressed air to be forced by the mercury column into the receiver, or to prevent



the compressed air from being forced by the mercury column into the receiver, and means automatically to operate said valves.

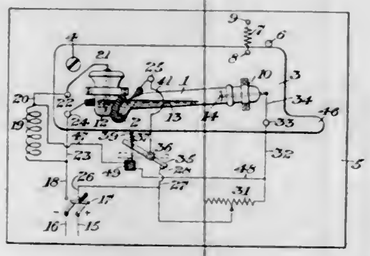
1,676,790. ELECTRIC LAMP. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 18, 1922. Serial No. 555,338. 6 Claims. (Cl. 176—126.)

6. An electric lamp comprising a section of glass tubing and terminals on the ends thereof of shock absorbing conducting material and a non-soiling coating on said material.



1,676,791. SWITCHING APPARATUS. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, a Corporation of New Jersey. Filed Oct. 12, 1923. Serial No. 668,092. 1 Claim. (Cl. 200—152.)

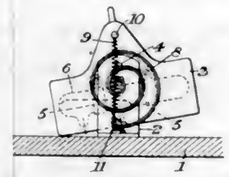
In an electric circuit making and breaking apparatus, in combination, a pivoted panel, a mercury switch mounted thereon, a second panel pivotally mounted on



the first panel, a mercury switch mounted on said second panel, and means connected to the two panels for adjustably moving the second mercury switch with respect to the first.

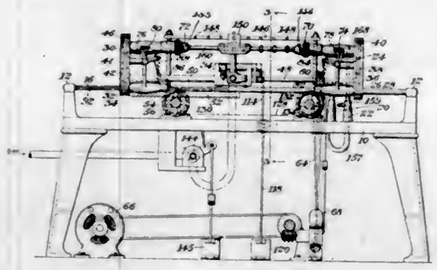
1,676,792. VAPOR ELECTRIC LAMP. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 17, 1924. Serial No. 686,704. 5 Claims. (Cl. 176—45.)

1. In combination with an electric vapor arc device having a positive temperature coefficient of resistance, terminal electrodes therefor, an electric heater connected through a switch across said electrodes, means for starting current flow through the device when connected to a current source, and means responsive to flow of starting current in said device for closing said switch and for opening said switch upon the attainment of predetermined or normal current conditions in said device.



1,676,793. ELECTRIC VAPOR LAMP. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,983. 8 Claims. (Cl. 176—45.)

1. The method of starting and operating an electric device of the character described which consists in passing current through said device and through a source of heat therefor, and availing of the change of potential across the terminals of the device to cause the interruption of current to the heater when the device has attained its normal operating temperature.

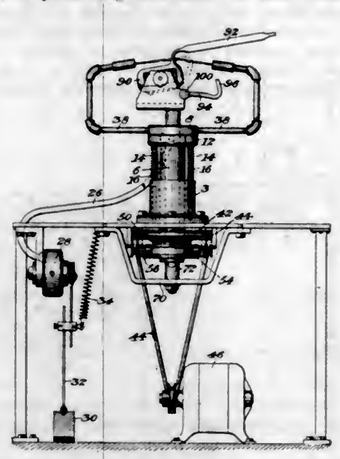


1,676,794. THERMOSTATICALLY-CONTROLLED SWITCH. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed May 5, 1925. Serial No. 28,169. 3 Claims. (Cl. 200—138.)

1. In combination with a switch of the mercury tube type mounted for pivotal movement, a flat spiral bimetallic element mounted in a plane parallel to the plane of movement of said switch, fixed at its inner end near the pivotal mounting of said switch, and having its other end terminating at a point substantially diametrically opposite the pivot of said switch and capable of movement between given limits in response to changes in temperature over a given range, and a resilient connection

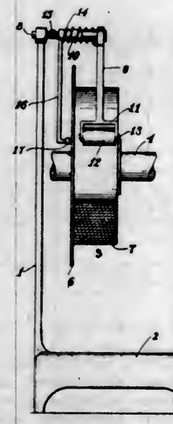
from said other end of the thermostat to a point on said switch diametrically opposite said other end with respect to the pivot of said switch.

1,676,795. GLASSWORKING MACHINERY. ROY D. MAILEY, East Orange, and WILFORD J. WINNINGHOFF, South Orange, N. J., assignors to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 26, 1927. Serial No. 171,173. 2 Claims. (Cl. 49—7.)



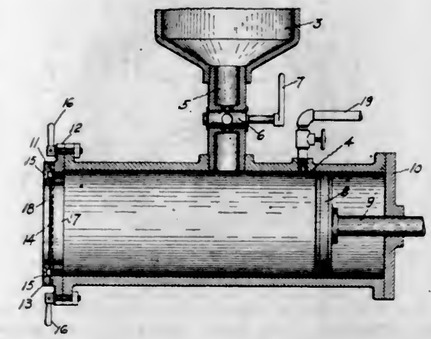
1. In machinery for working hollow glassware, a set of gas jets projecting toward and movable along a given line, a pair of work holders for supporting a piece of hollow glassware along said line, one of said work holders being movable toward and from the other, a mold movable into operative relation to a piece of work held by said work holders and mounted to move with said jets for movement therewith along said line and a positioning means comprising a latch member having a plurality of latching parts arranged along said line and a cooperating latch member carried by said mold and movable along first said latch member into and out of operative relation to said latching parts.

1,676,796. GLASSWORKING MACHINERY. GEORGE A. MILLAR, Ridgefield Park, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 1, 1927. Serial No. 158,432. 7 Claims. (Cl. 49—7.)



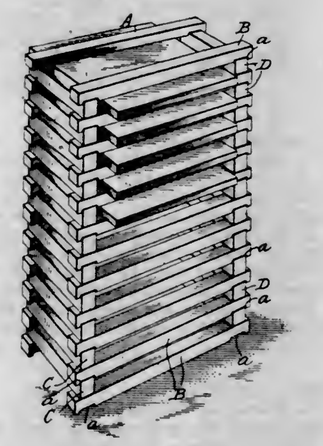
1. In a glass working machine, in combination, a member mounted to be rotatable about and slidable along a given axis, a second member having a face against a face of said rotatable member, means for holding said second member against rotation with said rotatable member and for holding said faces in predetermined relation, one of said members having an arcuate channel between said registering faces and each of said members having an opening therethrough registering with said channel, a gas jet mounted to said rotatable member and connecting with the opening therethrough and a work holder in operable relation to said gas jet.

7. In a glass working machine, in combination, a guideway, a hollow cylinder rotatable in said guideway and movable longitudinally therein, a collar about said cylinder and movable longitudinally therewith, means for holding said collar against rotation and for holding it in predetermined longitudinal relation to said cylinder, the adjacent faces of said collar and said cylinder having sliding contact with each other, one of said members having an annular channel extending between said adjacent faces and each of said members having an opening therethrough extending from the outside and registering with said channel, a tube connecting with the opening in said collar and permitting movement of said collar longi-



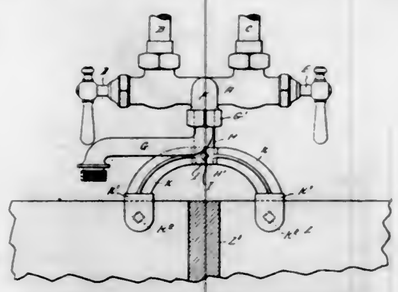
tudinally with said cylinder, a gas jet carried by said cylinder and connected to the opening therethrough and projecting inwardly toward the center of rotation of said cylinder and a work holder in operable relation to said gas jet, means for the application of power to rotate said cylinder about its axis and to slide it along its axis, and a support for said work holder extending longitudinally through said hollow cylinder.

1,676,797. TENSION REGULATOR. ALEXANDER NYMAN, Tuckahoe, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1925. Serial No. 76,266. 5 Claims. (Cl. 242—75.)



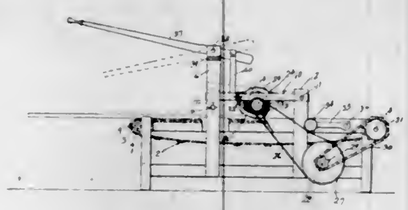
2. A tension device comprising a reel, a friction member to engage said reel, an arm rigid with said member to rest upon the surface of a strip wound upon said reel, and a spring normally extending to urge said arm and said member toward the center of said reel.

1,676,798. METHOD OF MAKING ARTICLES FROM A FIBROUS COMPOSITION. WILLIAM G. O'BRIEN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 16, 1922. Serial No. 588,666. 3 Claims. (Cl. 92—59.)



2. The method of making articles from a fibrous composition which consists in precipitating rubber upon a quantity of fibers, forcing the liquid in which the coated fibers are suspended through a screen of sufficiently small mesh to prevent the passage therethrough of the particles, and subsequently causing a rubber precipitant to be moved through said screen.

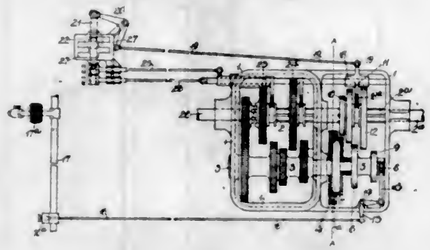
1,676,799. MEANS FOR SUPPORTING AND EXPOSING CERAMIC PRODUCTS IN THE COURSE OF THEIR PRODUCTION. THEODORE C. PROUTY and WILLIS OSWALD PROUTY, Hermosa Beach, Calif., assignors to American Encaustic Tiling Company, Ltd., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1927. Serial No. 180,402. 23 Claims. (Cl. 25—153.)



1. A device for supporting ceramic products and exposing the same to heat, comprising a series of members positioned in relatively spaced order and constituting a rigid unitary structure affording a series of supporting surfaces arranged one above the other.

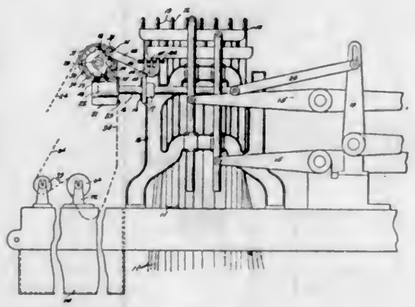
1,676,800. COMBINATION FAUCET FOR LAUNDRY TUBS AND SINKS. PETER R. RICHARDS and LEON BLOCH, Cleveland, Ohio, assignors to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 14, 1924. Serial No. 692,648. 1 Claim. (Cl. 4—193.)

As a new article of manufacture a faucet for tubs and sinks comprising a body portion having inlet openings and a centrally arranged discharge spout projecting forwardly and downwardly from the central forward portion of said body, said body portion having a downwardly extending member arranged in line with the body portion and to the rear of the forwardly and downwardly extending spout, the lower end of said depending member being tapered and a support into which said tapering end fits together with means for securing the same.



1,676,801. FRUIT-TRAY CLEANER. JOHN W. ROBINSON, Woodland, Calif. Filed June 1, 1926. Serial No. 112,788. 3 Claims. (Cl. 15—56.)

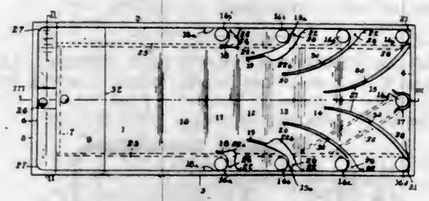
1. A machine for cleaning fruit trays comprising a frame, a conveyor for moving the fruit trays along the frame, a rotary brush, means for vertically adjustably supporting the brush above the conveyor in position to engage the fruit trays as the latter are moved past the brush by the conveyor, means for rotating the brush and conveyor, an operating lever pivoted on the frame and operatively connected with the adjustable brush support, an adjustable stop member on the frame with which said brush support engages and shoes carried by the brush support and arranged to engage the end walls of the tray.



1,676,802. CHANGE-SPEED GEARING. PERCY OCTAVIUS ROWLANDS, Birmingham, England. Filed May 8, 1925, Serial No. 28,920, and in Great Britain May 20, 1924. 9 Claims. (Cl. 74—58.)

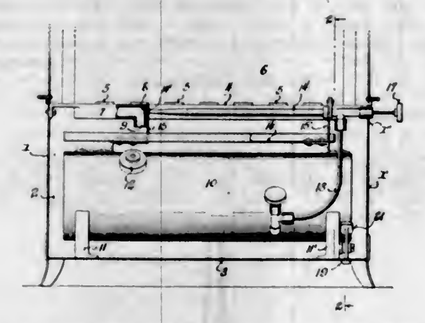
1. In change speed gearing, a gear set of the selective change speed type wherein normally-disengaged parts are selectively brought into engagement for power transmission activity at desired speeds, clutch mechanism including a pedal for controlling the transmission of power, manually-operable mechanism for controlling the engagement and disengagement of the normally-disengaged parts, said lattter mechanism including a rock shaft mounted for axial and oscillating movements, operable connections between the rock shaft and certain of the normally-disengaged parts whereby axial movement of the rock shaft will select the parts to be engaged and oscillating movements of the rock shaft will complete engagement of the selected parts, and means for synchronizing the speed of the normally-disengaged parts about to be engaged for power transmission purposes, said means including disks having annular faces mounted respectively on driven and synchronizing shafts and adapted to provide power transmission between said shafts at different speeds by en-

gagement of normally-disengaged disk faces in pairs of which the faces of the pairs are carried by the respective shafts, operable connections between the disk arrangement of one of the shafts and the rock shaft for positioning the faces thereof relative to the companion faces of the pairs to locate the faces of the desired pair in relative position for engagement, operable connections between the clutch pedal and the disk arrangement of the other shaft to complete engagement of the positioned faces of a pair, and normally-disengaged connections between the synchronizing shaft and the gear set and adapted to be engaged by clutch pedal movement.



1,676,803. THREAD-CONTROL ATTACHMENT FOR LOOMS. ANTHONY C. P. RUSSEN, Edgewood, R. I. Filed June 5, 1923. Serial No. 643,488. 10 Claims. (Cl. 139—329.)

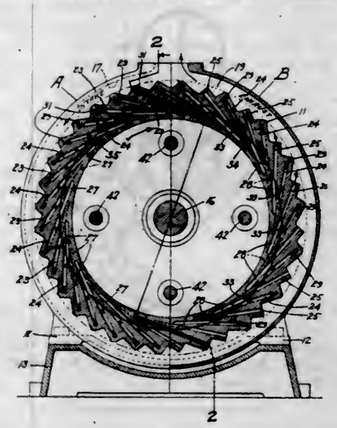
1. In a loom having thread controlling means, a rotatable drum, means for rotating said drum with a step by step movement comprising a toothed ratchet, a pivoted lever, a pawl carried by said lever adapted to engage the ratchet teeth, flexible means controlled by said drum for cooperating with the thread controlling means, means for moving the drum toward and from the thread controlling means, and means operated by said movement for swinging said lever to rotate the drum comprising a normally stationary, pivotally mount-



ed lever connected to the first lever by a pin and slot connection, and means for adjusting the second lever about its pivotal mounting to vary the effect thereof on the first lever.

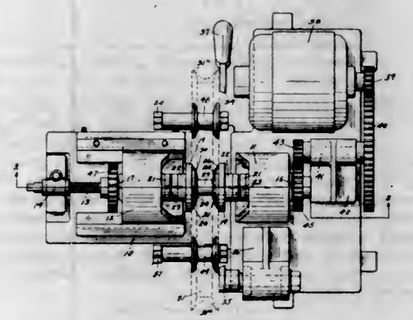
1,676,804. GOLF-GAME APPARATUS. CLARENCE W. SCHECK, Pittsburgh, Pa. Filed Mar. 9, 1927. Serial No. 173,920. 8 Claims. (Cl. 273—36.)

1. A golf putting game apparatus comprising a playing surface provided with side and rear walls and having a level putting surface at one end a plurality of holes arranged along the side walls, and a baffle-guide extending outwardly from the side wall at the rear of each of said holes and extending forwardly toward the putting surface, said guides being progressively prolonged toward the rear end of the board.



1,676,805. LIQUID-FUEL HEATING STOVE. ALEXANDER C. SLADKY and JOSEPH SLADKY, Milwaukee, Wis., assignors to National Enameling & Stamping Co., Inc., Milwaukee, Wis. Filed Dec. 1, 1927. Serial No. 237,004. 3 Claims. (Cl. 126—95.)

1. A stove body having a burner provided with a vapor inlet at one end and a removable fluid reservoir unit having a generator tube adapted to engage and interlock with the vapor burner inlet, and means carried by the reservoir for a second interlocking engagement with a stove body at a point remote from the first mentioned interlocking mechanism.

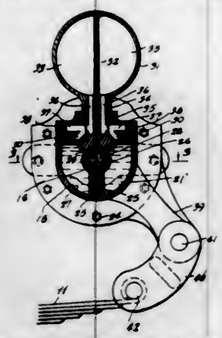


1,676,806. TURBINE. WILLIAM D. SMALLEY, Minneapolis, Minn. Filed June 1, 1925. Serial No. 34,095. 12 Claims. (Cl. 253—45.)

1. In a turbine the combination of a stator and a rotor having motive fluid containing chambers arranged in a plurality of planes around the axis of the turbine, said chambers comprising ports directing the flow of motive fluid in paths oblique to the periphery of the rotor, an annular channel supplying motive fluid to said containing chambers in limited volumes, means cooperating with said containing chambers to periodically open and close communication between said chambers whereby the motive fluid is intermittently transferred from one chamber to another and from one plane of chambers to another, and an annular exhaust channel

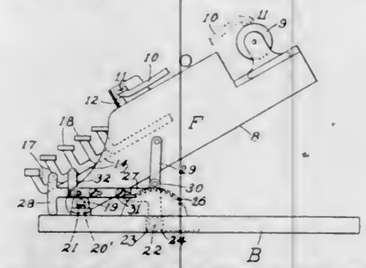
surrounding the last plane of chambers, the chambers in said last plane being alternately open and closed to the exhaust channel.

1,676,807. FLAP-TRIMMING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 17, 1925. Serial No. 44,379. 5 Claims. (Cl. 164—61.)



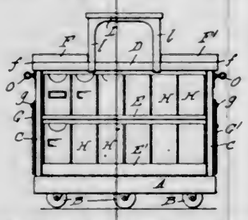
2. Apparatus of the class described, comprising spaced pairs of cooperating rotary shearing knives, a work-supporting roller removably mounted between one set of corresponding knives of each pair, said roller being formed to support material between said pairs of knives, a work-pressing roller for spreading the sides of the material into shearing relation to said cooperating knives, and means for driving the knives and feeding the material therebetween.

1,676,808. SHOCK ABSORBER FOR MOTOR VEHICLES. JAMES HENRY TAYLOR, Devon, Conn., assignor of one-half to William T. Teeden, jr., Devon, Conn. Filed Sept. 29, 1927. Serial No. 222,761. 7 Claims. (Cl. 188—89.)



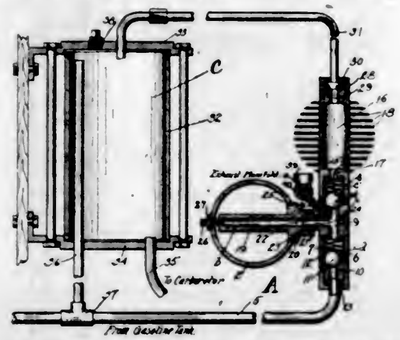
1. In a shock absorber for vehicles, a body member having a chamber for holding a liquid, a division member in said chamber and dividing it into two separate compartments, said members being mounted for relative

turning movements, separate air chambers connected to said compartments respectively at the upper portions thereof, means whereby one of said members may be



secured to some stationary part of the vehicle, and means whereby the other member may be secured to the vehicle spring or bumper.

1,676,809. TYPEWRITING MACHINE. RICHARD W. UHLIG, Newark, N. J., assignor to Albert Voigt, Brooklyn, N. Y. Filed Feb. 21, 1925. Serial No. 10,750. 11 Claims. (Cl. 197—186.)

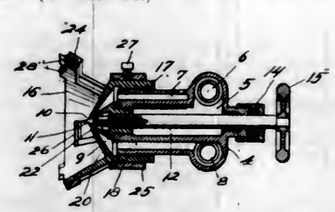


1. The combination of a writing machine, means to pivotally support the machine forwardly of its transverse center to tilt the rear portion of the machine upward at an oblique angle to the horizontal, a pivotally supported lever having an operative connection with the machine and operative to adjust the machine on its pivotal support from a horizontal position to variable angular position relative to the horizontal, a fixed notched sector, and a detent carried by the lever to engage a notch of the sector to releasably retain it in adjusted position.

1,676,810. POSTING BUS OR TRUCK. CHARLES B ULRICH, Jamestown, N. Y., assignor to Art Metal Construction Company, Jamestown, N. Y. Filed Apr. 23, 1926. Serial No. 104,111. 13 Claims. (Cl. 211—135.)

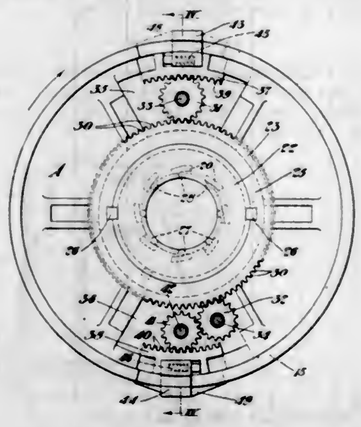
8. A posting bus having a top provided at opposite ends with extensions hinged to the top and adapted to swing outwardly to form continuations thereof and to swing inwardly and rest upon the upper surface of said top, said top and extensions being adapted to support record trays, a posting board movable over said top and extensions thereof and over record trays supported thereon and including legs extending in proximity to the edges of said top and extensions, the opposite edges of the top and extensions being turned downwardly and inwardly toward each other, the lower ends of the legs of said posting board having rollers adapted to roll on the in'urned portions of the edges of said top and extensions, and stops on said posting board adapted to engage said extensions when the same are swung inwardly above said top, to limit the movement of said posting board on said top.

1,676,811. INTERNAL-COMBUSTION ENGINE. LESTER E. VAN HISE, Los Angeles, Calif.; said Van Hise assignor to James V. Baldwin. Filed Sept. 3, 1921. Serial No. 498,434. 2 Claims. (Cl. 158—136.4.)



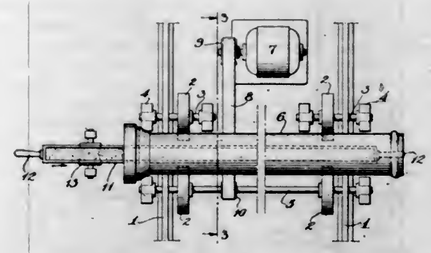
1. In combination with an internal combustion engine having an exhaust duct and a carburetor, a source of fuel supply therefor, a pumping bottle partly seated in said duct, a pipe connecting said source of supply to said bottle, a check valve in said pipe, a storage tank arranged adjacent said carburetor, a pipe connecting said bottle to said tank, an overflow pipe connected to the first named pipe between said check valve and said source of supply, and a pipe connecting said tank and carburetor.

1,676,812. BRUSH. EDWARD F. ASTLEY, Chicago, Ill., assignor to Humboldt M. Seyer, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,378. 3 Claims. (Cl. 15—139.)



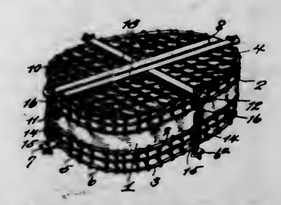
1. A brush comprising a hollow handle, providing a liquid receptacle, said handle being provided with an opening, a movable member projecting into said handle, a cup on the end of said movable member which normally closes the opening in the handle, an applying member extending into said movable member, the end thereof projecting from said cup, and an opening in said movable member for permitting the liquid in the receptacle to come into contact with said flexible member.

1,676,813. OIL BURNER. HARRY A. ATWATER, Kansas City, Mo., assignor to Combustion Equipment Company, Kansas City, Mo., a Partnership composed of A. W. Mackie, D. J. Mackie, R. V. Downs, and Harry A. Atwater. Filed Feb. 16, 1925. Serial No. 9,599. 1 Claim. (Cl. 158—76.)



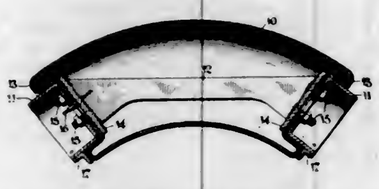
An oil burner having a fuel feeding passage provided with a discharge orifice, said burner also having a passage for feeding fluid under pressure to the exterior of said orifice, an air hood member having a casing portion adjustably mounted on said burner and formed with an inwardly projecting nozzle portion extending across said fluid pressure passage and provided with an orifice surrounding said fuel orifice, whereby the adjustment of said hood member regulates the rate of flow of said fluid under pressure past said fuel orifice, said hood member having openings for the discharge of air to and from the space immediately surrounding said orifices, and a shutter member carried by said hood member for regulating the movement of air through said openings.

1,676,814. CHUCK-OPERATING MECHANISM. JOSEPH E. BAINES, Pittsburgh, and JACOB P. BOSLE, Mount Oliver, Pa., assignors to National Tube Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 23, 1926. Serial No. 137,280. 6 Claims. (Cl. 279—72.)



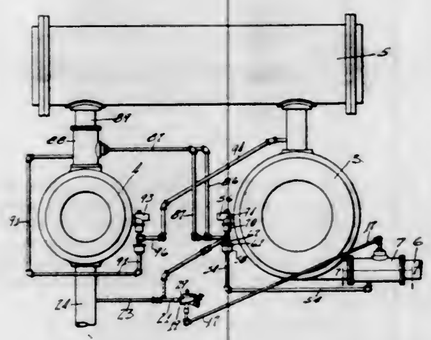
1. The combination with a pipe-working machine or the like having a positively rotated barrel, of a chuck comprising a main body portion secured to and adapted to rotate with said barrel, a cam-ring removably secured to and adapted to rotate with said body portion, a roller retaining ring mounted within said cam-ring and adapted to move relative thereto, said roller retaining ring being provided with a plurality of transverse slots, a plurality of roller-jaw members mounted in said slots, cam-faces on said cam-ring adapted to engage and control the movement of said jaws relative to the work, means for holding said roller-ring stationary while said cam-ring is rotated relative thereto thus causing said cam-faces to force said roller-jaws against the work, means for causing said roller ring to move relative to said cam-ring in the direction of rotation of said cam-ring to thereby permit said roller-jaws to move from the work, and selective means controllable from a point remote from said chuck for operating either of the above mentioned means.

1,676,815. METHOD OF AND APPARATUS FOR LINING PIPES. DOUGLAS T. BEATTY, Birmingham, Ala., assignor to Sand Spun Patents Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1926. Serial No. 92,451. 10 Claims. (Cl. 25—38.)



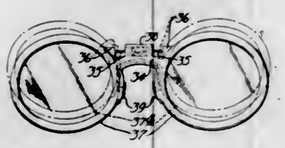
1. The step in the method of lining pipes or like hollow bodies with water mixed with plastic material, which consists in holding a mass of the material in contact with the pipe wall while imparting relative sliding movement to the mass and the wall to effect a conditioning of the wall by moisture and a rigid rubbing pressure or troweling action.

1,676,816. OPENWORK CONTAINER FOR TREATING MEATS. FREDERICK BRIGGS, Washington, D. C., assignor to Briggs Packing Co., Washington, D. C., a Corporation of Delaware. Filed Jan. 2, 1925. Serial No. 182. 1 Claim. (Cl. 100—57.)



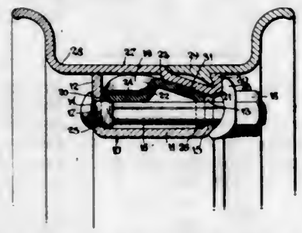
An open-work container for use in connection with meat treating processes consisting of opposed open-work sections, said sections having marginal flanges, said sections having reinforcing intersecting cross bars, one section being constructed in two parts hingedly united to facilitate the insertion of the contents in the container, contracting springs connected to the terminals of the cross bars of one section, and adjustable means connecting the other ends of the springs to the terminals of the cross bars of the other section, thereby creating constantly increasing tension between the two sections and exerting pressure upon the contents of the container.

1,676,817. SECTIONAL AIRBAG. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Apr. 10, 1925, Serial No. 22,205. Divided and this application filed Jan. 19, 1927. Serial No. 162,049. 10 Claims. (Cl. 18—45.)



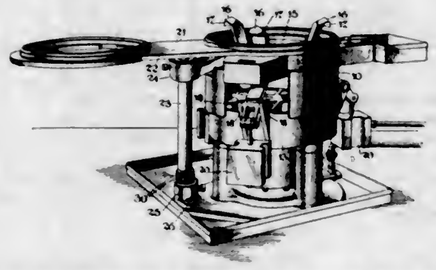
8. A vulcanizing core comprising a flexible elongate arcuate container and a metal end member so connected thereto that an annular fold of the container at least partially surrounds the end member.

1,676,818. PUMP-CONTROLLING MECHANISM. RUDOLPH CONRADER, Erie, Pa. Filed Jan. 17, 1924. Serial No. 686,771. 38 Claims. (Cl. 230—26.)



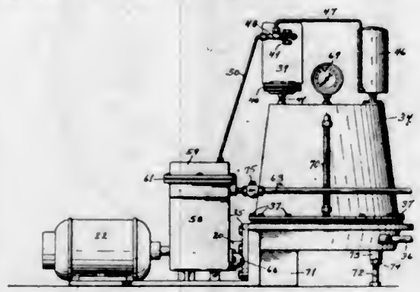
1. In a pump equipped with controlling mechanism, the combination of a pump cylinder; an intake unloader on the cylinder; a relief valve; a pilot valve responsive to intake pressure; and means controlled by the pilot valve controlling the relief valve.

1,676,819. EYEGLASSES. CLARENCE W. CUTLER, Chicago, Ill. Filed Oct. 1, 1927. Serial No. 223,372. 8 Claims. (Cl. 88—41.)



3. In eye-glasses; a frame; lenses supported by said frame; and means for attaching said frame and lenses to the face of a wearer, said means comprising a vacuum cup adapted to be placed against the face, and means for automatically slowly withdrawing air from said cup.

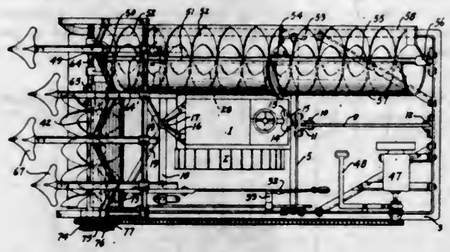
1,676,820. WHEEL MOUNTING. BURGESS DARROW, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 17, 1926. Serial No. 155,507. 3 Claims. (Cl. 301—18.)



2. A device adapted to be disposed on a vehicle wheel felloe comprising parallel apertured side portions and a web portion connecting the side portions, one side of the web being tapered to provide a seat for a tire rim, the opposite side of the web having a depression formed in its surface.

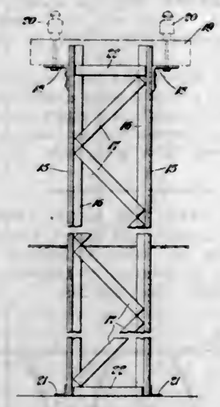
1,676,821. PRESS. LESLIE E. DOUGHERTY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 16, 1925. Serial No. 23,721. 12 Claims. (Cl. 18—2.)

1. In combination, a plurality of movable work supporting devices, sectional clamping members carried by the devices for engaging the work thereon, and a press for bringing together the sections of the clamping members as the first mentioned devices are brought successively into registering position with said press.



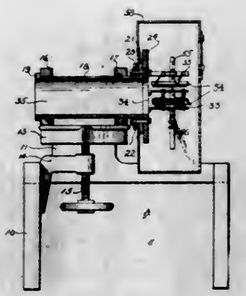
1,676,822. LIQUID-PUMPING APPARATUS. PAUL R. FINCH, Des Moines, Iowa, assignor to Alvah C. White, Des Moines, Iowa. Filed Feb. 18, 1927. Serial No. 169,225. 2 Claims. (Cl. 103—6.)

1. A pumping apparatus comprising a pressure tank, a pump for discharging liquid to said tank, an electric motor for operating said pump, an automatic switch



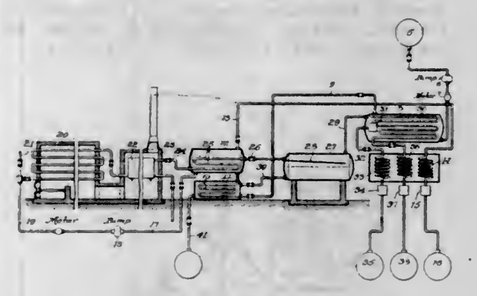
communicating with said tank and having connection to said motor for starting the pumping operation when the pressure in said tank falls below a certain minimum and for cutting off said motor when the pressure reaches a certain point, an air-measuring chamber adapted to receive a limited amount of atmospheric air and a valve device operable by said automatic switch for connecting said air-measuring chamber with the pump when the pumping operation is initiated and at the same time cutting off the supply of atmospheric air.

1,676,823. SNOW REMOVER. JOHN S. GAULT, Athol, Idaho. Filed Apr. 25, 1927. Serial No. 186,281. 3 Claims. (Cl. 37—42.)



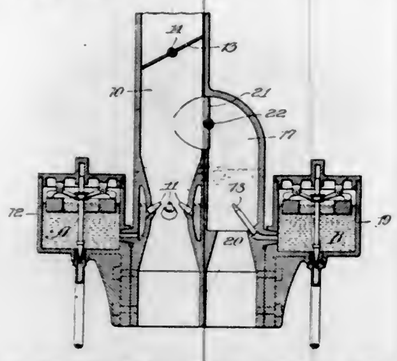
2. In a snow remover, the combination with an adjustable main frame having an adjustable, transversely arranged scoop and an open front-semi-cylindrical hood, of a screw conveyer above the scoop in operative arrangement with the hood, means for operating the screw conveyer, an upwardly inclined hood at one side of the frame having an open outer side and a screw conveyer in operative arrangement with the inclined hood, and driving connections between said screw conveyers.

1,676,824. BEAM OR POLE STRUCTURE. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed June 21, 1926, Serial No. 117,502, and in Canada Mar. 6, 1925. 1 Claim. (Cl. 189—24.)



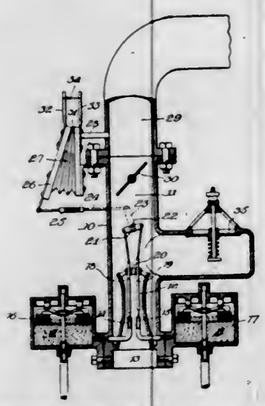
In a latticed beam or pole structure, the combination of a pair of opposed rolled metal T-members, and one-piece lattice-bars extending diagonally between and connecting said T-members, alternate ones of said lattice-bars extending in a direction opposite to the other bars said lattice-bars having diagonally slotted ends fitted over the stem portions of said T-members and permanently secured thereto.

1,676,825. WASHING MACHINE. JORGEN I. HAASE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 5, 1925. Serial No. 66,941. 6 Claims. (Cl. 15—40.)



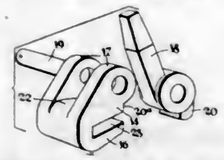
1. A hose washing machine comprising a support having a rotatable member mounted thereon, a plurality of normally contacting brushes resiliently secured to the rotatable member, and means on the brushes to effect their separation as a length of hose is introduced into the machine.

1,676,826. PROCESS OF TREATING OILS. FRANK A. HOWARD, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed May 18, 1921. Serial No. 470,568. 3 Claims. (Cl. 196—51.)



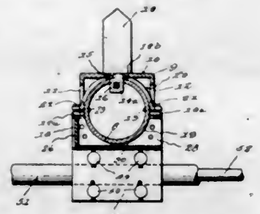
2. The method of treating oils to remove natural low boiling constituents therefrom and effect conversion of high boiling constituents of the residue to low boiling products which comprises heating residues to temperatures sufficient to effect conversion of high boiling constituents into low boiling products under pressure sufficient to maintain unchanged residue in the liquid phase, conveying the mixed products of conversion into a chamber at lower pressure, removing the products therefrom, passing fresh oil containing low boiling constituents into heat exchange relation with the conversion products at lower pressure removed from said chamber, and subsequently into heat exchange relation with the conversion products at higher pressure before they enter said chamber without at any time permitting admixture of said fresh oil and said conversion products, withdrawing the vapors evolved from said fresh oil and subjecting the residue to the hereinbefore described heat treatment.

1,676,827. METHOD OF AND APPARATUS FOR PREVENTING KNOCKING IN INTERNAL-COMBUSTION ENGINES. FRANK A. HOWARD, Elizabeth, and THOMAS R. PARKER, Jersey City, N. J., assignors to Standard Development Company, a Corporation of Delaware. Filed Jan. 7, 1922. Serial No. 527,665. 3 Claims. (Cl. 123—127.)



1. A carbureter for an internal combustion engine having a mixing passage, a low compression fuel jet delivering thereto, a throttle in said passage, a secondary passage leading to said mixing passage, a valve in said secondary passage, a jet in said secondary passage supplied from a source of high compression fuel and means operably connecting said valve and throttle so that said valve begins to open when the throttle is opened a predetermined amount.

1,676,828. METHOD OF AND APPARATUS FOR PREVENTING KNOCKING IN INTERNAL-COMBUSTION ENGINES. FRANK A. HOWARD, Elizabeth, N. J., and THOMAS R. PARKER, New York, N. Y., assignors to Standard Development Company, a Corporation of Delaware. Filed Jan. 7, 1922. Serial No. 527,666. Renewed Jan. 5, 1928. 11 Claims. (Cl. 123—127.)

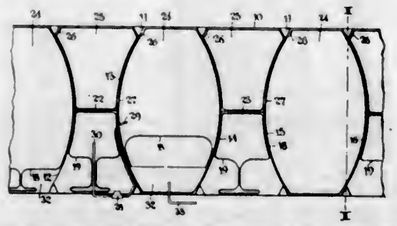


1. A carbureter for variable speed, variable load internal combustion engines comprising a mixing tube, a fuel nozzle delivering to said mixing tube and connected to a source of low compression fuel, a second fuel nozzle delivering to said mixing tube and connected to a source of high compression fuel and means responsive to the load condition of the engine for controlling the flow of fuel from said nozzles to cause the proportion of the high compression fuel in the mixture to increase as the compression pressure in the cylinder of the engine is increased.

1,676,829. TAPERED PLUG FOR CIRCULAR MANDRELS. JOHN R. HUNTER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 29, 1926. Serial No. 144,961. 6 Claims. (Cl. 18—6.)

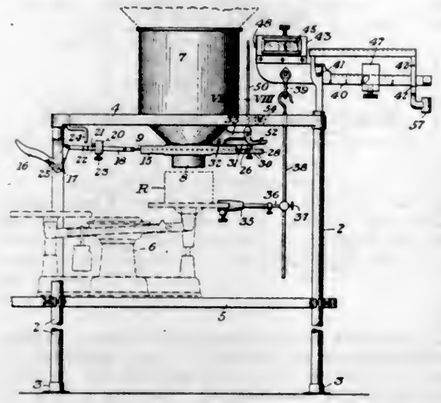
5. The combination with a mandrel having a non-circular tapered opening in one end thereof, of a complementary plug for the opening, a recessed member for supporting the plug having pivotal connection therewith and a rail associated operatively with the recess in the member.

1,676,830. RAKING ATTACHMENT. LOUIS H. LARSEN, Englewood, N. J. Filed Oct. 18, 1926. Serial No. 142,274. 2 Claims. (Cl. 126—173.)



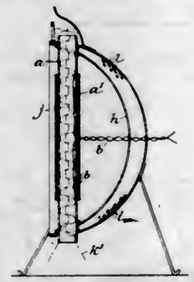
1. In a raking attachment, a rockable member presenting a flattened top portion having a plurality of apertures arranged therein, a plurality of teeth mounted in said rockable member, each of said teeth presenting a reduced portion defining a shoulder to abut the flattened top surface of said rockable member, and a rod removably securing said teeth to said member.

1,676,831. NOZZLE FOR THE PRODUCTION OF ARTIFICIAL FILAMENTS. LEONARD ANGELO LEVY, Cricklewood, England. Filed Aug. 16, 1926, Serial No. 129,660, and in Great Britain Sept. 14, 1925. 1 Claim. (Cl. 51—278.)



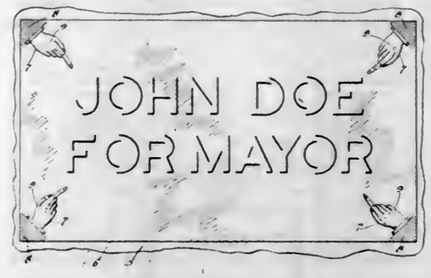
The method of determining the varying diameter of a tapered orifice, in a nozzle being ground, which consists in passing a fluid through said orifice under a predetermined pressure, and measuring the quantity of said fluid passed therethrough in a given time at predetermined intervals.

1,676,832. GAS CELL FOR RIGID AIRSHIPS. HERMAN RICHARD LIEBERT and EUGEN SCHOETTEL, Akron, Ohio, assignors to Goodyear-Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed Sept. 13, 1927. Serial No. 219,238. 8 Claims. (Cl. 244—3.)



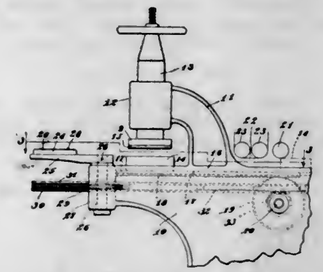
1. In an airship having inherently rigid main rings, a gas cell having gas under pressure therein, and a gas cell disposed contiguously on each side of the first-mentioned gas cell, and having gas therein under materially lower pressure than the gas in the first-mentioned gas cell.

1,676,833. DISPENSING APPARATUS. JOLLY L. MORRIS, Crafton, Pa., assignor of fifty-one one-hundredths to A. B. Coleman, Pittsburgh, Pa. Filed Mar. 18, 1924. Serial No. 700,019. 19 Claims. (Cl. 249—66.)



1. A dispensing device for use with weighing scales, including a hopper, a support therefor, a shutter for controlling the discharge from the hopper, manually operable means for opening the shutter, a trigger mechanism for holding the shutter open, means including a pivotal beam for actuating the trigger, and means for transmitting motion from a weighing scale to the beam.

1,676,834. ELECTRIC RADIATOR. THOMAS HORACE MCQUINN, London, England, assignor of one-third to Harry Morton Sargood, Toorak, Victoria, Australia. Filed Nov. 29, 1924, Serial No. 752,888, and in Great Britain June 17, 1924. 2 Claims. (Cl. 219—34.)

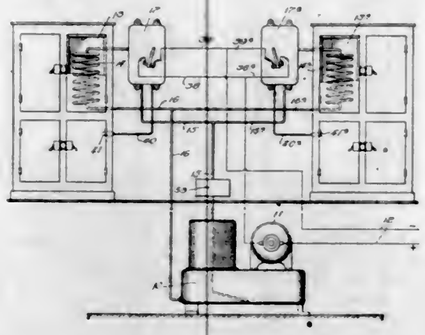


2. An electric radiator comprising a series of tubes of a refractory nature mounted vertically in a frame with their upper and lower ends open to the atmosphere, conductors of electricity applied to the external surfaces thereof, so that when an electric current is passed through the said conductors, the tubes are heated to a high degree so as to radiate heat by incandescence, and at the same time cause an upward current of air through said tubes, whereby the air in the room containing the radiator is heated by radiation and by convection currents, cones inserted in the bottom ends of the heating tubes to increase the velocity and turbulence of the air in its passage through said tubes, and a concave deflector arranged behind the heating tubes, and a deflector adjacent the upper ends of said tubes.

1,676,835. SIGN-SUPPORTING DEVICE. FRED A. OBERHEU, Detroit, Mich. Filed Nov. 8, 1924. Serial No. 748,654. 2 Claims. (Cl. 40—125.)

1. In combination, a poster or sign to be supported upon the inner side of a window pane, and a plurality of supporters each comprising a single thickness of thin sheet material spaced about and arranged within the periphery of the sign; the surfaces of said supporters next to the sign being stuck to the sign by an adhesive material, and each supporter comprising an attaching portion and a pointer portion extending therefrom toward the central portion of the sign; the exposed surfaces of the attaching portions of said supporters having adhesive coatings whereby they may be stuck to the window pane, to thereby support the sign, and the exposed surfaces of the pointer portions aforesaid having no coating of adhesive material upon them.

1,676,836. MACHINE FOR PRINTING OR EMBOSSING. SKIDMORE O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed May 20, 1927. Serial No. 193,038. 6 Claims. (Cl. 101—41.)

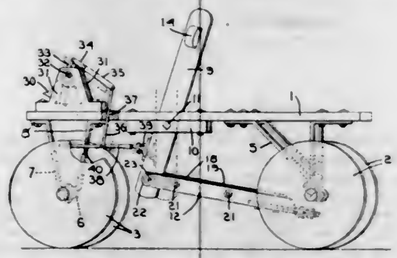


1. A machine of the character described having a vertically reciprocable printing member, a pivotally mounted work holder adapted to be turned on its pivot into and out of alinement with the printing member, a movable die having thereon the design to be printed and adapted to transfer the design to the printing surface when the die and the printing surface are brought into engagement with each other, means for moving the die into and out of alinement with the printing member and means for turning said work holder to move the work into and out of alinement with the printing member.

1,676,837. REFRIGERATING SYSTEM. FRANK W. SCHWINN, Chicago, Ill. Filed Nov. 16, 1925. Serial No. 69,344. 1 Claim. (Cl. 62—6.)

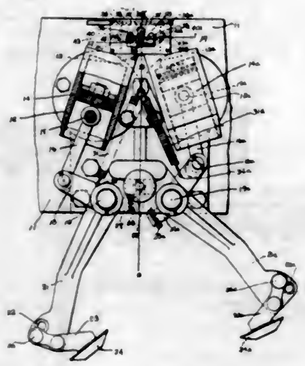
In a refrigerating system; a plurality of cooling compartments; a compressor; a condenser; a cooling coil in each compartment; connections between each cooling coil and the condenser; an expansion valve in connec-

tion with each cooling coil adapted to control the flow of refrigerant from the condenser to the cooling coil; thermostatically controlled means in connection with each expansion valve adapted to regulate the opening of said expansion valve in accordance with changes in temperature in the corresponding cooling compartment;



an electrical switch operated by each of said thermostatically controlled means adapted to be opened upon the expansion valve being closed and vice versa; a motor for driving the compressor; and electrical connections between said switch and the motor whereby said compressor will be stopped when all of said switches are open.

1,676,838. ACCELERATOR, METHOD OF VULCANIZING CAOUTCHOUC, AND PRODUCT THEREOF. LORIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 17, 1925. Serial No. 57,022. 9 Claims. (Cl. 18—53.)

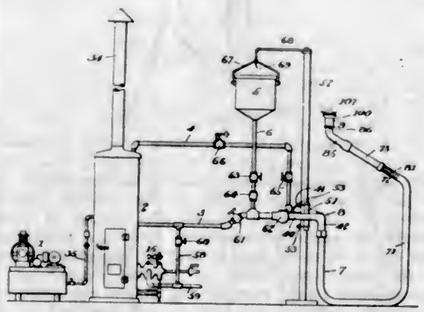


4. A method of vulcanizing rubber which comprises heating a vulcanizable rubber compound in the presence of the reaction product of a mixture of an unsaturated aldehyde, a saturated aldehyde and an amine.

1,676,839. TOY VEHICLE. JOHN SEPON, Chelsea, Mass. Filed May 27, 1927. Serial No. 194,675. 5 Claims. (Cl. 208—113.)

1. In a toy vehicle, the combination with a body, rear and front wheels on which the body is mounted, the rear wheels being driving wheels, a rear axle comprising two sections to which the driving wheels are rigidly secured, the inner ends of the sections being bent at right angles, a pin connecting said right angle portions, a lever pivoted to the body, a connecting rod pivotally connected to the lower end of the lever, said connecting rod being provided at its rear end with two plates each having a half round portion which embraces the pin, and a bearing sleeve interposed between the pin and the half round portions.

1,676,840. VALVE MECHANISM. JESS A. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 12, 1926. Serial No. 101,346. 9 Claims. (Cl. 154—10.)

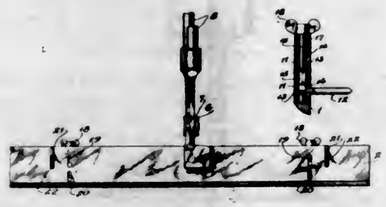


1. In a tire machine, a pair of stitcher arms, individual pneumatic means for operating the arms, individual control valves for said means, means for operating the valves independently or simultaneously comprising a triple acting valve actuating means adapted to actuate either valve independently or both valves simultaneously.

1,676,841. GOLF-BALL CENTER. PAUL S. SHOAFF, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 8, 1927. Serial No. 225,026. 5 Claims. (Cl. 18—50.)

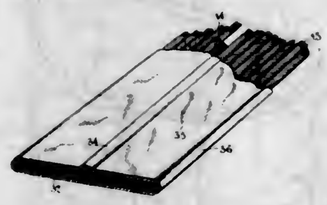
3. A method of manufacturing material for golf ball centers which comprises compounding balata resin with scrap vulcanized rubber, heating the compound until it is reduced to a gel-like consistency, incorporating a weighting material and sulfur into the gel, and vulcanizing the mixture obtained.

1,676,842. WASHING AND CLEANING APPARATUS. ALBERT A. SMALLHOUSE, Los Angeles, Calif., assignor of thirty-nine one-hundredths to Joseph Aebischer, Palmdale, Calif. Filed Feb. 2, 1926. Serial No. 85,514. 6 Claims. (Cl. 299—84.)



1. A cleaning system comprising a heater provided with a combustion chamber, a water pipe having a coil supported in said chamber, a compressed air supply pipe also having a coil supported in said chamber, a heating drum in the combustion zone connected with said air coil, means for separately introducing the heated compressed air from said drum, and water from said water heating coil to a point of discharge, and means for supporting a cleaning element under pressure in communication with the point of discharge for admixture with the heated air and water, for the purpose described.

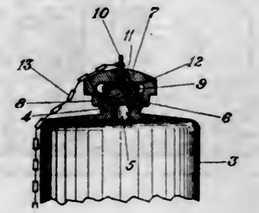
1,676,843. RUBBER STOP SIGN. ANDREW J. STEPHENS, Kansas City, Mo. Filed Jan. 12, 1928. Serial No. 246,206. 3 Claims. (Cl. 94—1.5.)



1. A sign including an inscription plate of flexible rubber, and a flexible rubber base in which the lower end of the plate is mounted, the base being more flexible than the plate, so that the base will yield when the plate bends, thereby to avoid a cracking of the plate at the upper edge of the base.

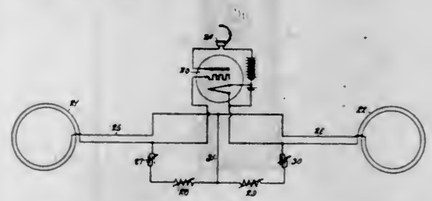
1,676,844. ROOFING TONGS. FRED N. STEVENS, Salem, Va. Filed Aug. 9, 1927. Serial No. 211,797. 7 Claims. (Cl. 113—56.)

1. In combination with tongs of the character described, pairs of correspondingly positioned gage pins mounted on one of the jaws thereof, means for operating each pair of pins whereby said pins may be selectively moved to positions at substantially right angles to the jaws, the remaining jaw having ways therein for receiving the free portions of the pins, when in operative positions, therethrough.



1,676,845. BELT AND METHOD OF MAKING THE SAME. AUSTIN A. TEISHER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 21, 1925. Serial No. 17,314. 8 Claims. (Cl. 154—4.)

1. A belt comprising a core of vulcanized rubber having right and left hand twisted cords embedded therein in their normal condition and enclosed in an envelope of rubberized fabric.

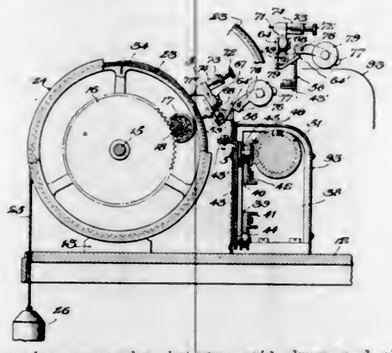


5. A method of making belts which comprises wrapping a strip of rubberized fabric on a collapsible mandrel, covering the strip with uncompressed rubberized cords of different twist, removing the assembly from the mandrel and vulcanizing the assembly.

1,676,846. CLOSURE FOR CONTAINERS. CHARLES S. WATSON, Toronto, Ontario, Canada. Filed Apr. 3, 1923. Serial No. 629,731. 8 Claims. (Cl. 221—60.)

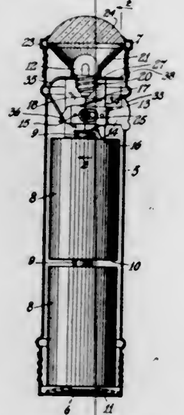
1. The combination with a container comprising a collapsible body portion and a rigid neck portion formed with an aperture and a valve seat, of a cap for the container adapted to be detachably secured to the neck, a closure valve for the aperture in the neck disposed between the cap and the seat, and a connection extending from the valve through an aperture in the cap and attached to the outside of the container adapted to secure the cap and the valve against loss from the container and to permit of free rotational movement between the valve and the cap.

1,676,847. METHOD AND APPARATUS FOR EXPLORING SUBTERRANEAN STRATA. THEODOR ZUSCHLAG, New York, N. Y., assignor to The Taumac Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 18, 1927. Serial No. 161,880. 3 Claims. (Cl. 175—182.)



1. The method of ascertaining the characteristics of an alternating magnetic field, which consists in receiving induced currents in two or three directions perpendicular to each other at one or two locations in said field, measuring the frequency of said currents, balancing said currents by means of variable impedance devices of known values, calculating the intensity quotients and phase angle differences for said directions by means of the data thus obtained and computing from these values the maximum and minimum field directions and maximum and minimum field intensity quotients and phase angle differences for the points of observation.

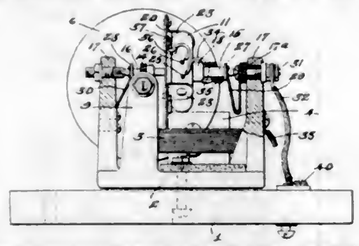
1,676,848. RECORDER. CARL H. AU, Washington, D. C., assignor, by direct and mesne assignments, to Bertha B. Au and Jennie K. Hoyt, Washington, D. C. Filed Jan. 19, 1925. Serial No. 3,440. 3 Claims. (Cl. 234—1.)



1. In a recorder for recording a variable force or movement, the combination of a shaft, a timing mecha-

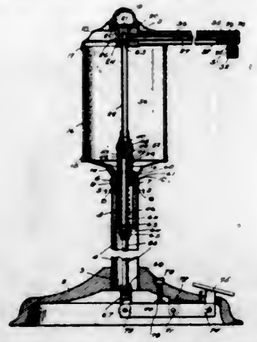
nism connected to and controlling the revolution of said shaft, a drum mounted to turn on said shaft, a pawl

and ratchet connection between said drum and shaft, and means for finely adjusting said drum around the shaft independently of said pawl and ratchet.



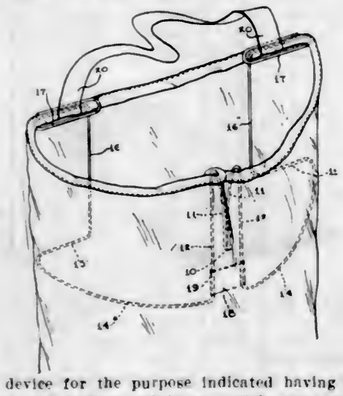
1,676,849. FLASH LIGHT. EDMUND R. BARANY, Brooklyn, N. Y., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 24, 1925. Serial No. 77,487. 22 Claims. (Cl. 240—10.5.)

18. A flashlight comprising a casing provided near its front end with a slot; a dry-cell in said casing; a reflector and lens removably connected with the front end of said casing; a lamp mounted in and having a terminal disposed behind the reflector; and a switch-unit insertable through the front end of the casing and disposed between said reflector and dry-cell, said switch-unit comprising a supporting member, a switch-lever mounted thereon and swinging in a plane parallel with the axis of said casing, and means actuated by said switch lever for completing and breaking the circuit between the lamp-terminal and cell-terminal, said switch-lever being provided with a thumb-piece located in said slot.



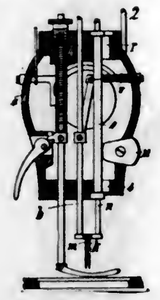
1,676,850. ELECTRIC FLASHER SWITCH MECHANISM. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Feb. 26, 1925. Serial No. 11,738. 2 Claims. (Cl. 200—92.)

1. An electric flasher comprising a rotatable switch member including an annular receptacle of insulation having a fluid conductor partly filling the same, means for rotating the switch member, a pair of terminals exposed in the receptacle, wires connected at like ends to the terminals respectively and at their other ends to



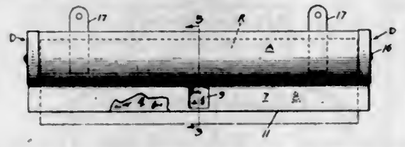
conductors rotatable with the switch members, the wires being rotatable with the switch member and brushes coacting with the conductors of the switch member.

1,676,851. LIQUID DISPENSER. JOHN W. BLOODHART, Dubuque, Iowa, assignor to Midland Chemical Laboratories, Inc., Dubuque, Iowa. Filed June 25, 1927. Serial No. 201,351. 15 Claims. (Cl. 221—94.)



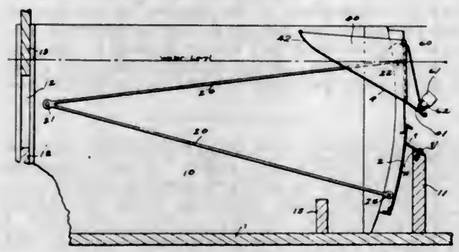
1. A liquid dispenser, comprising a pump, a stationary part, a part rotatable with relation thereto, and supported thereby, a discharge nozzle on the rotary part in communication with said pump and movable about the axis of rotation of the rotatable part, and a manually operated means on the stationary part for operating said pump.

1,676,852. SACK HOLDER. SOLOMON C. BRANUM, Oklahoma City, Okla., assignor of one-half to Joe E. Mason, Oklahoma City, Okla. Filed Oct. 5, 1926. Serial No. 139,680. 3 Claims. (Cl. 150—1.)



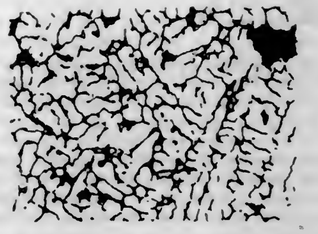
3. A device for the purpose indicated having a vertically arranged section defining a crotch, arms extending from said section and terminating in upstanding leg portions having horizontally arranged loops at their upper ends, the loops being arranged in a plane parallel with the plane of the arms and the latter being of arcuate form.

1,676,853. SEWING MACHINE WITH SEVERAL NEEDLES. WILHELM BRASE, Berlin, Germany, assignor of one-half to Clemens Graaff, Berlin, Germany. Filed Mar. 21, 1925, Serial No. 17,425, and in Germany Mar. 21, 1924. 5 Claims. (Cl. 112—167.)



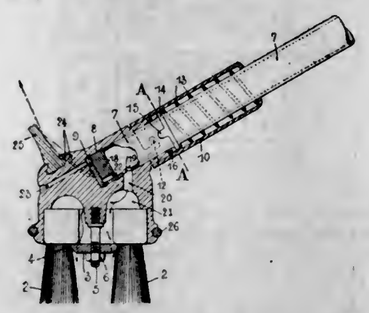
1. In a sewing machine the combination of two needles arranged one behind the other in the direction of sewing, with means to vary the distance between said needles, and a stitch regulating device by means of which the distance between said needles is regulated according to the feed of the work.

1,676,854. ROLL-MATERIAL HOLDER. EDWIN D. CASTERLINE, Oakland, Calif., assignor to Julia Elena Casterline, Oakland, Calif. Filed July 8, 1926. Serial No. 121,105. 3 Claims. (Cl. 242—55.5.)



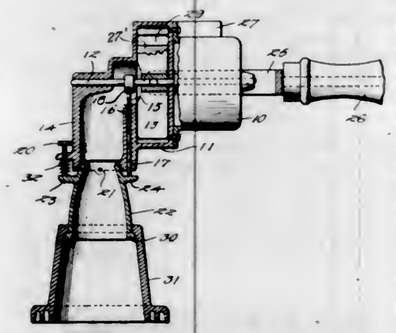
1. A wax-paper dispenser comprising a casing, adapted to receive a roll of wax paper, having a longitudinal opening therein, and a pair of resilient longitudinal lips radiating from said opening and tapering into clamping contact with each other along a sharp knife edge formed by their extremities, whereby a web of wax paper dispensed between said lips may be neatly severed by said lips.

1,676,855. MEASURING WEIR. CHESTER W. CHEATHAM, Seattle, Wash., assignor of one-half to J. N. Nissen, Seattle, Wash. Filed Oct. 6, 1926. Serial No. 139,813. 10 Claims. (Cl. 73—167.)



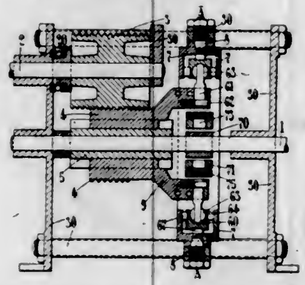
1. In a water measuring and controlling device in combination, a fixed weir board, a vertically movable weir board positioned at the upstream face of the fixed board for vertical movements, a current impact board fixed above and relative to the movable weir board, and radius rods fixed in their relation to said movable board and extending in an upstream direction, a fixed pivot for the upstream ends of said rods, the movable weir board having a segment-cylindrical downstream face concentric with the pivot axis of the radius rods and positioned closely adjacent to the upstream face of the fixed weir board.

1,676,856. ALLOY. ALFRED GEORGE COOPER GWYER and HENRY WILFRED LEWIS PHILLIPS, London, England, assignors to The British Aluminum Company, Limited, London, England. Original application filed July 18, 1925, Serial No. 44,535, and in Great Britain July 19, 1924. Divided and this application filed Aug. 26, 1926. Serial No. 131,742. 5 Claims. (Cl. 75—1.)



1. The method which consists in the addition to a molten alloy containing at least about 6% of copper and at least about 50% of aluminium of about 0.1 to 0.3% of an alkaline earth metal.

1,676,857. FOUNTAIN BRUSH. JULES JEAN CHÉRON, Paris, France. Filed Feb. 17, 1925, Serial No. 9,864, and in France Feb. 19, 1924. 5 Claims. (Cl. 15—128.)



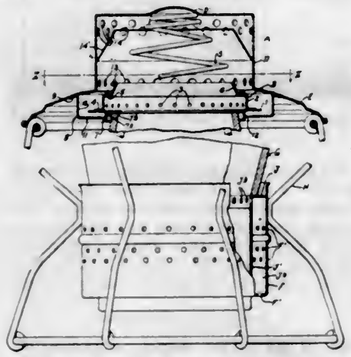
1. A fountain brush comprising in combination; a head carrying the bristles at its lower part and having therein a recess and water outlet conduits which open at one end into said recess, some of said conduits opening at their opposite end towards the bristles and the other conduits opening at the forward part of the head, a hollow water supply handle guided at one end in said recess and having a watertight fit therein, a plug for closing the end of the handle, outlet parts in said end of the handle and in the plug and adapted to respectively and alternatively register with said outlet conduits according to the position of the handle with respect to the head and means for assembling the handle with the head and whereby a relative displacement is permitted between the same.

1,676,858. VACUUM CLEANER. HERMAN G. FERBER and JOSEPH A. LUYBEN, Fort Wayne, Ind. Filed Sept. 25, 1926. Serial No. 137,788. 4 Claims. (Cl. 15—15.)

1. A device for treating the scalp comprising a casing having a motor and a fan therein, said fan being driven by the motor, a nozzle on the casing, a hollow rockable member having an end supported in the mouth of the nozzle, a scalp engaging implement on the outer end of the rockable member and movable therewith, means operable by the motor for rocking the member in one direction, means for limiting the rocking movement thereof in said direction, and means for rocking said member in the opposite direction.

1,676,859. VARIABLE-SPEED GEAR. WILLIAM JOHN GEE, London, England. Filed July 29, 1926, Serial No. 125,812, and in Great Britain Aug. 11, 1925. 1 Claim. (Cl. 74—14.)

A variable speed gear or disengaging coupling comprising rotatable driving and driven elements having intermeshing helical teeth, one element being formed in sections, means for sliding the sections of said one element along its axis relative to the other element, speed control means for causing a pre-determined extent of movement of the sections of one element along the axis thereof, comprising a rotating control ring adapted to be adjusted about a pivot passing diametrically through its centre, links pivotally connected to the sliding sections so as to oscillate in a plane at right angles to the axis of the gear and universal joints connecting the outer ends of the links to the rotating control ring, substantially as described.

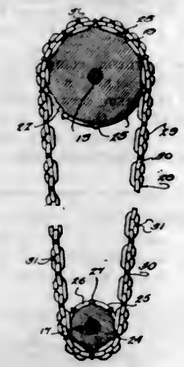


1,676,860. TURNING GUIDE FOR FISHING TOOLS. EDWIN L. GREEN, Cross Plains, Tex.; Cordelia A. Green, administratrix. Filed Dec. 28, 1925. Serial No. 77,952. 5 Claims. (Cl. 294—86.)

1. In a guide for fishing tools the combination of a body, and a lower depending spiral shaped hook of shell-like formation, having a lower end substantially tapered to a point, the upper edge of said hook from said point of the hook spiralling upwardly thru substantially 180° and the lower edge of said hook inclining downwardly from the upper end of said hook in spiral relation thru substantially 180° to a point of termination 180° away from the free lower end of said hook, the upper ends of

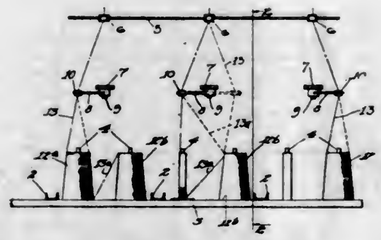
the upper and lower edges of said hook terminating at substantially opposed points, whereby to provide a substantially spiral shaped opening forming a spiral of substantially 180° throughout the length of the hook, the width of said opening to the inside of the hook being equivalent to the diameter of said hook.

1,676,861. LANTERN. ALEXANDER H. HANDLAN, St. Louis, Mo. Filed Oct. 12, 1925. Serial No. 61,966. 4 Claims. (Cl. 240—38.)



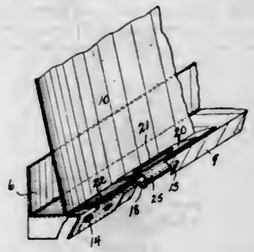
1. A lantern having a dome, a globe, a seat for the bottom face of said globe, and a spring-pressed globe holder, said globe holder including an annular portion arranged transversely of the lantern, and an annular housing secured to said dome and enclosing the marginal edge portion of said annular portion of said globe holder, said annular housing being provided with a wall which overlaps said annular portion of said globe holder.

1,676,862. PROCESS FOR THE PRODUCTION OF QUINOLINE-4-CARBOXYLIC ACIDS. ALFRED HÄUSSLER, Nieder-Ingelheim-on-the-Rhine, Germany, assignor to C. H. Boehringer Sohn, Chemische Fabrik, Nieder-Ingelheim-on-the-Rhine, Germany, a Firm. Filed Dec. 8, 1926, Serial No. 153,454, and in Germany Feb. 6, 1926. 5 Claims. (Cl. 260—39.)



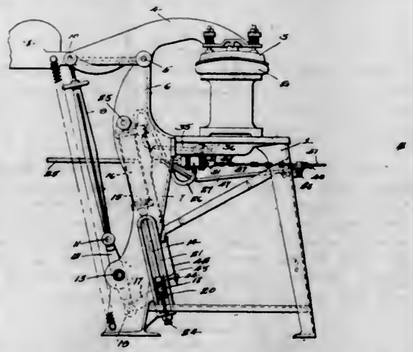
1. A process for the production of quinoline-4-carboxylic acids aryl-substituted in the second position, which consists in causing 1 molecule of pyroracemic acid to react, in the presence of a solvent, with more than 1.5 molecules of a condensation product from an aromatic amine and an aromatic aldehyde.

1,676,863. CHAIN CONSTRUCTION. RALPH S. KELSO, Rockford, Ill., assignor to Free Sewing Machine Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 3, 1925. Serial No. 73,066. 1 Claim. (Cl. 59—85.)



A drive chain comprising a plurality of links, each link comprising a single piece of wire bent to form a resulting link having curved ends, the ends of the material forming each link being arranged intermediate the ends of the link and terminating in substantially conical portions the apexes of which substantially coincide, said conical portions being substantially coaxial and having apex angles not exceeding 90°, each link of the chain being of such length that the adjacent ends of the links connected thereto are spaced a material distance apart.

1,676,864. ARRANGEMENT OF SPINDLES FOR CREELS. RAYMOND C. LONGVALL, Worcester, Mass., assignor to Warp Compressing Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1927. Serial No. 182,867. 3 Claims. (Cl. 242—131.)

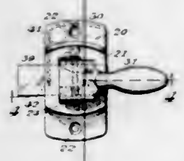


1. An improved arrangement of spindles for creels, comprising a pair of horizontally extending spindles supported in parallel relation, with yarn packages thereon, a stationary thread eye located between said spindles and in the same horizontal plane therewith, and a pivotally mounted thread guide located between the ends of said spindles and said thread eye, said thread guide being adapted to move under the influence of gravity into alinement with either of said spindles.

1,676,865. COVER BACK AND HINGE. GAETANO MANGIALETTI, Brooklyn, N. Y. Filed Oct. 15, 1926. Serial No. 141,851. 5 Claims. (Cl. 220—31.)

1. In a device of the class described comprising a cover back having a base and rear wall, means for positioning the cover back on the top and at the rear of a stationary tub or the like, said base having a front depending flange, portions of said flange being cut away, and a cover having an abutting flange pivotally connected to the depending flange adjacent the cut out portions whereby it may be swung outwardly and upwardly on the base.

1,676,866. ACTUATING MECHANISM FOR PRESSING MACHINES. ALFRED D. MAUAY, Ilion, N. Y., assignor, by mesne assignments, of one-third to Gaius A. Braun, Syracuse, N. Y. Filed Mar. 16, 1926. Serial No. 95,123. 3 Claims. (Cl. 68—9.)



1. In a pressing machine, the combination of a frame including a hollow rear leg, a buck carried by the frame, a press head movable toward and from the buck, a yoke lever pivoted between its ends to the frame and carrying the head at its front end, actuating means including a lever pivoted between its ends to the frame, a link pivoted at its upper end to the rear arm of the yoke lever and at its lower end to one arm of said lever and forming a toggle, a cylinder located in the hollow rear leg, a piston movable in the cylinder, the rear leg being formed with a guide and the piston rod having a cross-head movable along the guide, the guide extending in a general direction parallel to the toggle when the toggle is straightened and a link pivoted to said piston rod to the other arm of the lever.

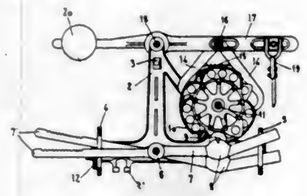
1,676,867. LATCH. RAYMOND G. MOORE and ARTHUR CLAUD-MANTLE, Bridgeport, Conn., assignors to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 17, 1926. Serial No. 116,529. 6 Claims. (Cl. 292—169.)

1. In a latch, a flanged casing having a pair of handle supports stamped and bent therefrom and providing an open portion between said supports, a handle supporting

pin extending transversely between said supports, said flange having opposed latch bolt receiving slots, a latch bolt slidably engaged in said slots, a spring within said casing adapted to normally project said bolt, a lever handle mounted between said supports upon said pin and including a top portion, side flange portions and a latch bolt actuating portion extended into the casing

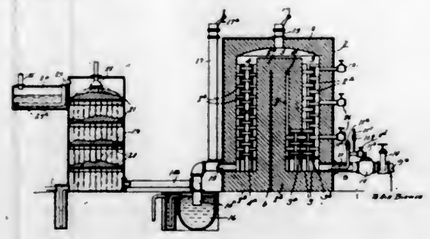
through said open portion, said side flange portions, adapted to normally abut the upper side of said casing at one side of said open portion, and a spring coiled about said pin and having an end engaged with the top portion of said handle and adapted to yieldably hold the same in its normal position independently of the latch bolt.

1,676,868. ARRANGEMENT FOR CLOSING BOXES. ALBERT CARL PETERSEN, Copenhagen, Denmark. Filed July 5, 1927, Serial No. 203,614, and in Denmark Aug. 30, 1926. 1 Claim. (Cl. 220—60.)



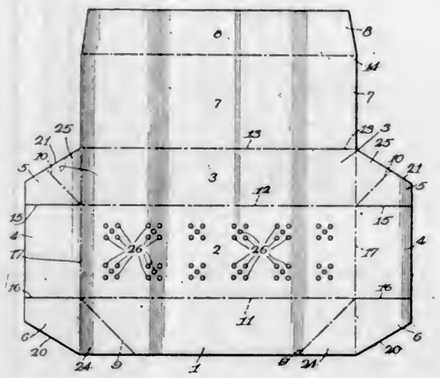
A box consisting of an open body provided on opposite sides below its open side with recesses arranged diametrically opposite to each other and a cover for said box comprising a body and downwardly extending flanges, ears on opposite flanges adapted to engage said recesses, the body of the cover being formed with an upwardly domed central portion whereby pressure on the domed part will release the ears from the recesses.

1,676,869. RESISTANCE UNIT AND RHEOSTAT. HENRY G. RICHTER, Roselle Park, N. J., assignor to Electrad, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 28, 1927. Serial No. 164,233. 4 Claims. (Cl. 201—56.)



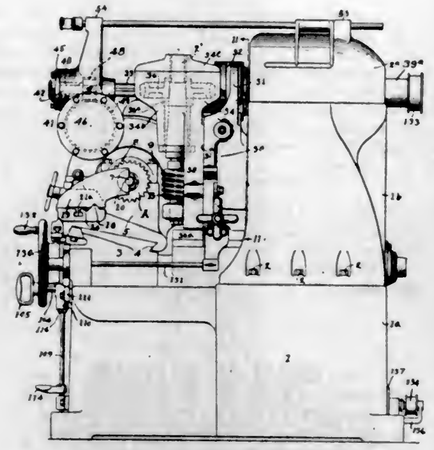
1. A resistor comprising a screw threaded insulated cylindrical member, a resistance member comprising a metallic core, an insulated envelope thereon, and a resistance wire spirally wound thereover, said resistance member being wound in the screw threads of said cylindrical member and terminating short of the ends of said member, conductive internally threaded cap members arranged to be secured over the ends of said cylindrical member for gripping the ends of said resistance wire and establishing electrical connection therewith.

1,676,870. SHEDDING MECHANISM. ANTONIO CALVET RIFÉ, Barcelona, Spain. Filed June 19, 1926, Serial No. 117,200, and in Spain Aug. 31, 1925. 5 Claims. (Cl. 139—78.)



1. A shedding mechanism comprising in combination with levers, operating cams, a movable arm, a pawl member carried by said arm, means rigidly mounted with said cams and engaged by the pawl member for rotating the cams, and means associated with said arm and cams for locking and freeing the latter with movement of the arm.

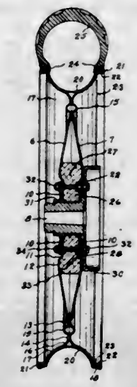
1,676,871. GASEOUS FUEL. JAMES REUBEN ROSE, Edgeworth, Pa., assignor to Carbo-Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 13, 1917. Serial No. 185,978. 2 Claims. (Cl. 48—199.)



1. A gas for cutting and welding with oxygen, containing not materially less than 80% of hydrogen, not materially less than 10% of methane, not materially less than 1½% of heavier gaseous hydrocarbons and not materially more than 5% of carbon monoxide.

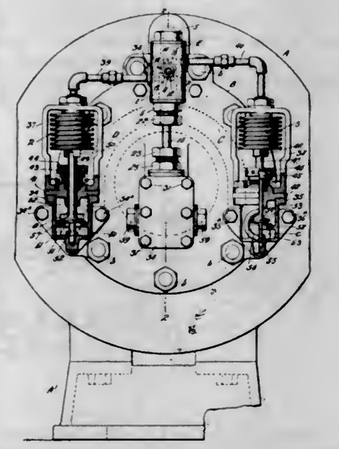
1,676,872. EGG CARTON. WILLIAM A. SCHURMANN, Chicago, Ill., assignor to W. A. Schurmann & Co., Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1925. Serial No. 26,589. 1 Claim. (Cl. 229—29.)

An egg carton formed from a blank of sheet of material having integral front and rear and bottom and end walls, and a filler in the carton to provide rectangular egg cells, said integral bottom of the carton having a center cushioning means for centrally engaging the lower end of each egg cell, and surrounding cushioning means with said center cushioning means in the center thereof, said surrounding means being in position to engage the lowest surface of the egg, if the lower end of the egg is displaced sidewise, said center and surrounding cushioning means being of the same height and disposed close together, with their tops all in the plane of the lower end of the egg, at the center of the bottom of each cell, to prevent the lower end of the egg from slipping down between any of said cushioning means, said cushioning means comprising a group of upwardly pressed dots, five in number, each outer dot being opposite one corner of the egg cell, whereby the group is rectangular, with the fifth dot in the center thereof, and with the tops of said dots all in said plane below the egg.



1,676,873. HOBBING MACHINE. CHARLES H. SCHURR, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 7, 1923. Serial No. 679,127. 17 Claims. (Cl. 90—4.)

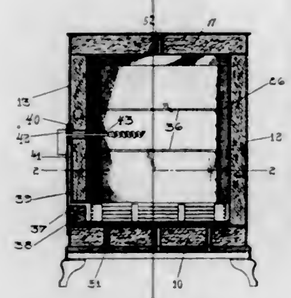
1. In a hobbing machine, a drive shaft connected to a source of power, a tool spindle, a driven gear on the tool spindle and a driving gear on the drive shaft meshing therewith to drive the tool spindle, a supplemental shaft, a driven gear on the supplemental shaft and a second driving gear on the drive shaft meshing therewith to drive the supplemental shaft, a work spindle, a driven gear on the work spindle and a driving gear on the supplemental shaft meshing therewith to drive the work spindle, the tool spindle being adjustable around the axis of the drive shaft in a plane parallel to the axis of the work spindle.



15. In a hobbing machine, a drive shaft, a tool spindle, a worm gear on the tool spindle and a worm on the drive shaft meshing therewith to drive the tool spindle, a supplemental shaft, a worm gear on the supplemental shaft and a second worm on the drive shaft meshing therewith to drive the supplemental shaft, a work spindle substantially parallel to the supplemental shaft and substantially at a right angle to the drive shaft, a gear on the work spindle and a gear on the supplemental shaft meshing therewith to drive the work spindle.

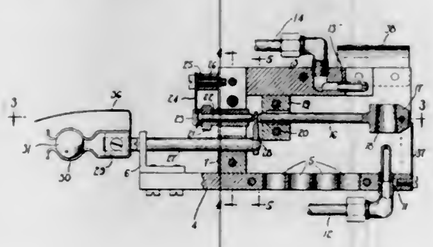
1,676,874. WHEEL. ALVIN H. SHOEMAKER, Seattle, Wash. Filed Sept. 13, 1926. Serial No. 135,073. 9 Claims. (Cl. 301—63.)

8. A disc wheel embodying two sheet metal discs having parallel portions near the hub and thence diverging at a short distance from the hub to afford a space of greater width therebetween, and spacing means arranged to fit between said parallel hub portions and having a widened circumferential part arranged to enter said space of greater width between said discs.



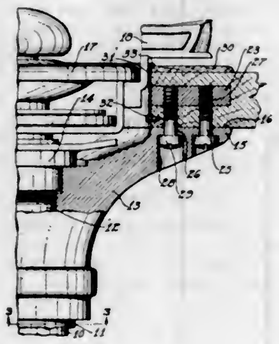
1,676,875. AUTOMATIC RECEIVER PUMP. HOWARD GRIFFITH SHORTT, Carthage, N. Y., assignor of one-half to Stebbins Engineering and Manufacturing Company, Watertown, N. Y., a Corporation of New York. Filed Dec. 17, 1927. Serial No. 240,661. 16 Claims. (Cl. 103—246.)

1. In an automatic receiver pump of the class described, the combination of a liquid receiver having an inlet and outlet, a control valve and its cylinder, a buoyant member in the receiver, means whereby the buoyant member positively and automatically actuates said control valve, an exhaust outlet for the control



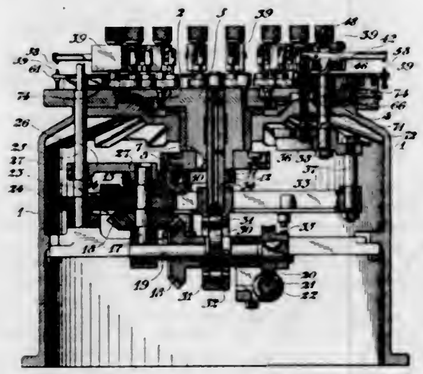
cylinder, a steam inlet valve for the receiver, a steam outlet valve for the receiver, both controlling a common passage into the receiver, connections between the control valve and the steam inlet and outlet valves, said connections including expansible members which expand to close the steam inlet and outlet valves and contract to allow said valves to open, so that when the control valve is actuated in one direction the steam inlet valve will be opened and the outlet valve closed, and when the control valve is actuated in the opposite direction the inlet valve will be closed and the outlet valve opened.

1,676,876. CONSTANT-TEMPERATURE OVEN. WINFIELD H. STANNARD, Matteson, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 30, 1925. Serial No. 72,208. 13 Claims. (Cl. 219—35.)



1. In a device of the class described, the combination of an oven enclosure, including a bottom, a top and walls, a heating element extending about the enclosure and located adjacent to the bottom, and the walls, and a flue communicating at its bottom with the heating element and extending upwardly along the walls and delivering adjacent to the top.

1,676,877. HYDROCARBON-BURNER SYSTEM. JOSEPH S. STRING, East Orange, N. J., assignor to J. S. & J. F. String Incorporated, Newark, N. J., a Corporation of Connecticut. Filed Aug. 11, 1926. Serial No. 128,536. 9 Claims. (Cl. 158—42.4.)

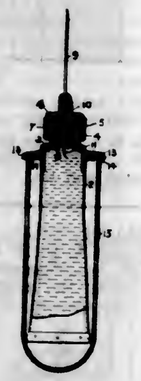


1. An igniting device for a hydrocarbon burner system comprising a pilot light, a thermal rod adapted to expand by the heat from said pilot light and having a free end and a pivoted end, said ends being so located that the heat of said pilot light will strike said rod intermediate thereof, a switch actuator frictionally engaging said thermal rod and a device constituting an electric switch associated with said switch actuator and adapted to function automatically upon disengagement of said switch actuator with said thermal rod.

1,676,878. MOTOR VEHICLE. MILTON TIBBETTS, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Original application filed Apr. 7, 1923, Serial No. 630,457. Divided and this application filed May 21, 1927. Serial No. 193,137. 6 Claims. (Cl. 74—33.)

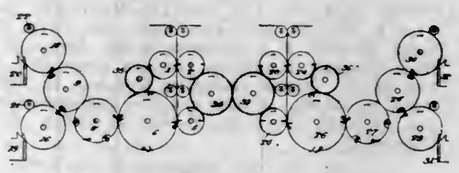
1. In a steering mechanism, in combination, a support having a face to receive a steering wheel, a steering wheel comprising a wooden hub having a metal insert therein, and attaching means extending from said support into said metal insert to secure the wheel to the support.

1,676,879. GAUGING MACHINE. PHILIP WALLIN, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 22, 1926. Serial No. 136,945. 13 Claims. (Cl. 209—88.)



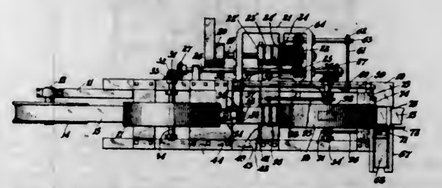
1. A roll gauging machine comprising a plurality of gauging devices, an indexing mechanism for supporting conical rolls standing on their small ends and carrying said rolls into alinement with portions of said gauging devices, separate socket members therefor for receiving and supporting said rolls when in alinement with said gauging devices and means for moving said gauging devices toward said rolls to gauge the same.

1,676,880. MOP. WILLIAM D. WHITAKER, Elkins Park, Pa. Filed June 21, 1926. Serial No. 117,290. 4 Claims. (Cl. 15—229.)



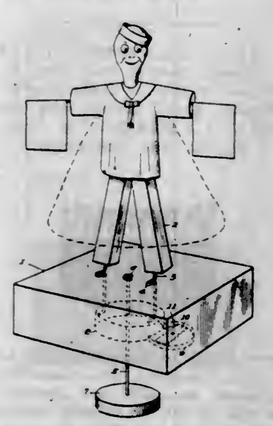
1. A mop comprising a pad provided with an opening, a plurality of strands, a band secured centrally about said strands, said strands and band being folded and extended through the opening in the pad, means securing said strands and band to the pad adjacent said opening and means securing the strands to a face of the pad in such a manner that the end portion of the strand will extend beyond the confines of the pad in all directions in the general plane of the pad.

1,676,881. HYPODERMIC SYRINGE. WENDELL P. ANTHONY, Ridley Park, Pa., assignor to The Mynol Chemical Company, a Corporation of Delaware. Filed Aug. 19, 1924. Serial No. 732,898. 4 Claims. (Cl. 128—216.)



1. A hypodermic syringe, comprising a capsule of soft collapsible material for containing the fluid in a hermetically sealed condition said capsule provided on its end with a thin perforable diaphragm, combined with a cap arranged to be detachably secured to the end of the capsule over the perforable diaphragm and provided with an outwardly projecting needle and an inwardly projecting needle whose canals are in continuous communication, and wherein further, the length of the inwardly projecting needle is sufficient to extend through the perforable diaphragm into the fluid containing space of the capsule when the cap is secured in operable position upon the capsule, and wherein the capsule is provided with a head portion of greater thickness to embody a more rigid construction than the collapsible body part and said increased thickness shaped on diametrically opposite sides to provide shoulder portions to receive the thrust of the fingers when forcing the needle into the flesh of the patient.

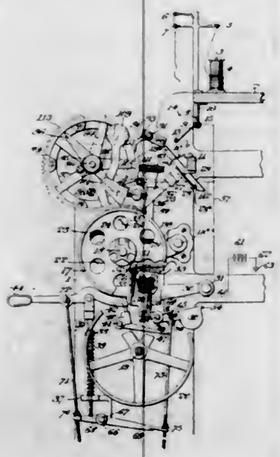
1,676,882. COLLECTING, FOLDING, AND DELIVERING MECHANISM FOR PRINTING PRESSES. HOWARD M. BARBER, Pawcatuck, Conn., assignor to C. B. Cottrell & Sons Company, Westerly, R. I., a Corporation of Delaware. Filed May 7, 1927. Serial No. 189,551. 10 Claims. (Cl. 270—47.)



1. A mechanism arranged to collect, fold and deliver signatures of 8s and multiples of 8s, comprising a four-way collecting cylinder and two coacting folding cylinders, the first folding cylinder being arranged to take the sheets from the collecting cylinder and fold them off to the second folding cylinder.

1,676,883. MACHINE FOR CUTTING OFF AND PREPARING STOCK STRIPS. THOMAS A. BEANEY, Poughkeepsie, N. Y., assignor to Beaney Rubber Company Inc., New York, N. Y., a Corporation of New York. Filed July 2, 1924. Serial No. 723,612. 19 Claims. (Cl. 164—12.)

7. In a machine of the kind described, a stock feed consisting of spaced feed wheels, an intermittent driving gear for the wheels, a gear shift to determine the length of the feed, a lock for the feed wheels, and means for simultaneously adjusting the lock and the gear shift.

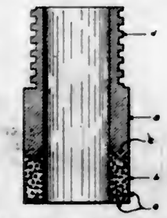


1,676,884. TOY. KATHRYNE IVY BELDEN, Peoria, Ill. Filed Apr. 5, 1923, Serial No. 630,065. Renewed Apr. 23, 1928. 2 Claims. (Cl. 46—40.)

1. In a toy the combination of a figure, a buoyant base for the figure and having a bore extending upwardly therethrough, a rod mounted for vertical movement in

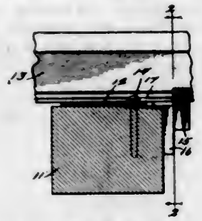
said bore, a counter-weight carried by the lower end of said rod, means for limiting the downward movement of said rod, and a counterbore in the under surface of said base wherein the counter-weight is adapted to enter.

1,676,885. WINDING AND REELING MACHINE. EDWARD E. BRADLEY, Stonington, Conn., and IRVING R. ROWE, Westerly, R. I., assignors to The Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Original application filed Aug. 21, 1925. Serial No. 51,604. Divided and this application filed Jan. 15, 1926. Serial No. 81,435. 20 Claims. (Cl. 192—142.)



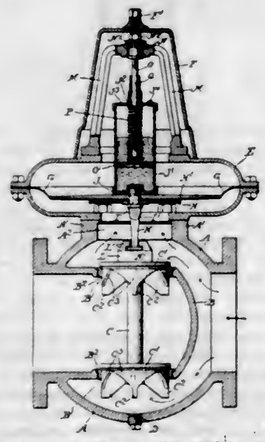
1. In combination, a main driving pulley, a reel, its driving pulley arranged to be moved into and out of coaction with said main driving pulley, a brake arranged to engage said reel pulley for moving it away from the driving pulley, a stop motion mechanism for controlling the movement of said brake, an electrical circuit coacting with said stop motion mechanism, a registering device driven from the main driving pulley through the reel pulley, and a member arranged to be engaged by said registering device for closing said circuit to actuate the stop motion mechanism and brake.

1,676,886. ARTIFICIAL-HORSEHAIR-UPHOLSTERY FABRIC. ABRAM BRANDT, New York, N. Y., assignor to Jos. Brandt & Bro., a Copartnership composed of Joseph Brandt, Louis Brandt, and Abram Brandt, New York, N. Y. Filed Nov. 24, 1926. Serial No. 150,531. 2 Claims. (Cl. 139—420.)



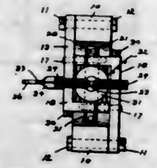
1. As a new article of manufacture, an artificial horsehair fabric for upholstery use comprising large warp threads arranged in pairs and passing substantially straight through the fabric and weft threads of pyroxylin material arranged over and under the same pair of warp threads whereby the warp threads are buried and concealed in the fabric and solidly packed to produce a close meshed fabric.

1,676,887. CORE-DRILL BIT. JOHN R. CHAMBERLIN, Bronxville, N. Y. Filed July 14, 1922. Serial No. 574,998. 2 Claims. (Cl. 255—72.)



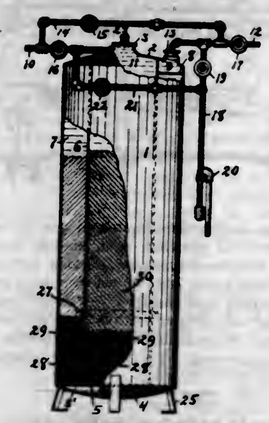
1. A rotary core drill bit comprising a metal tube and an end tube of cutting crystals bound together by a vitreous binder, said end tube being self-sustaining, and said metal tube having one end in contact with one end of said self-sustaining end tube of cutting crystals and binder with the metal thereof extending into interstices in said end tube whereby substantially all of said end tube is free of metal.

1,676,888. BEARING PLATE FOR RAIL ANCHORS. BYRON M. CHENEY, Chicago, Ill. Filed Sept. 3, 1927. Serial No. 217,432. 10 Claims. (Cl. 238—299.)



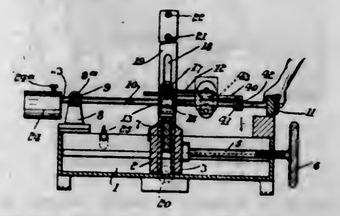
1. The combination with a railway tie, a tie plate, a rail supported by said tie plate, and a rail anchor attached to said rail, of a bearing plate formed separately from said tie plate and rail anchor and interposed between said rail anchor and tie.

1,676,889. GAS-RELIEF VALVE. GEORGE C. DAVIS, Chicago, Ill., assignor to G. M. Davis Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1923. Serial No. 631,283. 8 Claims. (Cl. 137—53.)



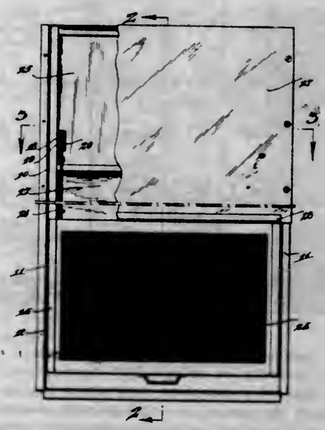
1. In an automatically opening valve, a valve casing, a valve element therein, means for opening and closing said valve element in response to pressure fluctuation within said casing, said means including a diaphragm adapted to be raised by the pressure within the valve casing and to carry the valve element with it, there being mounted to rise and fall with the diaphragm a dash pot, and in combination with said dash pot a plunger supported from the valve casing, carrying within the dash pot a resisting plate adapted yieldingly to resist the movement of the valve element, and a spring, said spring within said dashpot adapted at one end to bear against said resisting plate and at the other against the interior of said dash pot, said spring adapted to support a portion of the weight of the valve element.

1,676,890. SPEAKER UNIT. OTTO S. DRAKE, Newburgh, N. Y. Filed July 18, 1927. Serial No. 206,472. 5 Claims. (Cl. 175—339.)



1. In a device of the class described, a magnet, a pair of permanent pole pieces carried by said magnet, a pair of coil spacers having one end rigidly attached to one of said permanent pole pieces and the other end adjustably secured to the other permanent pole piece, said coil spacers formed with alined bearings, an armature mounting adjustably mounted therein and means for locking said adjustment, a pair of adjustable pole pieces mounted at right angles to said permanent pole pieces and adapted to be held between said permanent pole pieces and said coil spacers with their ends forming an air gap with said armature, and means for transmitting movement from said armature.

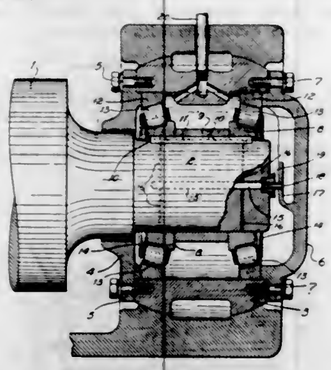
1,676,891. APPARATUS FOR FILTERING AND SOFTENING WATER. RALPH C. DUNKELBERG, Fort Wayne, Ind. Filed Nov. 11, 1927. Serial No. 232,563. 11 Claims. (Cl. 210—24.)



1. In apparatus of the class described, a pair of shells concentrically disposed, there being an annular space therebetween; a head closing the upper ends of both shells having a central closed aperture; a head closing the lower end of the outer shell; a perforated plate in the lower end of the outer shell having supporting relation with the inner shell; gravel beds within the lower portions of said shells sustained by said plate; a filter bed within the inner shell overlying the gravel bed therein; a water softening mineral-body within the annular space between said shells overlying the gravel bed therein; a perforated annular partition extending between said shells spaced from the uppermost head; a valve controlled water supply pipe having connection through the uppermost head with the innermost shell; a discharge pipe having connection through the uppermost head with the space between said shells; a valve controlled waste pipe in connection with the discharge pipe; a valve controlled by-pass connection between said supply and discharge pipes; and a valve controlled cross-pipe connection, one end of which is connected with said waste pipe and the other end of which is connected with said supply pipe at a point between the valve thereof and its connection with said head.

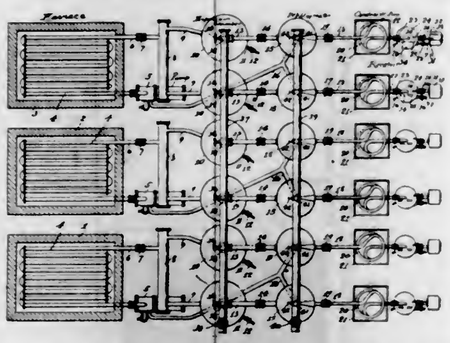
1,676,892. MACHINE FOR FINISHING BOOK COVERS BY LINING, LETTERING, OR ORNAMENTING. HUGH DUNN, Falkirk, Scotland. Filed June 23, 1926. Serial No. 117,980, and in Great Britain Mar. 13, 1926. 15 Claims. (Cl. 41—7.)

1. A machine for the purpose specified, comprising, in combination, means for holding the book, means for lining, lettering and ornamenting the book, means for applying metallic leaf directly to the book and reciprocable mounting means for said lining, lettering and ornamenting means and said metallic leaf applying means whereby they can be moved over the back of a book, the aforesaid means co-operating to allow the metallic leaf to be laid on the back of the book and subsequently impressed upon the back of the book in one operation.



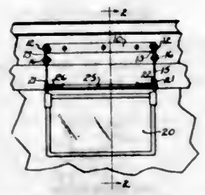
1,676,893. FIREPLACE ATTACHMENT. LOUIS F. ETSELE, Philadelphia, Pa. Filed June 28, 1927. Serial No. 202,028. 5 Claims. (Cl. 126—135.)

1. An attachment for fire places including a frame, fixed guideways in the upper part of the frame, removable guideways in the lower part of the frame and align-



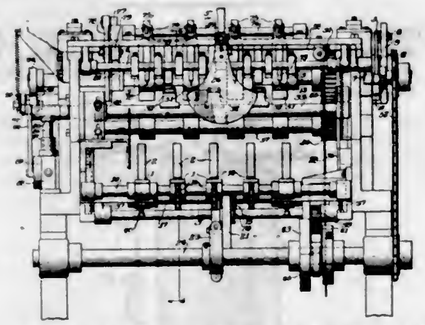
ing with the fixed guideways, a screen and a blower slidable in the guideways, a pulley mounted between the fixed guideways at either side of the frame, a flexible support passing over each pulley and connected to the screen and to the blower, and means for removing the screen and blower when the attachment is installed in a fire place.

1,676,894. SHAFT BEARING. PARDEE H. FRANK, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 2, 1927. Serial No. 171,960. 6 Claims. (Cl. 308—207.)



1. A shaft, a housing, a roller bearing interposed therebetween, said roller bearing including an inner bearing member loosely mounted on said shaft so as to be slidable thereon and rotatable therewith, and means for supplying lubricant to the bore of said inner bearing member, to prevent said inner bearing member from binding on said shaft, said means being independent of the bearing lubricating means.

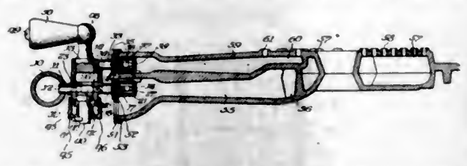
1,676,895. PROCESS AND APPARATUS FOR CRACKING PETROLEUM. LEE J. GARY, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 14, 1921. Serial No. 452,214. Renewed Feb. 20, 1928. 2 Claims. (Cl. 196—48.)



1. An apparatus for cracking hydrocarbon oil, comprising a plurality of independent heating coils, a plurality of expansion chambers, into which heated oil from said coils is discharged, a dephlegmator associated with each of said enlarged expansion chambers, pressure reducing means interposed between each enlarged expansion chamber and its associate dephlegmator, a common header in communication with the vapor space of each of said expansion chambers, a second header in communication with each of said dephlegmators, whereby a uniform pressure can be maintained in said dephlegmators, lower than a uniform superatmospheric pressure maintained in said enlarged expansion chambers, and means connected to said dephlegmators for condensing and collecting vapors issuing therefrom.

1,676,896. GLARE SHIELD. PHILIP J. GROENENSTEIN, Cleveland, Ohio. Filed Mar. 11, 1926. Serial No. 93,854. 4 Claims. (Cl. 296—97.)

4. In combination, a glare shield support, a visor, a pair of links connecting the visor and support, each of said links having slots therein extending at right angles to each other, means operating in said slots for enabling the visor to be moved in horizontal and vertical planes with reference to the support, and other means for connecting the visor to the links for permitting the visor to be swung about an axis with reference to the support.

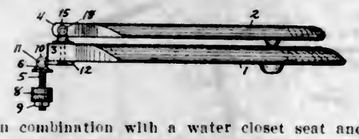


1,676,897. PNEUMATIC FEED MECHANISM. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 22, 1924. Serial No. 757,340. 13 Claims. (Cl. 271—28.)

1. Feeding mechanism in which the articles are arranged in vertical position, said feeding mechanism having feeding devices comprising suckers for engaging and pulling out the upper edge of the foremost article, means for reciprocating said suckers vertically, and for swinging the same outwardly when moved downwardly, a rotary segment cooperating with the suckers and a gripping roll cooperating with said rotary segment.

1,676,898. GAS-RANGE BURNER. PHILIP S. HARPER, Chicago, Ill. Filed Aug. 24, 1927. Serial No. 215,017. 3 Claims. (Cl. 158—104.)

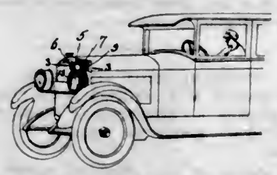
3. A double gas range burner with a gas cock having a single plug and two gas nozzles, each of said gas nozzles leading to a burner section with a plurality of burner ports therein, said plug having two passages therethrough with connecting passages respectively each leading to one of said gas nozzles, said plug having an equalizing passage therein connecting the two said passages through said plug, the two passages through said plug arranged to close on rotation of said plug one before the other on the side leading to said gas nozzles, indicating means showing when one of said passages is closed, said passages arranged to close on rotation of said plug one before the other on the side of gas inflow



to said plug, said body having a large passage leading to the opening on the side of gas inflow of one of said two passages in said plug, and said parts having a separate smaller passage with connecting passages from the point of gas supply through the opening of the other of the two said passages through said plug on the side of gas inflow.

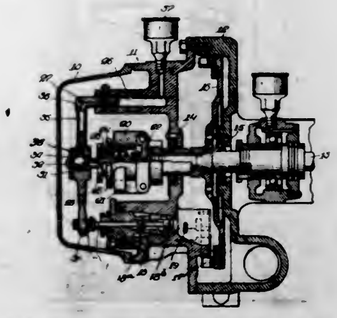
1,676,899. EDIBLE PRODUCT AND METHOD OF PRODUCING SAME. HATTIE L. HEFT, MAY B. VAN ARSDALE, and DOROTHY E. SHANK, New York, N. Y., assignors to Teachers College, a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,504. 14 Claims. (Cl. 99—11.)

1. The method of producing edible food products from mixtures comprising nonacidosis producing odd-carbon fatty acids, which method comprises mixing the said odd-carbon fatty acids with a farinaceous material and baking the mixture.



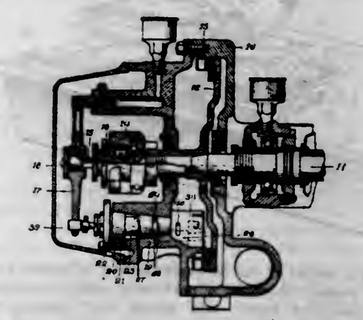
8. An edible article of manufacture comprising a heat treated farinaceous product containing non-acidosis producing odd-carbon fatty acids.

1,676,900. HINGE FOR WATER-CLOSET SEATS AND COVERS. WILLIAM J. HESS, Fort Wayne, Ind., assignor to Van Arnam Manufacturing Company, a Corporation of Indiana. Filed Nov. 13, 1926. Serial No. 148,178. 4 Claims. (Cl. 4—236.)



1. In combination with a water closet seat and cover therefor, a pair of hinge posts; a pair of wings hinged respectively in connection with said posts and extending beneath said seat; superimposed posts on said seat pivotally supporting said cover; and a screw connecting each of said wings and the corresponding superimposed post through said seat, there being a stud on each wing projecting into said seat to prevent displacement of said wing.

1,676,901. IMAGE REFLECTOR FOR VEHICLES. WALTER HUELLER, West New York, N. J. Filed Sept. 10, 1926. Serial No. 134,603. 5 Claims. (Cl. 88—1.)

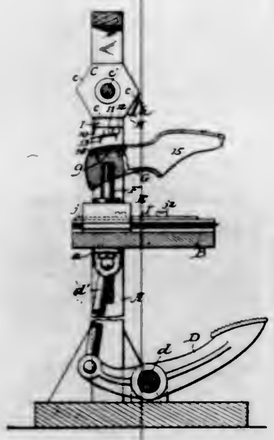


3. A device for a road vehicle to indicate the approach of a vehicle from either side, said device comprising a casing, lenses attached to said casing with their axes extending transversely of the road vehicle, mirrors in said casing to reflect images received by the lenses towards the driver of the road vehicle, and lenses for magnifying said images for the benefit of the driver of the road vehicle.

1,676,902. GOVERNOR. LEE B. JONES and EDWARD H. WERZNER, Evansville, Ind., assignors to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Aug. 5, 1920, Serial No. 401,537. Renewed Dec. 5, 1927. 14 Claims. (Cl. 264—15.)

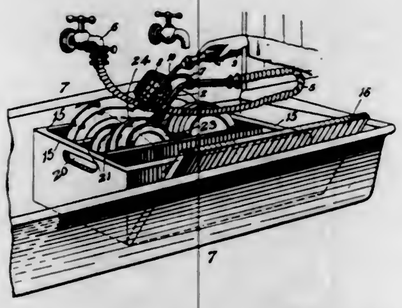
1. In a governing mechanism, a rotary shaft, pivoted bell cranks associated therewith, one arm of which is responsive to centrifugal force and the other arm of which is moved thereby substantially parallel to said shaft, a pivoted valve-actuating lever adapted to be moved through said last named arms, said lever having a ball socket formed therein and having a removable wear plate at one side of said socket, a freely movable ball loose within said socket and capable of turning to present all parts of its surface to said plate, and a valve associated with said lever.

1,676,903. VALVE. LEE B. JONES and EDWARD H. WERZNER, Evansville, Ind., assignors to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Aug. 5, 1920. Serial No. 401,538. 20 Claims. (Cl. 137—140.)



1. In a turbine, a fluid supply valve, means for normally moving said valve in accordance with the speed of said turbine, and means which is dependent entirely on the fluid pressure in said turbine for closing said valve upon the failure of said first means.

1,676,904. HEEL-ATTACHING MECHANISM. JOHN A. KELLY, Brooklyn, N. Y. Filed July 29, 1925. Serial No. 46,710. 1 Claim. (Cl. 12—17.)



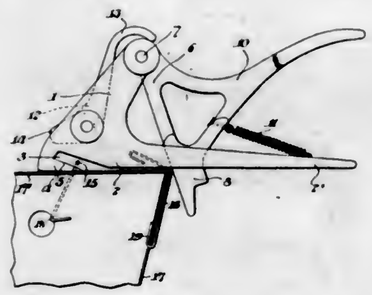
In a heel attaching mechanism, the combination with a last carrier, and means for imparting vertical reciprocating movement thereto, of a work head mounted for

rotative movement at will and positioned in co-operative relation to the last carrier, a die positioned on said work head and operable to countersink a recess in a heel-seat

of an upper adapted to be mounted on the last carrier, a plurality of pins protruding from the face of said die and operating concurrently therewith for puncturing the heel seat, and a heel holder mounted on the work head.

1,676,905. COMBINED DISHWASHER AND SOAP HOLDER. FRANCIS M. KING, Sr., Philadelphia, Pa. Filed June 6, 1927. Serial No. 196,773. 4 Claims. (Cl. 141—9.)

1. In a device of the character stated, a nozzle, a water supply conduit therefor, a perforated soap container pivotally mounted above said nozzle and adapted to be turned towards or away from said nozzle, and a handle for manipulating said nozzle and container.

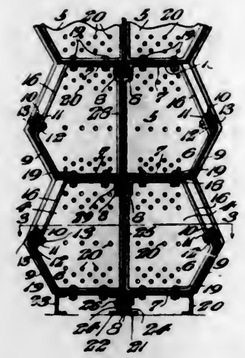


1,676,906. SOUNDING DEVICE FOR DOLLS AND OTHER TOYS. ALEXANDER KONOFF, Brooklyn, N. Y., assignor to Voices Incorporated, Wilmington, Del., a Corporation of Delaware. Filed June 22, 1922. Serial No. 570,209. 10 Claims. (Cl. 46—46.)

1. A sounding device of the character described comprising an exterior box or casing, a stationary shaft mounted therein having near one end a side recess, an air-bag or bellows within said box or casing and secured at one end thereto, a piston to which the other end of said bag or bellows is secured and which is adapted by its weight, in one position of the device, to distend said bag or bellows and, in another position of the device, to collapse said bag or bellows for forcing the air therefrom and a reed carried by said piston, said piston having a sleeve

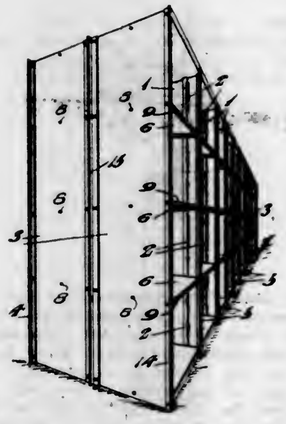
portion to guide on said shaft and a sound-box into which said reed leads and which has in its outer end an opening through which said shaft extends, said opening being substantially closed by the shaft except when passing over said recess and then being open to permit the flow of air therethrough and the sounding of the reed.

1,676,907. TOOL FOR MANIPULATING FASTENERS FOR CONTAINER CLOSURES. MATHIAS R. KONDOLF, Cynwyd, Pa., assignor to Boxboard Products Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 26, 1924. Serial No. 688,739. 7 Claims. (Cl. 140—93.)



1. A tool comprising an extended base for engaging a package surface and projecting beyond the edge thereof, a member rigidly connected with said base and projecting outwardly therefrom, a lever pivotally connected with said member adjacent to the top thereof and projecting toward said base and beyond the bottom thereof, and an arm projecting transversely from said lever and forming a handle complementary to the projecting end of said base, said base and lever being provided with fastener and keeper engaging means.

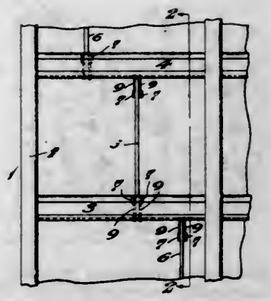
1,676,908. CONSTRUCTION IN BINS. ALBERT H. LEVENE, Newark, N. J., assignor to De Luxe Metal Furniture Company, a Corporation of Pennsylvania. Filed July 24, 1926. Serial No. 124,645. 8 Claims. (Cl. 312—124.)



1. In a device of the character stated, a bin constructed of a series of metallic shelves, each shelf having a base and a reinforced outwardly inclined front, terminating in an inwardly inclined edge, movable transverse

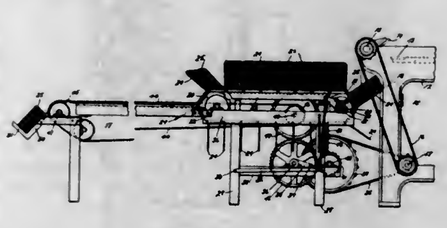
partitions for said shelves, each having a base and front edges outwardly converged, the lower front edges of said partitions conforming to the inclination of the front of

said shelves, and means passing through said inclined edge and said partitions for detachably securing the latter at suitable intervals along the length of said shelves.



1,676,909. SHELVING. ALBERT H. LEVENE, Newark, N. J., assignor to De Luxe Metal Furniture Company, a Corporation of Pennsylvania. Filed Aug. 12, 1926. Serial No. 128,802. 5 Claims. (Cl. 211—135.)

5. In a structure of the character stated, metallic vertical partitions having stamped therefrom vertically disposed hollow continuous ribs, horizontal shelves having their flat ends abutting against said vertical partitions and having depending side flanges, and means independent of said ribs passing through said flanges and said vertical partitions to secure said horizontal shelves in place.

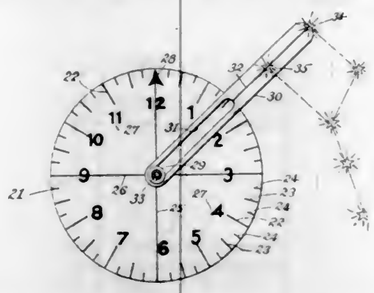


1,676,910. MOVABLE SHELF DIVIDER. ALBERT H. LEVENE, Newark, N. J., assignor to De Luxe Metal Furniture Company, a Corporation of Pennsylvania. Filed Oct. 23, 1926. Serial No. 143,545. 4 Claims. (Cl. 211—135.)

4. In a shelf construction of the character stated, horizontal shelf members having apertures therein, vertical movable dividers adapted to coact with said shelf members to divide a given shelf into any desired number of compartments, said dividers being provided with projecting apertured lugs, and sliding keys adapted to engage the apertures in said shelf members and in said

lugs, detachably to secure said dividers in position with respect to said shelf members, each of said sliding keys comprising a pair of opposed, staggered tongue portions and two opposed staggered offset edge portions.

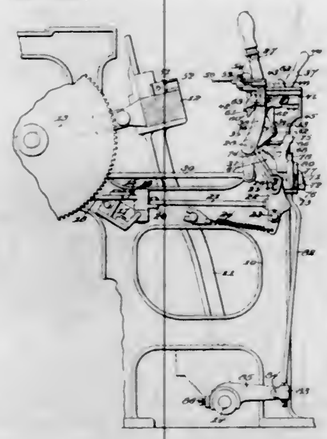
1,676,911. SHINGLE-GROUPING MACHINE. CHARLES J. MCDAVITT, Chicago, Ill., assignor to The Lehon Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 689,124. 10 Claims. (Cl. 198—35.)



2. In a shingle machine, a source of shingles delivered successively, a rack disposed to receive shingles from the source and including oppositely inclined members whereby the shingles are caused to accumulate with a corresponding edge of each shingle against one of the inclined members, a collecting device including fingers adapted to move transversely to the last mentioned inclined member, and means for intermittently driving the collecting device.

5. In a shingle machine, means for delivering shingles successively and means for grouping the shingles including oppositely inclined members forming a trough-like rack opening upwardly whereby the shingles accumulate in substantially parallel relation, each leaning against the shingle beneath, a collecting device including the fingers moving transversely to the rack to lift the shingles therefrom in groups and means for driving the collecting device intermittently with a quick start followed by gradual deceleration.

1,676,912. DEVICE FOR CALCULATING TIME. FREDERICK C. MEACHAM, Garden City, N. Y. Filed Nov. 13, 1925. Serial No. 68,815. 3 Claims. (Cl. 35—3.)



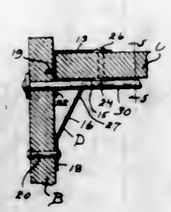
1. A stellar time indicator comprising a disk having a central opening and a marginal scale, a longitudinal-

ly slotted arm adapted to be positioned to lie wholly within the margin of said disk, means associated with said central opening having an opening in alignment

therewith, said slotted arm being rotatably and slidably carried by said means and having a line thereon which, if projected, would intersect the center of said disk.

1,676,913. FEELER LOOM. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 30, 1927. Serial No. 187,817. 15 Claims. (Cl. 139—229.)

1. A feeler loom having, in combination, a lay, a shuttle, a feeler mounted to enter the shuttle and detect the condition of the filling, a trip lever connected with the filling feeler, a shipper lever for starting and stopping the application of power to the loom, a brake lever for applying a braking force to the loom, connections between the shipper lever and the brake lever having provision for throwing off the brake when the shipper lever is moved to starting position, and for throwing off the shipper lever when the brake is applied, and delay-action means under the control of said trip lever for applying the brake and shifting the shipper to disconnect the power.

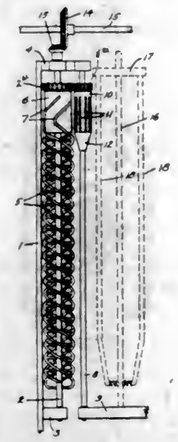


1,676,914. COIN-SELECTING MECHANISM. CHARLES J. PAULSON, Brooklyn, N. Y., assignor of one-third to Matthew V. O'Malley, Brooklyn, N. Y. Filed Feb. 4, 1925, Serial No. 6,685. Renewed May 19, 1928. 7 Claims. (Cl. 194—97.)

1. The combination with a coin box having a receiving slot, of a tiltable inclined guide displaceable by an entering coin, a shield hung upon said guide, said shield and guide forming a passage-way which directs true coins to a predetermined exit, lodgement means in said

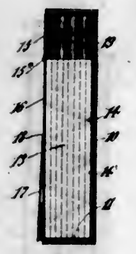
passageway, for spurious coins, and means for separating the shield from the guide in the tilting action of the latter to permit ejection of a lodged spurious coin.

1,676,915. LADDER. RICHARD F. SCHULZKE, Portland, Oreg., assignor to Zoss Ladder Works, Portland, Oreg., a Corporation of Oregon. Filed Oct. 11, 1926. Serial No. 140,945. 1 Claim. (Cl. 228—58.)



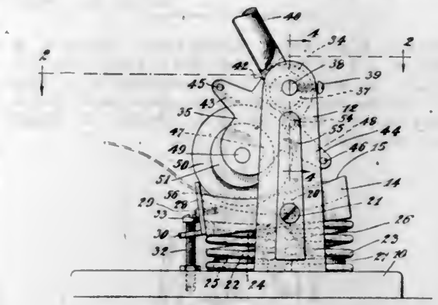
In a step ladder comprising uprights and treads extending between the uprights, means for securing the ends of the treads to the uprights, comprising bracket members each embodying an end plate having ears formed at the ends thereof for attachment to the front and rear edges of an upright, a rest plate extending inwardly from the lower edge of the end plate and having an apertured tongue, a brace plate depending at an acute angle from the inner end of the rest plate and having a foot portion at its lower end for attachment to the upright, a tie plate extending inwardly from the upper edge of the end plate and having an aperture for vertical alignment with the aperture in said tongue, and a fastening element passing through the tread and said aligning apertures for securing of the bracket to the tread.

1,676,916. CONVEYER FOR CORN HARVESTERS. ANDERS OLSON, Galesburg, Ill., assignor of one-half to Swan Hanson, Galesburg, Ill. Filed July 27, 1925. Serial No. 46,286. 1 Claim. (Cl. 56—110.)



In a device of the class described, in combination with a spiral conveyer and snapping bar rotatably mounted in parallel relation therewith, a cylindrical head at the upper end of said conveyer upon which the

spirals are extended in a reverse direction, a grooved roller on the upper end of said snapping bar of relatively smaller size than said head, and in proximity

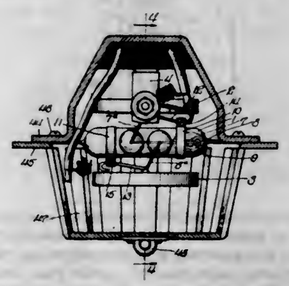


thereto, and means for operating said head and roller in a direction to draw material downwardly between the same.

1,676,917. DISPLAY CONTAINER. GEORGE E. PARMENTER, New York, N. Y., assignor to The American Crayon Company, Sandusky, Ohio, a Corporation of Ohio. Filed Mar. 26, 1926. Serial No. 97,549. 1 Claim. (Cl. 206—44.)

A display carton comprising a container body having a fixed rear wall with an easel support to hold the body in an inclined position, a bottom wall, side walls, and a front wall cut-away at its upper portion, said fixed rear wall and said side walls being severed transversely near the upper ends thereof and said severed rear wall portion hingedly joined to the fixed rear wall, a top connecting the severed rear and side wall portions, partitions in the container body for extending up approximately to the line of severance for holding separate groups of long goods which project above the line of severance and are adapted to be housed at their upper ends partially by the hinged severed portions of the side and fixed rear wall, and an integral flanged cover inserted over the container body and hinged severed portions from the front side of the carton.

1,676,918. FORK-TINE STRAIGHTENER. JOHANNES TH. PEDERSEN, Flushing, N. Y. Filed Nov. 23, 1926. Serial No. 150,178. 8 Claims. (Cl. 153—45.)



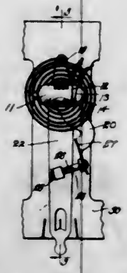
1. In a fork tine straightener, a base, a block yieldingly mounted on the base, a swinging frame, means for moving the swinging frame across the face of the block, and a revoluble member carried by the swinging frame and adapted to cooperate with a fork placed between the same and the block for straightening the tines of the fork as the said revoluble member is carried by the frame across the face of the block.

1,676,919. PROCESS FOR MAKING HOLLOW RIVETS. LAWRENCE M. PERSONS, Chicago, Ill., assignor to Cook Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed Oct. 20, 1920, Serial No. 418,306. Divided and this application filed May 23, 1923. Serial No. 640,823. 5 Claims. (Cl. 10—27.)

3. The method of forming a tubular rivet comprising stamping transverse serrations in a piece of sheet material and at the same time turning up the longitudinal edges of such sheet material and thereafter bending said sheet into tubular form so that the serrations provide internal threads for the completed tubular rivet.

1,676,920. ELECTRICAL SWITCH. LOUIS A. M. PHELAN and CLIFFORD HOTCHKISS, Beloit, Wis., assignors, by direct and mesne assignments, to Absolute Con-Tac-Tor Corporation, a Corporation of Indiana. Filed Nov. 29, 1922, Serial No. 604,021. Renewed May 2, 1928. 8 Claims. (Cl. 200—139.)

1. The combination with an actuator, of a liquid contactor tube, and means for mounting said tube in a manner to be rotatable about its transverse axis by said

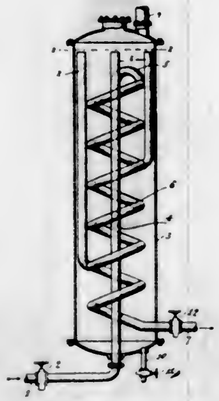


actuator, said means comprising clamps at spaced points on said tube and rods extending from said clamps to points on said axis and then along said axis.

1,676,921. ELECTRICAL APPARATUS. LOUIS A. M. PHELAN and CLIFFORD HOTCHKISS, Beloit, Wis., assignors, by direct and mesne assignments, to Absolute Con-Tac-Tor Corporation, a Corporation of Indiana. Filed Dec. 23, 1922. Serial No. 608,703. 24 Claims. (Cl. 200—139.)

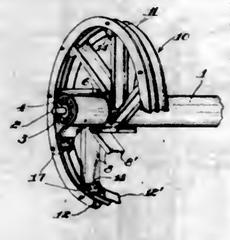
1. A thermostatic switch comprising a coiled thermostatic element, a liquid contactor wholly supported on and movable with said element, a body of conducting liquid housed in said contactor, and an adjustable supporting means for said element for adjusting the position of said contactor.

1,676,922. ELECTRICAL APPARATUS. LOUIS A. M. PHELAN, Elkhart, Ind., assignor, by mesne assignments, to Absolute Con-Tac-Tor Corporation, a Corporation of Indiana. Continuation of application Serial No. 652,539, filed July 19, 1923. This application filed Oct. 7, 1925. Serial No. 60,940. Renewed Jan. 12, 1928. 10 Claims. (Cl. 200—139.)



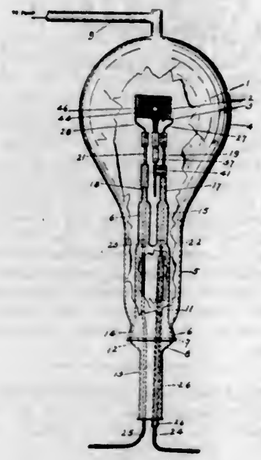
1. A thermostatic switch comprising a spiral thermostatic coil, a liquid contactor tube mounted at one end of said coil, a regulating arm for adjusting the angular position of said tube thereby permitting said coil to operate said tube at predetermined temperatures, and a support at the opposite end of said coil and attached to said regulating arm, said support having relative adjustment with respect to said regulating arm.

1,676,923. ELECTRICAL APPARATUS. LOUIS A. M. PHELAN, Elkhart, Ind., and CLIFFORD HOTCHKISS, Milwaukee, Wis., assignors, by direct and mesne assignments, to Absolute Con-Tac-Tor Corporation, a Corporation of Indiana. Original application filed Dec. 23, 1922, Serial No. 608,703. Divided and this application filed Dec. 7, 1927. Serial No. 238,332. 10 Claims. (Cl. 200—139.)



1. A thermostatic switch comprising a coiled thermostatic element, supporting means adjacent to one end of said element, a liquid contactor wholly supported upon the other end of said element, and a body of conducting liquid disposed in said contactor and having a substantially stationary center of gravity.

1,676,924. PROCESS AND APPARATUS FOR CRACKING OIL. ROBERT T. POLLOCK, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 11, 1921. Serial No. 460,525. Renewed Mar. 15, 1928. 3 Claims. (Cl. 196—58.)

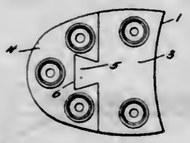


1. The process of vaporizing hydrocarbon oils, which consists in passing oil that has been heated in a furnace to a distilling temperature in a restricted stream through a vaporizing zone located outside of the furnace where no rise in temperature of the oil occurs, in releasing vapors from said stream into said zone at different intervals during the travel of the oil through said zone in said restricted stream.

1,676,925. BULL WHEEL. CARL B. PRITCHARD, Scottdale, Pa. Filed May 13, 1925. Serial No. 29,914. 6 Claims. (Cl. 64—17.)

1. In a bull wheel structure the combination of a shaft, a plurality of wing plates rigidly anchored to the shaft and spaced circumferentially thereof, a channel spoke connected to each of said plates, and a one-piece integral rim having a peripheral face and inturned flanges extending radially inwards at its opposite edges defining the width of the rim, the outer extremities of the said spokes neatly fitting within the space between said inturned flanges of the rim with the side flanges of the spokes rigidly fastened to said inturned flanges.

1,676,926. HIGH-FREQUENCY FURNACE. HARVEY CLAYTON RENTSCHLER and JOHN WESLEY MARDEN, East Orange, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 5, 1925. Serial No. 475. 5 Claims. (Cl. 226—15.)



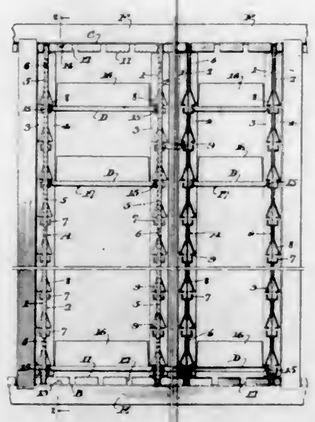
1. A furnace comprising an hermetically sealed vessel, means connecting said vessel to an exhaust pump, a removable mount for said vessel, said mount comprising a hollow tubular member open at one end and terminating in a press at the other end, a plurality of leading-in wires sealed in said press, main supports connected to said leading-in wires, a high frequency induction coil carried by said supports, and a material support connected to one of said main supports, said material support being composed in part of a material which does not react with the material undergoing treatment.

1,676,927. MARKER FOR TREES, PLANTS, AND FLOWERS. JOSEPH C. RICHARD, North Long Branch, N. J. Filed May 4, 1926. Serial No. 106,629. 1 Claim. (Cl. 40—19.)

A marker comprising a transparent, waterproof, cylindrical member having one end integrally sealed, a closure for the other end of the cylinder frictionally held in the open end of the latter, and a supporting reversible, penetrating implement passed through and frictionally held in the closure, said implement having a headed end to prevent withdrawal from the closure in one direction.

1,676,928. SHOE HEEL. BERNARD RUPERT RYAN, Sydney, New South Wales, Australia. Filed Mar. 3, 1925, Serial No. 12,922, and in Australia May 2, 1924. 1 Claim. (Cl. 36—35.)

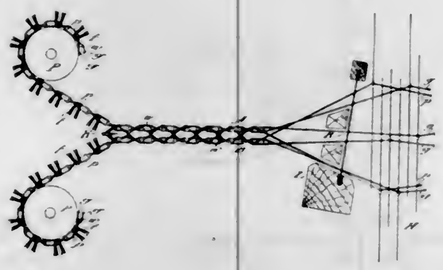
In a shoe heel, a top lift comprising a front portion adapted to be permanently secured to the shoe, and a rear portion adapted to be removed and replaced without disturbing said front portion, both of said portions being provided with wedge shaped recesses, and a plug fitting in said recesses and locking said portions together, said plug being made of a non-slipping composition.



1,676,929. COPPER CHROMIUM FERROUS ALLOYS. BYRAMJI D. SAKLATWALLA, Crafton, Pa. Filed Apr. 7, 1924. Serial No. 704,633. 9 Claims. (Cl. 75—1.)

1. A ferrous alloy containing carbon, about 8 to 25% chromium, .5 to 5% copper and 1 to 3% silicon.

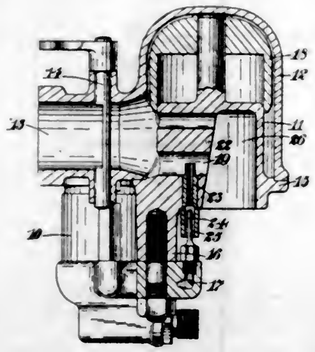
1,676,930. METALLIC SHELVING. FRED A. SCHMITZ, Canton, Ohio, assignor to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 20, 1927. Serial No. 220,679. 4 Claims. (Cl. 211—135.)



4. Metallic shelving including uprights having vertically spaced, open-ended, shelf supports pressed outwardly

beyond the plane of the body of the uprights, and extending from the front to the rear of the uprights, and closed-end guards pressed outwardly beyond the plane

of the body of the uprights; said guards being disposed directly above, and alternating with, said supports, and terminating short of the ends of the supports.



1,676,931. MANUFACTURE OF COLORED PILE FABRICS. GEORGE E. SHIPWAY, Noroton, Conn., assignor to The Salt's Textile Manufacturing Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 24, 1925. Serial No. 77,656. 7 Claims. (Cl. 139—391.)
